FRIENDS' INTELLIGENCER

UNITED WITH

The Friends' Journal.

INTELLIGENCER Vol. XLV. No. 1. | PHILADELPHIA, FIRST MONTH 7, 1888. | JOURNAL. Vol. XVI. No. 690.

WHITTIER.[1]

O, Poet, loved of all men!—thine the gift
In equal measure heart and mind to lift.
When War's shrill trumpet called to fields where life
Yielded to death, in slavery's bitter strife,
Thy prophet-lips, touched with a coal of flame
From freedom's altar-fires, spoke freedom's name!
That trumpet-sound,—ringing from North to South,
Steady and clear—was strengthened at thy mouth;
And all unfaltering through the stubborn fight
Thy voice and pen maintained the cause of Right!
Nor less is thine the power to move the heart
To deeper tenderness; the Poet's art
In thee is simply nature; and it sings
Of love, and homes by quiet wayside springs,
Of birds and breezes, and the fancies sweet
That touch thy memory from the wind-swept wheat!

But underlying all, breaking through creeds
And forms of doctrine, are the faith which leads,
The hope which rests on the eternal plan—
God's fatherhood, the brotherhood of man!
Thine too the charity which angels love,
Which measures by thy heart the heart above;
And for the wanderer who repentant turns
And, to regain his long-lost manhood, yearns—
Sees—in the place of an avenging rod,—
Forgiving pity, and the love of God!

Peace to thy age, O Poet!—Though
But weak my words may be,
The feeling which impels the pen
May make them worthy thee.

Unkind seems March; yet hath it buds
For April's blossoming;
And so thy winter promise holds
For Heaven's eternal spring

H. F.

VIEWS OF WILLIAM PENN.

[In response to an inquiry published some months ago, under the title "A Query," our friend Hugh Foulke suggested the closing portion of William Penn's volume, the "Rise and Progress of the People called Quakers," as a statement satisfactory to his own mind. We give it herewith.—EDS. INTELLIGENCER AND JOURNAL.]

FRIENDS, as you are the sons and daughters of Adam, and my brethren after the flesh, often and earnest have been my desires and prayers to God on your behalf, that you may come to know your Creator to be your Redeemer and Restorer to the holy image, that through sin you have lost, by the power and spirit of his Son, Jesus Christ, whom he hath given for the Light and Life of the world. And O, that you, who are called Christians would receive him into your hearts! For there it is you want him, and at that door he stands knocking that you might let him in, but you do not open to him: You are full of other guests, so that a manger is his lot among you now as well as of old. Yet you are full of profession, as were the Jews when he came among them, who knew him not, but rejected and evilly entreated him. So that if you come not to the possession and experience of what you profess, all your formality in religion will stand you in no stead in the day of God's judgment.

I beseech you ponder with yourselves your eternal condition and see what title, what ground, and foundation you have for your Christianity. If more than a profession and an historical belief of the Gospel? Have you known the baptism of fire, and the Holy Ghost, and the fan of Christ that winnows away the chaff in your minds, the carnal lusts and affections? That divine leaven of the kingdom, that, being received, leavens the whole lump of man, sanctifying him throughout in body, soul and spirit? If this be not the ground of your confidence, you are in a miserable estate.

You will say, perhaps, that though you are sinners, and live in daily commission of sin, and are not sanctified, as I have been speaking, yet you have faith in Christ, who has borne the curse for you, and in him you are complete by faith, his righteousness being imputed to you.

But, my friends, let me intreat you not to deceive yourselves in so important a point as is that of your immortal souls. If you have true faith in Christ, your faith will make you clean; it will sanctify you: For the saints, faith was their victory of old: By this they overcame sin within and sinful men without. And if thou art in Christ, thou walkest not after the flesh, but after the Spirit, whose fruits are manifest. Yea, thou art a new creature; new made, new fashioned; after God's will and mould. Old things are done away, and behold, all things are become new. New love, desires, will, affections, and practices. It is not any longer thou that livest; thou disobedient, carnal, worldly one; but it is Christ that liveth in thee; and to live is Christ, and to die is thy eternal gain: because thou art assured that thy corruptible

v.45:1-10,
12-52
1888

shall put on incorruption, and thy mortal, immortality, and that thou hast a glorious house eternal in the heavens that will never wax old or pass away. All this follows being in Christ, as heat follows fire and light the sun.

Therefore have a care how you presume to rely upon such a notion as that you are in Christ, whilst in your old fallen nature. For what communion hath light with darkness, or Christ with Belial? Hear what the beloved disciple tells you: If we say we have fellowship with God and walk in darkness, we lie, and do not the truth. That is, if we go on in a sinful way, are captivated by our carnal affections, are not converted to God, we walk in darkness, and cannot possibly in that state have any fellowship with God. Christ clothes them with his righteousness that receive his grace in their hearts, and deny themselves,and take up his cross daily and follow him Christ's righteousness makes men inwardly holy, of holy minds, wills and practices. It is nevertheless Christ's, because we have it; for it is ours, not by nature, but by faith and adoption. It is the gift of God. But still, though not ours, as of or from ourselves, for in that sense it is Christ's, for it is of and from him; yet it is ours, and must be ours in possession, efficacy, and enjoyment, to do us any good; or Christ's righteousness will profit us nothing. It was after this manner that he was made, to the primitive Christians, righteousness, sanctification, justification, and redemption; and if ever you will have the comfort, kernel and marrow of the Christian religion, thus you must come to learn and obtain it.

Now, my friends, by what you have read, you may perceive that God has visited a poor people among you with this saving knowledge and testimony; whom he has upheld and increased to this day, notwithstanding the fierce opposition they have met withal. Despise not the meanness of this appearance. It was, and yet is, (we know) a day of small things, and of small account with too many,and many hard and ill names are given to it; but it is of God, it came from him because it leads to him. This we know, but we cannot make another to know it unless he will take the same way to know it that we took. The world talks of God, but what do they do? They pray for power, but reject the principle in which it is. If you would know God, and worship and serve God as you should do, you must come to the means he has ordained and given for that purpose. Some seek it in books, some in learned men, but what they look for is in themselves, though not of themselves, but they overlook it. The voice is too still, the seed too small, and the light shineth in darkness; they are abroad, and so cannot divide the spoil; but the woman that lost her silver found it at home, after she had lighted her candle and swept her house. Do you so too, and shall find what Pilate wanted to know, *viz.* truth. Truth in the inward parts so valuable in the sight of God.

The light of Christ within, who is the light of the world, (and so a light to you that tells you the truth of your condition) leads all that take heed unto it out of darkness into God's marvellous light. For light grows upon the obedient. It is sown for the righteous, and their way is a shining light, that shines forth more and more to the perfect day.

Wherefore, O friends, turn in, turn in, I beseech you. Where is the poison, there is the antidote. There you want Christ, and there you must find him, and, blessed be God, there you may find him. Seek and you shall find, I testify for God. But then you must seek aright, with your whole heart, as men that seek for their lives, yea, for their eternal lives; diligently, humbly, patiently, as those that can taste no pleasure, comfort, or satisfaction in anything else, unless you find him whom your souls want to know and love above all. O, it is a travail, a spiritual travail! let the carnal, profane world, think and say as it will. And through this path you must walk to the city of God, that has eternal foundations, if ever you will come there.

Well! and what does this blessed light do for you? Why, first, it sets all your sins in order before you. It detects the spirit of this world in all its baits and allurements, and shews how man came to fall from God, and the fallen estate he is in. Secondly, it begets a sense and sorrow, in such as believe in it, for this fearful lapse. You will then see him distinctly whom you have pierced, and all the blows and wounds you have given him by your disobedience, and how you have made him to serve with your sins; and you will weep and mourn for it, and your sorrow will be a godly sorrow. Thirdly, after this it will bring you to the holy watch, to take care that you do so no more, and that the enemy surprise you not again. Then thoughts, as well as words and works, will come to judgment, which is the way of holiness, in which the redeemed of the Lord do walk. Here you will come to love God above all, and your neighbors as yourselves. Nothing hurts, nothing harms, nothing makes afraid on this holy mountain. Now you come to be Christ's indeed, for you are his in nature and spirit, and not your own. And when you are thus Christ's then Christ is yours, and not before. And here communion with the Father, and with the Son you will know, and the efficacy of the blood of cleansing, even the blood of Jesus Christ, that immaculate Lamb which speaks better things than the blood of Abel, and which cleanseth from all sin the consciences of those that through the living faith come to be sprinkled with it from dead works to serve the living God.

LETTER TO AN ABSENT MEMBER.

[The following is the substance of a letter from an Overseer in a Western meeting to an absent member, and may be of interest to others than the person addressed.—EDS.]

IT is my inclination as a Friend and Christian to be concerned for the welfare of my brethren, and it is my duty as one of the overseers of our preparative meeting to have a special interest in its members,—to know of their whereabouts and of their interest in the society, and whatever else about them a well-wisher should know.

Nothing would please me better, so far as relates to thee, than to be assured that thou art a true Friend,—deserving the name according to the language of the Master, who said "Ye are my friends if ye do whatso-

ever I command you." The true servant of God, in every age, has been a "Friend" and a "Christian," a minder of "the Light," a yielder to the pure leadings of the spirit of God, and so a son of God; for "as many as are led by the spirit of God, they are the sons of God." I believe there never was an age nor nation of rational people in which the ever new covenant,—new in every individual soul,—"the Law written in the heart and placed in the inward part," was not known. I believe that "Christ within" has ever been, as now, "the hope of glory." This is the "child born" and the "son given" in every human soul, and is indeed entitled to the name of "Wonderful Counsellor . . . . and Prince of Peace." Through this holy anointing, this child of God, this inward Teacher, "He hath shown unto thee, O man! what is good, and that he requires of thee to do justly, to love mercy ,and to walk humbly with thy God,"—with this faithful and heavenly teacher. The same truth was declared by the apostle when he said "The grace of God which brings salvation hath appeared unto *all* men, teaching us, that, denying all ungodliness and the world's lusts, we should live soberly, righteously, and Godly in this present world." Plato, the ancient Greek sage and philosopher, knew of the same holy teaching when he was enlightened to declare with reference to his own duty,—a truth to which the spirit of Truth in every soul responds amen!—"Nothing is more sure to me than that I ought to be as good and as noble as I can." The same Divine Saviour taught the Chinese philosopher, Confucius, the same supremely excellent Golden Rule which Jesus afterwards announced in Judea, "All things whatsoever ye would that others should do unto you, do ye even so unto them." And by the same "Christ within" the old Roman, Justinian, was enabled to teach that "Justice is a constant and perpetual desire to give unto others those things which we require for ourselves." Such "Scriptures" are as holy as any written by Moses, or Ezra, or Luke, or Paul, for they are "given by inspiration of God" and "are profitable for doctrine, for reproof, for instruction in righteousness, that the man of God may be perfect,—thoroughly furnished unto every good work."

To be humbly obedient to this heavenly counsellor is to be the choicest kind of a Friend,—is to be in fellowship with the Father and with the Son, and to know much of the bliss of heaven.

Are these thy views? and is it thy concern and labor to be a faithful follower of this our Heavenly King? When we are united in this great engagement, we become a precious Society of Friends, indeed.

While it is sad to remember how few come up to the full measure of their privileges in these regards, it is comforting to believe that few are totally negligent, and that many are struggling on in a considerable degree of faithfulness.

Please let me know somewhat of thy feelings as to these matters, and of thy interest in them, and also of thy interest in our Religious Society, and if thou valuest thy rights of membership. * *

WHAT CONSTITUTES A FRIENDS' SCHOOL.

[This Essay, by President Sharpless, of Haverford College, published in *The Student* for Twelfth month, will be found very suggestive, we think, for the school work which our friends have in charge.—EDS.]

I WILL introduce the subject by inquiring what are some of the noticeable deficiencies of Friends' schools in this neighborhood. It goes without saying that there has been a great advance in the interest in schools and the quality of the work done therein in a few years past. Any one whose memory goes back ten years will be forcibly impressed by this fact. Could we set the school of that period by the school of this as vividly as the contrasts were made in our recent Centennial, I am sure we should all be surprised. Even if we consider only the improvements made during the lifetime of this association, there is abundant ground for encouragement. The association itself is an exponent, as well as to some slight extent the cause, of the present condition of things Ten years ago its existence would not have been possible, and its present life is the very best assurance of the present and the best hope for the future. It would not be surprising if the time would come when we should be proud of our school system. An inquiry into deficiencies is therefore made in the certainty of no irremediable and fundamental faults coming to light, but rather with the prospect that an acknowledgment and clear view of them will lead to their extinction.

One of the deficiencies which I believe exists, but which may not be generally acknowledged, is the lack of provision for systematic physical education. I say this with a knowledge of what is done in certain quarters towards this end. But, before the right thing will be done, we must adopt this principle—that physical education is as important as mental and as difficult to secure, and hence that it is as properly a subject for which schools should spend money and provide time in the daily programme. If any one says that the present irregular exercise that some girls and most boys voluntarily take will supply the need, we would ask, if be considers that the reading which many children voluntarily take will supply the place of systematic training from text-books. It is or may be good, but it will not in every case give the sound vital organs, the solid muscle, the elasticity of step and of spirit, which gives a man easy victory over the obstacles of life. You talk about mental discipline and culture and you insist that it shall be regular and required, and adapted to the mind on which it acts. Why do you not ask the same for physical? Is not physical dyspepsia as bad as mental? Is not physical inanition as bad as mental? What is an education for but to prepare for the duties of life; and as a factor in the performance of duty, which has the most potent place, the mind or the body? Can not our schools, then, teach the fundamental rules of hygiene, so as to make them as practical and as compulsory as the fundamental rules of arithmetic? Can not the one be made equally as important a requisite for the teacher in an ungraded school as the other? And can not a department be made for the subject in the graded schools? Numerous practical difficulties suggest themselves, but prac-

tical difficulties always clear themselves away in the face of an imperious determination to do a thing. One ought to be ashamed to use those words, "practical difficulties," when he sees a great good to be attained by overriding them.

Another subject which, it seems to me, needs especial attention, is the development of character,—the expansion of whatsoever things are honorable and true and pure and lovely and of good report in the individual minds of boys and girls. This should be put to every teacher as an imperative and unevadable duty. Opportunities will come continually. They will come in recitation, in conversation, emphatically in games. Every child should be made to feel that life cannot be solely for purposes of selfishness or ambition, but that duties will be expected of all, and that the subtle thing we call character will outrank intellect in its influence and strength. He must be taught to respect conscience in what it tells him to do as well as in what it tells him to avoid. He must be filled with the feeling that the present times are better than the former and that upon us rests the responsibility to make the future still better. He must be made to feel that he can not sit supinely either in the civilization or the morality of the past, or take his ideas unthinkingly from the fathers in letters or science, in state or church. We Friends need the creation of strong men who will face the living problems of the day in the spirit of the living present, who will subdue self, and consecrate themselves to good work—and the schools must make them. Are our schools doing it?

Thirdly, our schools must infuse a scholarly spirit. As machines for intellectual drill, they are doubtless good. As agencies for the acquisition of knowledge, they do not hold any inferior place. But do they leave their students insatiate for more, or do they leave them with a feeling that their education is about accomplished? If once young people feel the demands of a craving intellect, I will defy the cares of business or pleasure wholly to crush them out. Every grade of school should promote its pupils in an expectant frame of mind to the next higher; and at whatever stage they drop out to go into business, some very definite desire ought to exist in their minds for further intellectual development in at least one chosen line. Do our schools from higher to lower create these desires as fully as possible?

These three points, development of health, and of character, and of scholarly spirit, are matters we need, it seems to me, to consider carefully, to determine whether we do our duty as teachers to the young people who work with us.

Honesty and simplicity should characterize a Friends' school. There should be no extravagant announcements, no courses established for show, and there should be continual preference felt for the useful over the simply ornamental. Our habits encourage this and our success in infusing honesty and simplicity and earnestness require it. If we have faults we must not try to cover them up, but squarely face them and correct them. If we have virtues we should not trumpet them, but there is no need of our denying them. As our schools are not to make money but to do good, and as they are mostly the recipients of gifts to which we stand in the relation of trustees, it is imperative on us to make them as good as they possibly can be, in the lines the donors defined. Once have it admitted that Friends' schools ought to exist, it must also be admitted that it is positively wrong for us to allow them to have serious defects. We may not advise our children to attend them to their detriment. There is no Quakerism in teaching arithmetic badly, but there is Quakerism in teaching arithmetic and everything else well. There is the essence of Christianity in everybody doing his duty the best he can, and inexcusable ignorance is not a palliation. Committees can not allow poor work to be done, teachers can not do it—if remedies are possible—and carry out the trust reposed in them. The very truthfulness and honesty of Quakerism demand good schools. We are not logical Quakers if we do not have them. They who stand in the way of improvement, they who callously rest satisfied with indifferent results, are false to the faith of our fathers, which requires faithfulness to duties, and doing everything according to the best light we receive.

Another requisite of a Friends' school is adherence to plain fundamentals. A prominent citizen of Philadelphia said to me, "I send my boy to a Friends' school, because they teach him to read and write." A great many schools, perhaps some Friends' schools, do not teach their children to read and write. They learn to get an idea from a book, to express one on paper in a lame sort of way, but they cannot read and write reasonably well, nor do they know the multiplication table, or know how to speak the English language, or a variety of other acquisitions of like nature not yet gone into disuse. It is not honest or straightforward or Friendly to make a child believe he knows something, when these vital matters are beyond his grasp.

We suppose that most of us would say that the fundamental theory of Quaker schools is the "guarded education" idea. While subscribing to this, it is well to guard ourselves against the pssible abuses of the guarded education. To define this theory briefly, I would say it involves the idea of sifting the influences to which children are exposed and admitting only the wholesome,—and that these guards are to be real and effective. The smaller the children, I will not say the greater the importance of guards, but the more arbitrarily and absolutely the guards must be applied. As they grow older the guards should come to be to some extent self-applied; until in college government, the effort should be more to secure the guards by possessing solid official example and precept and a moderate official restraint, and mainly by encouraging in students' minds a plane of thought, which makes the self-imposition of guards a matter of imperative duty. It is possible to carry our arbitrary guardianship too high in the scale. I would lay it down as a general rule that restraints are evils, necessary evils if the result cannot be otherwise secured, but productive of harm in diminishing sympathy between teacher and child. The evil becomes greater as we go up in the educational grade, and we must not impose the guards too

rigidly by authority, when we can get them imposed by influence through voluntary action. But nevertheless they must be imposed,

The acknowledgment of the importance of guards removes all chance to criticise education itself. We can all point to children who have been injured by going to school. But when we come to investigate the matter we shall find that the injury was produced by influence of teachers who ought not to have been there, or by students who should never have been admitted, or by the world which should have been shut out; that an education under proper conditions would not have spoiled the intellectual or moral habits of any one, or even have diminished the warmth of his spiritual life; on the contrary, that the longer one remained under the influence of such a system, the better would he have developed all the qualities of a noble and useful man; the higher the education the humbler and truer, and holier the man. Such it is in theory, and such Friends' schools ought to make it.

But you have doubtless noticed an important omission in the standard phrase. It is a "guarded religious education" which is commended to us, and so far as I know, Friends have a monopoly of the phrase. The first adjective is negative but the second is necessarily positive, for religion cannot be made up of negatives. A Friends' school, therefore, must have a double duty, to guard itself against bad influences and to develop a religious life among its students. If it takes the one without the other, it omits one of the essential elements. To be honest with its patrons it must do more than make this influence a name. It must be a pervading reality. It needs an active desire and a grasping of every opportunity, not a relegation of the whole work to the Holy Spirit, but an ever present recognition of responsibility which takes form in positive words spoken and deeds done. This must constitute one of the essential points of a real Friends' school.

What is the duty of a Friends' school in teaching the peculiar views of Friends to the children? There may be two answers to this question depending on the status of the school. If it is one founded for Friends' children and whose object was mainly developed for the benefit of our own membership, I think positive instructions in this line should be given, and if outsiders seek and receive the benefit of the school they will do it with the understanding of its purposes. It may not be right to use efforts to undermine their faith in their parents' religion and actually to seek them as proselytes to Quakerism, but it is unreasonable to allow them to interfere with the definiteness and efficiency of the doctrinal instruction given to Friends' children. We ought to teach the next generation Friends' views on immediate worship, the theory on which our unprearranged meetings are held, our absence of ordinances and our opposition to war and oaths; for many of our children if they do not learn these at school will never learn them as they ought. Those not members will actually be glad to know all this as matters of information even if they are not convinced by it, and the leaven of Quakerism has great permeating power, as it lies in the heart of a worldling or a high ritualist. I believe that in all our Friends' schools, intended more especially for Friends' children, the views of Friends should be taught without hesitation and without compromise.

The case is somewhat different in schools founded and conducted by Friends but intended for the public. Here the patronage must be considered, and it would be to some extent a breach of trust to enforce denominational teaching, when the original object was mainly to give the community the benefit of sound mental and moral training. It may be doubted whether these should be called Friends' schools, inside the limits of the definition which this paper elects to make.

I have touched very briefly on a variety of very important points and I fear the treatment of these be cause brief has sounded rather dogmatic. It is not so intended, however, I throw the thoughts into the common stock for what they are worth. Having myself drawn largely from the same stock in times past, I am conscious that I am only reüsing the views of others. I hold that so far from Quakerism being opposed to education, it is in close alliance with a proper education, and should first dictate the quality of it and then use it for its own ends; and I hold that there is no more important subject for the Friends of this Yearly Meeting to inquire into than the quality of the results worked out in their schools. I know that it is utterly unreasonable and wrong to use great pressure to bring all our children into Friends' schools, if those schools are not made the very best possible, and the system as a whole adapted to our wants.

When our school-men and women grasp the idea firmly that it is their duty to give the best mental and moral training possible, when they appreciate and live out the theory logically involved in the phrase "a guarded religious education," when we all understand that mental development is not obstructive to spiritual growth, but tends to produce humility and the Christian graces, and know how vitally our schools are connected with the usefulness of our members in the world,—we will then unitedly resolve that the growth manifest among us shall not cease, but that effort and thought and money shall flow more and more liberally into this beneficent system.

ISAAC SHARPLESS.

THE report comes from Waldeck, a little German principality, that a decree has been proclaimed that a license to marry will not be granted to any individual who has the habit of getting drunk; and, if one who has been a drunkard applies for such license, he must produce sufficent proof of reformation to warrant his receiving it. It is required that the officer to whom application is made shall ascertain the character of both the parties who are desirous of marrying, as to whether one or the other is addicted to drinking.—*Citizen.*

THE real things are inside. The real world is the inside world. God is not up, nor down, but in the midst.

A FRIEND'S STATEMENT OF FAITH.

HAVING for more than sixty years been a member and in full accord with the branch of the Society of Friends called "Hicksite," a name they do not accept or acknowledge, although they venerate the name of Elias Hicks as a bright example and gifted Minister of the Gospel, but claim to be the followers of Fox, Penn, Barclay and others—recognizing the doctrine of the *Inner Light* and Immanence of the Holy Spirit, a portion of which light and spirit is given to every rational, intelligent being, Christian and non-Christian alike, the world over—it has, with me, always been hard to understand how many good men and women could formulate for themselves creeds that would shut out from the Divine Favor all who do not think as they do.

Being often asked what our Friends believe, I think the following extracts from John G. Whittier's Poem of "The Meeting" will in part, at least, answer the question.

I. S.

Trenton, N. J., 12th Mo., 1887.

EXTRACTS FROM "THE MEETING."

I ASK no organ's soulless breath
To drone the themes of life and death,
No altar candle lit by day,
No ornate wordsman's rhetoric play,
No cool philosopher to teach
Its bland audacities of speech;
I reverence old-time faith and men,
But God is near us now as then;
His force of love is still unspent,
His hate of sin as imminent;
And still the measure of our needs
Outgrows the cramping bounds of creeds;
The manna gathered yesterday
Already savors of decay;
So sometimes comes to soul and sense
The feeling which is evidence
That very near above us lies
The realm of spiritual mysteries.
The sphere of the supernal powers
Impinges on this world of ours.
The breath of a diviner air
Blows down the answer of a prayer;
That all our sorrow, pain, and doubt,
A great compassion clasps about,
And law and goodness, love and force,
Are wedded fast beyond divorce.
So, to the calmly gathered thought
The innermost of truth is taught,
The mystery dimly understood,
That love of God is love of good,
And, chiefly, its divinest trace
In Him of Nazareth's holy face;
That to be saved is only this—
Salvation from our selfishness,
That worship's deeper meaning lies
In mercy and not sacrifice,
Not proud humilities of sense
And posturing of penitence
But love's unforced obedience;
That book and church and day are given
For man, not God—for earth, not Heaven—
The blessed means to holiest ends,
Not Masters, but benignant friends;
That the dear Christ dwells not afar,
The king of some remoter star,
Listening at times, with flattered ear,
To homage wrung from selfish fear,
But here, amidst the poor and blind,
The bound and suffering of our kind,
In works we do, in prayers we pray,
Life of our life, He lives to-day.

For Friends' Intelligencer and Journal.

THE MESSENGER OF PEACE.

"BEAUTIFUL upon the mountains are the feet of those that bring glad tidings that publish peace." The world has need of these messengers, men and women, that by word and deed, in action and in conversation, bear about with them the inscription of "Holiness unto the Lord." Their presence is a rebuke upon wrong doing though not a word be spoken. May the number of these become like the sand of the sea, innumerable, glorifying the Father of mercies till heaven and earth shall blend together in one harmonious whole. Then there is no dread of the closing scene of this life, death comes as a messenger of release to free the spirit from its clay tenement, proving Christianity sufficient to take away all fear. And this is an attainment all should seek after, "For we know not the day nor the hour when the Son of man cometh." May we clothe ourselves in royal vestments such as will give each one a place in the presence of the King of Kings.

The lowest place in the realm of light will satisfy the immortal soul, dignified with immortality and eternal life.

May the heart's aspirations forever be,
Lead me and guide me
And bring me to thee.

In thee will I trust in times of distress,
And in tempest-tossings, lean on thy breast.

SARAH HUNT.

SCRIPTURE LESSON, No. 3.

FIRST MONTH 15TH, 1888.

JESUS WALKING ON THE SEA.

TOPIC: CONFIDENCE.

GOLDEN TEXT: Be of good cheer; it is I; be not afraid. Matthew, 14: 27.

READ Matt. 14: 22-36.

AFTER the occurrences of our last lesson, it was necessary for Jesus to go quietly away from the multitude that thronged about him, who, accepting him as their long-expected Messiah, were ready to take him by force and make him their king (John 6: 15.) He retired to one of the lonely mountain places near by, that he might be alone with his Heavenly Father, but not until he had sent his disciples away in the ship across the Sea of Galilee.

The Fourth Watch. Under the Roman rule, the night, instead of being divided into three watches of four hours each, as had been the Hebrew custom, was now divided into four; the first was called evening, the second midnight, the third cock-crowing, and the fourth morning, (Mark 13: 35.) The term *watch* was probably given to each of these divisions from the custom of placing sentinels around the camps of the soldiers, and on the walls of the cities

as guards or watchmen. These were, in the earlier time, changed every fourth hour, but under the Romans, in the time of our lesson, they were relieved every three hours. It was not until the fourth watch that Jesus came to the little crew of disciples toiling in the midst of the tempestuous sea, showing that the night had been spent in communion with his heavenly Father in the solitude of the mountain.

They were troubled. Then, far more than in our time, the people believed in apparitions, and that the spirits of those who had died came back to earth and made themselves visible to the living. It was when Jesus perceived that the disciples took him for a spirit that he spoke the encouraging words which restored their confidence and emboldened Peter to dash himself into the troubled waters, that he might go to meet his Master.

The land of Gennesaret—the region of Galilee west of the sea, over which they had crossed. Capernaum, where Jesus made his home, was on the west side of the sea. The incidents of this lesson will also be found in Mark 6 and John 6. Luke makes no mention of them.

Confidence and trust are so akin to each other that we can hardly treat of the one without giving heed to the other. This cardinal principle is so closely interwoven with the fabric of human society, that whoever seeks to build his structure without it omits the corner-stone upon which all true society is built. First of all, we should have confidence in our Heavenly Father. This will enable us to bear patiently and with calmness many things that seem to our finite vision to be at variance with his divine purposes. Happy are we if we are in possession of the implicit confidence evinced by the little child just trying to walk, who, fearful of its own uncertian steps, reaches out to grasp the hand extended for its help, putting forth its childish endeavors with confidence, knowing that its feeble efforts will be sustained by loving hands.

Our Heavenly Father hides from our natural vision very many of his purposes, but confidence assures us by the hope which it begets in us, that the ultimate good of all who are seeking the good is to be accomplished, and that by ways which we see not and along paths which are new and untried, we are traveling toward the higher and better in our spiritual life.

As our faith grows stronger and broader our confidence in divine ability to keep that which we have committed to his care increases.

It is also essential that we should have a measure of confidence in ourselves. "For," as the apostle has said, "we are made partakers of Christ if we hold the beginning of our confidence steadfast unto the end."

We should be so firmly grounded in the truth and in the principles thereof, that the consciousness of the integrity of our purpose, and of the uprightness of our intention would give us sufficient strength to lay hold of the Divine promises and make them ours, so that our confidence grows into "a hope that maketh not ashamed."

When we have confidence in God and in ourselves, we shall find our confidence in one another increasing. Sensible as we will become of the imperfections and shortcomings of our best attainments, we will be more tolerant to those about us, and knowing the honesty of our own intentions, will freely accord the same to others, realizing in our experience how often it is necessary to put up the petition, "Help thou mine unbelief."

The practical lesson to be derived from the study of the subject before us, is the need of a constant dependance upon the divine Power. If the beloved Son found it necessary to the right performance of the work laid upon him, to retire to a quiet place, that he might be alone with his Heavenly Father, how much more do we, who so imperfectly represent the Master in our lives and conversation, need the strength that comes through the same divine communion.

We often find ourselves in the storm and darkness buffetting with the waves of doubt and discouragement, how precious to the soul at such times comes the assurance, "It is I, be not afraid." Let us keep near the arm that reaches out for our salvation, and though deep calleth unto deep, and we are ready to cry with the Psalmist "All thy waves and thy billows are gone over me," yet shall we know the Lord to "command his loving kindness in the day time, and in the night his song shall be with us."

Forgiveness of sins is the remission of sins. It is not merely letting a man off from a present penalty; it is setting him free from the power and dominion of sin itself. It is redemption; a new creation; a new birth; a making over; so that he whose sins are forgiven is transformed into the image of God and made a child of God. When Christ says that if we do not forgive men their tresspasses, neither will our Father forgive us our tresspasses, we are not to understand that he affixes an external and arbitrary condition, as though he said, If you are unforgiving, I will be unforgiving also. No! What he says is this: Only those who are engaged in the work of redeeming others can receive the influences of redemption themselves; only those who exercise a forgiving spirit possess a spirit which can receive forgiveness. It is as if he said, If ye harbor resentful or vengeful feelings, or even look with indifference or unconcern upon the wrong in your fellow-men; if their sins arouse your wrath or your self-conceit, if they stimulate you to satire and to scorn, or if they produce no impression on you whatever, and you go your way careless about them, you cannot be cleansed of your own sinfulness. The beam cannot be taken out of your own eye until you have at least the desire to get the mote out of your neighbor's eye; you cannot receive the cleansing love unless you have some measure of the love that cleanses.—*Christian Union.*

If some small rivulets you have drunk of sometimes, be now discontinued, your way is open to the never-failing, inexhaustible Fountain-head.—*David Hall.*

For a hundred that can bear adversity, there is ardly one that can bear prosperity.—*Carlyle.*

VENERATION FOR THE PAST.

IT has become almost the universal utterance in what may be termed religious circles, in respect to our age and generation, that we do not cherish veneration and reverence for the persons and usages of the past ages, and that this in some way detracts from our moral and religious position.

This expression calls for serious thought and investigation, for it may be from the very charge itself has grown the indifference and neglect in this regard. The constant assertion of a theory frequently leads to a belief in that theory without any firm conviction as to its truth, so the frequent iteration of our want of veneration leads to a careless holding of respect and reverence. The wiser way is to present with force that which is of value in the past, and stimulate not only to the advancing to its standard of high attainment in things physical, mental, moral, and spiritual, but if possible make an advance upon it. In a recently published bigography there occurs the following: "The virtues of one's ancestors are as much a subject for personal humiliation as for family pride. For if we have only taken the virtues handed down to us without adding to them or exalting them, we, are like the receiver of talents who has laid them up in a napkin." And this "adding to the virtues of the past" does not come by exalting them to so high a plane, that they are deemed as beyond our present reach, neither by constantly lamenting our own departure from that standard; but by a calm inquiry as to the right the past has to its high claim upon our allegiance, and finding the claim valid, aiming for it with an energy sure to reach it. And not only reach it but to improve upon it. In this there is no disrespect, for of what avail are all our efforts to give to our children, and they in turn to their children, better advantages in every way, if we do not expect them to attain to greater heights?

The problem is to improve all the attributes God has so bountifully bestowed upon us, not robbing the one while we advance the other, remembering the assertion of the Master in his most remarkable sermon "Ye therefore shall be perfect as your heavenly Father is perfect."

To the solution of this important problem let us direct our thoughts, rather than to be constantly mourning over our fallen estate. It is for us to declare with our beloved poet Whittier, for whom, as recent events testify, we do not lack veneration, that we do yet "reverence old-time faith and men," while we with him also acknowledge that "God is near us now as then" and go forward firm in the belief that

> "His force of love is still unspent,
> His hate of sin as imminent."

Then shall we find advancement not alone in material and mental things, but very perceptibly in things moral and religious.

MARRIAGES.

MATLACK—CHEATLE.—On Fourth-day, Twelfth month, 24th, 1887, at the residence of the bride's parents, under the care of Chesterfield Monthly Meeting, Walter E. son of Reuben and Anna Matlack, and Emma, daughter of Thomas B. and Alice Cheatle, all of Trenton, N. J.

WILSON—PENNOCK.—At the residence of the bride's father, on Twelfth month 29th, 1887, by the order of Friends, under care of London Grove Monthly Meeting, Samuel M. Wilson of Toughkenamon, Pa., and Annie E. Pennock, of West Marlborough, Chester county, Pennsylvania.

DEATHS.

EDWARDS.—At Quakertown, Pa., suddenly, Twelfth month 25th, Hersillea J., wife of Amos Edwards, in her 72d year.

HALLOWELL.—Twelfth month 25th, at Horsham Pa., Mary K., widow of Thomas B. Hallowell, aged 77.

KING.—At his home in Richmond, Indiana, Twelfth month 7th, 1887, Levinas King, in his 89th year; a valued member of Whitewater Monthly Meeting of Friends.

LODGE.—At Upper Providence, Delaware county, Pa., Twelfth month 28th, after a lingering illness, Mary Jane, widow of Allen Lodge, in her 70th year. Interment at Darby Friends' ground.

PRICE.—In Philadelphia, after a lingering illness, at the residence of her brother, Dr. Mordecai Price, Twelfth month 29th, 1887, Emily W. Price, formerly of Baltimore, Md.; a member of the Monthly Meeting of Friends of Philadelphia, and for a number of years past a teacher in Friends' Central school.

SUTTON.—Twelfth month 16th, 1887, at the residence of his son-in-law, Joseph C. Townsend, Baltimore, Md., James L. Sutton, in the 81st year of his age.

TRAGO.—Twelfth month 27, 1887, Amanda, widow of the late Thomas Trago, in the 52d year of her age; a member of Little Britain Meeting.

The circumstances attending the death of this dear friend are very sad. Her husband was an invalid for months before his decease. Most assiduously did she nurse him by day and by night until the end. They had no children. After his decease she made a sale of their personal effects, (quite limited in amount), and was about removing to Lancaster to wait on an invalid sister. Her affairs were all arranged at the residence of her nephew preparatory to taking the cars the following morning. On retiring to bed with a lamp in her hand, her eyesight being somewhat defective, she mistook the stairs for the hall and fell headlong to the bottom, producing a concussion of the brain which rendered her unconscious, in which state she remained until the afternoon of the day following, when her gentle spirit was released.

Although the summons came suddenly and unexpectedly, we have a well-grounded hope that it did not find her unprepared, but that her immortal spirit now rests in peace.

L. K. B.

WARNER.—At his home, Bloomfield, Florida, Eleventh month 29, 1887, Isaac Warner, in the 79th year of his age; a member of Third Haven Monthly Meeting, Easton, Md.

WILKINSON.—At his residence in London Grove township, on Fifth-day, Twelfth month 29th, 1887, Ellis P. Wilkinson, in his 81st year; a member of London Grove Monthly Meeting.

CHARLES H. MAROT.

Something more than a passing notice is due to the memory of Charles H. Marot. Those who have shared his companionship can testify to the high ideal which ever marked his character. An original thinker; clear in his perception of error; an earnest and candid seeker after truth, unselfish in his business relations, careful not to infringe upon the rights of others; his example cannot but be helpful to those who are younger, that have entered upon an arena fraught with many dangers to a healthful spiritual growth. Long a resident of West Philadelphia, his loss will be felt by a large circle of friends who will hold in lasting remembrance his many virtues.

E. P. C.

First month 1, 1888.

EMILY W. PRICE.

[The following was read at Race street, (Philad'a) First-day school, on the 1st instant.]

The opening of a new year is peculiarly a time of retrospect, and it seems fitting that to-day we pause upon the threshold for a moment's reverent reflection upon the life whose outward record closed yesterday with the laying to rest of our friend, Emily W. Price. To some of us even the name may be unfamiliar, for her work among us here ceased more than three years ago, and the life from which we would learn a lesson to-day was not made conspicuous by great deeds or brilliant performance, but by "patient continuance in well-doing." Her connection with this school covered a period of nine years, and many among us can bear witness to the devotion of spirit which characterized her work and her faithfulness to all the duties it laid upon her.

The physical frailty which was always her portion, while it seemed to loosen her hold on the things of this life, served but to give her a firmer grasp of things eternal and to make more clear her spiritual perceptions. Yet, let us not consider that her path was other than that which is common to us all, for the goal she reached was attained by a quiet acceptance of duty, by the overcoming of daily obstacles, by the rising out of bitter sorrows, and by dwelling in that strength of spirit which triumphed over the weakness of the flesh. We mourn that such a spirit is gone from our midst, yet how can we limit the influence of such a life or measure the ever-widening circle in which its power shall be felt? It must be that to all who have known the sweetness of her spirit, her memory shall ever be an inspiration to noble endeavor.

And especially weighty is the lesson of her life to those whose privilege it has been to breathe the atmosphere of that quiet chamber where during the past year she awaited God's silent messenger without a tremor,—satisfied since it was his messenger—

I know not what the future hath
Of marvel or surprise,
Assured alone that life and death
His mercy underlies.

And so, beside the silent sea
I wait the muffled oar,
No harm from Him can come to me,
On ocean or on shore.

I know not where His islands lift
Their fonded palms in air,
I only know I cannot drift
Beyond his love and care.

LECTURES ON ENGLISH LITERATURE.

A COURSE of three lectures on English Literature, by Esther J. Trimble Lippincott, is announced to be given at the parlors of the New Century Guild, 1132 Girard Street, (Philadelphia), on successive Third-days, as follows:

1st mo. 10, "Chaucer or the Dawn of English Literature."
1st mo. 17, "Ballad Poetry and the Renaissance."
1st mo. 24, "Shakespeare and the Golden Age of English Literature."

This will form a brief but interesting series, and will repay those who attend.

In connection with this we give an extract from the informal address, or "Talk," of E. J. T.-L. to the Young Temperance Workers, at Girard Avenue meeting-house, on the evening of 12th mo. 23, a week after the Whittier meeting. She said:

"Of the permanence and blessing of these gifts,—the precious thoughts, bestowed upon us,—we all had an assurance one week ago, when, in honor of the eightieth birthday of a poet whose

'Thoughts that breathe, and words that burn,'

have become portions of our treasured possessions,—here, in this house, on an evening so stormy that the stoutest, for any other occasion, would have been "snow bound" at home,—were assembled delicate, frail women and gray-haired men, aged, middle-aged, and young, all to honor one who had bestowed upon themselves and upon the world, treasures above the value of rubies,—nothing that the hand could grasp, nothing that would clothe or feed the body, but the fruitful coinage of a heart and brain beating steadfast and true to the interests of humanity,—thoughts which flashed in boldest utterance to denounce a nation's sin, thoughts which winged themselves like holy messengers into bruised and aching hearts, thoughts which made the sky seem bluer, and the whole earth fairer for their utterance."

Among the prominent Americans who died during the year 1887 were Henry Ward Beecher, President Mark Hopkins, Dr. R. D. Hitchcock, Bishops Horatio Potter, Alfred Lee, and William B. Stevens of the Protestant Episcopal church, Bishop Harris of New York and Daniel Curry, of the Methodist Episcopal church, Professor Spencer F. Baird, John G. Saxe, James B. Eads, John Roach, Henry D. Stanton, Vice-President Wheeler, United States Judge Woods, Elihu B. Washburne, James Speed, Ex-Governor Washburn of Massachusetts, and Ex-Governor Holley of Connecticut, Governor Bodwell of Maine and Governor Marmaduke of Missouri, Dr. Alonzo Clark, Dr. Edward L. Youmans, Paul Tulane, and Dorothea L. Dix, philanthropists, and finally ex-Secretary Daniel Manning.

ENGLAND AND INDIA.

Editors INTELLIGENCER AND JOURNAL:

THE indictment of English rule in India is no doubt well-founded, but it does not decide (or indeed profess to decide) the question whether that rule has been of advantage to the natives. On this point then, please hear what a native Hindoo, Nawab Sir Salar Jung, has to say in an article in the *Nineteenth Century* for October, 1887:

"The enlightened classes in India recognize that the rule of England has secured us against incessant internal strife involving a perpetual exhaustion of the resources of our communities; and, also, by a just administration of equal laws, a very sufficient measure of individual liberty is now our birthright. We have lost, as some think, our national liberties, which after all was merely the *liberty* enjoyed by despots to compel their subjects to make war on one another. This so-called liberty is denied us, but more than two hundred and forty millions of us have now the right to live our own lives on what lines we please and subject only to the control of a known written law."

He has, however, much to complain of in the article mentioned. As for famines, they have always been the scourge of the dense populations of the East; but the difficulty has been, as I understand it, not so much in the want of food in the country, as in the absence of means of transportation to convey it to the district where required. It is claimed that railroads already built will henceforth prevent famines.

It is to be remembered that a large part of India is still under the rule of native princes "protected" by the British government. These princes, though forbidden to make war, amuse themselves by keeping up enormous armies.

J. D. MCPHERSON.

Brussels, 12*mo* 20, 1887.

[The statement quoted above, from Sir Salar Jung, covers the points in which English control of India has been obviously most serviceable,—*i. e.* the opening the land to modern ideas, and the establishment of a higher usage as to private rights. But it must be noted that our friend does not quote the extensive bill of complaint which the Hindoo dignitary makes out. As to the Indian famines, the present writer regards them as due more to the extinction of the manufacturing industries than any other cause. The explanation of this is simple. Where the whole people is entirely engaged in agriculture, and the crops of some of them fail, these latter have nothing with which to buy food, but where there are manufactures, or other industries than agriculture, the return from these gives each community the means of purchasing. It is the experience of other countries that where agriculture is the sole avocation, famines are the most prevalent and most serious.—EDS. INTELLIGENCER AND JOURNAL.]

ONE of the smallest manuscripts in the world is to be sold in London. It is advertised thus: For sale, a grain of rice, with the whole first chapter of the Koran written on it; given to an English officer in 1812 by an American gentleman, who received it from an Arab sheikh, whom he had cured of a dangerous fever in the desert.

WHITTIER MEETING IN CHICAGO.

ESTEEMED FRIENDS: It is a little late, but I feel inclined to make a brief report of our impromptu Whittier meeting, held just after the close of our First-day meeting on the 18th. One friend read "The Eternal Goodness." Another read extracts from "Our Master," emphasizing the lines

"How vain, secure in all thou art
Our noisy championship!
The sighing of the contrite heart
Is more than flattering lip."

The poem of "Abraham Davenport" was read, reminding us anew that "duties are ours, events are God's,"—such a stimulating poem, urging to *present* duty,—to "occupy till I come." Favorite poems were spoken of and remarks made upon their influence on the hearts and lives of their readers.

Two or three spoke of the deep impression made in earlier life by the "Slave Ship." One young Friend spoke of the effect upon her of the poem entitled, "The Quaker of the Olden Time," which was read with deep feeling and a desire that the closing aspiration might be answered. "First-day Thoughts" was another selection, which would be an excellent verse to read in our First-day schools to the children who ask "what do we go to meeting for?" Many others were specified,—"Gone," "The Angel of Patience," etc. We wished we might have had hours instead of "thirty minutes." We wanted to hear "What the Traveler said at Sunset," "My Soul and I," "Forgiveness," "Andrew Rykman's Prayer," "The Call of the Christian." And where do we find so beautiful "A Christmas Carmen" as Whittier's? another poem our First-day school pupils should commit to memory and repeat in concert on that day. I know of nothing finer and truer, of the kind. As our time was limited we closed with the beautiful little poem, "At Last," recently published in the INTELLIGENCER AND JOURNAL, and which has found an echo in many hearts.

I wish every Friend might own and read Whittier. We have no truer exponent of our faith. One friend to whom his writings were almost unknown until recently, pronounces his book "priceless."

If the celebration of his eightieth birthday serves, as I believe it has, to render his writings much more extensively known, let us be thankful that he has been so long spared, and may realize in some measure here, the rich harvest of his faithfulness to the Truth given him to utter. H. A. P.

Chicago, Twelfth month 29, 1887.

THE city of Toronto has a population of 140,000 and prospers without Sunday horse-cars and without a single Sunday newspaper.

As we must render an account of every idle word, so must we likewise of our idle silence.—*Ambrose.*

A MAN'S conscience should be quick like the eye, and like the eye-lid to shut itself against an evil.

STUDY the grace of silence when provoked. Resolve to defer reply to another day.

WHITTIER MEETING AT CHAPPAQUA.

Editors INTELLIGENCER AND JOURNAL:

AT a meeting of the "Greeley Circle," held at Chappaqua, Westchestsr county, N. Y., on the 16th of last month, composed largely of Friends; a committee appointed at a previous meeting for the purpose, composed of Gabrielle Greeley, (a daughter of Horace Greeley), Jennie C. Washburn (a daughter of our valued Friend, Joshua B. Washburn), and Daniel D. Lillie, submitted the following beautiful letter of congratulations to be sent to the Poet Whittier:

"DEAR MR. WHITTIER:

May we be permitted to offer you our reverent, tender congratulations on your approaching birthday in the name of the Horace Greeley Literary Circle of Chappaqua, and with it a little remembrance painted by our Secretary, Miss Washburn,—a calendar to mark the days of 1888 for you—and may we also trust that among the many treasures of your house, it may still find some modest corner to rest, and there number only days of blessings to you and yours.

"We thank you for the beautiful lesson you have taught us in the past, for the sweet songs you have sung us, for the example of a life that burned with a holy zeal for the suffering and oppressed; and we pray that the future may bring you more of the blessing of the great Father, that as the days pass on, your life may become more and more golden with the love of God and man, that so at last, when death comes, it be not death, but only the lifting up of the golden sheaf of wheat to the Heavenly Father, there to go no more out forever.

"With great respect, sincerely yours,

GABRIELLE GREELEY,
DANIEL D. LILLIE,
JENNIE C. WASHBURN."

It occurred to me, that if space permitted in your interesting journal, the foregoing letter might be appreciated by its readers.

THOMAS LAWRENCE.

Nyack, Rockland Co., N. Y., 1st mo. 2d, 1888.

From The Christian Union.

THE QUAKER POET.

BY O. M. E. ROWE.

IN an old, historic town of Massachusetts, near the laurel-bordered Merrimac, there once stood a low schoolhouse, weather-beaten and brown. One Saturday afternoon, long years ago, the winter sun at setting lighted up the face of a little culprit arraigned before the desk, "deep scarred with raps official and the jack-knife's carved initial."

"John," said the teacher, "why don't you say your catechism with the other boys?"

He ran his fingers uneasily through his tangled black curls, and hesitated.

"John Greenleaf," he demanded, sternly, "why don't you say this catechism?"

The black eyes flashed, as he bravely said, "I can't! Father says I musn't, because it's not true."

The pupils listened breathless and awestruck, but the teacher's Puritan blood tingled as with an insult.

"John, if you don't say this catechism lesson, I'll chastise you."

"Thee can whip me if thee pleases, but thee can never make me say it!"

The lad's face betrayed the unconquerable spirit of his Quaker ancestors who had endured scourgings and been seared with red-hot irons "for righteousness sake." The teacher divined this, and discreetly dodged the issue by dismissing him every Saturday afternoon. This boy was John Greenleaf Whittier, and this incident of the boy strikes the keynote of the man.

A famous Englishman going to see Goethe composed fine speeches with which to greet him, but was so impressed that he said nothing. In girlhood I accepted an invitation of Mr. Whittier's niece to visit him, and the ordinary courtesies died on my lips when I beheld looking down upon me a face that seemed akin to the grand faces of Angelo's Sistine prophets. Familiar pictures give the snowy hair and beard, lofty forehead, powerful overhanging brows, dark cavernous eyes, slumbrous with intense fire, and the clear cut, strong lines of the face. They convey no hint of the light, tall, erectness, and nervous poise of the figure, or the whole impression the man gives of simplicity, strength, and centrality of character. Saturday, December 17, was his eightieth birthday, and the ripened sweetness of well-spent years makes life's afternoon serenely beautiful. The schools all over the country celebrated the event, and the famous Essex Club of Salem made it a grand occasion. They were denied the poet's presence, for he says, "Oliver Wendell Holmes is in his element at a banquet, and is seen at his best, but it's a kind of purgatory to me, and I cut a sorry figure." Sensitive and modest, he appreciates the honors bestowed by a loving public, if no part is demanded of him. His voice has rarely been heard on public occasions. At the Boston memorial service for Charles Sumner, after a brilliant eulogy by Carl Schurz and a glowing tribute by John Weiss, Whittier was introduced. The shy poet stood embarrassed, and briefly expressed his inability to speak worthily of his dead friend, and added, "If Sumner had known that I should attempt to speak here, he would have said of me what Burns said on his death-bed about the militia: 'Don't let that awkward squad fire over my grave!'"

With the backward glance age loves, he often recalls his childhood. He says the first sensation he made in the family was when an infant, and his child-nurse rolled him down the back stairs. Fortunately, she wrapped him in a blanket, and he was uninjured by his enforced gymnastics. He confesses to being a roguish boy, even pretending to hang the cat to tease his sister. One of his naughtiest episodes was suspending a turtle to the branch of a tree overhanging a brook, to see if it could escape. Days afterward he woke in the night in agonies of remorse over forgetting the turtle. At early dawn he scampered down to the brook, and was greatly relieved to find the creature none the worse for his prank.

He once went to school to a queer old pedagogue who taught in his own house, so the pupils overheard

the domestic infelicities. His father's library consisted of the Bible, "Life of George Fox," "Chalkley's Journal," and Sewell's "History;" "a book dear to every Quaker heart." Not a wide range for the boy's culture; and yet these stories of suffering for the truth, woven into the warp and woof of youthful thought, made lofty ideas for the man. A volume of Burns, which the schoolmaster loaned him, revealed the beauty of verse. The Shakespeare he bought with his first money opened a new, wide world of thought. Ten weeks a year at the district school only increased his longing for an education. With a laugh that ends in a sigh, he recounts his attempts to earn money for tuition at Haverhill Academy. He picked blueberries, and then cranberries and apples, but money was scarce, and nobody would buy. A farm-hand taught him to make slippers out of sheepskin. To get a single dollar he must make and sell twelve pairs of these "run-arounds," and it argues much for his pluck that he thus earned $30 in one winter. By working for his board ($1.50 per week), he had a year at the academy, walking three miles to his home on Saturday and returning Monday morning. He seems to regret none of his early hardships except undue exposure to the cold, which was part of the "toughening" then considered necessary. To this he attributes the neuralgic headaches from which he has suffered severely all his life.

When nineteen years old he taught school in Amesbury. Some of the pupils were older, and he was obliged to study. Possibly they took a malicious delight in bringing him mathematical puzzles to solve. Difficulties beset him. The good woman who boarded him slept in her kitchen, and when her early bedtime came he must perforce, go to his cold north room. Going to bed to keep warm, he studied till his candle burned out, and then passed a wakeful, anxious night. He could not go down to the warm kitchen till called to breakfast, so he worked on, shivering with cold. Not to solve the boys' problems was defeat, ignominy, and dismissal. He has carried a painful consciousness of his defective education, though he has largely remedied it by a wide range of reading. He has felt at a disadvantage with college-bred men polished by European travel. Yet he was an equal friend in that rare coterie of Emerson, Longfellow, and Hawthorne, who used to gather in James T. Fields' sanctum in the Old Corner Bookstore, and when he refers to those days there are tears in his voice. What a strange pathos grows into life's meaning for a man who has outlived his contemporaries!

Mr. Whittier began to write poetry as a bird begins to sing—because he must. His first poem, written on coarse paper with blue ink, was sent to the Newburyport *Free Press*, edited by William Lloyd Garrison. After printing several contributions, he visited his promising contributor and found him plowing. Garrison helped him to a position as proof-reader in Boston, and this was the beginning of better days. At various times he was on the editorial staff of several papers. While connected with a Whig publication, he was told to reply to Garrison's attack on Henry Clay as a slaveholder. When finished, he showed it, in great agitation, to a friend, who complimented him on a successful refutal of the great agitator's argument. With eyes glowing with intense feeling. Whittier tore the manuscript into shreds, saying, "I can't enter into a controversy with that man. He has God's eternal truth on his side!" He threw himself into the heat of the abolition contest, and sadly endured the estrangement of old friends. He was dragged from Faneuil Hall with Garrison, and insulted and pelted through the streets of Boston. When the mob burned his newspaper office in Philadelphia, he saved his life by crawling through the coal door in the cellar. Heredity and early influences made him keenly susceptible to injustice, and the fire and passion of his strong nature is always stirred by tyranny and wrong, but he has ever a gentle excuse for human frailties. Worn out with the conflict and enfeebled in health, he made a home in Amesbury, to be shared by his mother, sister, and aunt, and afterward the family life was enriched by the cheery presence of a little niece. His hospitality was of the truest type. He received Quaker preachers, abolitionists, and reformers of all kinds on equal terms with distinguished foreigners and men of letters. Charles Kingsley wrote from America: "Yesterday, I had a most loving and like-minded talk with Whittier about the other world. He is a rare old saint." What conversations the "garden-room" has heard around the Franklin hearth and old mahogany desk where the poet did so much of his best work! His home was a well-known refuge for fugitive slaves. His cordial sympathy brought to him all kinds of people with all sorts of trouble: poets seeking advice, needy young men wishing an education, friendless women looking for work, broken-down ministers, school-girls for his autograph, even an old man who thought he had committed the unpardonable sin, and a clergyman who had lost his faith in immortality. To the latter he said tenderly, "Thee can never find it by argument. It will never come from the outside. Thee must feel it. It comes only from within."

His sister Elizabeth was a woman of lovely character, with fine poetic insight. She was a stimulating but discriminating critic, and his constant companion. Here is a New England parallel to Charles and Mary Lamb. Mr. Whittier was never married, but, with exquisite tenderness, his heart sings of his youthful romance, undimmed by half a century, in "Benedicite." After the death of mother and sister, and the marriage of his niece, he went to live in Danvers, on a fine old estate called "Oak Knoll." It once belonged to Parson Burroughs, who was hung in the witchcraft epoch. The sounding-board from the church where he was convicted now covers a disused well, and his flintlock still stands in the old-fashioned hall. The grounds include a lawn, orchard, fountain, and a rose garden where the poet still loves to wield hoe and spade. Rare old trees surround the spacious house, whose verandas, with tall columns, suggest a Virginia mansion. Within is a delightful air of good cheer and comfort. Five congenial cousins, ladies of refinement, lend the grace of feminine sympathy to the home they delight to have him share. He is the

friend of every animal on the place, from the family horse to the timid squirrel. He often drives to Salem, but his visits to Boston grow less frequent every year. He is remarkably vigorous for threescore and twenty, but a growing deafness, alas! shows

"The little rift within the lute,
That by and by will make the music mute,
And, ever widening, slowly silence all."

He retains a lively interest in foreign affairs as well as national politics. He reads many hours every day, without spectacles, from the large variety of books sent him, with as keen a pleasure as ever. He enjoys theology and psychical research, and on a recent visit I found "Phantasms of Thought" open on his desk. Wordsworth grows dearer every year. "Browning," he says, "is a great poet, but leaves too many gaps for me to fill in, and fatigues me." He receives many visitors, sometimes twenty a day, with charming old-fashioned courtesy, but innumerable letters requiring an answer are a great bore, and, conscientious as he is, they cannot be answered. He retains his Amesbury home, leasing it to friends, and reserving intact his favorite rooms. He is taxed there, and returns religiously every election day, to the great delight of his old neighbors, who regard him as an oracle, and vote as he declares proper.

Mr. Whittier has a keen sense of humor, and responds quickly to a witticism. He is fond of playing games such as "Proverbs" and word games, but cares nothing for cards. He has never attended a theatre and rarely a concert, for, not being able to distinguish one tune from another, music is an unknown language—and yet what melodies his heart has sung!

Even when treating of the personality rather than the genius of Whittier, a word is needed about his poetry. A man puts so much of himself into his art that it is his best biography. Millet with his brush, and Whittier with his pen, have glorified with their poetic fancy the life out of which they grew. The poet discerns "in all familiar things the romance underlying," and sings of the huskers and shoemakers, the barefoot boy, the telling of the bees, the pumpkin, and the commonest things of life. He absorbs the stories rife in his boyhood, of Quaker, witch, and Indian, as the plant drinks the sunshine and dew. He is intensely American, and whatever touches his brother, black or white, he feels. His war poems have the stateliest rhythmic march and a rush of passion carrying all before it, for every drum beat vibrated in his heart.

In lieu of other data, it is easy to imagine a thirtieth century antiquarian rebuilding New England history, habits, and incidents from Whittier's verse, and the whole record of the slave and the war for his freedom is there. In spite of defects, his poetry—at once homely and refined—appeals to our noblest nature, for it is charged with the moral beauty of right action made strong by heredity and religious faith. A distinguished critic calls "Ichabod" "the purest and profoundest moral lament in modern literature."

The exquisite lyric of "Snow-Bound" is pure in sentiment, full of deep, quiet feeling, and tenderly warm with the inward light of memory and spiritual life. With picturesque touches he lingers fondly on the family group, till the pathetic sincerity touches the reader as if it were his own reminiscence.

Mr. Whittier speaks of his inward experience as simply as he does of stars and flowers. In the early poems are restless questionings of life's deeper meanings, and the eternal verities—"Are you sure?" Then the widening religious life rises to "I believe," and gradually the deepest, sweetest phase of "I trust" and "I love." Standing in the lengthening shadows to-day,

"All the jarring notes of life
Seem blending in a psalm,
And all the angles of its strife
Slow rounding into calm."

THE TWO WORDS.

BY I. E. DIKENGA.

ONE day a harsh word, rashly said,
Upon an evil journey sped,
And like a sharp and cruel dart,
It pierced a fond and loving heart;
It turned a friend into a foe,
And everywhere brought pain and woe,—

A kind word followed it one day,
Flew swiftly on its blessed way;
It healed the wound, it soothed the pain,
And friends of old were friends again;
It made the hate and anger cease,
And everywhere brought joy and peace.

But yet the harsh word left a trace
The kind word could not quite efface,
And though the heart its love regained
It bore a scar that long remained;
Friends could forgive but not forget,
Or lose the sense of keen regret.

Oh, if we would but learn to know
How swift and sure one word can go,
How would we weigh with utmost care
Each thought before it sought the air,
And only speak the words that move
Like white-winged messengers of love!

—*Sunday School Times.*

THE value of wind-breaks around orange orchards is again being discussed on the Pacfiic Coast. The Riverside *Press* says that "during the late heavy wind those orchards surrounded by tall eucalyptus trees came out of the ordeal with flying colors and little loss. On the other hand, orchards where these wind-breaks are found yield but tittle fruit on the trees next to the wind-breaks. Whether it is better to sustain the loss of a heavy storm at long intervals or a steady loss every year—that is the question"

THE old idea that sufferers from heart disease should avoid physical exertion has been dispelled by Prof. Oertel, who has successfully employed regulated exercise in the treatment of some forms. In a large proportion of cases, the nutrition of the cardiac muscle, as of the muscular system generally is thus improved.

A NEW YEAR GREETING.

A HAPPY NEW YEAR to all, to-day!
Though winds are blowing and skies are gray,
And snow and icicles fill the air,
While mercury stands—I'll not say where—
And each one's thinking, "Oh, dear! oh, dear!
A *pretty* way to begin the year!"

But I'll change that if you'll kindly wait,
For if you please, I am '88.

I promise you sun and skies of blue
(And rain and snow-storm and tempest, too).

But it lies with you, I'll whisper here,
To make me a sad or a merry year;
For all the sunshine that's in the sky
Will not bring smiles if you choose to cry,
Nor all the rain that the clouds can hold
Will tarnish a soul that's bright as gold.
And so whatever your score may be,
Just please remember, and *don't blame me*—
For once again, as I close, I'll state
I am

Yours submissively, '88.

—*Lillian D. Rice in St. Nicholas.*

ORTHODOX FRIENDS.

The London *Friend*, in its issue for Twelfth month, prints letters from three correspondents (Edward Pearson, Alfred W. Bennett, and Geo. S. Gibbs), disapproving the "Declaration of Faith" adopted by the Richmond Conference. Editorially, the *Friend* indicates its opposition to the document. It says: "It appears from the report of Indiana Yearly Meeting that, whilst many objected to *adopting* the 'declaration' without much longer consideration, all were ready to *approve* it without delay. We do not understand the distinction, unless 'approval' implies in Indiana what London Yearly Meeting would mean by accepting the report of a deputation or committee and entering it upon its proceedings, even though it did not agree with everything it contained. As a document of some historical value there would appear no serious objection to accepting the 'declaration' in this manner, but do not let us call it *approval*."

* * *

In regard to the proposed triennial General Conference, three other correspondents of the *Friend* express themselves strongly in opposition. One of them, Walter Sturge, begins his communication with the remark that "the Richmond Conference appears likely to entail trouble and perplexity upon the Society in England," and says that the suggestion for the formation of "a delegate body of ultimate authority and appeal," etc., as suggested by Dr. Nicholson, of Kansas, "seems to me an astounding proposition and wholly contrary to the spirit of our constitution;" and on this point he adds: "We are a pure democracy—in our Monthly, Quarterly, and Yearly Meetings, every member has (theoretically at least) an equal voice. Women are no doubt for the most part excluded, but that does not affect the argument for the present purpose. We allow of no important decisions by committees; and appeals relating to doctrine are by rule heard and decided by the meeting at large. . . . It is inconceivable that London Yearly Meeting, of two hundred years' standing, should allow a mere body of delegates, five-sixths of whom would be members of American Yearly Meetings, to have power to override its decisions as to doctrine, practice, and discipline."

* * *

Concerning this General Conference, *The Friend* itself, (London), remarks: "Many considerations are almost certain to prevent London Yearly Meeting from placing itself under the authority of any such body, which, in the nature of things, would most commonly hold its meetings on the other side of the Atlantic. It is evident, however, that the idea has already made way in America, as will be seen by the following extract from a letter in a late number of the *Christian Worker*:

> If we wish to be a set of religious guerillas instead of an effective and well-organized army of Christians, moving in unison upon the works of the enemy, we shall oppose a central conference. If we wish to do a great work in the army of the Lord, we shall seek to be organized and fight under a competent general authority and one general book of army regulations, all instituted by our own authority, delegated to our ablest and best representatives.

Experience is a good teacher, but her lessons are often more available to those who *watch* than to those who *make* experiments, and to the latter her charges are sometimes very high. We think the careful study of Church History, whether ancient or modern, should be sufficient to warn us all how we place our confidence in excellent organization, or strongly enforced regulations or competent generals. The history of the Episcopalian bodies, whether Roman, Lutheran, or Anglican, with their recognized heads and carefully-worded creeds; of the Congregational bodies, with each church by its constitution independent of every other church; of the Presbyterians and Methodists, with yet different modes of administration, all teach one lesson: that not according to their organization but according to the presence or absence of Christ by his Spirit among them, and not according to their creeds and church formulas, but according to their right use of the Scriptures of truth, have they been successful or otherwise in advancing the kingdom of Christ."

* * *

[It is no more than just to reprint the following article from the Chicago *Christian Worker*, organ of the Western Evangelical bodies of Friends. It is, as will be seen, a comment upon an editorial article in this paper. If we understand it, the *C. W.* entirely approves the omission from the Richmond Declaration of the doctrine of the Inward Light, and condemns it as being "Unitarianism." Can it be possible that any one can question the historic fact that that doctrine was the one fundamental thing in George Fox's preaching? or think that William Penn, when he declared it "the corner-stone" of the Friends' structure, was not qualified to speak for them?—EDS. INTELLIGENCER AND JOURNAL.]

"*Friends' Intelligencer* some time ago contained an editorial entitled 'Rejecting the Corner-Stone.' It was devoted to the action of the Conference in omitting to declare in favor of the doctrine of what is called the 'Light within; the voice of God in the

soul.' It is natural that those who believe in Unitarianism should make this criticism upon the action of the Conference. Unitarianism denies the Deity of Christ and the vicarious atonement, and makes salvation come by the development and growth of a principle within which they claim belongs to man by nature. When they preach salvation by the blood they mean salvation by the life, for the blood is the life; salvation by the life of Christ is salvation by his example, or, in other words, salvation by good works through following Christ as our example. Christ within is the 'Light within' as a principle or seed upon which the spiritual Christ works and brings the soul by gradual steps into favor with God. Much of this kind of teaching is found amongst those who call themselves Friends, but it is as far from the Gospel of Jesus Christ as taught by true Friends, as light is from darkness. It rejects the foundation of the Christian's hope, and leaves but a bleak and barren desert, instead of fresh green pastures and flowing streams. In nothing do we rejoice more as to the action of the Conference than in its teaching that man is lost, with no saving principle in his nature, and that through Christ's atoning blood, shed upon Calvary, is life purchased; that this precious boon is made available alone through faith in Him; that to this dead soul the Holy Spirit come with quickening power and leads man to a knowledge of his lost condition and, through repentance and faith, to the saving fountain. Did we not believe that George Fox and Robert Barclay and William Penn taught these same truths, we would reject them as not being Apostles of Jesus Christ."

* * *

The *Western Friend*, (published at Varck, Kansas, by C. W. Harvey, and organ of the Wilbur bodies in the West), regards the proposal of a General Conference of yearly meetings as "the most dangerous innovation yet proposed in this era of revolution in the Society of Friends." It goes on to say:

A glance at the principle involved in this proposed court of "appeal" shows that though not so named, its powers are to be those of Bishops and Popes in Episcopal government. Under the name of "delegates" this new body is to be composed of untitled Prelates, who with autocratic power from which there is no appeal, shall as a visible, human, ecclesiastical head dominate the Society of Friends, as the Pope does the church of Rome. Nothing could be farther away from the principles of true Quakerism.

The fact that a proposition involving so radical a change in the church government of the Society of Friends could be passed without protest by the Conference makes two things evident:

1. That a condition of Society now exists in the bodies represented at Richmond for which this proposition is a remedy.

2. It shows in a most alarming way the completeness of the downfall of the Society from the divine guidance and headship of Christ, which is the *crown of government* in the true Society of Friends.

The prevalence of a disposition everywhere manifest in the bodies represented at Richmond for the individual minister to accept the direction of committees as the primary evidence and authority for ministerial labor, and the adoption of decision by majorities has shown for many months a fatal and widespread disbelief and abandonment of this fundamental principle by which our doctrine of the headship of Christ was established and carried out in our system of ministry and church government. The condition of confusion and tendency to disintegration resulting from this apostasy, and consequent lack of spiritual guidance, has prepared the way for, and made necessary, this scheme of human headship. Having rejected, in fact, the inward revelation by which the headship of Christ prevailed in our church government, like apostate Israel they want a human "king" to rule over them and to lead them to battle.

THE SLAVERY OF A DEPRAVED APPETITE.

A NUMBER of years ago a family living in one of the large Atlantic cities advertised for a woman of all work. Among those who responded was a person apparently about twenty-seven years of age, tall and fine-looking, but singularly reticent. She answered the questions which were asked in the fewest possible words, and asked that she might be tried, stating that if they were not pleased with her at the end of a week she would take her departure, and no harm would be done. When asked for a recommendation she said that she had not lived at service for a number of years, but had supported herself as a seamstress. After some hesitation they took her at fourteen dollars a month.

Everything she did was perfectly done; the kitchen was kept as though intended to be ready for exhibition at all hours of the day or night; the cooking all that could be desired; the "up stairs" work neatly, regularly, and faithfully performed. But never once did she voluntarily enter into conversation with any of the members of the family. Questions were answered respectfully, but without a superfluous sentence or syllable. Directions were always understood.

She had a singular dislike for company, and reduced her service in waiting on the table in most ingenious ways, until, while everything seemed to be provided, she did not appear more than once if company were present, and that when the final course was brought on.

She never went out, never received a caller, and the family would have thought that they had found the domestic treasure of the world had it not been for a mysterious air that continually surrounded her, the influence of which upon the younger members of the family, who would have been glad to talk with her, became somewhat depressing. The remarkable fact was that she never received a letter by mail.

This state of things continued for about two months, when the family made a visit to a country place which they had, with a view to preparing it for the coming season. The lady of the house stated that they would not return until eight o'clock; but, accomplishing their object in time to take a six o'clock train, they reached the house a little after seven. As they drew near they heard music, and entering with

a night-key, they stood in the hall, and heard the most beautiful strains of one of Beethoven's symphonies, or some equally well-known and difficult composition. They had never heard an amateur performance that indicated more skill. With curiosity intensely excited, they peered through a crack between the folding doors, and saw their cook and maid-of-all-work seated at the piano and entirely absorbed. After a little while they made a sound, she rose, blushed crimson, and went down into the kitchen. A few days afterward she was asked by her mistress where she learned to play, but made no reply. The mystery was intensified, but no solution was reached.

About two weeks later she disappeared. At the end of the second day she returned, and stated that she had been taken sick while calling upon a friend, and had been unable to leave the house until that afternoon. Of course, the matter was considered satisfactorily explained, and all things went on smoothly for about a month, when she disappeared for three days, returning with the aspect of one who had been quite ill. Similar explanations were made. In two weeks more she went out in the afternoon, and returned that evening obviously intoxicated.

The next morning the head of the house said to her, "Do you know the condition you were in last night?" She burst into tears, and said that she did. On inquiry, she stated that she was the daughter of an estimable and wealthy citizen of Boston; that she had been well educated, particularly in music, but had contracted the habit of drinking by the free use of wine in the family, and also by having had stimulants prescribed for her. She further said that she had disgraced her parents, and had determined to earn her own living. Her knowledge of cookery had been acquired partly from lessons which had been given by a professional to ladies, and partly by a natural love for the work.

She besought our informant to give her another trial, which he gladly did. But the intervals became shorter between her disappearances, and in a comparatively short time it became necessary to discharge her, and she was never heard of afterward.

The above account was communicated to the editor of this paper by the family who employed her, a short time after her departure. In its essentials it is as told to us; the language, of course, being that of the writer, and not of the original narrator.

No slavery ever invented by man is equal to that produced by rum, whose chains are still strong and often irresistible when they have been invisible for months, and when the slave has finally thought himself free.—*Christian Advocate.*

THE CATACOMBS OF ROME.

FROM an illustrated article by Professor Philip Schaff, in the *Century*, we quote the following extracts: The Roman Catacombs are long and narrow passages or cross-galleries, excavated in the bowels of the earth, in the hills outside and around the city, for the burial of the dead. They are dark and gloomy, with only an occasional ray of light from above. The galleries have two or more stories, all filled with tombs; and form an intricate net-work or subterranean labyrinth. Small compartments (*loculi*) for the reception of the dead were cut out like shelves in the perpendicular walls, and rectangular chambers (*cubicula*) for families or distinguished martyrs. They were closed with a slab of marble or tile. The more wealthy were laid in sarcophagi. The ceiling is flat, sometimes slightly arched. Space was economized so as to leave room usually only for a single person, the average width of the passages being two and one-half to three feet. This economy may be traced to the poverty of the early Christians, and also to their strong sense of community in life and in death. The little oratories with altars and Episcopal choirs cut in the tufa are probably of later construction, and could accommodate only a few persons at a time. They were suited for funeral services and private devotions, but not for public worship.

The furniture of the Catacombs is instructive and interesting, but most of it has been removed to churches and museums, and must be studied outside. Articles of ornament, rings, seals, bracelets, necklaces, mirrors, tooth-picks, ear-picks, buckles, brooches, rare coins, innumerable lamps of clay (terra cotta) or of bronze (even of silver and amber) all sorts of tools, and in the case of children a variety of playthings were inclosed with the dead. Many of these articles are carved with the monogram of Christ or with other Christian symbols. (The lamps in Jewish cemeteries generally bear a picture of the golden candlestick.)

A great number of flasks and cups, with or without ornamentation, are also found, mostly outside of the graves and fastened to the grave-lids. These were formerly supposed to have been receptacles for tears, or, from the red, dried sediment in them, for the blood of martyrs. But later archæologists consider them drinking-vessels used in the agapæ and oblations. A superstitious habit prevailed in the fourth century, although condemned by a council of Carthage (397) to give to the dead the eucharistic wine, or to put a cup with the consecrated wine into the grave.

The instruments of torture which the fertile imagination of credulous people had discovered, and which were made to prove that almost every Christian buried in the Catacombs, was a martyr, are simply implements of handicraft. The instinct of nature prompts the bereaved to deposit in the graves of their kindred and friends those things which were constantly used by them. The idea prevailed also, to a large extent, that the future life was a continuation of the occupations and amusements of the present, but free from sin and imperfection.

On opening the graves the skeleton frequently appears even now very well preserved, sometimes in dazzling whiteness, as covered with a glistening glory, but falls into dust at the touch.

THE ills we see,
The mysteries of sorrow deep and long,
The dark enigmas of permitted wrong,
Have all one key:
This strange, sad world is but our Father's school;
All chance and change his love shall grandly overrule.
—*Havergal.*

CO-OPERATIVE BUSINESS METHODS.

THE firm of Haiens, Jones & Cdbury, manufacturers of plumbers' supplies, etc., in this city, announced to their employés, at the opening of the year 1887, that they would give them a share of the profits of the business. They have now issued a circular stating that the same plan will be followed during 1888, and adding as follows:

"Business in our line has been reasonably active, and the profits above the average. This is largely due, we suppose, to the fact, that every one working with us receives a share of whatever profits are earned and in announcing, as we hereby do, a second coöperative, or profit-sharing year to end 12 mo. 31st, 1888, we desire to impress on every one the importance of care, in fully employing the time set aside for work, and in intelligently using materials and machinery to avoid waste, that future results shall be at least as satisfactory as the present experiment has been.

"The profits of business to-day are so small, the amount able to to be realized from the sale of product so little above the actual cost, that the success or failure of a firm depends very largely on the faithful and conscientious discharge of duty of each and every one in its employ.

"With his wages for the currrent week, each person who has worked with us for 6 months, will be handed a certicate for the share due him out of the profits of 1887, which will be seven and one-half (7½) per cent. upon his total wages for the year.

"The total amount of wages paid by the firm for the year to its 250 employés has been $125,000 and the dividend of 7½ per cent. now declared, requires the total sum of $9,375 to pay it.

"This dividend will be payable in cash on 1st mo. 21st, 1888, to those persons only to whom it is due; but such as wish to leave the amount with the firm can do so and they will be paid interest on such amounts at the rate of 4 per cent. per annum."

It is estimated that the cost of a single day's fog in London for gas alone is $40,000. On a recent foggy day the London gas companies had to supply 150,000,000 feet, or nearly 50,000,000 feet more than the usual amount.

It is not the burden, but the over-burden, that kills the beast.—*Spanish.*

NEWS AND OTHER GLEANINGS.

—In reply to a request from a Pittsburg newspaper, the *Volkoblatt*, for a New Year sentiment, Andrew Carnegie sent the following: "The Old European continent is an armed camp, its millions training how best to kill each other. The new American continent is a smiling garden, its millions cultivating the arts of peace. The dynasties of the Old World sink deeper and deeper under the load of debt. The New World is troubled how to dispose of its su plus. In despotic Europe anarchists and nihilists abound—the natural result of unjust laws. The germs of these pernicous growths, transplanted to the republic, wither and die. For these and many other mercies, rejoice; for of all lands America is the most favored."

—The *Drovers' Journal*, in its annual review of the live stock trade of Chicago, shows receipts of 2,378,000 cattle, 68,500 calves, 5,480,000 hog and 1,362,000 sheep. The receipts of cattle, calves, sheep, and horses were the heaviest on record. Compared with 1886 the receipts show an increase of 415,000 cattle, 15,000 calves, 154,000 sheep, and 18,000 horses; and a decrease of 1,180,000 hogs.

—Charles Neurer, United States Consular Agent at Gera, Germany, has transmitted to the State Department an interesting report upon the industries of that place and upon the condition of the population employed in those industries. It is extremely difficult for the workman to make both ends meet, and there is no question, says Mr. Neurer, that the position of the American workman is eminently superior in all that pertains to the happiness and well-being of himself and family and in his ability to save for the future. The rate of wages paid to employes in factories at Gera ranges from $6 a week for turners in accordion factories to 42 cents a week paid to children in tobacco mills. With the exception of bread, which can be bought for two and a half cents a pound, the staple articles of food are dearer in Gera than in the United States.

—During 1887 there were granted in New York city, 4,374 permits for new buildings, to cost $67,068,020. This is an increase on 1886 of 279 buildings, and on the total cost of $9,719,287. There are now in New York city about 116,200 buildings altogether.

—Laura Dewey Bridgeman, who can neithersee, speak, nor hear, on the 21st inst. held a reception in commemoration of the fiftieth anniversary of her entrance into the Perkins Institution for the Blind, in South Boston. She entered the institution when she was eight years old, and her education was an extraordinary triumph over physical difficulties.

—Ground was broken on the 21st inst., at Piedras Negras, Mexico, for the great international bridge across the Rio Grande to Eagle Pass, Mexico. The structure is to be of iron and steel, and accommodate both wagon and railroad travel.

—A telegram from Lima, Ohio, says the Standard Oil Company is about to begin the construction of an immense pipe line from that city to Chicago. The right of way is nearly all secured, and the work will begin in a few days. Over 1000 tanks will also be built for the storage of oil from the northwestern Ohio field.

CURRENT EVENTS.

A dispatch from Meadville, Pa., on the 31st ult., says: The fast Chicago express on the New York, Pennsylvania, and Ohio Railroad, consisting of two sleepers and five day coaches, collided with freight train 23, consisting of two engines and sixty cars. three miles west of this city, at 8 o'clock this morning. Five persons were killed outright, among whom was a passenger. Thirteen others were injured, nine of them fatally.

On the 30th ult., Governor Beaver, of Pennsylvania, issued a proclamation announcing that the total amount of the State debt cancelled for the year ending November 30, 1887, amounted to $1,418,511. At the close of the same year the total debt amounted to $15,840,471.28, and assets of the Sinking Fund to $10,684,362.43. This leaves Pennsylvania with a debt of $5,156,108.85.

There was a heavy snow storm throughout the Northwest on the 31st ult. In many places freight trains were abandoned and passenger trains went out with two locomotives. At various points in Minnesota, Wisconsin, and

Dakota it was considered the worst storm of the season, and was accompanied by unusually low temperature. The storm was also heavy in Southwest Virginia. Throughout Vermont the weather was very cold, the thermometer marking 32 below at Montpelier, and ranging from 22 to 30 at other points. There was a rain and sleet storm in Pittsburg, and up to midnight forty persons were reported to have received painful injuries by falling on the icy pavements. Two men had their skulls fractured.

MAIL advises from China state that a powder magazine, containing 40,000 kilograms of powder exploded at Amoy, on November 21, doing immense damage. The force of the explosion was very great, and a fourth of the buildings of the town were laid in ruins. Fifty soldiers were blown to atoms and several hundred inhabitants were killed.

IT is stated that the Government of Japan has decided to call in all the gold and silver coin which it has heretofore kept deposited in banks in foreign countries, in order to pay off public debts abroad without making it necessary to send out money from Japan for the purpose. Heretofore this coin has been allowed to remain in banks abroad without drawing interest.

NOTICES.

*** Philadelphia Quarterly Meeting Committee, to visit the branch meetings thereof, will attend West Philadelphia meeting, corner of 35th and Lancaster avenue, First-day morning, First month 8, 1888, at 10.30 o'clock.

*** Friends' Charity Fuel Association meets this (Seventh-day) evening, at 8 o'clock, at 1520 Race street.

WM. HEACOCK, Clerk.

*** Friends' Home for Children, 4011 Aspen street. There will be religious services at the Home next First-day, First month 8th, at 3 p. m. Isaac H. Hilton and others are expected to be present. All are cordially invited to encourage us with their presence.

*** A meeting of the Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting, will be held at Race street meeting-house, Seventh-day, First month 21, 1888, at 1 p. m,

JAMES H. ATKINSON, } Clerks.
ANNIE C. DORLAND, }

PUBLISHERS' NOTICES.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

This powder never varies. A marvel of purity, strength, and wholesomeness More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about* 3300 *persons, reaching, say,* 15,000 *readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞ *When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.* ☜

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.

FRIENDS' INTELLIGENCER and JOURNAL

Memoranda for those who will aid in Sending in Subscriptions.

1. Rates for the Year 1888.

   Single subscriptions, $2.50 per year.
   8 copies, $2.25 each, a year.
   15 copies, $2.00 each, a year.
   ☞Note the change in last item from previous years.

2. "No Agents."

   We recognize no one as our "Agent" with the single exception of Friends' Book Association, 15th and Race Sts., Philadelphia. Those Friends who get up Clubs for the paper must be regarded as the agents of those subscribing through them. When money reaches our hands we receipt for it our selves, and no one, (except F. B. A., as above), is authorized to receipt for us.

3. Concerning Clubs.

   a. It is, of course, our desire to get new subscribers, and retain old ones. Unless Clubs help to do one or both of these things, they do not aid the paper. We therefore hope to have in them (in the $2.00 Clubs, especially) *some new ones.* This is difficult, of course, in some localities, and in such we will not *exact*, though we *desire* it.

   b. Names and money, for clubs, should be sent to us in *one, two, or at most three*, instalments. We can wait till the person getting up the club is ready with the money, but we cannot accept single names and money, (unless for *new subscribers*), at intervals through the year, on Club accounts, and in renewals, please use the same name as the paper has been coming to ;—if for any reason the name is changed, please call our attention to this fact.

5. Discontinuances.

   We do not discontinue a paper, (unless for continued delinquency in payment), without the order of the subscriber. Persons wihing to "stop" *must so notify us.*

THE LIFE-SAVER.

I DO not know the deadly depths within,
Where lurk my heart's capacities of wrong;
I cannot fathom what I might have been,
(Abandoned to myself to drift along
The seething floods, whose cruel undertow
Clutches unwary souls), had not the hand
Of the strong Swimmer, buffeting the flow
Of death, upheld my life and drawn to land.
I only know that from my fatal self
One who is strong preserved me! and I owe
My rescuing to Him, who treads the shelf
Where sea meets shore along this treacherous coast
To watch the over-bold, who dare the woe
Of waters, lest their powers give up the ghost.

—*M. Woolsey Stryker, in S. S. Times.*

THE WORSHIP OF FRIENDS: THE MINISTRY.[1]

THE true Quaker is quiet, not that he may dream his life away as a kind of spiritual "lotus eater," but that his soul may be enabled to reflect the heaven of God's will and love as a perfectly still lake reflects the blue sky overhead; and this quiescence is instantly turned into intense activity of apprehension as soon as the Spirit of God is felt to move upon the face of the waters; and this activity of apprehension passes on again into an activity of outward speech whenever a message from above becomes clear to the mental ear, and the loving command is felt to accompany it, to pass it on to those around.

And in the very various gifts given to the living Church, we shall, undoubtedly, find that besides the gifts of prophecy, exhortation, prayer, and the sweet and blessed gift of personal testimony (not so much valued as it ought to be), and other gifts, which are enumerated in Paul's Epistles to the Roman and Corinthian Churches, there is great value in the gifts of pastors and teachers. Of the former, it seems to me, there might, with advantage, be an indefinite number in every Church, brothers and sisters who shall care for the young, the newly converted, the sick and aged, the sorrowful, the poor, the erring, the penitent; and these pastors may exercise their beneficent gift without necessarily preaching in meeting at all. When those who are thus gifted can work in concert, and help one another, it is still more beautiful than when they work separately; and a pastoral committee seems quite Scriptural and right where it may be practicable. But the gift of teaching is also of great consequence; the consecrated intellect is to be esteemed, as well as consecrated learning, and knowledge of the letter of Scripture should go with a knowledge of the Spirit that gave it forth. Probably our Society has suffered from a depreciation of this gift among us, as if the intellectual powers given by God were in some way opposed to the spiritual, and that to have the one implied a lack of the other, and *vice versa*. This is a fatal mistake, and very dull meetings are often the result, for when persons neglect any part of their nature, which God has given to be sanctified and used, there cannot but be a great loss. A carelessness has crept in among us also, not simply in the use or disuse of our thinking powers as applied to the things of God, but in our use and study of Scripture, and we believe Bible-schools and Bible-reading meetings will often prove very helpful, as preparing for and feeding our meetings for worship.

No one can read the descriptions of the meetings of the early Friends without seeing how much ministry there was in them of a decidedly teaching order, and how far they were from disusing their ordinary faculties of reason and thought in the work of preaching, while always subjecting them to the control of the Spirit of God. And we would suggest that in those parts where the Society of Friends is languishing, or dying out, the way to resuscitate it is not by appointing supported pastors (using the word in the general sense), or in any such way returning to that from which we came out, but by encouraging an intelligent and consecrated ministry, being very careful to find a place for every gift, and specially tender over those entrusted to the young and timid. One member cannot suffer without all the members suffering; and it is a painful fact that very often tedious and prolix speakers have been allowed to speak, year by year, without adding anything to the Church, except weariness and the exercise of the gift of patience, while fresh living testimonies and beginnings of ministries that should have been welcomed, have been discouraged and "eldered," because some shibboleth of speech or appearance was wanting. No wonder such meetings have dwindled; let us take warnings by such mistakes and avoid right, as well as left hand errors.

The Society of Friends has a mission still, though suffering somewhat from the decrepitude of age. Her testimonies have, indeed, been allowed to tarnish through want of faithfulness; but they are pure gold, and from pure gold the tarnish will always rub

[1] An extract from a Tract entitled "The Supremacy of Christ in His church, with especial reference to the question of Worship," by Helen B. Harris, Haverford, Pa., (the wife of Prof. J. Rendell Harris, of Haverford College, and an "Orthodox" Friend.)

off easily. Let her step forth again with an unwavering and unfaltering voice, asserting that supremacy of Christ in his Church, not by man, but by the Spirit, and then let her make room in her midst for the free and full working of that Spirit, even if it first speak in loving reproof for past slothfulness. Let every member share the burdens of the rest, and not be afraid of the poor coming among us, remembering how the Lord blessed and loved them. And if a brother or sister be poor in this world's goods, but rich in faith, and the Lord call them, from time to time, to service for which money is needed, according to our ability let us give it, not grudgingly, but of a willing mind, for God loveth a cheerful giver. Let us reach out our hands, also, to those that are afar off, as well as those that are nigh, and encourage a living interest in all such foreign service in the Gospel as the Lord shall grant us the privilege of doing for him, not running in our own will and strength, but carefully waiting for and watching his guidance, which will not be withheld.

We have, also, I believe, a special service as a Church (if we are faithful to our privilege), in offering the hand of loving sympathy to that large class of persons among us now, both of the educated and uneducated classes, but especially the former, who are what is commonly called "Agnostics." Often it will be found that they have simply recoiled from some form of priestly assumption or another, and have relinquished a traditional faith in Christianity, because they have never seen it simply professed and lived out. They know something of the teachings of Jesus, and they think his mission failed, and he could not have been Divine, because those whom they have met as professors of Christianity have, by word or life, denied him. The doctrine of holiness as possible, nay, necessary for man, is what they need. Priests have mostly been very shy of this doctrine, for it is subversive of their system; but the Friends, if faithful to their trust, must testify to it in their word and life, and this testimony always draws hearts to Christ, when it is done in singleness of purpose and true humility. The simplicity of our worship, and even our times of silence are adapted to these minds also, weary of many forms and many voices.

But if we would be revived, let us make up our minds that we have to be more aggressive than of late years. We must not be afraid of proselytizing, but be very glad and thankful every time we make a convert. We must not be sectarian, and yet we must believe in and promulgate the highest and the best we know, and if that is Quakerism (using the word in its broadest and best sense) we can't help it, and it is not a fault to be ashamed of, so far as we can see!

We will, now, as we draw our remarks to a conclusion, recapitulate the kind of meeting to which we would love to invite all seeking souls, and which has from time to time been realized among us. It has silence for its ground work, and love for its atmosphere, and tenderness and gentleness for its guardian angels; all are brothers and sisters, though some older and more gifted than others have double honor, but no one presides or is preëminent. Large gifts and eloquent speech have their place, but so also has the stammering tongue, the few trembling words, the simple expression of feeling, the broken prayer. There is room for all to which the Spirit prompts, and no one is hurried and no one is excluded. There is no excitement, but there is intense earnestness, and the silence is one of condensed and concentrated life. No one is there with a prepared sermon, and yet what may be given to some one to utter may be the result of years of careful thought and prayer, only now brought to its perfect focus.

Among the company there is perhaps one who sits with his head bowed in silence the whole meeting long; others have spoken, but he has scarcely moved. Who is he? The most gifted of all present, but he was engaged in inward communion and contemplation, and it was the Lord's will that to-day he should drink in directly and from others, and give out nothing vocally himself, and he has accepted the privilege of silence as he often accepts that of speech. How beautiful such a picture is as it rises to our mind's eye; and, in their quaint ancient dresses and rough meeting-houses, we love to think of those brave men and women who first crystallized into such an actual form of worship the absence of all form; doing nothing as it seemed, that God might do all in them! They were not just like the first Church, those early Friends, for some of the gifts of early times had not been given them, but the great principle was the same; and very noticeably reproduced was the great love between themselves that characterized them as it did the early Christians, so that it might have been said, "See how these Quakers love one another." How they esteemed one another's gifts, and how they watched over one another for good; and what a close guard they kept over themselves and one another, that all might learn to feel the slightest monitions of the Master's guiding will, when it was felt, to offer instant obedience.

For Friends' Intelligencer and Journal.

FRIENDS' MEETINGS AT FISHERTOWN, BEDFORD COUNTY, PA.

HAVING received a kind invitation from the Friends of Fishertown, Bedford county, Pa., to be present at the opening of their new meeting-house on Christmas day, and feeling the liberty to accept it, I left my home on the morning of the 23d ult. for the purpose, and as many of your readers do not know where Fishertown is located, and what route it would be necessary for me to take to reach there, I will briefly describe it. I went first to Canandaigua, N. Y., where the Pennsylvania system of railroads terminates in that State, and after an hour's delay took a train on the Northern Central Railroad for Elmira, at which place I had to wait three hours before I could get a train for Harrisburg, which was my next point to reach—and when I arrived at 10 p. m., I had the pleasure of seeing their beautiful new station building, and of waiting in it for my train to go to Huntingdon, until 3.30 a. m. This was not a little tedious, as I could get but little sleep, owing to the continued coming in and going out of the people to take the various trains that were frequently passing.

Taking the train for Huntingdon at the hour last named, I arrived there at 6.30 and then had to wait two hours more,—at the expiration of which time I took a train over the Huntingdon and Broad Top R. R. to Bedford, where my friend Uriah Blackburne kindly met me and conveyed me to the home of Azariah Blackburne at Fishertown, arriving between 1 and 2 p. m. While this route is not the nearest for one to take, its connections are the best and it can be accomplished in the shortest time. The scenery all the way is generally picturesque, particularly in the summer season, and still at this season of the year, it has a beauty of its own. The mountains, clad in snowy white, with the trees dismantled of their leaves except where here and there interspersed with the evergreen hemlock and pine, while over the ground lay scattered timber which had either fallen from decay or had been cut for the bark for tanning purposes, afforded much food for thought which relieved the tedium of the journey,—and deepened my reverence for the Power who, unseen by mortal eye, works all these changes by laws instituted by a Wisdom we cannot fathom.

First-day morning opened very pleasantly for a winter morning, and as the hour of meeting time approached the people came from different directions, and some many miles, to gratify a curiosity regarding the manner in which the Friends would "dedicate" their new meeting-house, which by the way I will first describe before noting the character of the services.

The house is beautifully situated on a commanding knoll, and can be distinctly seen from quite a distance on every road leading to Fishertown. It is a strong frame building, veneered with brick, and hence appears to be a brick house, and in size is 32 by 60 feet, and two stories in height. The lower story is for the meeting room and the upper is designed for a school room. The house stands with the gable end to the road and in this end is the entrance to the meeting rooms, and the stairway to the upper room, —some 10 or 12 feet, being taken for the vestibule, cloak room, and stairway. The meeting room is of good height and well finished, wainscoted all around, and the wall above the wainscoting neatly papered. The wood-work and seats are all painted or nicely stained a dark cherry. There is no partition to mar the symmetry of the room: as they expect to hold all their meetings in the future jointly none is necessary.

Very near the hour appointed the room was filled to its full seating capacity, from 225 to 250, by a mixed congregation so far as regards religious views, and my mind was brought under a more than usual feeling of responsibility, under that sense that so many of these people, unaccustomed to our simple form of worship, (many of whom had come from the curiosity before alluded to), were looking to the instrument to satisfy that curiosity and the cravings of their hearts. When the time seemed ripened, I arose with the expression: "We have gathered here to commemorate one event and to inaugurate another in the religious history of man—to commemorate the birth of Jesus, and to open a new place of worship for a sect who are by many regarded as singular in their mode of worship; and I feel it to be my mission this morning to call your attention to the reason why, as it appears to me, it was necessary for Jesus to have been sent as the Messiah or Anointed of God to men, and why it was necessary such an organization as that of the Society of Friends should be called into existence, and what are their distinctive principles which those who will worship here will be expected to enunciate and live out among you." I then reviewed the creation of man, calling their attention to the account as found in the Scriptures as being an allegorical description of the moral and spiritual state of every man that has been created and endowed with rational powers. That the garden of Eden was not a located place on the earth, but might be called the heart of man by which was represented the affections or desires of the man, and the trees of the garden were the powers, passions, and dispositions belonging to man's physical and intellectual nature; that the partaking of the fruit of the tree of knowledge of good and evil represented the exercise of the human will, independent of the directions of the Divine Will, and that it was designed in the beginning that man should look to the revelation of the Divine Will made through the spirit or grace or Christ of God, for a knowledge of good and evil; for to conclude that when God forbade our first parents to partake of the fruit of the tree of knowledge of good and evil, and then did not provide a means whence they might obtain that knowledge, and hold them responsible for doing evil, would be to charge him with injustice and demanding an absurdity. I then traced the history of the Jewish people as we find it recorded in the Scriptures, showing the gradual departure from depending upon this immediate revelation of the spirit of truth to its culmination in the demand for an outward Mediator which was granted in Moses and through him the giving of the law on the tables of stone, and from that time the falling away more and more into an outward observance of the letter, and more and more ignoring its spirit. Then, fulfilling the prophecy of Jeremiah regarding the new covenant, Jesus came to set us that perfect example of a humanity, with like powers and passions and dispositions as ourselves, yet under such perfect control of the Divine spirit within, that he was kept free from the commission of sin. And hence it was not inappropriate that we should commemorate the beginning of such a life fraught with so much to encourage the human family to follow his example, so that by a like faithfulness we may be kept in harmony with the laws of God as they are unfolded to us.

I then traced briefly the condition of the Christian Church in its gradual departure from the purity and simplicity of the teachings of Jesus as found even in some of the expressions of the Apostles writing under the Bishoprics, culminating in the Roman Hierarchy, carrying it into the dark ages of apostacy. Then the first breaking of the bonds by Luther and his compeers in establishing Protestantism, which still was more or less wedded to outward rituals and the doctrines established by the ecumenical

councils of the Roman Church. This made it necessary for the calling of George Fox and his compeers into the service, to bring the attention of the people to the original design of the Creator to save and keep man through an obedience on his part to the immediately revealed will of God to him, as he should be able to comprehend it for his spiritual needs. This I told them was the principle upon which the Society of Friends base their religious ideas and action, and it was to continue this testimony and to furnish to the world examples of pure lives as the result of obedience to the revelations of the Spirit of God,—His Grace, His Christ in man,—that the Friends of this place had erected their house in which to worship, that through such a worship they might aid each other in living true to their profession and inducing others to leave their forms and rituals and embrace their more simple ways; and then closed my message with a tender counsel to the Friends composing that meeting to be true to their profession, to be tolerant of others' views, to mingle in social feeling with them, to cultivate a firmer and truer friendship with all, and thus win by their loving demeanor and simple worship others to unite with them, in bearing such a testimony to the world. As I closed a sweet precious solemnity overspread the meeting, as they had listened to the delivery of the testimony with deep attention, and there being no other public speaker present, after the announcements which had been made the meeting closed under the feeling that the Master had been in our midst, and we had by him been blessed. I had been requested before leaving home to remain a few days with them, so the Committee of Centre Quarterly Meeting, who were empowered to appoint some meetings, had notice given of a meeting on First-day evening, and one on Third-day evening, both in the new house, and I had consented to deliver a Temperance address on Second-day evening in the same house, and subsequently arrangements were made for a Temperance meeting at New Paris, some four miles away, for Third-day afternoon.

Promptly at 7 p. m., the meeting gathered on First-day evening and fully as many were present as in the morning meeting. The message to them was regarding "God is love," and man's highest duty was to love God, instead of fearing him. Again, the Gospel stream flowed through the instrument freely and with baptising power, spreading the same deep solemnity over the meeting as in the morning.

Second-day evening, the house was nearly or quite as well filled as on the previous evening and they listened with strict attention to the address.

Third-day evening, the house was again nearly full and this time their attention was closely called to the teaching of Jesus as to how and by what means salvation is to be obtained, as illustrated by his answer to the young man who came with the inquiry—"What shall I do to inherit eternal life?" And, again, there was a full and free flow of the Gospel stream, solemnizing and tendering the meeting, bringing forth after it had closed many expressions of satisfaction.

Thus closed a mission which was to me one of deep baptism of spirit and much labor, but crowned with so sweet a peace that it will live in memory as one of the bright spots in my life's journey. And I could feel that all of us who had mingled together on those occasions could acknowledge that it was good for us that we had been together, and that we were thereby strengthened to work more earnestly for our own advancement and that of others, in the attainment of the crown that is promised as the reward for faithful obedience to the Divine Law.

JOHN J. CORNELL.

Mendon Centre, N. Y., 1st mo. 1.

THE SEA OF GALILEE.

THE description of the Sea, as given below, is from the pen of H. B. Tristram, whose article in a recent number of the *Sunday School Times* is too long for entire insertion in the columns of this paper. The route usually taken by western travelers is from Nazareth by way of Cana and Hattan. The road is not picturesque nor romantic; its chief interest is found in it having been so identified with the life and labors of the Great Teacher. H. B. T. says:

"We pass under the gnarled old olive trees of Cana—old enough, we might fancy to have stood there eighteen hundred years ago—and descend into the rich plain of Sahel el Atl. We then mount to the upland plain of Hattan. Next we see Irbid, the Beth-Arbel of the Old Testament. We walk on for another hour or two. On a sudden there bursts on the sight a picture, not of majesty or grandeur, but of calm repose and peaceful beauty, scarcely to be equalled elsewhere. As by a sudden flash, far below us—more than one thousand feet—the deep blue basin of the sea of Galilee is revealed, slumbering in placid sweetness beneath its encircling rampart of hills. The atmosphere is marvelously clear, and seems to bring up distant objects close to our eyes. Just below us a narrow plain fringes the lake; and on its edge stands Tiberias, with its broken quays, its crumbling fortifications, its white-roofed houses, and palm-trees. We are looking down on the most hallowed scenes of our Lord's ministry. The whole lake is visible, except the south end, where the Jordan emerges from it, and a portion to our left, which is cut off by the intervening heights above Magdala. The lake is but thirteen miles long, yet on the little strip of shore north of us once stood Magdala, Capernaum, Chorazin, and Bethsaida. On one of those slopes was delivered the Sermon on the Mount. We can see the entrance of the Jordan at the north, the opening in the girdle of hills, the grassy slope on which the five thousand were fed. Two or three fishing-boats, with their lateen sails, remind us of the boats of old that put off from Tiberias. Opposite us, on the other side of the lake, are the heights under which lay the city of Gergesa, now Khersa, the scene of the healing of the demoniac and of the destruction of the herd of swine. Just above it, but withdrawn from view, was Aphek, now Fik, the scene of one of Israel's greatest victories over the Syrians. The prospect is commanding, but all looks small for the crowded theatre of the great events which seem to consecrate every mile of its shores.

The coloring is exquisitely delicate and varied when the afternoon sun lights up the eastern hills with golden tints and purple shadows; but I have seen the view even more lovely when the full moon rises over the cliffs of Gergesa, shooting her silver beams across the lake, and lifting the white houses and palm-trees out of the shadow.

"And the sheen of their spears was like stars on the sea,
When the blue wave rolls nightly on dark Galilee."

The descent to Tiberias is rugged and precipitous. The change in the climate and character of the vegetation is sudden and striking. From the fertile uplands of Galilee we pass, as we descend to six hundred feet below the sea level, to a tropical flora. Every flower, tree, and shrub is different. The shores of the lake at every season of the year are hot and oppressive. Of all the busy towns that once studded the fringe of the sea of Galilee, Tiberias alone remains. None of these are mentioned in the Old Testament. Chinnereth indeed occurs; but it has been lost, absorbed probably, by its near neighbor, Tiberias, founded by Herod, and which soon became the capital of Galilee. But it was emphatically a Gentile city; and yet, after the destruction of Jerusalem, it became for three hundred years the metropolis of Judaism, where its rabbis taught, and where the Mishna, the Talmud, and the Masorah were compiled. Shrunken as it is to-day, with wide open spaces inside the massive bastions of its shattered walls, it still has a certain importance as the seat of a Jewish rabbinical university. About a mile to the south of the city a town of whited sepulchers, conspicuous from afar, marks the burial-place of the greatest fathers of rabbinical learning for the last sixteen hundred years. Just beyond this venerated cemetery, a white dome and cluster of buildings cover the famous hot sulphurous baths of Tiberias, still in constant use.

South of the Baths there is nothing of historic interest. We turn and walk along the shore from Tiberias northward, a narrow strip of beach, about three miles long, sometimes receding into a sloping field, sometimes contracted by the beetling cliffs above into a mere rocky path overhanging the sea, connects the slopes of Tiberias with the fertile plain of Gennesaret. About two-thirds of the way is a mill, with a copious hot spring, and a few corn-fields and gardens straggling among the traces of walls in a little plain, identified with the Dalmanutha of the New Testament. Here the high table-land pushes right to the sea, and we climb a shoulder and descend on a squalid village, at the corner of a marshy plain, surrounded by a thick growth of thorn-trees, a solitary palm-tree, and a ruinous stone tower. This is Magdala. It is now called Mejdel,—in Hebrew, Migdol; that is, the watch-tower. I have often been struck by the remarkable acoustic properties of this enclosed basin, where at night we can hear the human voice at the distance of half a mile.

Let us now return to Mejdel, and follow the shore to the ancient Bethsaida. The narrow silvery beach is formed, not of sand, but of myraids of triturated fresh-water shells. Along this beach, shaded by the oleanders which come down to the water's edge, our Saviour must time after time have walked to and from his home at Capernaum. Four little perennial brooks work their way across the plain, and are in part the cause of its extraordinary fertility. Josephus describes it as an earthly paradise, where eternal spring reigns and the choicest fruits grow luxuriantly. Then it was the centre of trade and commerce, the home of a busy population. Bethsaida, Chorazin, and Capernaum were just to the north of it. Through those towns and across the plain was the great arterial commercial route from Damascus to the coast. In the times of the Jewish monarchy, the caravan-road struck across the country north of the lake; but the new line was developed by the Greeks and afterwards by the Herods, till Galilee became the commercial centre of Syria. Caravans from Palmyra and the far east passed on their way to Ptolemais and Tyre. Busy custom-houses stood at the gateways of the crowded cities. More than six hundred crafts ceaselessly plied on the waters for fishing or for transport. Stately palaces and luxurious villas lined the whole shore on the western side.

But far more absorbing are the sacred associations of Gennesaret; every step recalls the miracles of Jesus and reminds us of his parables. Here was uttered the parable of the sower. Every detail is reenacted before our eyes to-day. There we see the beaten unfenced path across the plowed land, on which, as he crosses it, the sower leaves the seed exposed to the flocks of larks and buntings which follow in his wake. There the boulders peep through the black mould, their shoulders thinly covered with soil. Through the dark ooze in that moist patch we can see the strong shoots of the thorny *'nubk* peeping forth, ready soon to choke the springing corn. On that spit of shingle the fisherman of Ain Tabighah is drawing up his boat, where the toilers of Bethsaida hauled up theirs, and where they thrust out a little from the land, while He sat in the stern and addressed the crowds that fringed the shore.

Thus musing, and recalling the pictures of which this landscape was once the setting, we reach the north angle of Gennesaret, a little projecting rocky headland, like the southern one. Here, shaded by a noble fig tree,—whence its name Ain et Tîn, "the spring of the fig tree."—a copious spring of clear, warm water bursts from the foot of the cliff, and feeds a little pool and a swamp beyond it, a jungle of papyrus waving its feathery crest. The papyrus, long since extinct in Egypt, is found here and in the great marshes of Huleh (Merom), and nowhere else in Syria. We now round the headland, and soon come on a group of ruined buildings and a fine octagonal fountain, in and around which gush forth numerous little streamlets of steaming hot water, forming a little morass amid a thicket of oleanders, canebrake, and chrysanthemums; while the creak of a rustic water-mill reminds us that still a few inhabitants remain on the site of Bethsaida, for such I believe El Tabighah to have erstwhile been. Its inhabitants are still fishermen, and just on this spot is the favorite fishing-ground of the lake. They have not the boats of Tiberias, but lie under a wattled screen by the shore, watching for the approach of a shoal.

They are quite naked; and when the ripple announces that the fish are coming, they wade up to their shoulders, and dexterously throw out their net, seldom failing to secure a haul,—and this several times in the space of an hour. We could here picture St. Peter casting his fisher's coat about him, for he was naked.

From Bethsaida the pilgrim may go by the shore to Tell Hum; but inland, more than two miles distant from either place, among the heaps of basalt at the foot of the hills, is Kerazeh, the Chorazin of the Gospels. "Woe unto thee," indeed, for more weird or desolate remains could scarcely be conceived. Little is left above the foundations of houses, which, however, can be very easily traced, showing the arrangements of a Galilean house in our Saviour's time to be exactly what we find them to-day. No inhabitants seem to have disturbed this solitude since the place was destroyed many centuries ago.

SCRIPTURE LESSON, No. 4.

FIRST MONTH 22D, 1888.

TOPIC: JESUS AND THE AFFLICTED.

GOLDEN TEXT: "And Jesus went about all the cities and the villages, teaching in their synagogues, and preaching the gospel of the kingdom, and healing all manner of disease and all manner of sickness.—Matt. 9: 35.

READ Matt. 15: 21-31.

THE tender, compassionate heart of Jesus was ever open to the cry of the poor and afflicted. The incident of the Canaanitish woman is only one of many that are recorded, and that make true the prophecy concerning him, delivered more than seven hundred years before by the prophet Isaiah. In Mark 7: 24–30, the woman is called a Greek, a Syro-Phœnician by nation. The Jews called all persons Greeks who were not of their nation,—it meant a foreigner. Anciently the whole land, including Tyre and Sidon, was called Canaan. The Phœnicians were the descentants of the Canaanites, who were of the posterity of Ham, one of the sons of Noah.

Son of David. A descendant of David. The phrase as elsewhere used means also "the Messiah." *Have mercy on me* indicates the regard in which Jesus was held by those outside his own people, the Jews, and the earnestness of her manner gives evidence that she believed him to be the Messiah and able to restore her daughter to health. *I am not sent but unto the lost sheep.* This shows that Jesus had not yet seen the broad field that his mission was intended to cover. He came, as he believed, to be the Saviour of his own people, the Jews, to call them to the higher meaning of the religion of their fathers.

The children's bread. The Jews considered themselves as peculiarly the children of God, and this woman and her child were Gentiles. It was not that he meant to taunt her with not being one of God's favored children, but the rather to test her faith in him as one sent of God. *Cast it to the dogs.* Then as now travelers entering a town or village had only too much reason to notice the troops of lean, masterless dogs, and no one could sit at meat without the chance of some of them coming in at the ever open door to pick up the fragments, always to be found where only the fingers are used at the table. [*Geikie.*]

The woman was not to be turned away by this reminder of her nationality. She accepted the implied impropriety and her own unworthiness was acknowledged, but there remained one hope to cling to, and this seemed her last refuge. "The dogs eat of the children's crumbs:" might not this daughter of hers, who so needed the blessing that he only could bestow, be permitted to share the crumbs of his bounty? The appeal was not in vain. This is a lesson that we all may take home. If we desire a right thing that it would be proper for us to have, or that the having would increase our own means of doing good either for ourselves or for others, it is right for us to use every worthy means in our power to become possessed of it, and, though we may be again and again unsuccessful, let us have the courage to persevere. This is in accordance with the words of Jesus, "Seek and ye shall find!"

The lessons of pity and compassion that abound in the Old Testament must have been very precious to the heart of Jesus, and in his boyhood, as year after year he went to Jerusalem with his parents, and sat with the wise and good men of the nation, the same as he did on his first visit, when he was twelve years old, how much these annual seasons of instruction and devotion must have awakened in him the deep and abiding desire to give his time, his talent, and all that his Heavenly Father was entrusting to his keeping to the carrying out of some good work for the poor, and the afflicted, and those who were friendless and without a helper.

We can think of him in his humble home at Nazareth, working at his trade and making himself helpful to his parents, yet carrying in his heart the longing for a work that should mitigate the distress and help the burdened and oppressed people to bear their crosses and afflictions with courage and patience, looking for help to the God of their Fathers whom he would teach them to call their Father in Heaven. And when the time came that this Father in Heaven should own him as his beloved son, how this consciousness of oneness in God made him strong and wise, and able to help all who came to him in sorrow or in distress or in doubt as to what they ought to do. If we would be the friends and followers of Jesus we must have the same loving and compassionate spirit that animated him, and let no occasion for doing good pass unimproved.

In connection with this lesson it may be interesting to add a few items from the meagre history of the Canaanites that have come down to us from the most ancient times. When Abraham in his wandering from the country of the Chaldees came to this land, he found the Canaanites already there, and their immemorial conquest had decided the name and mastership of Canaan. From the Greek historian, Herodotus, we learn that their original home, according to their tradition, was by the coasts of the Arabian Sea, whence they spread steadily northward and eastward towards the Mediterranean. In blood as well as language, in traditional usages and religious rites they were probably of near kindred with the tribes of Israel, and after the conquest under Joshua they merged their broken fortunes with those of the

stronger race; yet a deep rooted religious antipathy assigned to them the inexpiable curse pronounced by Noah on his youngest son, and the real connection of the two remains in impenetrable obscurity. There were several petty nationalities of the Canaanites, —the Amorites or Highlanders, the Hittites or Lowlanders, the Perizzites or dwellers by the sea, and the Hivites, supposed to to be the inhabitants of the inland towns, were among the most prominent.

Sidon, in the antique genealogy, is the eldest son of Canaan. Phœnicia became the mother of rich colonies, the source of arts, commerce and letters to the Greeks, the headquarters of naval enterprise, that discovered the silver mines of Spain and the tin of Cornwall, and more than six hundred years before the Christian era circumnavigated Africa.

WORK FOR WINTER.

THE trees now stand forlorn with empty nests,— "bare, ruined choirs, where late the sweet birds sang." Their tossing arms lash the ground with wild, black shadows through the windy, moonlit nights. The cold increases, the winds search and whistle and sting; the pools skim over of a morning; the cattle huddle in the fields; the fowls stand drearily in the lee of the bush; faces redden on the street; and, under the stars fire-light gleams through the window panes. Meanwhile, the home-life deepens. As a friend once said to me, the seasons indoors seem to just reverse the order of the outward seasons. As the leaves are fading in the fall, we feel within our bodies and our minds a bracing *spring;* plans gather vigor, and we bend ourselves for the hard work of the year. The winter brings heart and mind to their full force of growth. Nature's winter is the human summer-time. Then, spring begins to make us languid. And the busy summer of earth-life brings to ourselves a pause and rest and comparative inaction, like an inward winter. Reckoning by the spirit's calendar, Thanksgiving Day is Easter; and the Easter is Thanksgiving Day for a winter's inward harvest; for then we shall have gathered in and barned away in memory what we have read, and thought, and done in our growing hours, while the snow lay outside on the ground.

So, as nature is getting ready for what may happen out of doors, indoors it is all astir. Hands oftener meet other bands in works of service, and hearts are closer drawn to hearts. The books come forth in the long evenings, the story-telling begins, the fathers and mothers gather the children around their knees by the cheerful blaze,—that blaze itself the sunshine of the old springs and summers in the far-off past. Over all within, without, is God, who careth for us thus; who made those summers of old and stored their heat who is preparing now the seasons of our immortality.—*From "A Year of Miracle" by W. C. Gannett.*

"I EXPECT to pass through this world but once; any good thing, therefore, that I can do, or any kindness I can show to a human being, let me do it now. Let me not neglect or defer it, for I shall not pass this way again."

ALL THINGS NEW.

THE date whereto time in its swiftness has brought us in one at which, naturally, the look is backward and forward, at which the old is bidden farewell to, and the new welcomed.

I would have it welcomed by us all, as bearing with it fresh aids and opportunities, incentives and encouragements, for the work we are here to do upon ourselves and others, for God and for man. I would have it welcomed the more, as repeating to us that word of solemn cheer, the expression at once of willingness and power,—"Behold, I make all things new." The Divine Agency waits but for the conditions on our part to be supplied, in order to that word's fulfillment: if our heart is selfish, to make it "new" in love; if our aims are low and earthly, to make them "new" by elevating and purifying them; if our life is controlled by unworthy motives, to make it "new" by inspiring it with those which have supreme regard to God's character and will. . . .

Let, then, this year run on its curtained way. We will accept the days that, one by one, it throws to us, each as a golden gift, a space to be filled with right purposes and faithful deeds, with truth and love and duty. We will go forth to meet trustingly what it has for us beneath its concealing wings; knowing that sooner will the myriad germs of nature slumbering around us wait vainly for the awakening spring than will a single soul wait vainly for the breath of his renewing Spirit,—that sooner will the fair skies above us lose their doming integrity, and lapse shriveled to the horizon, than will God withdraw from any soul desiringly seeking it his aiding, redeeming, re-creating presence.—*Nathaniel Hall.*

THE vast growth of what we call Christian civilization is indebted, not alone to the soil from which it sprang, but also to Him who planted it. His life, his example, and his teachings not only are still the very ideal of personal, and social excellence, characacter, and development, but no forecast of the future outgrowth of the human soul suggests anything further-reaching or better. For humanity he has done these two things. He has set the highest example of a life of moral, intellectual, and physical integrity, exquisite and broad in its sympathies, complete in its helpfulness and self-sacrifice, and ranging in its beneficence from loftiest heights of moral and religious philosophy to the tenderest chords that tremble in the bruised heart of a little child. And he has transmitted a body of moral and religious teaching which at once meets the aspiration and hunger of the soul and stimulates every nerve of endeavor forward and upward; at once puts humanity into the relation of worshipful, and, at the same time, intelligent and affectionate consecration to God, its Father, and into sympathy and helpful coöperation with its fellowmen. Hence the Christian church, hence this teeming civilization of Christian charity and progress.—*John D. Long, in the Christian Register.*

To reason with the angry is like whispering to the deaf.—*Dillwyn's "Reflections."*

PHILADELPHIA, FIRST MONTH 14, 1888.

CHEERFULNESS.

THE beginning of a new year is generally considered a suitable occasion to put in practice the good resolutions that the experiences of the near past have shown to be necessary, that the best of which we are capable may be attained, and our progress keep pace with the law of life within which by divine intention is ever urging the earnest hearted onward and upward towards higher ideals.

There is nothing that is so helpful in this direction as a cheerful acceptance of life as it comes to us. It matters little where our lot is cast or what hardships are to be encountered, habitual cheerfulness will light up the darkest road and make the most toilsome journey endurable. It finds among the roughest stones blossoms of hope to beguile the tediousness of the road, and hears overhead sweet strains of melody that awaken responsive echoes in the heart. It is the alchemy that transmutes the common things of life into things of beauty, that discovers something precious in the most menial services.

The way we look at and accept nearly every circumstance in life makes it a factor for good or for ill, and this view of the subject is of the greatest importance to our well-being, helping as it does to keep the mind open to all the genial influences that do so much to maintain kindly relations with all about us.

No resolution however sincere or well-taken can do for us all it is capable of, unless we make habitual cheerfulness its handmaid; no other trait can be substituted. Steadfastness and a persistent holding on to our purpose will do much, but they must have their root in the mellow soil of cheerfulness.

The old theological dogma of total depravity is largely chargeable with making habitual cheerfulness one of the graces of the lost Eden. With so blighting a curse resting upon the conscience of the world, to be glad with the gladness that filled the universe was to jeopardize the soul's prospect of blessedness in the endless future of its existence, and this developed a condition of life at variance with all the instincts of healthy rational delight in living.

Happily for the human family the immanence of heaven,—the nearness of the Heaven-Father, in all the tender relations the name suggests, are more and more recognized and realized in the every-day life of the world, and all those broken threads that have in the past marred and disfigured its patterns are being gathered up and woven into a faith and hope that will most surely in the Divine ordering bring greater harmony and beauty to the life of the race, and fulfill the promise of its highest aspirations.

Let us cheerfully accept the new issues that the New Year opens up before us, and wherein we have failed make greater effort, knowing that every victory thus won is a substantial gain, not alone to the individual, but through him to the whole family of man.

CHILD TRAINING.

"TRAIN up a child in the way he should go" said the wise king. In following this injunction many would choose other and better means of training than the rod he recommended, yet, with the departure of the rod from juvenile government, has gone in some cases almost all attempt at control, and sad indeed is the spectacle of children growing up without restraint from parents, and sad, too, must be their experience in after life, when contact with the world brings the natural result of their deficiency in self-restraint.

Training, which signifies time and labor and patience, is due to every child from its parents, a training which shall give him control of himself when the days of his childhood are passed.

And how is the little creature to learn to control the make up of propensities and temper and appetites which constitute himself? As truly as we learn to do a thing by doing it, so truly must he learn to govern himself by governing, that is, by having the government put upon him. But a fine piece of carving is not put into the hands of a new apprentice; he must learn the use of his tools and the use of his muscles, and he must do the same thing over and over again; neither can this complicated wonder, the child, be trusted, unassisted, with the management of himself.

We teach the little girl to knit: how awkward are her first attempts, how almost useless the product of her labor. "What is the use?" she sighs as she looks at the puckered strip which represents such a great effort for the small fingers. Encouragingly we say, "Only by doing do we learn to do," and willingly we show again how the needles must be held. Are not the mental and moral efforts of the children just as experimental, just as awkward perhaps, and just as much deserving our patience and help?

Take the case of a child with a violent temper, the question is how is that temper to be controlled. We have all seen different modes of solving the problem, and some do not bring the answer desired. One notable failure is the plan of meeting temper

with temper, and by overwhelming the child force submission. Hasty people say they have no time to wait for the slow movement of a child's mind as he tugs with his propensities, just as the weak and unskilled fingers labor with the needles. We may break the needles and throw away the thread, but that will not make the child a skillful knitter; we may meet refractory child-nature with equally ungoverned man-nature, but does that help him to become ruler over his spirit?

What we really want is that he shall overcome himself, then will he be master of the situation. This is furnishing him with power, and arming him with weapons that will stand in good service in many a life battle.

MARRIAGES.

DODDS—BROWN.—On Fifth-day, Twelfth month 22d, 1887, at the residence of the bride's parents, near Waynesville, Ohio, under the care of Miami Monthly Meeting of Friends, J. Emerson Dodds, of Cherry Fork, Ohio, son of Isaiah L. and Mary R. Dodds, of Tranquility, Ohio, and Annetta Brown, daughter of Ethan A. and Hannah A. Brown, and granddaughter of Aaron Chandler, deceased.

DEATHS.

BUTTERWORTH.—Near Vincenttown, N. J., First month 3d, 1888, Job Butterworth, in his 83d year.

COOKSON.—At the residence of her son-in-law, Joel V. Garrettson, in Monallen township, Adams county, Pa., on First-day morning, Twelfth month 25th, 1887, Phebe Cookson, in the 87th year of her age.

This aged and consistent Friend was a member of Warrington Meeting, and a granddaughter of Robert Vale, who was a native of London, England, and settled there in, 1749, when that meeting was within the limits of Lancaster county, Pa. J. V. G.

HIBBERD.—Twelfth month 31st, 1887, Josiah Hibberd, aged 65 years, for many years one of the city surveyors of Philadelphia, Pa.

KNIGHT.—At his residence, in Southampton, Bucks county, Pa., on the 30th of Twelfth month, 1887, of pneumonia and paralysis, Jonathan Knight, aged 78 years, less 4 days; a member of Middletown Monthly Meeting.

KNOWLES.—At her home, in Germantown, N. Y., the 12th of Twelfth month, 1887, Catharine, wife of Charles S. Knowles, and daughter of the late Nathan and Eunice A. Jenkins, in the 49th year of her age; a member of Chatham Monthly Meeting. Calm and composed she met the summons which called her from a devoted husband and loving children, assuring them that though she had a pleasant home here, a far brighter one awaited her beyond these changing scenes. R.

MIDDLETON.—First month 4th, 1888, in Philadelphia, Pa., John B. Middleton, aged 76 years.

MIDDLETON.—At Cornwells, Pa., First month 2d, 1888, C. Wilmer Middleton, of Philadelphia.

PENNYPACKER.—At Schuylkill, Chester county, Pa., First month 4th, 1888, Elijah F. Pennypacker, in his 84th year; a valued member of Radnor Monthly Meeting, Pa.

POWELL.—At Ghent, N. Y., First month 10th, 1888, Townsend Powell, in the 81st year of his age. Funeral at his late residence, on Fifth-day, the 12th inst., at 2 o'clock.

SCARLETT.—At his late residence, in New Garden township, Chester county, Pa., on the 31st of Twelfth month, 1887, Abiah Scarlett, in the 72d year of his age; a member of Kennett Monthly Meeting of Friends.

SHALLCROSS.—In Byberry, on the morning of First month 5th, 1888, of diphtheria, Mary G., daughter of Thomas and Rachel W. Shallcross, in her 18th year; a member of Byberry Monthly Meeting, Pa.

SIMMERS.—In Philadelphia, First month 5th, 1888, T. Ellwood Simmers, aged 53 years.

SMITH.—In Newtown, Bucks county, Pa., on the 4th of First month, 1888, Edward H. Smith, (druggist), aged about 54 years.

TEST.—Tenth month 14th, 1887, Hannah B., wife of Joseph D. Test, in the 73d year of her age; a member of Salem Monthly Meeting, N. J.

ELIJAH F. PENNYPACKER.

It is difficult for those who knew him best, to speak in measured terms of such a person. The simple truth would seem like eulogium. There were few conflicting elements in his nature. He was born good, and had an intuitive sense of right which always preserved him on the high levels of rectitude. He believed most profoundly in the "Light which enlightened every man;" and walked daily under its serene guidance. Pure in thought, word, and deed, his strength was preserved for beneficent activities. There was in his own sphere, no sin, however strongly upheld, which did not meet in him a manly and courageous opponent;—no cause, involving a good to the human race, which did not find in him an earnest and active supporter. It is scarcely necessary to say that in the time when there was occasion for it, he was an abolitionist of the truest order. His features indicated such promptitude, decision, and rare moral worth, that none could for an instant suppose him false to Freedom. It is probable he would have been, as his nephew was, a general in her service, had he not been what he was, an opponent of the sword, and a believer in the sanctity of human life.

The cast of his mind was hereditary, being remarkably similar to that of his mother. He was not born a Friend, but became one towards middle life. Before that time, political honors were offered him, and he was in the Pennsylvania Legislature, doing good service in the cause of Public Education and in other measures of importance.

His principles leading him in that direction, he became a member of the Society of Friends, uniting himself with Schuylkill Preparative Meeting, near his residence, in Chester county, Pennsylvania. Here he became a frequent speaker, his favorite theme being the Fatherhood of God and the brotherhood of man, and other truths universal in their scope. To say that he was beyond and above the majority of his hearers, would be nothing new. To speak of his unaffected modesty and uniform gentleness and forbearance, is only to recall the past. He wielded an influence for good in every situation, whether within or without the circle of his own religious denomination.

In private life and amongst his friends, an unvoiced wail of sadness did not pass him unheard. Where he felt called, there he went, unsummoned except by the needs of giving comfort, advice, or assistance. He was truly a missionary of the Spirit, doing its divine behests with faithfulness, and soothing the sorrow of the widow and the fatherless and of them who had no helper. Living close to the Father, his countenance wore an expression which nothing but an elevated mind can stamp upon the lineaments of the face. It was a blessing to all who saw him and will be a treasured memory for life. L.

WILLIAM CANBY BIDDLE.

AS the year 1887 drew near to its close, there passed from earth, on 12th month 22d, a valued Friend, to whom a tribute of respect seems most fitting.

William Canby Biddle was an active and beloved member of Philadelphia Monthly Meeting of Friends held at Race street. He was the son of Clement and Mary Canby Biddle, who were for many years useful and consistent elders of the same meeting.

From his youth the actions of his life were ruled by high and steadfast principles. Being gifted with a sympathizing heart, a clear and vigorous intellect, and much ability and good judgment in practical affairs, he was well equipped for usefulness both in his religious society and in the community in which he lived.

From his grandfather Owen Biddle, one of the founders of Westtown Boarding School, he inherited a deep interest in the cause of education among Friends, and was a useful and earnest laborer in the establishment of Swarthmore College, and an advocate for the organization of Friends' Central School at Race street, Philadelphia. His concern for the welfare of the Society of Friends was deep and abiding, and he was ever ready to assist in the formation of any plan that promised to advance its best interests, sometimes yielding his own judgment to that of his friends whom he loved, his friendships being warm and unselfish. He served his own meeting as Clerk and assistant Clerk, also as Recorder, and for nearly 43 years as Trustee.

The latter years of his life were shadowed by much suffering, which he endured without murmuring, and in complete submission to the will of his Heavenly Father, who has called him home doubtless to receive the welcome of "Well done, good and faithful servant; thou hast been faithful over a few things, I will set thee over many things: enter thou into the joy of the Lord."

Very characteristic of his faithfulness to the testimony of Friends in favor of simplicity, and expressive of his life-long objection to extravagance and display, as well as the tenderness of his feelings towards the poor and unfortunate, were the sentiments expressed in a letter found after his death, a copy of which, as it may serve as an example to others, is here appended:

PHILADELPHIA, 5th month 1, 1882.

To Clement M. Biddle and Others:

A plain walnut coffin (not casket) without plate or trimmings—with very simple lining, if any, my own clothes, not new ones specially had for the occasion; no show of any kind; of course no flowers.

Plain hearse and a few carriages for family and intimate friends, my idea being that funeral should be at the house.

Avoid all needless ostentation and expense; give difference between a simple funeral and a fashionable first-class show, out of the estate, to the Home for Aged and Infirm Colored Poor, or any other benevolent object.

I do not leave positive directions, because they might be inconvenient to carry out, but the nearer my interment approaches an old-fashioned Friends' funeral, in simplicity, as expressed in the above wishes, the nearer will it accord with my idea of what is desirable.

Please do not keep city house long darkened by bowed shutters; it is an unhealthy Philadelphia custom; light is good, and I hope there will be nothing in my death to make it a gloomy subject to those who love and survive me.

WM. CANBY BIDDLE.

It is pleasant to record that at his funeral held at his late residence, the arrangements were in accord with his desire, his sons, grandsons, and brothers only accompanying the remains to Fair Hill, while the same day the treasury of the Home for the Aged and Infirm Colored Poor was enriched by a sum of money saved from that which is too frequently expended for display.

As a striking coincidence there appeared in the Philadelphia *Public Ledger* on the morning of his funeral, (Twelfth month 24th, 1887), an appeal from the Institution above referred to, stating that its funds were exhausted, not enough being on hand to purchase the needed food for the inmates, thus impressing with much force the charitable bequest penned nearly six years previous.

Is there not a lesson to be learned from a life that is here so briefly recorded? A lesson of humility and charity, qualities which need cultivation in this our time, and our much favored country.

ELIJAH F. PENNYPACKER.

THE death of Elijah F. Pennypacker is elsewhere mentioned, with a tribute to his fine traits of character, by one who knew him well. Of Mennonite ancestry, (his grandfather being a prominent member of that body of excellent people), he was brought into contact with Friends by attending the school of the late Enoch Lewis and otherwise mingling with them, and in the course of time was received as a member. For a number of years the small meeting at Schuylkill, (near Phœnixville), has been kept up mainly through his influence, and oftentimes he felt it right to give some expression in our religious meetings. He was always ready to assist ministering Friends and committees in the prosecution of their labors.

In his earlier manhood he took an active interest in the anti-Masonic movement, and was elected to the Legislature of Pennsylvania in 1832 and subsequently. In more recent years he was a candidate of the political Temperance organization for one of the highest State offices. His antipathy to the wrong made him a warm Abolitionist and an active worker on the "Underground Railroad." A non-resistant from principle, he was an earnest advocate of peace and greatly interested in whatever tended for the intellectual and moral improvement of mankind. At the time of the Irish Famine, in 1847, he sent to the starving people a barrel of flour, with an inscription which gained wide publicity from the fact that two vessels with the barrel on board were wrecked in turn, and the sailors of a third refused to permit it to come on deck. The inscription read:

"A donation for the Irish sufferers, given freely, and accompanied with a heartfelt petition to the British Parliament to remove one of the real causes of distress amongst the laboring and perishing classes by abolishing the existing unchristian system of na-

tional defense by fortifications, armed soldiery, and a navy, and directing that all vessels now belonging to the naval establishment of Great Britain shall henceforth be engaged in righteous and useful commerce, and that the trained army, disciplined enemies of God and man, consisting of about 300,000 men, shall hereafter be employed in useful and productive industry; that, instead of being a drain upon the resources and means of subsistence of laboring British subjects and reproach upon the Christian name, they may contribute by the honest use of their faculties to the supply of their own wants and comforts, as well as the relief of perishing thousands."

In the Prohibition movement he was very decided, and sought its promotion in every way in his power. Holding very earnest views on many subjects, he had the respect and esteem of those who differed from him, being regarded as a man of strict uprightness who sought to live out his highest conceptions of duty.

AID TO ORPHAN AND NEGLECTED CHILDREN.

IN the last issue of the *Presbyterian* of this city, Prof. R. E. Thompson, of the University of Pennsylvania has an interesting article, "The Care of Homeless Children." He calls attention of Christian people to their duties toward children, describes the benevolent efforts for their benefit, the various methods of their care which have blessed so many thousands in the past, shows the gradual growth in wisdom as to methods that have been accepted in our day, and the decided advance in caring for them made by those institutions that have adopted the cottage plan, each cottage presided over by a house-mother. He alludes to the work of Wichern, in Germany, and then adds:

"Is it not possible to go a step further? A good many years ago Mrs. Clara Leonards, of Springfield, Mass., was impressed with the inadequacy of the State institution for orphan and neglected children at Muncy. When she sat down among them, and they climbed into her lap and looked with hungry eyes into hers, she felt that in an institution of that kind no child could be given the individual interest which would replace in some degree the loss of its own mother. She had not heard of Wichern's plan. She proposed a still more radical change. She organized the ladies of her own county into an association to provide homes for its orphan and neglected children, and she obtained from the State the right to take charge of them. That society has been so long at work that its first children are now among those who contribute to its support. It owns no buildings except an office in Springfield. It finds a home in some respectable family for every child thrown upon its care. It pays the family a reasonable sum for taking the child until he can earn his own living. It exercises a constant and watchful care to see that he is trained in habits of order and of industry, and receives a proper general and religious education. Where it is possible, it places children in families whose religious principles are those of the child's parents, if they had any. And it removes children from any family in which they do not fit in until it finds a congenial home for them. The results of this course as seen in the lives of those who have been thus cared for are most gratifying.

"Some years ago Mrs. Leonards spoke of the methods and the success of this society at a meeting of charitable people of all religious bodies in Philadelphia. The result was the organization of the 'Children's Aid Society,' to apply the same principles here. The new society is not hostile to the orphan asylum. It does not believe itself capable of taking off their hands the work they are doing. It assumes (1) that there are orphan and neglected children enough in Philadelphia and in Pennsylvania to employ all the personal energies that have been given or are likely to be given to them; and (2) that the charitable people of this city and State will give their support to every form of work which commends itself to their judgment as wisely planned and executed in the right spirit. Like the Springfield society, it has no asylum. Its work is to place children in real and good homes. To find these and to see that the children are cared for in industry, in education, and in religious training, is its proper work. It is found that such homes are easier to find in Pennsylvania than in Massachusetts, because the general standard of comfort is much higher, and perhaps because our people are more disposed to assist in any kind of philanthropic work. As a matter of fact, the society has choice and pick of several desirable families for every child it takes charge of, and also hundreds of mothers with young children have been secured places as domestic servants in country houses, where servants generally are hard to procure. The expense of caring for a child is as low as in the cheapest orphan asylum, and a majority are secured free homes. Besides payment for board of children, the society maintains an office at 127 South Twelfth street, and employs an agent to organize a like work in other counties of the State. It has already reached the magnitude and dignity of a Pennsylvania charity, and was honored with a special reference in Governor Beaver's annual message to the Legislature. Indeed, although this method of caring for such children did not originate in our State, and although it has been taken up in many others, it is in Pennsylvania—and thanks to the efforts of the Philadelphia society!—that it has been adopted most extensively.

"Of course there are dangers connected with the plan; but these, I think, are less than attend any other plan for the purpose which has been suggested or applied. They are less because this plan fits more exactly into that divine ordering of human life which has our Father in heaven for its author. It seeks to 'set the solitary in families' and to secure for children in their most susceptible years just those influences which best mould human character to good and noble results; and from what I know of the representatives of the society in Philadelphia, I am constrained to believe that it has fallen into very good hands."

Contributions to the aid of the Children's Aid Society will be thankfully received at the office of the

Society, 127 South Twelfth street, or they may be sent to Henry Gawthrop, Treasurer, 308 Walnut street, Philadelphia.

For Friends' Intelligencer and Journal.

NOTES BY THE WAY.

AN article in this paper, 12th mo. 10th, has brought vividly before my mind some random recollections connected with the Penn family. The article was on the two wives of William Penn. When I was a child we lived many years on Sixth street between Vine and Callowhill, I recall a remark of my mother's, that the name of the latter street was sometimes called Gallows Hill,—a shocking corruption of the beautiful name of Penn's second wife.

My cousin James Mott quoted with some amusement the name of a person taken from that of Penn's first wife. It was after this manner (not exactly thus). She was named Gulielma Maria Springett Penn Smith,—and when she married became Gulielma Maria Springett Penn Smith Brown.

I recall two other Gulielmas among friends of my own acquaintance.

After I removed to Lancaster county to the home of the late editor of THE JOURNAL, I saw there a title-deed of the farm which has now been in the Gibbons name over 160 years. It bore a great pendant seal of wax, and was a conveyance by John Thomas, and Richard Penn, (children of the second wife), to Elizabeth Whartnaby, from whom it passed into the Gibbons family, having been held by the great-great-great-grandmother of the present holders. Other farms in the more eastern counties are perhaps held by families who take their titles directly from these sons, two of whom spent several years in this country, as the article before alluded to tells us.

The city of Allegheny, opposite Pittsburg, in the far west of the State, has public parks, the gift of the Penns;—although it seems strange that any such thing should have been planned at the early date when the sons were here.

* * *

Again the article in this paper solves for me a little problem connected with the Penn-Gaskell family. Many years ago my father was in business with Peter Penn-Gaskell; I afterwards met at the house of Edward and Mary Needles, a Mrs. Penn-Gaskell.

My knowledge of the family slumbered for many years until I met at Chester, the late Dr. Coates, who had married a Penn-Gaskell. His wife and her sisters were dead and the brother was heir to an Irish estate.

A few years after, when I was in Ireland, in the county Cork, mention was made to me of a Penn-Gaskell living not far from Cork, who had been kind to certain fishermen in leasing them, on favorable terms, bits of land. I wrote to Penn-Gaskell, mentioning one or two of these circumstances, but learned from his agent that he was not at home.

The point which I did not understand in this connection was how one of the Penn-Gaskells became an Irish proprietor; but the article above alluded to tells us that William Penn, son of the first wife, (who was a scapegrace, and caused his family great trouble), died in the north of France, his father's Irish estates going to his, the son William's, children. One of these descendants probably married a Gaskell, (a name known among Friends in Philadelphia) and the gentleman in the South of Ireland perhaps holds his estate according to the English law of primogeniture.

Dr. Coates has died since I met him at Chester. He had a child, who, if these inferences are correct, would be a lineal descendant of our great founder.

* * *

Lindley Coates, a prominent Friend, was a son of Isaac Coates, whose valuable journal of travels in the Indian country ran, some months ago, through several numbers of this paper. Some of these having been left at the U. S. Mint in this city, excited the interest of two men employed there who are not Friends. I was much amused with a trait in this journal of Isaac Coates, connected with our stupendous waterfall. He made two journeys to the region of Niagara. When he first went near it he had not time to stop, although one or more of his companions went there. On two subsequent occasions, however, he was extremely interested in visiting it, and he expresses his own sorrow or that of one of his own friends that his wife could not have the same opportunity. And this also recalls that Daniel Gibbons, father of the late editor of THE JOURNAL, made a journey on foot when a young man from his home in Southern Pennsylvania, (or its vicinity), to Niagara, stopping on the return journey to work for a farmer and recruit his funds. This Friend, Daniel Gibbons, belonged to Caln Quarterly Meeting, and was a long and intimate acquaintance of Lindley Coates, who was of the same quarter.

Lindley Coates, like Daniel Gibbons, was a strong anti-slavery man. His home was near Christiana, on the confines of Chester and Lancaster counties. Of his intelligence an idea may be formed by some lines upon him, written by Benjamin S. Jones, who wrote a set of verses on some of our prominent abolitionists. Those on Lindley Coates seem to indicate that he practiced the Socratic method of argument, of asking a man questions to prove his error:

"Pray Lindley don't vex one
By asking a question,
That answered, upsets his own side;

'Tis very perplexing
And shamefully vexing,
For one's self to prove he has lied—

'Tis Friend Coates,
For one's self to prove he has lied."

* * * * *

John G. Whittier, in some of his verses, also alluded to Lindley Coates. These verses were perhaps called out by a proposition to banish from circulation through the post-office anti-slavery publications. I wrote, not long ago, to Whittier for information on those lines, and he replied, 5th of 2dmo., 1887:

"The verses thou refers to of my own making I have no copy of. I remember only some lines:

Go, search for treason, hunt for that
In every peddler's cart of rags,
Pry into every Quaker hat,
And Dr. Fussell's saddle bags.

Send down at once your corporal's guard,
With flow of flag and beat of drum,
Storm Lindley Coates's poultry yard,
Beleaguer Thomas Whitson's home.

The three Friends mentioned in these verses were members of our branch of the Society. Some years ago Whittier wrote a letter to me, now unfortunately missing. In it he spoke nearly as follows:

"I have been interested in thy letters to THE JOURNAL, and although connected with what are called Orthodox Friends, yet I have a warm recollection of the kindness of the liberal Friends of Pennsylvania and New Jersey, and of their noble efforts for the enslaved. How I wish we were all together again."

P. E. GIBBONS.

THE LIBRARY.

THE AMERICAN ANTIQUARIAN. (Chicago, Ill.)

To those interested in the study of the antiquities of our Continent this journal is most helpful and informing. The last number of Volume 9 is especially calculated to increase our desire to know more of the aboriginal life of those whose scant records are found in every part of our great territory. The *Antiquarian* is published bi-monthly, at $4.00 per year. The Editor-in-Chief is S. D. Peet, assisted by Dr. D. G. Brinton and others who have charge of respective departments which include Aboriginal literature, Native Myths, and Mythology, European and Bible Archæology and Egyptology.

This journal occupies one of the most suggestive and instructive fields in all the range of American literature. Its special work is to furnish information in reference to all archæological researches, explorations, and discoveries, whether in this or other countries. The prospectus for 1888 includes a series of papers upon "The Age before Man," by a number of distinguished writers, that will be fully illustrated. There will be papers on the Pile dwellings and Lake villages in America, the Antiquites and customs of the Puget-Sound Indians, and kindred topics, all promising new and valuable information, which may be relied upon as authority. Maps and drawings illustrate the several subjects considered.

NEWS OF FRIENDS.

—Watson Tomlinson and Ellen T. Croasdale, of Byberry, accompanied by Elmira Twining, of Newtown, with Joel Borton, Jr., of Pilesgrove Monthly Meeting, N. J., have been attending most of the monthly meetings in Bucks Quarter, as a sub-committee of the Yearly Meeting's Visiting Committee. They also had appointed meetings at Lambertville, Newtown, and Yardley, to very general satisfaction. Besides attending the meetings, they visited or called on quite a number of families at their homes, who are but seldom visited by traveling Friends,—they being a little off of the generally traveled route,—and were most cordially received by all.

SWARTHMORE NOTES.

—The sons of the late Edward Stabler, of Sandy Spring, Md., have just presented to Swarthmore College the foundry of their father, with all its appliances and patterns. In this foundry was cast all the metal work of the presses and seals made by him for the various State and city governments, corporations, and courts of law throughout the country; for the several departments of the national government at Washington, and for its Consular agents all over the world. Here, too, were made the steel dies for the gold and silver medals of the Maryland Institute, and many other works of a similar character. This valuable gift will become a part of the foundry of the department of engineering and the mechanic arts at the college, and will add largely to the means of instruction in this direction.

—At an adjourned meeting of the Swarthmore College Stock Trust Association, on 12th mo. 23, a permanent organization was formed with the following officers: President, Emmor Roberts; Vice-President, Edward H. Ogden; Secretary, William J. Hall; Treasurer, Joseph T. Bunting; Trustees, Clement M. Biddle, John T. Willets, Edward Stabler, Jr., Alfred Moore, Herman Hoopes, S. Robinson Coale, Edmund Webster.

For Friends' Intelligencer and Journal.

THOUGHTS

SUGGESTED DURING A RECENT VISIT TO CHESTER VALLEY FRIENDS' MEETING.

How passing strange, yet strangely true,
The scenes that we behold to-day,
Compared, through retrospective view,
With scenes that now have passed away!

The dear old forms, whose silvered locks
Now rest beneath the valley's clod;
Who by their lives taught us to live,
For truth, humanity, and God,

Have given place to other forms,
Whose locks, with ours now silvering grey,
Proclaim to us the solemn truth:
We too are passing swift away.

And one[1] of the dear gone before,
Ere he had sought the silent bourne
Whither our loved are passing o'er,
And whence no travelers return,

Gave forth these words of prophecy:
"Though faith may wane and prospects frown,
The Spirit saith unto me;
'This meeting never shall go down.'"

Dear, earnest, faithful, loving heart,
Those words of cheer and child-like trust,
That to each soul such strength impart,
Are yet fulfilled, since thou art dust.

The children of those former years,
As if transformed by magic power,
Now share this meeting's hopes and fears,
The fathers, mothers of this hour.

The seed then sown has taken root—
Reward of patient, arduous toil--

[1]Stephen Stephens, Sen., who departed this life Eighth month 31, 1845, in his 81st year.

And in its turn has borne the fruit
That scatters seed in present soil.

And for the future what is here?
The youth and childhood of to-day,
Giving their promise each to share
Its cares when age has passed away!

And though some lambs may stray the fold,
And solace find in creeds and forms,—
In other realms of faith's household
A refuge seek amid life's storms,

What matters it—the name they bear,
For time or for eternity,
If from each sin-polluting snare
Our God's eternal truth makes free?

To love that truth they've here been taught—
Its principles can never die;—
Departed one, who long hast sought
A mansion in thy home on high,

In view of what to-day we see,
Though faith may wane and prospects frown,
The Spirit saith unto me:
"This meeting never shall go down!"

LYDIA W. HILLES.

Norristown, Pa.

WHEN THE TIDE COMES IN.

WHEN the tide is coming in there is freshness in the air,
The heavens are soft and blue, and the world is bright and fair;
When the tide is going out. O! the earth looks bare and cold,
The rocks stand gray and rough, when the wave doth not enfold.
So the tide of sorrow washes out the hopes and dreams of youth,
Leaving stern and cold realities, bare rocks and sands of truth;
But when the tide of earthly hopes goes out, and surgings cease,
The tide of heavenly love comes in and fills the soul with peace.

—*Anna Holyoke Howard, in "Woman."*

TO JOHN GREENLEAF WHITTIER.

AT dawn of manhood came a voice to me
That said to startled conscience, "sleep no more!"
Like some loud cry that peals from door to door
It roused a generation, and I see
Now looking back through years of memory
That all of school or college, all the lore
Of worldly maxims, all the statesman's store
Were nought beside that voice's mastery.
If any good to me or from me came
Through life, and if no influence less divine
Has quite usurped the place of duty's flame;
If aught rose worthy in this heart of mine,
Aught that viewed backward, means no shade of shame;
Bless thee, old friend! for that high call was thine.

THOMAS WENTWORTH HIGGINSON.

Cambridge, Mass., Dec. 17, 1887.

"THE best test of a man's calling to the ministry is his ability to translate his life into a sermon." And we may add that the best test of the sermon is the ability of those who hear it to translate it back into life again.—*Exchange.*

IDEALS, TRUE AND UNTRUE.

AMONG the most precious possessions of humanity are its ideals. Whatever of poverty or hardship, of sickness or sorrow, of disappointments or adversity, of failure, or weakness, or sin may afflict a man, he has still within him the image of something better, nobler, happier, more successful to hope for and to strive after. To this image, varying though it does with the character and personality of each individual, is society indebted for its continued progress and improvement in manifold directions.

These ideals, however, are not all equally valuable, nor equally attainable, and it becomes an important part of self-culture and of education to see to it that those we are cherishing in ourselves, and infusing into the hearts of the young, are not only excellent in themselves, but possible to realize under existing circumstances. One of the most serious mistakes which is made in this direction, as well as one of the most common, is that of presenting for the aim of everybody the ideal of greatness and eminence. It is not an uncommon thing to urge boys to put forth their utmost endeavors in the hope of some day becoming great statesmen and filling offices of political importance. Instances are presented to them of men who, once simple school boys like themselves, have risen to the position of mayor, or governor, or senator, or even president; and it is more than hinted that equal exertions on their part may produce equal results. Or they are pointed to the great authors and poets, who have instructed and cheered mankind with their thoughts and imaginings; to the great orators, who have thrilled their audiences; to the great inventors or musicians or sculptors whom the world delights to honor, or the merchant princes who have accumulated and dispensed millions, or equally rare and exceptional men of genius in other directions, and they are counseled to read their lives and study their methods, not simply to admire and reverence, but to imitate, that they may rise to the same pinnacles on which these men have stood.

The chief reason why such motives should not be presented to the average youth is that they are *unsound*. It is not true that most of the young people who are thus addressed can rise to great eminence in any direction. It is not even true that many can. If it were, eminence, ceasing to be exceptional, would lose its meaning. If all, or most, or many reached the same high position, which is thus held out as a lure to all, it would become merely a common level, and lose all its distinctiveness. Neither would it be desirable were it possible. If all were officials, where would be the citizens? If all were architects, where would be the workmen? We may be very sure that the notion that everybody may rise to fill an exceptionally high place in the world is both irrational and undesirable. High places are for those who improve the talents God has given them.

The earnest striver, who tries to live the life of some one else, and fails, finds but little energy left to live his own, and often sinks down into comparative apathy. He whose sole aim is to reach some special height, when he finds that his powers are inadequate

will care but little to climb any further. Thus much loss of needed power and effort results from such impossible ideals. The individual does less than he can, and both he and society through him are losers. Besides all this, such elevations are merely artificial. The few who attain them see before them endless heights still waiting their ascent. All is comparative, and the utmost limit that man has yet reached in any direction is but a short distance compared with what lies beyond.

The true ideal that should fill a man's heart and his energies is *excellence in his own sphere;* the living of his own particular life just as fully and nobly as *he* (not somebody else) can. True, this is an unknown quantity, but it is a real, true, and attainable one. Day by day it is rising, and day by day he feels conscious of increased power. Where it may lead him he cannot tell, but that by its guidance he will go further and accomplish more than by any other he may rest assured. Whoever cherishes this aim will find full scope for every faculty, full work for every day, and full satisfaction in every success. Attempting nothing impossible, he is doomed to no inevitable disappointment, nor is there any limit at which he may cease to strive.

The diffusion of such an ideal is just what society needs for its best welfare and progress. Eminent men and women in every walk of life are great blessings to the State, and we cannot too highly value or reverence them. But they are necessarily few, and it is to the large body of people of average abilities that the country must look, and on whom it must depend for its character and prosperity.—*Philadelphia Ledger.*

CONCERNING RUNNING IN DEBT.

A CORRESPONDENT writes us for aid in his perplexity. He is married and living on a salary of $600, which certainly does not leave a large margin for saving. He has a debt incurred in getting his education—that is, his equipment for life. This debt falls due next March, and he has nothing wherewith to pay it. He is at his wits' end, and he wonders if there is any loan company of which he could borrow, on personal credit and a life insurance policy, enough money to pay this debt, making the loan payable in three annual installments. We answer his question here through the columns of *The Christian Union* because it represents a common case and affords an opportunity for counsel which will have a wider application.

There are some things for which it is legitimate that a man should run in debt. One is a home. If the interest on the investment, plus taxes, repairs, and insurance, is not more than he can afford to pay as rent, such a debt is ordinarily prudent—for he thus puts himself under bonds gradually to pay off the debt and become the owner of his home; and meanwhile his expenditures are no greater than they would be without the debt. So it is legitimate to incur a reasonable debt in acquiring an education. Education is capital, and a man may properly borrow a certain amount of capital, only being careful to borrow no more than he has reasonable assurance he will be able to repay within a reasonable time or within the time definitely agreed upon.

But when a man runs in debt, if he agrees to pay it at a time specified, he must keep that obligation constantly before him, and his first duty must be to meet that obligation before he incurs any other and new ones. Unless, for example, he can see his way clear to live married on as little as it will cost him to live single, he ought not, except in very extraordinary circumstances, to take on him the obligations of marriage until he has provided, or reasonably assured himself that he can provide, for his other and precedent obligation. One of the great dangers of running in debt is that the debtor will forget his obligation until the time of payment comes, and then be appalled to find himself wholly unprepared to meet it. We cannot help wondering, for example, what assurance our correspondent has that he could pay his present indebtedness in three annual installments. If we understand his figures aright, the three annual installments would leave him only $400 a year to live on. Has he carefully counted the cost? Is he sure that he can live on that? If not, he is only proposing to annul one unfulfilled obligation by entering into another obligation which will probably be unfulfilled when the time of fulfillment comes. These are not very encouraging, and may not seem to be very sympathetic, words to the correspondent who looks to us for help, or at least for sympathy. But we have some hope that reporting his case and commenting on it may be a help to some other reader of the *Christian Union* before he has placed himself in the same predicament. The general principle is this: Never incur a debt unless you can see tolerably definitely where the money is coming from with which to pay the debt when it becomes due; and when you have incurred a debt, keep it constantly before you and lay by something every year to meet the debt, until it is met and paid off. To these principles there are few, if any, exceptions.

But what shall our friend do? and he probably represents thousands of others in like circumstances who have run in debt, and who have not the wherewithal to meet the obligation. Do not try to transfer the debt from one creditor to another; this does not pay the debt. Go to your creditor, tell him frankly your condition, and set yourself diligently to work to pay him by installments. In this particular instance we advise our friend, though it is advice more easily given than followed, to save at every hazard something between now and the first of March, then go to his creditor with that something in hand, pay him on account, and ask for the opportunity to pay the balance in similar installments; only make the installments quarterly or monthly instead of annually; the oftener you face your debt the earlier you will be likely to get it paid off.—*Christian Union.*

FOR over forty years I have not hesitated to declare my conviction that justice and fair dealing, and the democratic principles of our government, demand equal rights and privileges of citizenship, irrespective of sex. I have not been able to see any good reasons for denying the ballot to woman.—*J. G. Whittier.*

THE WINTER SOLSTICE.

THE sun grazes the tropic of Capricorn on the 21st of December, and the astronomical winter commences. The event is known as the winter solstice. It is the season when ice and snow reign over the northern temperate zone, and the sun looks with slanting beams upon a belt of earth where cold and desolation hold sway. He seems to stand still in his course as he views the frigid picture; and then the great giver of physical life and light turns his face toward us, and offers the first precious minute of additional daylight as a guarantee of joys that follow in the train of his progress northward. The pagan nations of antiquity, who looked upon the sun as the visible manifestation of the Deity, observed the winter solstice as a season of sacred festivities. The Persians kindled their sacred fires. The Romans celebrated their Saturnalia. The Scandinavians built huge fires in which yule logs blazed in honor of Odin and Thor. The Druids gathered the sacred mistletoe, and made human sacrifices to the savage divinities whom they worshiped. Feasting and rejoicing filled the passing hours. The dwellings were decked with branches of evergreen and wreaths of laurel. Presents were exchanged and universal merriment was the order of the day. The sun, the embodiment of power and strength, was coming back. It was the return of life and happiness to their rude natures, and their most sacred religious rites and dearest social pleasures clustered closely around the winter solstice. The early teachers of Christianity could not induce their converts to give up these heathen festivities, and endeavored to change them to Christian festivals. Engrafted upon the pagan rites and amalgamated with them, we have the strange medley of Christian and pagan customs that make Christmas and New Year all over the civilized world the season of joyful thanksgiving to the great Creator of the sun, and the blessedness of his returning beams. December crowns the longest nights of all the year with a superb picture of the glory of the heavens.—*Providence Journal.*

COEDUCATION AT ADELBERT COLLEGE.

ADELBERT COLLEGE, of Western Reserve University, at Cleveland, O., is said to be on the point of abandoning coëducation, and either closing its doors to women altogether, or relegating them to an "Annex." With Ann Arbor, Cornell, Boston, and almost all the State Universities of the West, admitting women,—with the drift of the age unmistakably in that direction,—if Adelbert likes to make itself a little eddy in the onward stream of progress, and turn round and round, or even run backward for a time, the friends of Adelbert have more occasion to be disturbed than the friends of coëducation.

The reason given for the proposed change is instructive. Girls have been admitted to Adelbert for four years, and according to the Cleveland *News and Herald*, they have more than held their own with the young men in scholarship. The Latin salutatory in 1886 was given by a young woman, and so was the valedictory last June. But the trustees think that conservative young men, who do not like to study with young women (especially, perhaps, when the young women surpass them), avoid Adelbert because it is coëducational, and go to Eastern colleges instead. To entice in these conservative young men, they propose to exclude the girls. We can see only one advantage in the proposed arrangement. It will keep some of those conservative young men away from the Eastern colleges, which are afflicted with too many such students of their own. Young men of that stripe are a mediocre ornament to any college. —*Woman's Journal.*

THE NERVOUS ORIGIN OF COLDS.

WHENEVER, owing to any derangement of the nervous system, the perfect maintenance of animal heat fails to be carried out, disorder ensues, the mildest form of which is a catarrh, namely, the blocking up of the skin or outer surface of the body, with the consequent transference of the excretion to the mucous or inner surface. The deleterious matter, which ought to have been removed by the skin, irritates the blood by its retention there, and ultimately expends itself by the nose and throat. For example, if the nervous system be feeble, sweating would probably be induced, and a consequent loss of heat, irrespective of the needs of the body; in which case a cold would most probably follow. As a fact, there are many persons with feeble nerves who readily perspire in the coldest weather, and are in consequence liable to frequently recurring colds The nervous origin of colds also furnishes us with a clue to its treatment in the early stages. The whole history of a cold shows it to be essentially and primarily a state of collapse, demanding early recourse to a stimulating plan of treatment. There is no more dejected mortal than a patient in the first stage of a cold, and both his physical and mental condition point to nervous collapse. Hence, we believe, the great success of camphor and ammonia inhalations in the early stage. —*Chambers' Journal.*

PHILIP SCHAFF, in *The Independent*, states that the German Empire, like the United States of America, has no direct or official connection with the church; but that every German State has its own independent State church. There is no organic connection between these State churches, each being confined to its own geographical boundary. This state of things dates back from the Diet of Spire, 1526. The Constitution of the German Empire, adopted in 1871, says nothing about religion. The religious statistics, according to the census of 1880, gave the number of Protestants in the German Empire about 28,000,000, and of Roman Catholics 16,000,000.

LOUISA M. ALCOTT says: "It is wise for women who have made a place for themselves in literature and journalism, to cultivate not only their intellectual faculties, but practical ones also, and to understand the business affairs of their craft. The ignorance and helplessness of women writers is amazing. The brains that can earn money can understand how to take care of it by a proper knowledge of contracts, copyrights, and duties of author and publisher."

PROF. ROMANES ON WOMEN'S BRAINS.

PROF. ROMANES notes that the brains of the average man is slightly heavier than that of the average woman, and argues that "there is a general correlation between brain weight and mental capacity throughout the whole animal kingdom." But the brain of an elephant is three or four times as heavy as that of a man, yet we do not find the elephant three or four times as intelligent as the man. Again, if the relative weight of brain to body be made the crucial test, the weight of the brain, as compared with that of the body, is greater in certain birds than it is in the human species. Prof. Romanes says that if it could be shown that the feminine brain differed from the masculine brain in quality, its smaller size would not matter. Well, consider the case of idiots. It is found that if the masculine brain is below a certain weight, the owner is invariably an idiot; but the feminine brain can fall several ounces below that weight, and the owner still be perfectly rational. If a ounces of masculine brain = idiocy, while $(a-2)$ ounces of feminine brain = rationality, the inference would seem to be that the quality is different; or, at all events, that the smaller creature may have a smaller brain without necessarily having inferior wits.—*Woman's Journal.*

It was not until he died, says a *Boston Herald* writer, that the public became aware how much of his time and thought the late Richard C. Greenleaf devoted to scientific study. Engrossed with the cares of a large business through the day, he divested himself of it when night came, absolutely, and turned for recreation to genuine hard work with his microscope. In his earlier years he had studied the stars, and made himself familiar with the geography of the heavens. But some twenty-five years ago he realized that he could go no further in astronomy with the appliances which he could control, with nothing short of an observatory, in fact. So he gave up his nights on the roof of his house in Dorchester, where winter after winter he had sat muffled in a great coat, studying into the mysteries of the heavens, sent to Europe for the best microscope that could be bought, and began the study of nature in her minutest forms, pursuing his researches with such care and method as to take a leading position as a microscopist. "I hold it to be every man's duty," he once said, "to do something with his own brain to add to the world's store of knowledge. If a man have means sufficient to enable him to give to institutions which are carrying on such work, it is his duty to do so, but that is not his whole duty. He should do something himself, something to make the next generation know more than his did."

Whoever believes in the principle of right-doing as a principle will be ready to do right always and everywhere, to God as to men, to men as to God. This it is, and this only, that makes a genuinely whole-intent man thus a man of integrity.—H. Bushnell.

NEWS AND OTHER GLEANINGS.

—During the last season on the lakes, it is estimated, more than 200 lives were lost and $2,500,000 worth of property destroyed. Seventy-six steamers, forty-three schooners, six tow barges, and eight tugboats were lost or damaged.

—Some people doubt the poisonous effect of nutmeg, but several cases of nutmeg-poisoning have been noted in the *British Medical Journal* during the past summer. A whole nutmeg was taken in four of the cases, and five whole ones in the remaining case. In still another case, the use of half a nutmeg in a hot drink was nearly fatal.

—The London *Athenæum* says a number of unbound journals and logs of the *Resolution* and *Discovery* during Capt. Cook's last voyage have recently been found at the Record Office where they have apparently lain unnoticed by Cook's numerous editors and biographers. Prof. J. K. Laughton has been engaged upon an examination of these interesting relics, which include at least ten separate accounts of Cook's death, giving some curious variations from the accepted narrative.

—Recent experiments have demonstrated that an incandescent electric light of one hundred candle power, sunk twenty feet in the ocean, will illuminate the surface sufficiently to distinguish objects within a radius of two hundred and fifty feet.

—It is rather the abuse of tea than its use that causes serious physical evils. Four or six cups of tea taken during each twenty-four hours will in time produce tea-poisoning and greater or less evil results. Tea is well enough when its use is kept under absolute, intelligent control; but if it becomes master in any case, then it must be promptly abandoned, for danger attends the intemperate tea-drinker every hour of his or her life. Those advanced in life crave the stiumlating effects of tea, but the young should abstain from its use entirely. It is better for all that the appetite for tea be not awakened in early life, as a great injury may thereby result.—*Popular Science News.*

—A current newspaper item says that Anna E. Dickinson has so far regained her health as to make it possible for her to start for Florida, where she will spend the winter.

—There are twenty women students in the medical department of the Buffalo, (N. Y.), University—a larger number than ever before.

—The memorial in favor of granting degrees to women at Cambridge University, England, had more than 500 signers, of whom 40 were head mistresses of public schools, 211 assistant mistresses in public schools, and 42 professors and lecturers.

—Several years ago three Russian lady doctors started, at Tashkend, a consulting hospital for Mussulman women. From the beginning the experiment proved a success, and the popularity of the hospital has been increasing ever since. During the last twelve months fifteen thousand consultations have been given.

CURRENT EVENTS.

The extensive strike of the "freight handlers" and coal miners employed by the Philadelphia and Reading Railroad Co. continues, and the cessation of work by the latter has grown more complete up to this writing, (10th inst.) The assigned cause of the strike of the freight handlers is generally condemned as insufficient, but the miners' case is more justified, and there is a strong demand that it be submitted to arbitration. This, the President of the Reading Road, Austin Corbin, refuses.

It is stated that the shipments of coal on the 8th inst. along the Reading Railroad completely exhausted the stock on hand, and no more can be shipped until it is mined, either at individual or Reading Company collieries. Inquiry at the railroad office in Reading on Second-day night elicited the information that not a single coal train had left the coal regions since early the previous night, and not a single car-load of coal passed through Reading on the 9th inst.

Dispatches from the North-west showed extreme cold there, at the close of last week. The thermometers at Belgrade, Montana, registered 52 degrees below zero on the morning of the 7th. This is the lowest temperature recorded in that section since 1865. All freight trains on the railroads were abandoned, and passenger trains going west were from twenty-four to thirty-six hours late. A telegram from Marquette, Michigan, says the snow fall in the upper peninsula is unprecedented. Up to the night of the 6th, two feet had fallen on a level, and it was still snowing.

L. Q. C. Lamar, of Mississippi, Secretary of the Interior, sent his resignation to the President, on the 7th inst., having been nominated by the latter to a place on the bench of the U. S. Supreme Court.

A cable despatch from London to the Toronto *Mail* says: "The feeling is rapidly growing that, as commercial union would greatly promote the prosperity of the Dominion, it is desirable in the interest of British investors. This view has been put forward in two or three Liberal newspapers and is favored by several prominent members of the Peace Society who have just returned from a visit to the United States and Canada."

You are troubled by the invariableness of law; make it the method of a divine intelligence, and your trouble vanishes. You have Providence then, not once in a while, but always.—*A. W. Jackson.*

NOTICES.

*** A meeting of the Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting, will be held at Race street meeting-house, Seventh-day, First month 21, 1888, at 1 p. m.

Annie C. Dorland, }

PUBLISHERS' NOTICES.

***Matter intended for insertion in the Intelligencer and Journal should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** We particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

***As a definite number of copies of the Intelligencer and Journal is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* Royal Baking Powder Co., 106 Wall-st., N. Y.

The use of the Intelligencer and Journal *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about* 3300 *persons, reaching, say,* 15,000 *readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞ *When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.* ☜

A true and perfect Soap for Babies, Children or Persons of Delicate Skin.

AFRICA—FIVE THOUSAND MILES from Philadelphia grows the stately palm tree, producing a beautiful orange-colored fruit, rich in oil of the most healing nature for burns, scalds or bruises.

We buy the best of this oil and make our PALM TOILET SOAP entirely of it. When the Soap is made it contains many of the healing properties of the oil.

For Persons of Delicate Skin and Children, some of our friends say it is the best Toilet Soap in the world. Price $1.25 per dozen.

532 St. John St., Philadelphia, Penna.

FRIENDS' INTELLIGENCER and JOURNAL

Memoranda for those who will aid in Sending in Subscriptions.

1. Rates for the Year 1888.

   Single subscriptions, $2.50 per year.
   8 copies, $2.25 each, a year.
   15 copies, $2.00 each, a year.
   ☞Note the change in last item from previous years.

2. "No Agents."

   We recognize no one as our "Agent" with the single exception of Friends' Book Association, 15th and Race Sts., Philadelphia. Those Friends who get up Clubs for the paper must be regarded as the agents of those subscribing through them. When money reaches our hands we receipt for it ourselves, and no one, (except F. B. A., as above), is authorized to receipt for us.

3. Concerning Clubs.

   a. It is, of course, our desire to get new subscribers, and retain old ones. Unless Clubs help to do one or both of these things, they do not aid the paper. We therefore hope to have in them (in the $2.00 Clubs, especially) *some new ones.* This is difficult, of course, in some localities, and in such we will not *exact*, though we *desire* it.

   b. Names and money, for clubs, should be sent to us in *one, two, or at most three,* instalments. We can wait till the person getting up the club is ready with the money, but we cannot accept single names and money, (unless for *new subscribers*), at intervals through the year, on Club account.

4. Subscribers' Names.

   When sending clubs, please carefully designate all "new" names; and in renewals, please use the same name as the paper has been coming to ;—if for any reason th name is changed, please call our attention to this fact.

5. Discontinuances.

   We do not discontinue a paper, (unless for continued delinquency in payment), without the order of the subscriber. Persons wihing to "stop" *must so notify us.*

A WORD AND A DEED.

A LITTLE spring had lost its way
Amid the grass and fern;
A passing stranger scooped a well,
Where weary men might turn;
He walled it in, and hung with care
A ladle at the brink;
He thought not of the deed he did,
But judged that toil might drink,
He passed again, and lo! the well
By summers never dried,
Had cooled ten thousand parching tongues,
And saved a life beside.

A nameless man, amid a crowd
That thronged the daily mart,
Let fall a word of hope and love,
Unstudied from the heart;
A whisper on the tumult thrown,
A transitory breath—
It raised a brother from the dust,
It saved a soul from death.
A germ! O fount! O word of love!
O thoughts at random cast!
Ye were but little at the first,
But mighty at the last!

—*Selected.*

For Friends' Intelligencer and Journal.

THE "THINGS GOD PREPARED FOR THEM THAT LOVE HIM."

I Corinthians, ii: 9.

WE are too apt to consider the "things" here referred to by the apostle as something to be manifested hereafter, a reward that awaits the righteous man in the future life; and in this sense it is used both from our galleries and in our written utterances, as an incentive to well doing. The text is part of a quotation from the prophet Isaiah, and the evident intention of the prophet was to bear testimony to the great spiritual truth that the Divine Being holds intercourse with his dedicated servants and more than satisfies their spiritual longings. "For from of old men have not heard, nor perceived by the ear, neither hath the eye seen a God beside thee which worketh for him that waiteth for him." It was a revelation of God such as men were not familiar with, and contrary to all the hopes and expectations of the multitudes who by various devices sought to gain Divine favor. F. W. Robertson, in a discourse on "God's revelation of Heaven" makes this point very clear. He says: "The world of which the apostle speaks is not a future, but a present revelation. God hath revealed it. He speaks not of something to be manifested hereafter, but of something already shown, only not to eye nor ear. The distinction lies between a kingdom which is appreciable by the senses, and another whose facts and truths are seen and heard only by the Spirit. Never yet hath eye seen the Truths of God—but then never shall it see them. In heaven this shall be as true as now. Shape and color give them not. God will never be visible, nor will his blessedness. He has no form. The pure in heart will see him, but never with the eye; only in the same way, but in a different degree that they see him now. . . . Eye hath not seen and never shall see in finite form the Infinite One, nor the infinite of feeling or of Truth."

And this accords with all we know of God through the revelation of himself to our inner sense. They who have never known this revealing, do not know God, and it is for want of this knowledge that so many who are trying to find him through the various avenues of the outward world, the reasonings of the intellect, and the investigations of science, hopelessly fail, and are fain to place culture and high-thinking, noble action and generous deeds, in the place where God the Eternal Good should rule and reign; thus making the attainment of the best condition of soul-life depend upon the limitation of things seen and temporal, and the high goal and end of all life, the perfection of that which of itself is finite and partakes of the things that perish with the using.

Do any ask for stronger evidence that the "things God prepared for them that love him" are not the things that we can receive from one another than the whole record of his dealings with man in the past presents? and yet, that these do not always convince the understanding to the removing of the veil that hides the holy of holies from the inner vision, is seen in the various attemps that are made to satisfy the craving of the immortal life, and the denials this leads to from those who have only heard by the "hearing of the ear." To quote from Robertson again, "Revelation is made by a spirit to a spirit—God hath revealed them through the spirit" . . . and therefore "the Spirit searcheth all things, yea, the deep things of God. Now the spirit of God lies touching as it were, the soul of man ever around and near. On the outside of earth man stands with the boundless heaven above him; nothing between him and space—space around him and above him—the confines of the sky ever touching him. So is the spirit of man to the Spirit of the Ever Near. They mingle. In every man this is true. The spiritual in him, by which he might become a recipient of God, may be dulled, deadened by a life of sense, but in this world never lost. All men are not spiritual men, but all have spiritual sensibilities which might awake."

What we want is to become conscious of the nearness of God. "Love God, and he will dwell with thee; obey him, and he will reveal the truths of his deepest teaching to thy soul. There is no doubt, no reservation; as surely as the laws of the spiritual world are irresistible, are these things prepared for obedient love. An inspiration as true, as real, and as certain as that which ever prophet or apostle reached, is possible to every one who will have it so."

To the soul thus brought into oneness with God, the love that casteth out fear will be a constant well-spring of peace. The life thus consecrated finds all things work together for good, because, walking in his light as children of the light, there can no shadows fall upon the life, dark enough to hide the sunshine of his grace and favor; and no cloud can intercept the fullness of that light which will grow brighter and brighter unto the perfect day. L. J. R.

For Friends' Intelligencer and Journal.

UNITY IN OUR MEETINGS.

IT is a well understood and accepted principle of action in our meetings for discipline, that no course of procedure should be decided upon unless it can be done *in unity*, and if a proposition can not thus be united with, it should be postponed for further thought, so that if presented again it may be adopted with a practical unity. And in this form of procedure Friends differ from nearly all others in the transactions of the business of the Society.

In order that such a course shall be conducive to a true unity, and thus preserve harmony amongst our members, it becomes necessary that each member shall be willing to make concessions to the others, and refrain from an undue and improper pressing of his own wishes to carry his own points, or to obstruct the adopting of propositions he does not fully approve. That there will always be a variety of opinions when any subject of importance comes before a meeting, is to be expected, because we are so constituted that we see things from different stand points and therefore often honestly arrive at different conclusions. So, to promote a true unity and harmony, we need not withhold a full, free, and candid expression of our sentiments, but while so doing we must be ever ready to surrender them when it appears clear that the meeting as a whole does not see with us. To then cheerfully acquiesce in the prevailing judgment of our friends, will relieve us of any responsibility regarding a course of action we do not fully approve, and thus preserve the unity and harmony we desire. But, as is sometimes the case, when a subject has been presented to a meeting as the concern of some member, and generally approved by the body; for a few who do not unite with the concern, after giving expression to their objections, to so press them upon the meeting by the manifestation of a feeling of determined opposition, that for the sake of unity desired, the meeting is obliged to postpone or forego the adoption of the proposition, will neither promote unity nor harmony in a meeting, though it may be yielded to by the larger number because of the precedents established and held sacred among us. Such a course of opposition leaves disturbed feelings which, though they may be unspoken, yet none the less surely weaken the influence of those who have taken the obstructive stand.

And more particular is such a course, on the part of a few individuals, objectionable and productive of such results as are above indicated, where a subject, like a proposition for an alteration of discipline or something of equal importance, has been presented to a subordinate meeting and by it fully digested and united with and forwarded in its regular order to a yearly meeting, with official notification of unity in all the subordinate meetings, through which it has passed, and then having been given to a large committee who take the time to thoroughly digest and consider it, and they report they too are united in its adoption; for a few then to manifest earnest opposition, either in frequency or a peculiar manner of expression, so that to be consistent with one adopted policy to wait for an entire unity, the proposition must be indefinitely postponed, will not so promote the harmony and unity of the body as to conduce to its healthy growth, but, on the contrary, it is sure to engender feelings of dislike which tend to weaken confidence in the individuals so opposing, and so slowly undermine their influence for good. Not unfrequently it tends to discourage some who are young in experience, and turn them away from the attendance of our meetings for discipline, and thus contribute to make such a forced unity a means of obstructing the true growth of the Society. I know this course is sometimes taken by those who claim for their long experience and activity in the affairs of the Society, that their judgment ought to carry more weight than that of the more immature, and they conscientiously take such a position because they think the proposition or course of action they oppose will tend to injure or retard the true interests of the Society, and that if they be true to their Master, they must firmly contend for what they think is right and so keep the Society from harm. But it is clear to me, as the result of a close observation for many years, that unity obtained under such conditions has invariably worked harm instead of good to the Society, and if it were admissible, I could give instances that would fill a number of pages, to prove the truth of my statement.

What then is the duty of these experienced and earnest ones, where they see a meeting about to take a course of action they feel sure will result in harm? This will not unlikely be an inquiry arising in some minds. The answer, to me, seems easy: Tenderly, and as clearly as they may be able, point out what seems to them to be the mistake the meeting is about to make, and what appears to them would be the better course, and then if the meeting does not accept their view of the case, cheerfully give up to the prevailing sense of the meeting, always remembering, however clearly we think we see a thing, or however experienced in the affairs of the church we may regard ourselves, we are yet finite and liable to be mistaken in our judgment. It may be warped by a prejudice regarding the subject under consideration or by an examination of it from one standpoint only, or against the individual from whom it was presented, or from our temperament which may lead us to oppose every

thing we regard as an innovation upon former practices, and thus others may have a clearer view than ourselves. And if they are willing to take the responsibility of an action we do not approve, after we have given a candid and kind expression of our views, we are clear, having performed our duty; and whether our view of the case shall prove in the future to be right on wrong,—we shall have preserved the affection and esteem of our friends, and thus a truer unity and harmony will be maintained than if we had so firmly opposed the course of the meeting as to lead to a dropping of the subject from the minutes, or to such a postponement of it as in the end would show that we had been in the wrong, and ultimately had to confess our error that the meeting might proceed.

I well remember a lesson taught me by an aged Friend, many years ago. A subject came before a meeting, and it was about to adopt it, and the adoption of it was excessively trying to me because I had a knowledge of some circumstances that were not known to the rest of the body, and which it was improper for me to make public. I arose and opposed the course the meeting was about to adopt, assigning reasons on general principles, but closed with this remark: "I am now easy, and will go with the meeting, let it decide as it may." Its decision was adverse to my feelings, but as meeting closed, the aged Friend came to me and said in a tender manner: "John, we frequently gain more by the submission of our views than we do by pressing them." It was a deeply instructive lesson to me, and the result on that case was the preservation of unity and harmony in the meeting, though at no little sacrifice of my feelings, but the precedent then established, and against which I bore my testimony, has never since been adopted, and the friend who strongly urged and pressed the course of action afterward acknowledged he was in error. Subsequent experience has convinced me that this is really the true method to keep and preserve unity in our meetings. And hence I would tenderly and lovingly counsel all who may read this essay who are interested in the welfare of the Society and are active in its business meetings to strive more earnestly for the attainment of that feeling, that while we may differ in our judgment from our brethren and sisters, yet we may cheerfully, after a candid expression of our feelings, submit to the judgment or view which the larger portion of the meeting entertains. If they be wrong, we shall be clear; and if right, we shall be glad we yielded; and so a unity and harmony will be maintained, and all feelings of bitterness or of discouragement that tend to turn away, will be avoided

JOHN J. CORNELL.

Mendon Centre, N. Y.

AVOID the first temptation to wrong. He who yields, and indulges in some form of sin practiced by others, because others practiced it, is in quicksands, and cannot expect but to suffer loss. Safety consists in ability to say no, firmly and from the beginning. —*Academy News.*

FOR every kind of truth a special capacity or preparation is indespensable.—*Robertson.*

For Friends' Intelligencer and Journal.

IS A REUNION OF FRIENDS POSSIBLE?

—[We give place to the following letter from Edward Ryder, as referring with much earnestness and force to what is, of course, a highly interesting subject. We reserve judgment upon the doctrinal suggestions which he makes, but we may remark that as the occasion for the letter is the recent expression in Whittier's communication, so also it seems to us that a basis for the union of all real Friends could be drawn from Whittier's own poems. They are always true to the vital principles of Quakerism, and seldom,—if ever,—encumbered by dogmatic burdens. —EDS.]

Editors INTELLIGENCER AND JOURNAL:

WHEN a man like Whittier, whom it is not impossible some future historian may style the last of the Quakers, as Brutus has been called "the Last of the Romans," though many true, but not great, patriots lived after him, speaks to his brethren as from the top of Mount Pisgah, where he sees them encamped in their separate tribes on the wooded plains of Moab, waiting, as it were, for the generation that rebelled against the Lord's commandment to die, before they pass on to their inheritance of Union, Liberty, Love, and race, it is a solemn moment. His eye is not dimmed, nor his natural force abated, yet this man, who has long communed with Truth face to face, and to whom the God of Abraham, Isaac, and Jacob may be said to have spoken as a man to his friend, says to his brethren of the faith, "I heartily wish all who hold the name of Friends were once more united. The great separation in the first instance, I have always looked upon as unnecessary and wrong, and its effects have been only evil. It fostered prejudice and hatred and all uncharitableness. It has crippled our power to do good. It has driven both sections away from the original ground of Quakerism. Is it not time to inquire whether there is not some way to bring all back to the true foundation laid by Fox, Penn, and Barclay?"

If such words from such a source are suffered to pass unheeded, there is, indeed, little room for hope that Quakerism will not ere long be a thing of the past.

That they are the words of truth and soberness, I believe every impartial and well-informed person will be ready to admit. Should there not then be earnest heart-searchings among those to whom they are addressed? Nay, should not a great cry go up to Him who alone can renew the light once given and which is burning so low that the way forward is scarcely distinguishable, that God will once more cause his face to shine above the cloud and give his people instruction—that he will again suffer the True Light to dawn as at the beginning, and become a Teacher of his people himself, even as he taught the fathers in their day and caused them to forsake their idols and worship the loving God? This is our only hope; for until we see wherein we have erred, how shall we repent? and who but the Great Revealer can convict us of our errors? Men may speak truly and forcibly; they may utter words that are well fitted to reflect the truth, but until the Truth itself unlocks the eye of the mind, the soul will not listen to what the most eloquent "babbler" has to

say. And still the words must be spoken again and again, that Truth, when he appears, may have something to illuminate. If there be no wick in the lamp the fire will be applied in vain.

If any one is disposed to doubt the correctness of Whittier's assertion that both sections of the Society of Friends have forsaken the original foundation of Quakerism, let him candidly compare the writings and preaching of the early Friends with those of the present time in one leading particular. Take the key-note of the gospel, the name of Christ, in which so largely resides the power his spirit exerts, and see how it is used. In the mouth of George Fox it was a word with which to raise the dead and send forth armies to battle. Read his latest epistles to his brethren and fellow ministers. He had become almost like Paul who said, "I live, yet not I but Christ liveth in me,"—not merely "Christ crucified," as he had sometimes known him and preached him when necessary, but also "Christ glorified" "risen from the dead" and become "the first fruits of them that slept." In all things, with all earnestness—not as if to prove his orthodoxy by speaking as others speak, but as one using a sword in battle, or a torch whose flame can burn into the darkness of men's souls and show them the gates of life and death—everywhere and always "Christ the power of God and the wisdom of God," not an abstraction, not a mere "attribute of God," but the living Son of the living Father,—such was Christ Jesus to George Fox and his friends. Hence they fought to conquer,and conquered when they fought; for He was with them whose name "is above every name"—unto whom "every knee shall bow," and "every tongue confess, that Jesus Christ is Lord, to the glory of God the Father." Oh how different was this Mighty Leader, this "God-with-us," to the apostles and the great Reformers who changed the face of the earth, from what he is to the children of this generation.

I forbear to press the comparison. What our own eyes and ears convince us to be true we are willing to receive, and little more. A word to the wise is sufficient. If only it be confessed that we of the present day are all in error, and all alike need the Great Physician, there is hope. But if, while we are walking in divergent paths, equally distant from the point of contact, each party insists that in order to unite the other must not only go back, but come around into its own position,the prospect of reunion is small indeed.

In case there should be a mutual confession and an earnest desire to unite, there is still a great work to do, the work of accustoming ourselves to new ideas and new modes of expression and action. Almost the only way to accomplish this would be, at the right time and place, or at various times and places, to come together and resolutely submit to the training each might exercise upon the other. The best way to learn a new language is to live with those by whom it is spoken. This makes hard work at first, but only those who are willing to work hard ever accomplish great results. The alternation method is the slow one of educating a new generation to larger and more correct views. Perhaps this is the chief ground of hope, since it has seldom been found practicable to "put new wine into old bottles." In this day of reunions, however, miracles are being wrought daily. Education, in the ordinary sense, is but the smaller part of what is needed. The chief thing is a new blossoming forth of the higher life, a genuine baptism of the Spirit, a return to our first love; and this may be vouchsafed to old as well as young. Why wait for death to unseal our eyes and make us young again? Let us be as large hearted and as reasonable now as we expect to be in another world, and the gates of our Zion will soon open softly, "golden hinges turning," to all who come in the ineffable name of Love. "Love and Truth," you answer. I admit that these must go together or there will be no long tarrying; but is not *love* the *way* to *truth*, and both together the *life* of man? Hence Christ said "I am the Way, the Truth, and the Life." No man ever learned the truth of God but through the love of God, nor can it be effectually communicated in any other way.

Hence, as our friend observes, error grew apace on either hand when Friends became divided. It was like the parting of two trees that had grown together from one root. While united they formed a shapely member of the forest, but as they sank farther and farther apart the limbs on either side hung down and left an unsightly gap in the middle. Is there no remedy but to let them fall and let a new growth rise from the broken root? Or will none arise? Will Quakerism never fulfill its ideal? never become what it seems to have been designed, a spiritual Bethel (house of God) in which the Father of Lights should be worshipped in the simplicity of matured faith, after the dictates of his own Spirit, where brethren should love each other too well to bind the conscience, and where Christ Jesus should be no remote, historic Saviour, but a present King, a Master in his own house, a true Head of many living members that should know him in whom they believe?

There seems no reason to doubt that Quakerism, or fully spiritualized Christianity, if it could be maintained in its purity, free from all sectarian taint and narrowness, is adapted to gain a large and honorable following in this age of freedom and progress. Thousands yearn for such a simple, natural,and democratic, or Christocratic, form of religion. This is the secret of the reverent attention it everywhere receives, even under the guise of peculiarities which ordinary people will not assume. The great heart of a living and noble faith is felt to be in it. Many want a religion where much can be seen, heard, and done; but a considerable, and perhaps growing class, prefer a quiet, unostentatious possession of the realities of faith, hope, and love. With these they would gladly be content; and an ever increasing number are now holding them without any connection with societies, or any confession but their lives. Of these, some would doubtless consent to join hands in a social endeavor to promote the common good, if they felt that anything could be gained by it to others or themselves. As it is they prefer their freedom to the bonds of religious association, and think they lose little. In reality, however, they do lose much, or rather lack much, of what a true and right religi-

ous association would secure. I know this from personal experience, and feel it profoundly; and yet this want is more easily borne than social ties that form a bondage other than the willing bondage of love. Was it not to such that Paul said, "Stand fast in the liberty wherewith Christ hath made you free?" Until religious association ceases to bind fetters on the conscience many will choose to forego its benefits who would gladly be made partakers of its undoubted blessings. For such it should be the office of the Society of Friends to furnish a congenial and happy home, with Christian employment, in the care of the needy and the cultivation of all that is commendable. When will the grand ideal of the great and gentle Master, who took even the outcasts to the embrace of his healing love and wrought in them till their adoring hearts exclaimed, "My Lord and my God," be fully realized? Shall it be in this world, or only in another? EDWARD RYDER.

Brewster, N. Y., Jan. 2, 1888.

"A.'S" ANSWER TO "A QUERY."

Editors INTELLIGENCER AND JOURNAL:

MANY very beautiful and comforting replies to "A Query" have been published, and it would seem indeed that nothing can remain to be said upon the subject; but though all of the answers were interesting and true, and some approached quite nearly the idea which possessed the mind of the querist, just what follows here has not been found among the communications.

It seems to the writer that the faith of Friends has especially to offer to the disheartened offender, as to all the world, righteous and sinners, the unspeakable love of God, which must render unnecessary and impossible any vicarious suffering as a means to "salvation." As though God were to say to this generation: "Children I love you! I love you with a love as great as the unmeasured universe, yet so particular and special that it even cares whether the microscopic sea animalculæ live or die; with a love swifter than electricity, gentler than silence; more healing than sunshine; purer than air; more restful than down, more nourishing than meat; safer than a mother's arms, surer than night and day; as new as the dawning, yet older than daylight; a love so deep and wide and full, so true, strong, enduring, so gentle, tender, condescending, that it must and shall conquer in time every evil under the heavens; absorb it, make it of more account. Heaven is to feel my love, and is the sure result of humble faithfulness to manifest duty. It is now, here, 'at hand' for all who will. You trust the day and night, sun, moon, and stars, the seasons in their turning; you trust food, clothing, labor, money, education, worldly position, and advantages, why will you not trust that love which makes possible, and indeed contains within itself, every blessing you enjoy? It is perfectly safe to trust every love. Faults, errors, sins, what are they but unwise mistakes? Leave them behind you. Forget them. Try again. So long as the heavens shall last, try again! Only look upward and never despair; only move forward, rather than back; only believe in and insist upon the good about you, rather than the bad. I rest not until every human heart is mine. My love is a reality to you when you trust me; and in spreading and pushing this truth you have my power to draw upon, patient, gentle, never-ceasing, irresistible. Does a parent punish a babe learning to walk if it slip and fall? It is hurt, and cries, but is discouraged only for a moment. Man must learn to stand alone, relying only on the God-strength within him, else he is invalid, worthless; but if he stumble or fall my love toward him is a help to rise and try again. Trust, and be strong." A.

From The Spectator, (London).

THE ARGUMENT FOR RETICENCE.

NO quality has gained more in public esteem in our country, and with good reason, than the one which is expressed by the word "reticence." If we look at the old uses of the word, they generally imply a censure, instead of approval. It is but lately that "reticence" has become a term of praise, instead of accusation, or at most, dubious and casuistic apology. But as authority declines, and one man's word is supposed to be *primâ facie* as good as another's, people begin to see that there must be some way of distinguishing amidst the discordant voices which is worth listening to, and which is not, and they find it permissible, even on the most democratic principles, to attach most weight to the words which are least lightly uttered, and which, whether they are or are not carefully weighed, are at least spoken under conditions of apparent deliberateness and self-restraint, which render it conceivable that they might have been carefully weighed. At a time when the eagerness to have the first word has seldom been equalled, and, as a consequence, the Babel of assertions and contradictions on almost all subjects is perfectly deafening, it is not surprising that even the democracy begins to discriminate between those who are loudest, most precipitate, and most confident in their cries, and those who reserve their judgment till it is at least possible that they may have got a judgment worth expressing to express. The word "reticence," which in old times, when men were more suspicious of reserve than they were impatient of garrulousness, was supposed to imply a sort of duplicity, has now come to be associated with discrimination and self-restraint. To say of a man that he was reticent used almost to suggest dissimulation, whereas now it means only that he does not open his lips till he has considered what he has to say.

And yet this is but a return to the old state of mind with which the sententious East judged the comparative garrulousness and looseness of purpose which it noted among the quick-witted Greeks. St. James was evidently aghast at the loquacity of the Greek converts, and took the greatest pains to impress upon them that what he called "the engrafted" or "implanted" word which was able to save their souls, was not a word which they ought to have forever on their tongues, but, on the contrary, was one which should make them "slow to speak" as well as "slow to wrath," one to be received with "meekness," one to make them doers and not talkers, one of which it should be the first and most striking re-

sult that it enabled them to bridle and tame that tongue which could not be tamed of any human power, but only by that Divine power of which he was the messenger. What St. James would have said to our modern Press, with its eagerness to startle if it can do nothing else, we can imagine. He would have said that it is "a restless evil full of deadly poison," and that unless men can wait to speak till they are tolerably sure that the impulse which opens their lips is neither frivolous nor mischievous, they certainly cannot be the ministers of the sort of message which is given from a source higher than themselves.

Dr. Newman spoke the true wisdom of the East when he wrote:—

"Prune thou thy words; the thoughts control
That o'er thee swell and throng;
They will condense within thy soul,
And change to purpose strong.

"But he who lets his feelings run
In soft luxurious flow,
Shrinks when hard service must be done,
And faints at every woe."

The feeling that it is better not to speak at all than to speak lightly, is one which has always proceeded from the conviction that utterance of all sorts has something solemn in it which should imply a steadfast purpose, and not a mere vibration of the nerves. In an age of prattle and gossip like ours, this conviction has almost disappeared. But natural selection itself is bringing it back, for how is there to be any discrimination between one kind of vehemence and another, unless we distinguish, however roughly, between the words that were weighed and the words that were not weighed,—the words which at least appeared to have a careful background of thought and preparation behind them, and the words which were so precipitate that their haste was evidently due to the desire to preoccupy the field?

Of course, reticence may be either evil or good; but volubility, though it may not be in any sense evil, can never be essentially good, can never be anything better than the fruit of a mind which is always effervescing with its own unconsidered or ill-considered experience. But though reticence may be either of good or of bad origin, it is quite a mistake to suppose, as people often do suppose, that there is necessarily in all reticence a want of simplicity,—a kind, indeed, of duplicity. Probably there never was anything less like duplicity than the sententious reticence of the Eastern genius. Indeed, St. James, who makes so bitter an attack on loquacity of all sorts, expressly describes a *double*-minded man as "unstable in all his ways," and regards it as the test of true simplicity that a man should not vacillate or express doubts of which he has only just become conscious. Reticence does not in the least imply either taciturnity or craft. A man may be full of life and the source of stimulus to others, and yet in the best sense reticent,—indisposed, that is, to give out hasty and ill-considered suggestions and impressions which may set men traveling on the wrong track, and still more indisposed to give out crude suspicions and innuendoes which may set men condemning those whom they have no right to condemn. Reticence need imply nothing but a deep sense of responsibility for all those words which are pregnant with action, those which tend to determine what men shall do, and still more, perhaps, what they shall be.

The truth is, that reticence only implies an instinctive hesitation whether the thought for the moment ought or ought not to be expressed, and many of the simplest characters that ever existed have felt that hesitation even in early childhood. All characters that have the instinct of detachment, the instinct that each mind has a life of its own which it may or may not be right to communicate to others, feel this reticence as a permanent instinct. And certainly it is one which this age, fond as it is of superficial excitements, greatly needs. The tendency of the day helps society to absorb the individual, instead of helping the individual to resist, to modify, and, if necessary, to transform society. It is a time which reminds us of the adage that Emerson used to quote, "Little pot, soon hot," a time in which small excitements spread very fast, and carry people away who have no individual life and reticence of their own. Only the truly reticent can be secure against the society of such an age as ours.

SCRIPTURE LESSON, No. 5.

FIRST MONTH 29TH, 1888.

PETER CONFESSING CHRIST.

TOPIC: IMMEDIATE REVELATION.

GOLDEN TEXT: "Flesh and blood hath not revealed it unto thee, but my Father which is in heaven."—Matt. 16:17.

READ Matt. 16:13-28.

CÆSAREA PHILIPPI, to which Jesus retired, was built in a valley at the base of Mount Hermon, twenty miles north of the sea of Galilee, and near the easternmost source of the Jordan river. Geikie says: "Jesus was a fugitive and an outlaw, rejected by the nation he had come to save; safe only because he was outside the bounds of Israel, in a heathen region." This statement prepares us for the inquiry of our lesson, and the injunction of secrecy as to who he was, which he laid upon his disciples. *The Son of Man.* Jesus in speaking of himself very frequently used this expression; he seems to have intended to keep before his disciples and those who heard him the fact of his humanity. It was Herod who said he was John the Baptist (John 14:2). Others may have said the same thing.

Simon Peter, the first to answer the question of his master, was impulsive, sometimes rash, and this made him appear to be the leading disciple, yet we have no just reason to believe him to have been any more loyal or earnest in his devotion to Jesus, than were John or James or others whose names do not so often occur. There is no evidence that Jesus meant the disciples to understand that Peter was to be their head and his own representative in the visible church. Friends believe that the headship rests on the revelation of God through immediate teaching by our Father in Heaven to each individual, and divine revelation is the rock or foundation of the Christian church.

The Society of Friends, unlike other Christian

professors, have always taught the doctrine of *Immediate Revelation*,—that is, that God reveals his will to the soul of man directly—not through any intermediate source. "I will put my law in their inward parts, and in their heart will I write it; and I will be their God, and they shall be my people; and they shall teach no more every man his neighbor, and every man his brother, saying, Know the Lord: for they shall all know me, from the least of them unto the greatest of them, saith the Lord," (Jer. 31: 33–34). This great truth was not revealed to the prophet Jeremiah alone, but has been the experience in all ages, of the true seekers for knowledge. Friends believe that it was the Rock of Divine Revelation which was to be the foundation of the Church of Christ, and not Peter or any of his so-called successors. "Nor is the revelation of God confined within the pages of any book, however valuable it may be, but in the ordering of Divine Providence instrumental means are often employed to convey religious truth, such as the reading of the Scriptures, the preaching of the Gospel, and the vicissitudes of life; but in all cases the good effected is from the immediate operation of Divine grace upon the heart or conscience."—S. M. JANNEY.

This is the one doctrine that constitutes the distinguishing feature of the religion of Jesus as Friends understand it. "Mind the Light," means give heed to the revealings of truth, made manifest through the Divine Spirit acting upon the spirit or soul of man. It was to this light, or revelation of Christ in the soul, that George Fox called the people in his day, and they who represent the Society of Friends in our times must mind the same light.

The doctrine of Immediate Divine Revelation lies at the foundation of all experimental knowledge of God. If the Church were an organization to be maintained by the secular power, or dependent upon the limitations of chance or human authority, as are governments and nations, then we might assent to the dictum which makes Peter the head of the church; but in both the old Scriptures and the newer revelation, the headship is declared to rest upon Jehovah. In the very incipiency of the Hebrew Church and throughout the eighteen centuries of its varied experiences,—its wanderings, and its short-comings,—God was ever recognized as "the Teacher of his people," and prophet, and priest bore constant and emphatic testimony to the spiritual revealings through which as a Spirit he made known his will to his human children.

Were there no other ground than this upon which to controvert the dogma of human headship, we need nothing stronger or more convincing, yet we have the testimony of Jesus and the apostles who immediately succeeded him, all against the assumption of authority by one over the other. Even in the very closing scenes of his earthly career, Jesus gave them an example of equality in service and labor, in that he was willing to wash their feet, thus performing the most menial human service, to set them the example of faithful labor for the good of one another in all those things that relate to the well-being of the life here and the life to come.

THE FIRST-DAY SCHOOLS.

NOTES ON BIBLE-CLASS STUDY AT GIRARD AVENUE SCHOOL.

THIS morning the Class continued the consideration of the Gospel according to John, the sixth chapter being now read.

The first thought which this chapter seemed to suggest was, that when we observe the highly figurative language used by Jesus on this occasion, it is not surprising that the Jews did not understand him, and even "many of his disciples" were offended and "walked no more with him." But we were reminded that he was speaking to an audience accustomed to such language, this being characteristic of the people of the East; and the query arose whether the narratives of the loaves and fishes, and Jesus walking on the sea might not also have been intended to be figurative.

Another peculiarity of this chapter was noticed. Whereas it is a prominent article of belief among most Christian churches, that no one can approach the Father, save through his Son Jesus Christ the Mediator, the leading thought which pervades Jesus' teachings on this occasion is apparently the reverse. "No man can come to me, except the Father . . . draw him." "Every one that hath heard from the Father, and hath learned, cometh unto me."

In regard to the miracles before mentioned, the opinion was expressed, that everything that occurs in the natural world must occur through the operation of natural laws, yet, doubtless, there are laws in the divine economy which are still unknown to us, and this consideration should lead us not to be too hasty in coming to conclusions. To him who feels that these narratives should be understood literally and accepted in faith, it is right thus to accept them; and to him who finds a bar in his mind to such acceptance, it is right to confess it candidly and to seek for other explanation or leave them unexplained. Let each be faithful to his own highest light and purest conviction. It is helpful to us all to hear the opinion of others, alike when they agree with and when they differ from our own. It cultivates a generous liberality of spirit, each perceiving that the other founds his faith upon what seems to him the reasonable reason. Then, too, the lessons to be drawn from these narratives are often the same from whatever standpoint we veiw them.

The question was asked, What lessons can be drawn from the two narratives under consideration, if they be understood literally? As no definite answer was expressed at our meeting, I feel like offering, in this connection, a thought or two. In the account of Jesus walking on the sea, is there not one prominent thought which alone might make it worthy to be treasured in the mind? "It is I; be not afraid." This sentence has a meaning and a value independent of the story which contains it, and may readily be applied to conditions in our own experience. It is as if the kind Father himself were speaking; and in some lonely hour on life's wide sea, when threatening shadows seem hanging over us, these words many return with new beauty and significance and remind us that the Comforter is nigh. Every out-

ward fact or event has that which corresponds to it in the mind, and this is what gives beauty to all parable and all story. In the account of the five thousand fed with five loaves and two small fishes may we not perceive this truth; that with those who are divinely fed, when the mind is filled with a new revelation or the heart is stirred by a lofty emotion, the element of quantity is nothing; there is no such thing as less or more; a crumb is the same as a feast. As it was written of the manna, referred to in our chapters, "He who gathered much had nothing over, and he who gathered little had no lack."

It being thought pertinent to the subject in hand, a recent editorial in FRIEND'S INTELLIGENCER AND JOURNAL, entitled "The Proper study of the Bible," was read and commented upon. As a closing exercise, a newspaper clipping was read, containing a declaration of faith by a conference of Oxthodox Friends. W. S. W. Sec.

IMMEDIATE REVELATION.

THE doctrine of Immediate Revelation, that forms the basis of the Scripture Lesson found in this week's issue of our paper, is the most important doctrine of the Christian Church. It lies at the very foundation of all that we know of the relation that exists between the Source and Centre of all Spiritual life, and man, whom he inbreathed with his own divine essence, and made "a living soul," the offpring of God, capable of holding intercourse with God.

We may give whatever interpretation to the statement relating to this breath of life which made man "a living soul" that the subject, as it is presented to the intelligent mind, seems to substantiate. Whether as it is recorded, it be a myth, a legend, or an inspiration, disclosing the close connection between the Divine and the human, the fact remains, and is corroborated by an unbroken chain of testimony, from the earliest time in which man "thought and spake and wrote," down to the age in which we are now living.

The deep significance of the conversation between Jesus and his disciples, as they came into the coasts, or borders, of Cæsarea Phillippi, is found in the affirmation of this great truth. He had before taught that worship must be spiritual—that the spirit of man must come into a *felt* oneness with the Great Father of Spirit,—now he would open to their understanding the way through which this oneness would be brought about,—the revealing power of God operating on the soul.

To the searching inquiry put by Jesus, "Who say ye that I am?" Simon Peter, in the ardent impulsiveness of his nature, makes haste to answer, "Thou art the Christ, the Son of the living God." Jesus responds by referring to the name which he had bestowed upon him when as Simon, he called him to leave his nets and the unstable element upon which his life had been passed: he cites him to the fact that the name Peter which he had received (as well as Cephas its Syrian synonym) signified a rock. It was as if he had said "I have called thee Peter,—a rock, denoting firmness, solidity, stability, and thy confession has shown that the name is rightly given. This revelation, made to thee by my Father in Heaven, is the rock upon which my church is to be built, and thou, as firmly and steadfastly as thy name implies, must carry this truth forward. Thou must be the one who shall unlock or open the knowledge of this revealing power to thy own brethren and to the Gentiles, and the power will be given to thee and thy co-workers to bind and restrain the froward and thoughtless, and to loose the shackles from the burdened and those who are cast down and ready to perish, and direct their steps into the kingdom of heaven, the kingdom of righteousness and peace." The apparent prominence given to Peter over the other disciples, which is made the basis of the Papal Authority, has no solid foundation. Peter, because of his peculiar temperament, was the first to make answer to the question of Jesus. This fact gave the conversation the direction which it took, and the same bold, impulsive spirit made him the leader and spokesman for the twelve, until by the dispersion they were scattered abroad, teaching and preaching in the cities of Judea and Samaria, and, eventually, in the Grecian cities of Asia Minor.

The revelation of sonship with God came to Jesus when he heard the voice from the ineffable glory, "This is my beloved Son in whom I am well pleased," and under its influence he went forth "full of the Holy Spirit." (Luke 4: 1). The revelation made to Peter differs from that of Jesus in that it was of another—his teacher and guide—but the promise of this teacher was that by waiting in expectancy at Jerusalem not only he but all the other apostles should be endued with power, and the Holy Ghost should come upon them not many days after his departure. This promise was fulfilled at the day of Pentecost when they were all with one accord gathered into the quiet of a waiting assembly both, the apostles and those who had joined their company, to the number of one hundred and twenty.

The same revelation of sonship was made to Paul, which he testifies to when he writes "It was the good pleasure of God to reveal his Son in me," giving this evidence of sonship with himself and fellowship with the beloved Son.

John, in the opening chapter of his Gospel, with the inspiration that this revealing alone can bestow, humble fisherman of despised Galilee though he had been, yet in the most lofty words that the blending of the finest Greek and Hebrew thought could offer, declared, "To them gave He the right to become children of God," even those "who were born (or begotten), not of blood, nor of the will of the flesh, nor of the will of man, but of God," and he adds, "No man hath seen God at any time; the only begotten Son, which is in the bosom of the Father, he hath declared him."

This only begotten Son is the revealing power by which God makes known the true spiritual sonship, and it is the one ground and foundation rock upon which the Church of Christ, by whatever name it may be known in its several divisions, must be built.

THE article elsewhere printed, from our friend John J. Cornell, suggests to us the reprinting of the minute adopted by Philadelphia Yearly Meeting, in 1885, upon the subject of unity in our business meetings. It is an excellent concise statement of the case. It advises—

—"that those who may feel a concern for the adoption of any measure, after having fully expressed their views should not manifest an over-anxious care whether they prevail, and that those who may not feel prepared for the adoption of a proposition shall not endeavor to prevent its success by undue opposition, but after having spoken, submit to the generally expressed views of the meeting."

THE course of lectures for the benefit of the Friends' Library, at 15th and Race streets, is announced elsewhere, and includes the names of Professors Beardsley, Dolley, Thompson, and MacAlister, with a varied and attractive list of subjects. The first lecture will be given on Fourth-day evening of next week, the 25th instant, by Prof. Beardsley, on "A Trip to the Yellowstone."

There is a jewel which no Indian mine can buy,
No chemic art can counterfeit,
It makes men rich in greatest poverty,
Makes water wine,—turns wooden cups to gold,
The homely whistle, to sweet music's strain;
Seldom it comes—to few from Heaven sent—
That much in little—all in nought—*Content*!

HE alone has a religion whose soul knows by experience that to serve God and know him is the richest treasure.—*Robertson.*

MARRIAGES.

EYRE—SMITH.—In Newtown, Bucks county, Pa., on Fourth-day, the 11th of First month, 1888, in accordance with the order of Society, by the approbation of Makefield Monthly Meeting, Isaac Eyre, to Elizabeth E. Smith, both of Newtown, Pa.

DEATHS.

FORRER.—In Dayton, Ohio, on First-day morning, Twelfth month 11th, 1887, Sarah Howard Forrer, in the 80th year of her age. She was born near Cardington, Ohio, Twelfth month 27th, 1807. Her father, Horton Howard, was a leading member of the Society of Friends, and well known to its members throughout the State. Married in Second mo., 1826 to Samuel Forrer, she shared with him life's joys and sorrows until his death, Third month 23d, 1874, and since that time she has lived a quiet life with her children and family around and near her. Gifted with rare refinement, intelligence, and beauty of person and character, which fitted her for any station, she devoted herself to domestic life, the training of her children, and the tasteful adornment of her house and grounds.

A true Christian, she has gone home full of years, and followed by the tears of her loving children and friends who mourn her loss.

LEVIS.—At the residence of her daughter, Rebecca L. Ash, West Philadelphia, Elizabeth B., widow of John E. Levis, in her 80th year. Interment at Darby, First month 16th, 1888.

PHILLIPS.—In Philadelphia, Sixth-day, Twelfth month 30th, 1887, Phebe Phillips. Interment at Wilmington, Del.

QUINBY.—At her residence on Spring street, Sing Sing, on Seventh-day, Twelfth month 31st, of acute bronchitis, Caroline Quinby, in the 85th year of her age.

In the death of this venerable and worthy woman, the community as well as a large circle of connections and friends, sustain a severe and irreparable loss; her children a loving and devoted mother.

She was an exemplary member of the Society of Friends, faithful in all the duties of life, whether in the family circle, or in the society in which she moved. She was very active in the cause of temperance, and always ready to minister to the wants of the poor and afflicted, extending the hand of sympathy to all.

She will be much missed in the little company at meeting where she was a regular attender in time of health, but we have the blessed assurance that "The path of the just is as a shining light, that shineth more and more unto the perfect day."

"Life's blessings all enjoyed,
Life's labors done."

RICHARDSON.—At the residence of her niece and nephew, Samuel and Deborah K. Furman, Philadelphia, on Second-day, First month, 9th, 1888, Deborah Richardson, aged 76 years.

REESE.—In West Philadelphia, First month 9th, 1888, Charles Reese, formerly of Baltimore, in his 65th year.

ROBERTS.—First month 8th, 1888, at the residence of her sister, Rachel Hipple, Marple, Pa., Jane Roberts, aged 80 years. Interment at Goshen Meeting ground.

ISAAC WARNER.

Isaac Warner, whose death at Bloomfield, Florida, was announced in the INTELLIGENCER AND JOURNAL recently, was an example of what patience, diligence, and frugality can accomplish in the outward relations of life, and not less of the truth that "Godliness is profitable in all things."

In early life he was deprived by death of the care of his mother; his father marrying again, he was exposed to much unprofitable association. His father was a potter by trade and though a member with Friends, was not strict in attendance to religious service, and his sons were noted for a disposition to barter, in which Isaac was generally successful. On advancing in years he was led to much retirement, and became thoughtful on religious subjects, particularly baptism, and on arriving at majority he was employed by Richard Wright, a member of Green Plain meeting, Ohio, at seven dollars per month; but as soon as he acquired the means to carry it on he rented land and by hard labor and skillful management was soon able to purchase a farm on the Sciota River. By purchasing and feeding cattle, which he several times drove to market at Philadelphia, he increased his capital. Having an excellent helpmeet in his valuable wife who was only two days his junior, they prospered, and though nearly forty miles distant, frequently attended their monthly and other meetings. About 1834 they purchased a farm of 160 acres three quarters of a mile from the Old Green Plain meeting-house, and added to it until over 400 acres were obtained with good improvements on a beautiful site overlooking the whole. On the marriage of his children he endeavored to give them a comfortable start in life, but not possessing his prudent care they were not all successful, and by being entangled in the business of one of them, all the gathering of years was swept from him. In our Religious Society, he filled important positions, and for many years was valuable as an Elder of Green Plain Monthly Meeting. Having lost his farm, in First month, 1876, he removed with his family to Third Haven Meeting, Talbot county, Maryland, where he soon became endeared to Friends and was appointed an elder of that meeting. In the few years he resided there, he was able by the unremitting exertion of himself and family, [which consisted of his wife, a single daughter and two grandaughters] to again become comfortably situated, but having a married daughter in Florida, and his wife as well as himself being somewhat feeble some two years ago, they went to visit her, and were satisfied to locate at Bloomfield, Sumpter county, much to the regret of their friends at Third Haven.

The disposition of Isaac Warner was mild, and his manner engaging. Upright in business, though an excellent judge of values, he was careful not to give occasion for offense, and acquired the confidence of all. To those acquainted with the circumstances of his early life, the deep trials of riper age, the equanimity manifest in his deprivations, it is an evidence that the expression is none too strong "that Godliness is profitable for all positions in life." R.

ENDOWED PROFESSORSHIPS AT SWARTHMORE.

SWARTHMORE, PA., FIRST MONTH 16, 1888.

Editors INTELLIGENCER AND JOURNAL:

I SEND you herewith a copy of a circular letter which will go out this week to a large number of Friends in this country and in Canada. It will doubtless fail to reach many who are interested in the College and in Higher Education in our Religious Society; should any such see this letter, and wish to do something to secure the important end desired, I hope to hear from them promptly upon the subject. A copy of the Conditional Subscription paper referred to, although published last summer, is again given for convenient reference. I think that this appeal will meet with a prompt response, and that we may be thus enabled to announce the establishment of *one* or *two* endowed professorships, at the coming Annual Commencement in the Sixth month. These endowments, in connection with those already established to aid students in moderate circumstances, will go far toward placing Swarthmore upon a secure foundation.

EDWARD H. MAGILL.

A PERSONAL APPEAL TO EVERY FRIEND OF SWARTHMORE COLLEGE.

ESTEEMED FRIEND:

IT is well understood that Swarthmore College cannot long continue to furnish the excellent facilities now given to students in her various departments at the low rate at which they are at present offered, and extend aid to so many who are unable to pay full rates, unless means are taken to secure the endowment of some of her professorships. The enclosed subscription paper was issued last summer, and has been presented to a number of friends of the College, though not, as yet, very widely circulated. Thus far only the sum of $3,000 has been conditionally subscribed. Some of the largest subscribers, upon learning the small amount reached in these five or six months, have suggested that their subscriptions be returned and the plan abandoned. I have ask a suspension of judgment upon this subject until the matter has been more fully and prominently placed before the friends of the College. This is the object of this circular note. There are certainly many Friends in the country who would give a moderate amount if they could be satisfied that thus giving they would secure the first endowed professorship of $40,000. One says, "I would gladly give $1,000 if thirty-nine others would do the same." Another says, "My means are too limited to do anything of importance on such a subscription, but I could give $5.00, $10.00, $15.00, $20.00, or possibly $25.00, and if I were sure that the end would be thus secured I would gladly do so." Now, my friend, what I earnestly press upon thee is this: Return me the enclosed subscription paper with thy own name upon it for such an amount, be it large or small, as thou can give, and would give if sure of thereby securing to us the $40,000. If the amount is not reached, thou will see that it costs thee nothing to make the subscription. Do not wait to get other names. I do not ask thee to canvass in this matter, this being a purely personal appeal. If one or more of thy friends should be willing to join thee, of course add their names, but do not wait to fill up the paper. If all to whom this circular letter is sent would put down the amount which they would gladly give to make sure of this endowment, I believe that the result would be the endowment of *two* professorships the present year. If the amount named ($40,000) be not subscribed in time to announce it at the coming Annual Commencement, in the Sixth month, I will promptly return the papers to all who may request it, and abandon the plan, if necessary. But I cannot give it up now, almost at the end of the second decade of my labors for this college, without making this earnest appeal.

To relieve some minds, I may say that the recent formation of the "Swarthmore Stock Trust Association" will secure the College, in perpetuity, under the control of members of the Religious Society of Friends.

In conclusion, I ask thee to bear in mind that even the smallest subscription will be gladly received, and that, by securing this endowment, we are taking a very important step toward placing our college upon a permanent foundation.

I enclose an envelope in which to return the subscription paper, and ask that it be returned at an early date.

Very truly thy friend,

EDWARD H. MAGILL.

SUBSCRIPTION PAPER.

IT being highly desirable that Swarthmore College should have the aid of endowed professorships, we, the undersigned, hereby agree to give the sums set opposite our respective names, to aid in endowing a professorship in said College, which professorship shall be selected and named by the Board of Managers.

This subscription shall be payable to the Treasurer of the Committee on Trusts, Endowments, and Scholarships, when the whole amount subscribed reaches the sum of forty thousand dollars, and no subscription shall be binding until the whole amount shall be subscribed.

FROM SOUTHERN INDIANA.

Editors INTELLIGENCER AND JOURNAL:

I THOUGHT an article from Southern Indiana might find a place in your valuable paper. Situated as we are, a little out of the line of travel East and West, we sometimes think that we are almost overlooked; especially is this the case in regard to ministering Friends, and our visits from them are "few and far between." But when they do come, we always feel it to be a great treat. Blue River Executive Meeting has but few members, but is holding its own pretty well, with a hope of increased interest. It seems to me that if some of our Eastern friends, who are looking towards a place where they can obtain land cheap, and also be within reach of an established meeting, would turn their attention in this direction, they might find as good opportunities as by going farther West. This county, (Washington), is well suited for grazing purposes, and most of the land, with proper care and cultivation, is adapted to the production of all kinds of grain, vegetables, and fruits that are generally raised by farmers in the Eastern States. The climate is perhaps as favorable as any in the West. Last year we had a severe drought but no worse (if as bad) than some other parts. The winter thus far has been quite mild, and stock are yet finding part of their living in fields and woods. Land here is, perhaps, as low or lower than it will ever be again, and this winter and spring will be a good time for investments. Our county seat, (Salem), though not a very fast town, is making a steady and substantial growth all the time. Last year there were about seventy-five new buildings erected, and this year will be likely to see a still greater number.

Our little town of Canton, (near which we live), is more a matter of commerce than enterprise. We have two stores, a blacksmith shop, good district school, one church, post-office with daily mail, no saloon, and a quiet, peaceable population of about one hundred and fifty. We are situated about four miles from Salem and two and a half from our meeting, which is between the two points. Just in the immediate vicinity of our meeting, land is better, and of course higher, than in this neighborhood. We have as good a public road leading from Salem to Canton as can be found in the county. There is a good deal of land now offered for sale in this vicinity which I think could be bought at prices ranging from fifteen to fifty dollars per acre. We have good water and plenty of it. I copy a few extracts taken from the geological report of this county in regard to our limestone product:

"The value of the Indiana oölitic limestone, for the various uses to which limestones are applied, is everywhere recognized and generously appreciated. It is generally admitted that they are greatly superior to any other stone of this class known. The Salem Stone and Lime Company of Louisville, Ky., has an extensive quarry one and one-half miles west of Salem, on the L., N. A. & C. Railroad. In connection with their quarries they have three large lime-kilns, which have a capacity of several cars per day. The oölitic limestone of Washington county contains over ninety-six per cent. of carbonate of lime, and the lime manufactured from it can not be excelled anywhere.

"The Salem Stone and Lime Company employ a force of nearly one hundred and fifty men, and when it is considered that nearly all the work in a stone quarry is now done by machinery, and that this company has all of the latest and very best machines in use, it will be recognized that the capacity of its works is very great. Steam channelers, steam drills, steam saws, steam planes and polishers, steam travelers, immense machines for transporting the huge blocks of stone from one point to another, and steam derricks or cranks are all in use here, and the one hundred and fifty men employed, are occupied nearly altogether in operating the machines. The stone at this quarry is a solid stratum thirty feet in thickness, without seam or parting of any kind, and with only an occasional water worn fissure. The color is uniformly a light gray. The stone at this quarry is a fair sample of that embraced in an area of two hundred square miles, extending over nearly the whole of the western half of the county. It may be quarried in blocks of any dimensions, and the color and texture is the same all the way through. Most thorough tests of the Salem stone were made at the instance of the State House Commissioners of Georgia, and it was selected by them in the belief that when strength, beauty, durability, and cost are considered, it was the best material offered the board. The County Commissioners of Washington county are erecting a commodious and elegant court-house which will be built wholly of Salem stone, and when completed will be a most convenient and imposing structure."

From our State statistics for 1885–1886, I take the following in regard to Washington county. The surface is somewhat diversified; the northern and southern parts are quite rolling, the central and eastern parts are undulating, and in the western part more level lands prevail. A walnut ridge runs northwest to southeast through the county, the soil of which is unsurpassed for fruit culture, all kinds of fruits being successfully grown. The soil of other portions of the county is fertile and well adapted to the growth of grain and general farming. The land is cheap, improved farm land averaging $15, and unimproved $5

an acre. The emigrant and others desiring cheap homes should not overlook this locality. All kinds of live stock are raised with profit.

JAMES W. HEACOCK.

NEWS OF FRIENDS.

—A private letter from a Friend in Montgomery county, Pa., to Joseph M. Truman, Jr., dated on the 9th instant, says: "I received a letter from our folks in Nebraska. In it they spoke of their desire to have a meeting-house in Lincoln, (the capital of the State, with about 40,000 inhabitants). They have a lot, given to them, which they value at $600." (The letter then mentions the names of some twenty Friends who are interested in the subject.)

Our friend J. M. Truman, Jr., remarks upon this that "if these Friends would organize a meeting at once, and have their rights transferred to Genoa, (now a monthly meeting), then a new monthly meeting ought to be set up, (at Lincoln), and the two could be formed into a quarterly meeting, much to the strength of themselves, and the building up of the Society in those parts."

—At Genoa, we understand, there was a balance of $40 expense incurred in building the new meeting-house, beyond the amount of the subscriptions. This was assumed by one or two Friends.

—A private letter from a Western Friend to one in this city, refers to the late session of Illinois Yearly Meeting, and says: "Though the number of Friends from abroad was the smallest they had known, the blessed promise of the Divine Master, 'where two or three are gathered in my name there am I in the midst' still extends, and sustains the humble seeker after Truth. I presume thou hast seen the minutes of the meeting. It is cheering to know there are so many earnest workers in the Philanthropic Union and other reforms, found among our young people. I bless the Loving Father for it, and trust they will be faithful to the service."

THE LIBRARY.

—The *Gardener's Monthly*, recently published by the late Charles H. Marot, (and edited by Thomas Mechan), was sold on the 11th inst. to the proprietor of *The American Garden*, of New York, and will be consolidated with that periodical. "The result will be," the publisher announces, "an enlarged, handsome, quarto, illustrated, monthly journal of gardening." It is notable that the *Gardener's Monthly* itself had absorbed the old *Horticulturist*, established in 1846 by that distinguished authority in fruit culture, arboriculture, rural decoration, etc., Andrew J. Downing.

—Among recent additions to the Friends' Library, at 15th and Race streets, (Philadelphia), are the following works: M. F. Rossetti's "Shadow of Dante," Gabrielle Rossetti's "Dante and His Circle," L. M. Alcott's "Joe's Boys," and "Garland for Girls," Juliana Horatia Ewing's "Six to Sixteen," Frederick Powell's "Bacchus Dethroned," Victor Hugo's "William Shakespeare," "Home Life in the Bible," by Dr. Daniel March, the Life of Ormsby M. Mitchell, Emerson's Poems, Rideing's "Boyhood of Living Authors," Samuel Smiles's "Thrift," Holden's "Living Lights," Joel Chandler Harris's "Free Joe and other Georgian Sketches," Hodder's "Life and Works of the Earl of Shaftesbury," Huntington's "Good Talking and Good Manners," D. M. Muloch-Craik's "An Unknown Country," Samuel Smiles's "Characteristics of Men of Industry," and Desiré Charnay's "Ancient Cities of the New World."

SWARTHMORE NOTES.

—The meeting on First-day morning was one of unusual weight and solemnity. In connection with the First-day school exercises a paper was presented upon "The Teachings of the Holy Spirit." In the meeting Rachel N. Mather spoke acceptably, dwelling upon the importance, especially to the young, of becoming united to some religious organization.

—The Matron, who has been absent a few days on account of her father's death, resumed her college duties on First-day evening.

—The President has issued a "Personal Appeal" to a large number of the friends of the College, upon the subject of endowed professorships. Attention is called to his letter, and a copy of the circular sent out, which appear elsewhere. It is hoped that they will meet with a prompt and favorable response. It is a subject of great importance to all interested in the higher education in our Religious Society.

BEYOND.

It seemeth such a little way to me
Across to that strange country, the Beyond:
And yet not strange—for it has grown to be
The home of those of whom I am so fond;
They make it seem familiar and most dear,
As journeying friends bring distant countries near,

So close it lies, that when my sight is clear,
I think I see the gleaming strand
And feel that those who've gone from here
Come near enough to touch my hand.
I often think, but for our veiled eyes
We should find that Heaven right around us lies.

I cannot make it seem a day to dread,
When from this dear earth I shall journey out,
To that still dearer country of the dead
To join the lost ones, so long dreamed about.
I love this world; yet shall I love to go
And meet the friends who wait for me, I know.

I never stand about a bier, and see
The seal of death set on some well-known face,
But that I think: One more to welcome me
When I shall cross the intervening space
Between this land, and that one "over there"—
One more to make the strange Beyond seem fair.

And so for me there is no sting to death,
And so the grave has lost its victory;
It is but crossing with abated breath,
And white, set face, a little strip of sea,
To find the loved ones, waiting on the shore,
More beautiful, more precious, than before.

—*Selected.*

WHAT DOES THE BABY THINK?

WHAT is the little one thinking about?
Very wonderful things, no doubt.
Unwritten history,
Unfathomed mystery!
Yet he laughs, and cries, and eats, and drinks,
And chuckles, and crows, and nods, and winks,
As if his head were as full of kinks
And curious riddles as any sphinx!
Warped by cholic and wet by tears,
Punctured by pins and tortured by fears,
Our little nephew will lose two years;
And he'll never know
Where the summers go;
He need not laugh, for he'll find it so.

Who can tell what a baby thinks?
Who can follow the gossamer links
By which the manikin feels his way
Out from the shore of the great unknown,
Blind, and waiting, and alone,
Into the light of day?

Out from the shore of the unknown sea,
Tossing in pitiful agony—
Of the unknown sea that reels and rolls,
Speckled with barks of little souls—
Barks that were launched on the other side,
And slipped from heaven on an oblong tide?
What does he think of his mother's eyes?
What does he think of his mother's hair?
What of the cradle roof that flies
Forward and backward through the air?
What does he think of his mother's breast—
Bare and beautful, fair and white,
Seeking it ever with fresh delight—
Cup of his life and couch of his rest?

What does he think when her quick embrace
Presses his hand and buries his face
Deep where the heart throbs sink and swell
With a tenderness she can never tell,
Though she murmur the words
Of all the birds—
Words she has learned to murmur well?

Now he thinks he'll go to sleep!
I can see the shadows creep
Over his eyes in soft eclipse,
Over his brow and over his lips,
Out to his little finger tips!
Softly sinking, down he goes!
Down he goes! down he goes!
See! He is hushed in soft repose;

—From J. G. Holland's "Bitter Sweet."

DEAR LITTLE HANDS.

DEAR little hands, I love them so!
And now they are lying under the snow—
Under the snow, so cold and white,
I cannot see them or touch them to-night.
They are quiet and still at last, ah, me!
How busy and restless they used to be!
But now they can never reach up through the snow,
Dear little hands, I loved them so!

Dear little hands, I miss them so!
All through the day, wherever I go—
All through the night, how lonely it seems,
For no little hands wake me out of my dreams.

I miss them all through the weary hours,
I miss them as others miss sunshine and flowers;
Day time, or night time, wherever I go,
Dear little hands, I miss them so!

Dear little hands, they have gone from me now,
Never again will they rest on my brow—
Never again smooth my sorrowful face,
Never clasp me in a childish embrace.
And now my forehead grows wrinkled with care,
Thinking of little hands once resting there,
But I know in a happier, heavenlier clime,
Dear little hands, I will clasp you sometime.

Dear little hands, when the Master shall call,
I'll welcome the summons that comes to us all—
When my feet touch the waters so dark and so cold,
And I catch my first glimpse of the City of Gold,
If I keep my eyes fixed on the heavenly gate,
Over the tide where the white-robed ones wait,
Shall I know you, I wonder, among the bright bands?
Will you beckon me over, oh! dear little hands?

—Selected.

GLIMPSES OF LIFE ALONG A CORAL REEF.

[During the summer of 1886 a party of naturalists from Johns Hopkins University spent a month among the Coral Islands near Abaco, Bahama. A very interesting article on the flora and fauna of the reef is found in the *Popular Science Monthly*, from the pen of F. H. Herrick, one of the party. From this article we make the selections which follow.—EDS.]

ABACO ISLAND is roughly crescent-shaped, its two horns pointing about northwest and south. With Little Abaco, which properly belongs to it, it is nearly one hundred miles long, and has an average width of twelve miles. There are six hundred and eighty square miles in the larger island alone. The greater part of its outer side, facing the ocean, is bordered by an inner reef of small keys and rocks, which trend northwest by southeast, and form a channel about five miles wide, having a depth of from one to two and a half fathoms. Two or three miles farther out there is a second reef, mostly submerged, beyond which the bottom falls abruptly to the abyssal sea. The larger islands extend through one degree of latitude, from nearly 25° 50′ to 26° 50′.

We left Green Turtle on the 15th of June in a sail boat, with two men to pilot and assist us. Our older guide was a native of the island, and made his living by fishing and sponging. The position of our key, which we had left behind, was shown by the top of its tall cocoanut palms long after the island itself had dipped below the water. Taking a northwest course up the channel, Abaco is seen as a low barrier on our left, while at a greater distance it looks like an undulating green ribbon between the sky and sea. We pass numerous small keys and rocks on the right, between which long white lines of breakers may be seen, marking the outer reef. We are frequently near enough to the "mainland" to see its dense forests of pine, its palms fringing the shore, the narrow beaches of white coral-sand, with here and there a thatched hut fronting a pineapple field, which may be distinguished by the small clearings in the woods.

The keys present the greatest variety in size and

form, from a bare rock no larger than a buoy to islands five or six miles long. The latter are very narrow, and are usually covered with a thick growth of shrubs and small trees which, excepting a few palms, rarely exceed fifteen or twenty feet in height. The islands are scattered along closely together, or occasionally separated by wide channels. The soil has to be very thin indeed which cannot support a variety of shrubs, which seem to grow out of the very rocks and to live upon the air. Some of the smaller keys are mantled with vines and climbing plants, such as smilax, convolvuli, and rock samphire, with here and there some low shrubbery at the water's edge.

The coral rock which forms the basis of the islands crops out at many points, and is always exposed around the shores where these are not covered by a sand-beach. Freshly-broken surfaces have a light cream color, but weather to a uniform grayish tint. This lime-stone is so soft that it can be readily sawn or chopped with an axe. Consequently, the waves denude it rapidly, forming the white coral-sand, which is distributed as a fine deposit over the sea-bottom and as stretches of smooth beach. The shores overarch where they are at all precipitous, roofing a wide cavern below, in which the ceaseless roar of the waves may be heard at a long distance. Where a single rock stands alone, it is usually so much undermined that it resembles a low table with a single huge leg. There is a large perforation through the rocks at the southern extremity of Abaco, known as the "glass window," and also several submarine passages extending from one side of the island to the other. The rain carves grotesque forms out of the soft stone. This is sometimes coarsely honeycombed, or bristled all over with pinnacles or miniature chimneys, which are sharp as knife-edges, and compel you to use much caution in walking.

The dark-green foliage of the keys is frequently bordered by white, glistening lines, indicating beaches of coral-sand, which reflect the sun's rays with great power. Cocoanut palms find foothold along the shores, growing spontaneously from nuts cast up by the waves. . .

The sharp contrast between the ordinary "white water" of the bay and the deep blue of the sea beyond the reefs, is very striking. The irregular black patches seen everywhere in the channel are due to algæ or similar plants growing on the bottom. The sea floor between Abaco and the reefs is elsewhere covered with the white coral-sand which causes a marvelously brilliant Color-effect in strong lights, the tints ranging from the richest emerald to a transparent greenish-white.

Numerous sea fowl show themselves as we sail past their haunts; brown pelican, standing immovable like statues on the rocks, but suddenly expanding into birds of astonishing size; men-of-war or frigate birds, whose dark, cleanly-cut forms are strongly silhouetted against the sky; flocks of black-headed gulls, standing in military order, each facing the same way, on the rocks, rise and whirl off at our approach.

At Fish Key we found a large colony of the sooty terns (*Sterna fuliginosa*), or "egg-bird," as the natives call them, just beginning to breed. This is a collection of wild-looking rocks, rising ten or fifteen feet above the sea like a row of petrified sand dunes which in reality they probably are, and covered with low shrubbery, grasses, and vines. When a long way off we noticed the birds hovering over the place, and on landing, their number increased, until the air far above and around us fairly swarmed with the gliding forms of this graceful tern, and the strange medley of their harsh cries, together with the whirring of thousands of wings, was nearly deafening. They were nesting amid a tangle of shrubs three or four feet high, along a low, narrow ridge of one of the islands, a few yards from the water. Parting the bushes aside, we could see the old birds sitting on their eggs, and caught with our hands several which were snared in the vines as they attempted to fly. This tern resembles a large and powerful swallow. It has a sharply-forked tail, snow-white neck and breast, while the rest of the plumage is a dead black. They nest close together under the bushes, laying a single egg on the ground, without nest of any kind. Their eggs are easily distinguished from any others which we saw, being white or creamy and boldly spotted all over with umber and lilac. Even in these remote places the numbers of sea birds are being yearly lessened by the natives, who persistently collect their eggs for food. The rare flamingo is now reduced to a colony of a few hundred on Abaco, where, as I was informed by an old settler, they numbered thousands several years ago, and similarly the beautiful tropic bird, which is hunted chiefly for food, is being gradually exterminated.

Close beside this key there was a small rock a few yards square, with scarcely a spear of grass upon it, which a party of the Wilson's tern (*Sterna Hirundo*) held in undisputed possession. Their cone-tipped, olive-green, and spotted eggs lay in twos and threes on the bare surface of the limestone. Both this bird and the smaller edition of it, the least tern (*S. superciliaris*), which has similar habits, are called "shanks" by the islanders, while on the North Carolina coast (where we found both species breeding a month before) they are known to the fishermen as "great" and "little strikers." The Wilson's tern has a wide range, and is one of the most beautiful of a large and exceptionally striking family. It has a prominent black crest and coral-red bill and feet. Like many of our most attractive birds, it is shot down each season to satisfy the widespread demands of a barbarous fashion. Its pearly wings, or as often the whole bird, usually much distorted by the milliner, may be seen almost any day in the streets, pinned on to ladies' hats.

As we approached Paw-paw Key some tall bushes on the island appeared to be draped in deep mourning. Presently, as a large black company of birds rose one after another in the air, we recognized the frigate bird (*Tachypetes aquilus*). I counted seventy of them as they soared above our heads. These swarthy giants cut a memorable figure against the sky, with their great angular wings, and long forked tail. They mount slowly upward in spiral curves, with all the ease and grace of the hawk, until a safe

height is reached, when they sail rapidly off to a distant island. The females are recognized by a conspicuous white spot on the breast. We witnessed the ascension and retreat of this pack from the same key on our return, a few days later.

This little island is nearly bare except for the carpet of vines and low bushes. A few specimens of the *Conocarpus*, called here "button tree," are growing along the water's edge. It is ten or fifteen feet high, and may be easily told at a glance by its silvery foliage. Its flowers are inconspicuous, in small globular heads, but they are quite fragrant. This and the *Rhacichallis rupestris*, called "seaweed" by our boatmen, are characteristic of all these islands. The latter is semi-prostrate, and has fine, spray-like foliage, resembling an evergreen. Its light-gray bark is noticeable and also its small saffron flowers. This shrub is very common on the exposed rocks just above high-tide mark, where various mollusks are found in great numbers. One univalve (*Tectarius*), nearly an inch long, is especially abundant. The rocks are peppered with them, and clumps of several hundred together are sometimes seen. It climbs up the stems of the Rhacichallis, on which it probably feeds, and seems to derive a double protection, from the colors of both the coral rock and bark of this shrub, which it perfectly simulates.

Before landing at this key we had seen a large, black bird emerge from a mass of twigs in a bush overhanging the water, and, with its long neck outstretched, fly to an adjacent part of the island. This proved to be the Florida cormorant (*Phalacrocorax*) and its nest. I soon saw a number of these birds standing in line on a sand-spit with heads erect, like a squad of soldiers at drill. The nest was a shallow, rudely-built platform of twigs and grass, and contained three long bluish-white eggs, of a coarse, chalky texture. We found several nests on the island, most of which had been just completed. The long neck and thick stub of a body gives the cormorant a comical appearance, whether it is on the wing or walking erect on the beach. This species has sooty-black plumage, a yellow throat, and a blue rim round the eye. The bill is long and cylindrical, the upper mandibles curving over the lower in the form of a sharp hook, and the lining of the mouth and gular-pouch is bright blue. The long, black quills of the frigate-bird were scattered over the island, and the bushes were whitened with their ordure.

I had not been many minutes on the key before I discovered a large snow-white bird nestling on the ground under a spray of Rhacichallis. Its wings were barred with jet black; its bill was bright yellow, and tapered to a spear-like point, which forbade too close familiarity. This proved to be the yellow-billed tropic bird (*Phaeton flavirostris*), and we afterward caught several in our hands, taking them from the nest. When held up by the wings, they strike lustily with their bills and utter a peculiarly shrill cry. The tropic bird lays a single egg on the ground beneath rocks or bushes. It is about the size and make of the hen's, and is finely sprinkled with reddish-brown, so as to appear of an almost uniform tint. These birds resemble the gulls in many points, but are distinguished from other sea fowl by two long streamers in the tail, which wave behind them as they fly.

(*Concluded next week.*)

THE PROGRESS OF RAILROAD BUILDING.

ABOUT 13,000 miles of new railroad were built in the United States in the year 1887. This is the largest construction in the history of the country. When, in 1882, during a period of extraordinary activity, 11,568 miles of new road were built, it was generally believed that these figures would not again be equalled. In the following year, 1883, the new construction fell to 6,741 miles, in 1884 to 3,825, and in 1885 to 3,608. The year 1886 witnessed a considerable revival of activity, and 9,000 miles of new road were built—a greater mileage than in any previous year with the exceptions of 1881 and 1882, and now 1887 has witnessed the building of more miles of railway than 1886 and 1885 combined, and not much less than 1885, 1884, and 1883 together.

The number of different lines constructed is surprisingly large, aggregating, after deducting for the duplicating of roads lying in two or more States, 364 lines. Of course, the number of companies building these lines was very much less than this, but the new mileage consists of main lines and branches ramifying in all directions, and supplying facilities for transportation to innumerable communities and to vastly extended regions.

The greater part of this prodigious increase of railways has taken place in a few Western States. New England and New York contribute scarcely anything to the grand total. The great Middle States add very little, and the additions in the Southern States are not as large as many anticipated, although Alabama presents a fine record with over 500 miles, Georgia adds 230 miles, Florida nearly 200, and Kentucky and North Carolina each a little less than that. The Northwestern States have shown very considerable activity, but the great rush of railway building has been in the central belt of the Missouri River. Kansas leads with the total of 2,070 miles. Nebraska comes next, with 1,101 miles, almost equalled by Texas, with 1,055 miles. Four States and two Territories—namely, Kansas, Texas, Nebraska, Colorado, Dakota, and Montana—together show an addition of over 6,400 miles, or about one-half of the entire year's mileage of the country. The only States from which no new construction is reported are Vermont, Connecticut, Rhode Island, and Nevada.

Many of the lines have been built through comparatively level country, requiring but little grading and bridge building, but, on the other hand, many other lines have been very costly. Moreover, several of the companies have purchased costly terminal facilities in large cities, while nearly all have made extensive purchases of equipment. It is probably fair to assume that the total cost of roadway, bridges, station buildings, terminal facilities, and equipment of these new lines averaged $25,000 per mile, at which rate it appears that not far from $325,000,000 have been expended on the lines completed during the year. But even this prodigious sum does not by any

means cover all the outlay for new construction, as a large amount of grading and bridge building has been done on extensions where the track has not yet been laid. Evidently, the work of the railway builder in 1887 has necessarily had a powerful influence on the financial condition of the country. The money which has thus been expended has temporarily employed a large army of workmen, and it has also furnished permanent employment to another great army, probably aggregating, at the average of five employes to a mile of road, about 65,000 persons.

The railway mileage of the United States at the commencement of 1887 was stated to be 137,986 miles. The extensions for the year here recorded increased it to 150,710 miles, and it may be said that, in round numbers, the United States to-day has 151,000 miles of railway lines.

ANATOMY OF AN EARTH WORM.

THE body of a large worm consists of one or two hundred almost cylindrical rings or segments, each furnished with minute bristles, and is endowed with a well-developed muscular system. The mouth is provided with a little projection or lip, capable of taking hold of things, and of sucking. Internally, a strong pharynx, corresponding, according to Perrier, with the protrusile trunk or proboscis of other annelids, and which is pushed forward when the animal eats, is situated behind the mouth. The pharynx leads into the œsophagus, on each side of the lower part of which are three pairs of large glands, which secrete a surprising amount of carbonate of lime. They are unlike anything that is known in any other animal, and their use is largely a matter of speculation. Mr. Darwin thinks they are partly excretions of the excess of lime contained in the leaves which the animal eats, and that they otherwise aid digestion by affording a neutralizing agent against the acids of its food. In most of the species the œsophagus is enlarged into a cup in front of the gizzard. The latter organ is lined with a smooth, thick, chitinous membrane, and is surrounded by weak longitudinal but powerful transverse muscles. Grains of sand and small stones, from one-twentieth to a little more than one-tenth of an inch in diameter, may be found in the gizzard and intestines and are supposed to serve, like millstones, to triturate the food. The gizzard opens into the intestine, which presents a peculiar remarkable longitudinal involution of the walls, by which an extensive absorbent surface is gained. The circulatory system is well developed. Breathing is done by the skin, without special respiratory organs. The nervous system is fairly developed, with two almost confluent cerebral ganglia situated near the anterior end.

Worms have no eyes, and are measurably indifferent to light; yet they can distinguish night from day and are quickly affected by a strong light, and after some time by a moderate light shining continuously upon them. They do not much mind a moderate radiant heat, but are sensitive to cold. They have no sense of hearing, but are extremely sensitive to vibrations in any solid object. Worms in pots, which had paid no attention to the sound of a piano, when placed on the piano instantly drew into their holes when the notes were struck. Their whole body is sensitive to contact, as of a puff of air. Their sense of smell is feeble, but responds fairly well to the odor of the cabbage and onion or whatever they like, as was shown to Mr. Darwin by some very interesting experiments. They are omniverous, and swallow enormous quantities of earth, out of which they extract any digestible matter which it may contain, consume decayed and fresh leaves and vegetable matter, and raw, roasted, and decayed meat, but like raw fat best.—*Popular Science Monthly.*

SAMPLES OF BEER ANALYZED.

WASHINGTON, Jan. 8.—The Commissioner of Agriculture has just issued the third of a series of reports on adulterations of food, drinks, and drugs. This report treats of adulterations of fermented alcoholic beverages, malt liquors, wine, and cider. The chemist and analyst by whom the report is made concludes that beer is generally adulterated with acid poisonous and injurious to health. Of thirty-three samples of beer analyzed, six American beers contained salicylic acid, of which two were bottle beer samples of Milwaukee beer, two from St. Louis, one from Alexandia, Va., and one from Philadelphia, which latter was also soured. In Philadelphia beer only was hop substitutes found. Of beers brewed in Washington, one contained sulphate and one carbonate of soda; the latter article was also found in Alexandria beer. One foreign beer contained salicylic acid. The use of glucose and sugar in malt adulterations is condemned as injurious to health. The preserving agents used by brewers are still more severely condemned as means of putting bad beer on the market. Wines and cider are also reported to be extensively adulterated.

AN association has been formed in New York, principally among the Episcopal clergymen and laymen, to advocate the following reforms: First, the exercise of economy and simplicity in everything appertaining to the funeral; second, the use of plain hearses; third, the disuse of crape, scarfs, feathers, velvet trappings, and the like; fourth, the avoiding of all un-Christain and heathen emblems, and the use of any floral decorations beyond a few cut flowers; fifth, the discouraging of all eating and drinking in connection with funerals; sixth, the discouraging of any but immediate members of the family accompanying the body to the grave; seventh, the dispelling of the idea that all club or society money must be spent on the funeral; eighth, the early interment of the body, in soil sufficient and suitable for its resolution to its ultimate elements; ninth, the use of such materials for the coffin as will rapidly decay after burial; tenth, the substitution of burial plots for family vaults; eleventh, the encouragement on sanitary grounds, of the removal in crowded districts of the body to a mortuary instead of retaining it in the rooms occupied by the living; and twelfth, the impressing upon officers of public charities and correction the claim of the poorest to proper and reverent burial.

Sir James Paget spoke at a school festival, some time ago, of the importance of "learning how to learn," and showed that knowledge not immediately useful in itself may be the means of developing the power of learning in the mind acquiring it. The cultivation of the faculty of knowing is of incomparably greater importance than the mere acquisition of knowledge; and to the student, this faculty, so developed that when need arises knowledge may be quickly obtained, is a better provision for the business of life than is afforded by the largest and richest stores of information packed away in the memory; thus the brain-property most worth carrying about is the power of finding at pleasure and learning at will precisely what is wanted.

Man is here for a purpose, and it is reasonable to suppose that that purpose is a worthy one. It cannot be that the good Father ever planned this mortal existence for the gratification of man's selfish and ignoble desires and appetites. Such a life would naturally and necessarily be a perversion of every idea of Infinite Goodness. He is here to unfold his godlike attributes, and fit himself for an existence upon another plane of life, where no earthly lesson will profit him except those radiated with love for humanity.—*Golden Gate.*

NEWS AND OTHER GLEANINGS.

—The year 1887 was one of unprecedented activity at the Baldwin Locomotive Works, Philadelphia, having resulted in the building of 653 complete locomotives. The works employed 3,000 men, who were at work 304 days, thus making average time of building a locomotive four hours and forty minutes. This eclipses the year 1882, when 563 locomotives, the largest number in any single year up to that time, were built. In 1831, the year the works were established by Matthias W. Baldwin, one locomotive was completed, and since that time there have been built a total of 8,975 engines for railroads in the United States, Europe, Japan, the Sandwich Islands, Cuba, Brazil, Mexico, and Central America. The 653 locomotives built last year placed in a continuous line would make a train five miles in length.

—A dispatch from London, on the 12th instant, said: "London entered this afternoon on its fourth day of continuous fog. The veil has never once been lifted since Monday, and no man has beheld sun, moon, stars or a square inch of blue or even gray sky. Luckily the density of the fog is not equal to its duration. Traffic in the streets has been maintained, though often with difficulty and danger, throughout the day. Cabs crawl about at noon with lamps lighted. Omnibuses, which have no lamps, trust to luck. A great part of them stop moving after 8 o'clock. The river is totally deserted. Railway traffic continues. Trains arrive and depart irregularly, but unceasingly. Accidents are frequent. The theatres are half empty. The law courts in many cases have had to adjourn from absence of counsel and witnesses. The fog until to-day has been white, but now becomes smoky. The shops and streets are lighted, and it is impossible to read or write anywhere all day long without lamps. The fog extends all over the western and southern coasts. The Atlantic and other mail steamers neither arrive nor depart at English Channel ports. The Dover and Calais Channel steamers continue to find their way across at great risk. The Folkestone and Bologne service is discontinued. Navigation of the Mersey is carried on fitfully. The Weather Bureau ventures a hope that it may possibly clear to-night."

—There will be a total eclipse of the moon on the 28th of this month, visible in nearly all parts of the world. At Philadelphia, the moon enters penumbra 3 h., 27 m.; enters shadow 4 h., 29 m.; total eclipse begins 5 h., 30 m., total eclipse ends 7 h., 8 m.; leaves shadow 8 h., 9 m.; leaves penumbra 9 h., 11 m.

—The trustees of Mt. Holyoke Seminary have voted to take measures to have the course of study enlarged and to apply to the legislature for authority to grant degrees, and to take the name of "Mount Holyoke Seminary and College."

—The Florida Sub-Tropical Exposition was opened in Jacksonville, on the 12th of this month. The procession, which marched through the decorated streets to the exposition grounds, was more than a mile in length.

—Several of the colored pupils in the Boston evening schools are described as more than fifty years old, and one man is nearly sixty, but they are "patiently and earnestly striving to gain the knowledge of which they were deprived in their younger days."

—If one would see the heavens in their greatest glory, he should get out of bed about five o'clock some clear morning and go out of doors. The evening sky has one blazing beauty, but with that exception is barren of marked planetary display. First in radiance in the east is Venus, mistaken by some for the "Star of Bethlehem." Venus shines with a white and steady light, like a great electric lamp, and throws her rays into a dark room like a moon. Next are Jupiter, Mars, and Saturn, which, with Venus, are all beheld within an area of 90 degrees. Jupiter pays court to Venus, and is quite near her, showing himself bright and rosy. Thirty degrees northwest, not far from the zenith, is red Mars, accompanied by a very faint star, and the more conspicuous by the contrast. Thirty degrees further northwest is Regulus, chief of the Lion Constellation, and thirty degrees still further on in a nearly straight line, is Saturn. —*Cincinnati Commercial Gazette.*

CURRENT EVENTS.

The great storm in the Northwest last week has been followed by a freeze the like of which, it is said, has not been experienced since the winter of 1864. Suffering is reported from all directions, especially in Minnesota, Dakota, Montana, and Nebraska. In Kansas thousands are suffering for want of both fuel and food, and in some counties aid is needed to save many from starvation. The loss of life been has appalling. The revised list prepared by the *Journal* of Minneapolis, Minnesota, shows 97 dead in Dakota, 12 in Minnesota, 6 in Iowa, 17 in Nebraska, and 2 in Montana, making a total of 134, besides 55 reported missing. Crops and live stock everywhere have suffered more or less.

The Pennsylvania Society to Protect Children from Cruelty last year investigated 870 complaints of cruelty and neglected children, involving the custody and care of 1986 children, and resulting in 296 arrests. In all, 619 children were removed from brutal parents or guardians, and 61 girls were removed from vicious associates. Managers were elected at the annual meeting of the Society yesterday.

A fire occurred on the night of the 13th inst., in Indianapolis, in the heart of the wholesale section of the city, and the stores destroyed were all among the largest on the street. Total loss, $708,000; insurance, $637,500.

THE bill granting suffrage to women, although exempting them from jury duty, passed the lower house of the Legislature of Washington Territory on the 16th inst. It passed the upper house last week. Petitions are being poured in on Governor Semple from all parts of the Territory, asking him to veto the bill.

WILLIAM H. HICKENLOOPER, the oldest bishop in the Mormon Church, died on the 14th inst., in Salt Lake City, aged 83 years. He had two wives, and at the time of his death his living posterity numbered twelve children, thirty-six grandchildren, and fifty-two great-grandchildren.

THE Interior Department has submitted to Congress for incorporation in the Indian Appropriation bill, an estimate of $3.000 to defray the expenses of opening the coal fields in the vicinity of Fort Custer, Montana, on the Crow Reservation. It is anticipated that the development of the vein will afford an abundant supply of excellent fuel for all parties at a less cost than wood, and be a saving to the Government in many respects.

NOTICES.

*** A meeting of the Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting, will be held at Race street meeting-house, Seventh-day, First month 21, 1888, at 1 p. m,

JAMES H. ATKINSON, }
ANNIE C. DORLAND, } Clerks.

*** A public conference under the care of the Temperance Committee branch of New York Yearly Meeting's Committee on Philanthropic Labor, will be held at the meeting-house in New York City, on Seventh-day afternoon, First month 28th, at 3 o'clock. Several interesting papers will be presented.

JOSEPH A. BOGARDUS, Clerk.

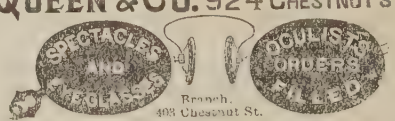
PUBLISHERS' NOTICES.

***Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

***As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.



This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about* 3300 *persons, reaching, say,* 15,000 *readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞*When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.*☜

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.

PERFECT TOILET

L.M.ELKINTON'S

PALM

A true and perfect Soap for Babies, Children or Persons of Delicate Skin.

AFRICA—FIVE THOUSAND MILES from Philadelphia grows the stately palm tree, producing a beautiful orange-colored fruit, rich in oil of the most healing nature for burns, scalds or bruises.

We buy the best of this oil and make our PALM TOILET SOAP entirely of it. When the Soap is made it contains many of the healing properties of the oil.

For Persons of Delicate Skin and Children, some of our friends say it is the best Toilet Soap in the world. Price $1.25 per dozen.

532 St. John St., Philadelphia, Penna.

FRIENDS' INTELLIGENCER and JOURNAL

Memoranda for those who will aid in Sending in Subscriptions.

1. Rates for the Year 1888.

   Single subscriptions, $2.50 per year.
   8 copies, $2.25 each, a year.
   15 copies, $2.00 each, a year.
   ☞Note the change in last item from previous years.

2. "No Agents."

   We recognize no one as our "Agent" with the single exception of Friends' Book Association, 15th and Race Sts., Philadelphia. Those Friends who get up Clubs for the paper must be regarded as the agents of those subscribing through them. When money reaches our hands we receipt for it ourselves, and no one, (except F. B. A., as above), is authorized to receipt for us.

3. Concerning Clubs.

   a. It is, of course, our desire to get new subscribers, and retain old ones. Unless Clubs help to do one or both of these things, they do not aid the paper. We therefore hope to have in them (in the $2.00 Clubs, especially) *some new ones.* This is difficult, of course, in some localities, and in such we will not *exact*, though we *desire* it.

   b. Names and money, for clubs, should be sent to us in *one, two, or at most three*, instalments. We can wait till the person getting up the club is ready with the money, but we cannot accept single names and money, (unless for *new subscribers*), at intervals through the year, on Club account.

4. Subscribers' Names.

   When sending clubs, please carefully designate all "new" names; and in renewals, please use the same name as the paper has been coming to;—if for any reason th name is changed, please call our attention to this fact.

5. Discontinuances.

   We do not discontinue a paper, (unless for continued delinquency in payment), without the order of the subscriber. Persons wihing to "stop" *must so notify us.*

Association of Friends to Promote the Education of the Colored People of the South.

This association, formed at Philadelphia, in Sixth month 1886, represents the conviction of many Friends and others that continued systematic aid to the work of educating the colored people of the South is imperatively called for.

The special design of the Association, for the school year 1887–88, is to extend support to the Schofield Normal and Industrial School, at Aiken, S. C., under charge of Martha Schofield, and to the School at Mt. Pleasant, S. C., under charge of Abby D. Munro.

Subscriptions are earnestly invited. Checks, etc., should be drawn to the order of the Treasurer, as below.

OFFICERS OF THE ASSOCIATION.

HOWARD M. JENKINS, Chairman, 921 Arch Street, Phila.

SARAH J. ASH, Secretary, 1717 Vine Street, Phila.

LYDIA A. SCHOFIELD, Correspondent, 1717 Vine St., Phila.

HENRY M. LAING, Treasurer, 30 N. Third St., Phila.

GENTLEMAN (FRIEND) DESIRES SITUA- tion; ten years experince general Mdse. business; capable taking charge. Very best referenee. F. M. H., INTELLIGENCER AND JOURNAL office.

LEHIGH AND SCHUYLKILL COAL.

BEST QUALITY. CAREFULLY PREPARED.

AQUILA J. LINVILL, 1244 North Ninth Street.

MASSAGE AND SWEDISH MOVEMENTS. A. BENTZEL, M. G. D., 3838 Baring St., Phila. Specialty: Indigestion, Insomnia. Lady Assistant. Instruction.

MONTGOMERY COUNTY MILK.—CONSHO- hocken Dairies. Special Attention given to serving families. Office, 603 N. 8th Street, Philadelphia, Pa.

JOSEPH L. JONES.

WANTED—A FAMILY TO RENT HOUSE near 17th and Master streets, and board owner. Address E., care Friends' Book Association, 15th and Race Sts.

WANTED.—A third story, unfurnished front room, southern exposure, with board for two ladies engaged during the day. Ten minutes walk from Broad and Fairmount Ave. Address M. L., care Friends' Book Association, 15th and Race streets.

WANTED.—Situation by responsible man, such as private watchman, day or night, inside, or some position of trust. Best reference. Please address B., Office FRIENDS' INTELLIGENCER AND JOURNAL, 921 Arch St.

WANTED.—AN ENERGETIC WOMAN WHO will feel an interest in the work, (a member of the Society of Friends preferred) to reside at the Agency, Santee, Nebraska, whose duty it will be to visit the Indians at their homes on the Reservation and instruct the women in the art of housekeeping and their other domestic duties.

A conveyance will be furnished, also an interpreter. A reasonable salary will be paid. Reference required.

Apply to or address, LEVI K. BROWN, Goshen, Lancaster county, Pa., secretary of the Convention of Delegates of the Seven Yearly Meet ings on Indian Affairs.

WEST PHILADELPHIA BARGAINS FOR SALE.

THREE-STORY double house, thirteen rooms, modern conveniences, porches, plenty fruit and shade trees. Lot, 50 x 150 feet. For full parars apply to J. F. GREEN, 112 South 40th St.

SWARTHMORE COLLEGE

OPENS NINTH MONTH THIRTEENTH.

Thirty minutes from Broad Street Station, Philadelphia.

Under the care of Friends, but all others admitted.

Full college course for both sexes; Classical, Scientific, and Literary.

A so a Manual Training and a Preparatory School.

Healthful location, large grounds, new and extensive buildings and apparatus.

For Catalogue and full particulars, address

EDWARD H. MAGILL, A. M., President,

Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

Terms, $150 to $175 per year.

Apply to HANNA R. CALEY, Principal, address, (during vacation), Media, Pa.

Or to

THOMAS P. BARTRAM, Newtown Square, Pa.,

CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec.,

Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,

Chappaqua Institute, N. Y.

ABINGTON FRIENDS' BOARDING and DAY School near Jenkintown, Pa., Bound Brook R. R. Ten miles from Philadelphia.

Second term begins First month 30th, 1888. Courses will be arranged to furnish a thorough English education and to prepare pupils for college.

Board and tuition $145 to $165 per school year. Tuition alone $25 to $45. For further information address,

ARTHUR H. TOMLINSON, Principal,

Or Jenkintown, Pa.

CYNTHIA G. BOSLER, Sec.,

Shoemakertown, Pa.

LADIES' FINE SHOES, HAND-SEWED. ORders taken and executed with promptness.

S. DUTCHER,

915 Spring Garden St., Phila.

SCHOOL PRINTING, circulars, catalogues, pro- grammes, note-heads, bill-heads, reports, numbered books, etc. Call and see samples of these that we havedone and are doing for numerous Friends' schools and colleges. Orders by mail will be promptly filled.

FRIENDS' PRINTING HOUSE,

S W COR. SIXTH AND ARCH STS.

Entrance on Sixth St. Take Elevator.

CHANGELESS.

BY SUSAN COOLIDGE.

WE say, "The sun has set," and we sorrow sore
As we watch the darkness creep the landscape o'er,
And the thick shadows fall, and the night draw on,
And we mourn for the brightness lost, and the vanished sun:

And all the time the sun in the self-same place
Waits, ready to clasp the earth in his embrace,—
Ready to give to all of his stintless ray,
And 'tis we who have "set," it is we who have turned away!

"The Lord has hidden his face," we sadly cry,
As we sit in the night of grief with no helper by.
"Guiding uncounted worlds in their courses dim,
How should our little pain be marked by him?"

But all the while that we mourn the Lord stands near,
And the Son divine is waiting to help and hear;
And 'tis we who hide our faces, and blindly turn away,
While the Sun of the soul shines on 'mid the perfect day.

For Friends' Intelligencer and Journal.

A RETROSPECTION.

WITHOUT a wish to awaken a thought of controversy or criticism, but in a feeling of respect and humility, the query is offered to those Friends, who with J. G. W. look back upon the "great separation" in our Society as having been "unnecessary and wrong," whether they have made themselves as fully acquainted as possible with the procuring causes of that separation, which severed the strong fraternal bond of unity amongst Friends? That this should have occurred with a peace-professing Society is indeed a humiliating chapter in its history; but when the various circumstances that led to the sad necessity are understood, we believe they present an apology for the "quiet retreat" from confusion and disorder which a large body of peace-loving Friends deemed it right to effect. That this was accomplished measurably, in a quiet, peaceable manner, and under great weight of exercise of mind, there are many documents which were issued at the time to demonstrate; and yet, with blushing it may be acknowledged, not always did the spirit of meekness and docility characterize the proceedings in some places and under aggravating circumstances. This could only be excused as a part of the outgrowth of intolerance and proscription, which produced party spirit, assertion of individual rights, etc. A few are still on the stage of action who were comparatively young in years when those disastrous events took place, and probably had little cognizance of any beyond those in which they were personally interested, and there are a few now living who were active participators in the lamentable contest and the sufferings it involved, but we are glad to record that the acrimony and prejudices which once existed between the two sections has greatly subsided. While it may seem that in some important particulars, both branches have drifted away from the original ground of Quakerism, we may still hope that the pure vital principle is not entirely overrun with the weeds and cobwebs of human contrivances, and that a united people may yet arise, able and willing to sustain the ark of our testimonies, and concerned to build upon the true foundation of our faith as expounded by Fox, Penn, and Barclay.

Sorrowful as it is to contemplate the facts of the great separation, yet let us not consider its "effects have been only evil." What might have been the condition of a large portion of the body had it not taken place, none can tell. We would not recommend any to make it a study, but to inform themselves of the direct causes, and the existing circumstances at the time—and perhaps there will be little disposition to censure or cavil at the motives for the course pursued by many, to liberate themselves from bondage and oppression.

In Janney's "History of Friends," there is much to enlighten on this matter and in the journal of John Comly are clearly portrayed the difficulties and trials which encompassed the whole body, dividing and scattering, and finally producing the necessity for the conflicting parties to be separate. In maturity of judgment and with depth of religious feeling, this result was deemed expedient, coupled with the hope that both divisions, by "a temporary separation" might experience a state of calmness and quietude in which their wounds would be healed, and health, soundness, and a right understanding be regained so as to become prepared for the renewed enjoyment of social order, harmony, and peace. But because this sanguine hope was not realized, let us not impeach the motives or the wisdom of those concerned sensitive minds who preferred to retire from scenes of contention and strife, and to enjoy, however contrited under it, the blessings of peace, harmony, and love, in a society capacity.

Many of those who preceded the present workers in the affairs of our Society were eminently gifted, not only with natural abilities and attainments, but also with the endowments of clear spiritual perceptions and a wisdom enlightened and guided by the Divine spirit. H.

First month, 1888.

INTERVIEW WITH THE EMPEROR OF RUSSIA IN 1814.

Editors INTELLIGENCER AND JOURNAL:

HAVING recently received an old manuscript containing "Extracts of a letter from John Wilkinson," giving some account of an interview between the Emperor Alexander of Russia, and the Friends who waited on him, with the address in London the 26th day of the Sixth Month, 1814, I send it, as below.

SAMUEL B. HAINES.

New York, 1st Month 21.

An address was drawn up for the Emperor of Russia, and one for the King of Prussia. The subject most prominent in each was that of Toleration, and respectfully recommending tenderness towards those who might from conscientious motives not be satisfied to conform to established modes and practices.

In attempting to present the address to the King of Prussia the occurrences were not altogether satisfactory; but very different was what passed with the Emperor of Russia, who, before the address was presented to him went to the meeting at Westminster, on a First-day morning, the 19th of Sixth month last, accompanied by the Duchess of Oldenburgh, his ambassador, the Count Lieven, and the two young princes.

Both the Emperor and his sister conducted themselves like persons in whose minds vital Christianity and undissembled piety had the predomination; and after the meeting concluded, they did not hastily leave it, but with that condescension and kindness which they have shown in so remarkable a manner on every occasion, stayed to shake hands with and take notice of several Friends who were near them; and before he got into his carriage, the Emperor told William Allen whom he would have to wait on him with the address, fixing on Third-day to receive it, saying that he wished to have a private conference. The Emperor received us without having any attendants with him; and William Allen, Stephen Grellet and myself continued with him near an hour.

As soon as we entered the room, the Emperor came forward to meet us, and shook hands with each of us in the most condescending and affectionate manner, and when W. Allen presented the address he took it but did not open it, having previously said that he did not wish the time allotted to be taken up in having the address read, as he knew what it contained, having seen the copy which we delivered before the Ambassador. The books were then presented; he opened each of them, enquiring (with apparent interest) at the same time as to what they taught of. After he had accepted the books, he turned towards us and expressed himself with great kindness and in full terms concerning the satisfaction he felt in having been at the meeting, and wished to know if all our meetings were held in the same manner. He was informed they were, but that there was not always preaching. "Do you then read the Scriptures in them?" We are not in that practice because we believe true worship to consist in the prostration of the soul before God, and we do not consider it absolutely necessary for anything to be either read or spoken to produce that effect. "That is my opinion also," replied the Emperor. "Have you any form of prayer?" "We have none because we believe that in prayer the soul must communicate its supplications in such a manner as best suits its condition." "In that," said the Emperor, "I fully agree with you. I believe I can truly say there is not a day passes in which I do not pray; but it is not in any set form of words, for I soon found that my mind could not be satisfied without using such language as at the moment is applicable to its condition. But you know Jesus Christ gave a form of words to his Disciples." "He did," answered one of the Friends, "yet we conceive it was only to instruct them in what it was most essential they should petition for, without meaning to confine them to those very words on all occasions." "I think you are right," said the Emperor. He then put many judicious questions, in order to be made acquainted with the leading features in the doctrines, discipline, and practice of the Society, and appeared well satisfied with the answers he received.

With regard to the operation of the Divine Principle on the mind, he expressed himself in such a manner as one cannot conceive anything short of his being an humble and faithful follower of its holy and secret guidance. After making many inquiries about the Society, he said in the most affectionate manner, "How is it that some of your people have not been to Russia? If any of them go into my country, on a religious account, let them not wait for any introduction, but let them come immediately to me." "I shall be glad to see them," which last sentence he repeated two or three times. Towards the conclusion, Stephen Grellet, in a respectful and affectionate manner, expressed a strong desire he felt for the Emperor's preservation under the burdens and complicated duties, which in his exalted station must necessarily be allotted him.

While S. G. was speaking, the Emperor took him by the hand, and with a countenance full of nobility mixed with Christian tenderness replied, "What you have said is a cordial to my mind, which will long continue to be strengthening to me;" and when we parted with him he took each of us by the hand, saying, "I part with you as a friend and brother." J. Wilkinson writes, "I cannot but feel myself very unworthy to have been present on such an interesting and important occasion; more especially as being one of only three. Perhaps, if there had been many, the Emperor would not have felt the same unreserved freedom. For several days I felt as though I had been exposed to a blaze of light, so powerfully was I impressed with the dignified, yet unaffected, humble, and pious countenance, manners, and expression of that truly Great Prince, who seems, indeed, to be walking in the Light, and to be filled with the love of truth and goodness.

In him the power and love of the Almighty are eminently displayed. For how can one see a frail mortal, who, in the midst of worldly glory and almost adored by surrounding multitudes, instead of

being puffed up with it, is with the spirit of an humble Christian, triumphing over pride and vanity.

How can one see a human creature, who had been nursed in the lap of despotism, and that in the midst of dark superstition, and yet be filled with liberty and light? How can one see this without at the same time being sensible of the beauty and truth of our Saviour's assurance, that "with God all things are possible."

A LETTER FROM WILLIAM POLLARD.

[*Friends' Review*, First month 19, prints the following communication.]

Editor of Friends' Review: My attention has been called to a criticism of my "Lectures on Old-Fashioned Quakerism," in a recent number of the *Friends' Review*, respecting which I ask permission to make one or two remarks.

It is surprising that any candid reader of these lectures should not at once perceive that the object was,—not to enunciate all the truths held by the early Friends in common with other professors,—but to propound that which specially characterized Quakerism. For instance, scarcely anything is said in these lectures as to belief in the existence of God, or as to the inspiration of Holy Scriptures, and yet these are obviously fundamental questions in revealed religion. The sacrifice of Christ for our sakes is surely one of these primary truths; and yet neither of these great truths can be spiritually realized by any human being till it is brought home to him by the Spirit—the living Christ. If this be so, it cannot be correct to say that the death of Christ is the central truth in man's apprehension of religion. This place belongs (as Fox and Barclay and Penn all persistently taught) to Christ himself; not to any doctrine about Christ, but to the real presence of the Lord in the heart of man. On this subject I wish to point out (what the reviewer apparently fails to notice) that the doctrine of the Sacrifice of Christ occupies proportionately as much prominence in these lectures as in the writings of George Fox himself. The question may be asked, why did George Fox (as compared with the Evangelicals of his day and of our day) say so little on this wondrous theme? I think the answer is,—because he knew that this is a truth that needs to be taught by the living Christ, and not by theologians. When George Fox spoke of bringing people to Christ and leaving them there, we know he did not mean bringing them to contemplate the death of Christ. He had faith in the Spirit taking of the things of Christ,—all that he has done and is doing for us,—and showing them to the awakened and teachable soul. The aim of Fox was to begin at the beginning—to proclaim the great central Truth, knowing that as Christ is listened to and accepted, he will carry on his own work and reveal his own truth to each seeking soul. Is this not a better and a safer way than the verbal reiteration of doctrines and creeds to hearts unprepared to receive them?

On the general question I cannot but express my great regret at the almost intolerant tone apparent throughout the review. There surely may be diversities of definitions; but the same truth and Christian charity ought to be able to recognize this. What is the right of private judgment worth if it does not leave thoughtful people at liberty to express the great verities of religion in terms, which, while consistent with the teachings of scripture, shall yet come home to the men of this generation in a way that antiquated theological dogmas do not?

One more point. It is surely no just ground for reproach against these "Lectures" or "Reasonable Faith," that many Hicksites have read them. It ought rather to be cause for rejoicing that such persons are willing to read and consider writings in which the Divinity of the Christ of Nazareth and his oneness with the Father are declared in such uncompromising terms. One would have thought that such an opportunity would be welcomed by spiritually minded Friends as the occasion for holding out the hand of brotherly help to those who are afresh seeking after the truth.

Let me, in conclusion, remind your readers that there is no danger in religious enquiry when it is devoutly conducted. In the words of our great Milton "the offers of God are all directed, not to an indolent credulity, but to constant diligence and to an unwearied search after truth." These striking words obviously imply the faith which includes obedience, and in that sense they cannot be gainsaid.

WILLIAM POLLARD.

Eccles, near Manchester, Twelfth mo. 21, 1887.

For Friends' Intelligencer and Journal.

A LETTER TO MY PEOPLE.

WHILE I was about my household duties, the summons in my heart; "Take thy pen and write unto the Churches—not unto the Churches that know My name—but unto My people that know not of the indwelling spirit of God in the heart." These are they, whom I would make living churches, filled with the indwelling Spirit which comes out from the Father. I would have them know of the "Key of David," which unlocks the soul, and letteth in the Holy One, who will teach them himself. Then as they come to know of this Eternal Life, they will know of his opening in their hearts, a perpetual fountain of living water, that he will give us to drink of daily, aye, hourly. Then, indeed, we will not have to say, "Where is the Christ?" for he will be unto us a Spiritual sun. As the outward luminary is to the universe, so these emanations from him will fill our whole being with that hidden Light which cometh out from the Father. We know that the seasons follow each other in their natural order. If, in the spring time, the husbandman breaketh not up the soil and soweth his seed, in time of harvest what would his increase be? He would have nothing to gather. So, when the Father of all, who planted that hidden germ in our heart, and when in his own time, he comes and touches it with his divine power, then it knows an expansion and growth; then, indeed, will we know of his leading us. We know that in our Christian experience, we first had the leaf, then the bud before the flower—then the flower before the fruit—everything in its order; just so our Heavenly Father opens in the hearts of those

who crave his guidance, more and more of that divine food with which he nourisheth up the spiritual part. As the sap in the oak giveth it life and vitality, so these emanations from our Father will fill our whole being with praises unto his holy name. Then if we will cling unto him, we will hear as Moses heard, the voice as it were of God when he commanded him to put his shoes off his feet, for the place on which he stood was holy ground. Certainly no portion of the earth could be more holy than any other part, it must assuredly have been the condition of his heart, wherein he had come to dwell with the Father in such unity, that he stood upon a plane, in the sight of the Almighty which was holy. Put thy shoes off thy feet—is it not comparable to being unclothed from all self, and letting our Saviour lead us where he willeth? Then when we come in such unity with him, and if he bids us thrust in the sickle and labor for him, that we will be willing to scatter the seed that he handeth to us, then, indeed, will we be sowers for him, and he will fertilize the seed by the power of his grace, and sanctify it unto the hearts of those unto whom it is sent.

R. A. D.

Holder, Ill.

For Friends' Intelligencer and Journal.

OUR MEETINGS.

IN assembling for religious worship, we should not look for outward entertainment, for that can only satisfy the intellectual nature, and falls far short of the blessing which true worship is designed to confer, nor is it of any real value in the building up of society, for we learn to look for this entertainment and if not continually provided, soon lose interest in our meetings and neglect their attendance. That worship which is acceptable to the Father is performed by seeking to have the soul clothed upon by his holy spirit, which alone can admit it to his presence. "In thy presence is fulness of joy and at thy right hand there are pleasures for ever more." This joy that the true worshippers feel, has ever been the cementing influence which binds together Christ's living church. "For the kingdom of God is not meat and drink, but righteousness, peace, and joy in the holy spirit." It does not come to us through the channels by which we are accustomed to gather knowledge.

The Divine Spirit cannot be fully expressed by language. If it were so reduced as to be understood through our natural senses it would cease to be divine; we cannot through them understand anything that does not lie within the scope of their power. "For what man knoweth the things of a man save the spirit of man which is in him, even so the things of God knoweth no man but by the spirit of God." Jesus observed because ye are not of God you will not accept me. Because of spiritual blindness we cannot always perceive his divinity. We can understand no more of God than we have of his presence in our hearts. Emerson says: "I like the silent church before the service begins better than any preaching."

ANNA B. HALLOCK.

First month 8th, 1888.

For Friends Intelligencer and Journal.

REST.

"THERE remaineth a rest for the people of God,', a fixed and settled rest, the quiet calm of a conscience at peace with the indwelling spirit that shows us what we are and what we ought to be, what course to pursue to reach the point desired. We are not left without a witness sufficient to guide us in the way of life and salvation. "My grace is sufficient for thee," was said long ago by the high and lofty One that inhabiteth eternity, whose name is holy. Let us hold fast to this through all given us to bear in our journey through the wilderness of this world, that when we are called home we can say as did the great Apostle Paul, "I have fought a good fight, I have finished my course, have kept the faith: henceforth there is laid up for me a crown of righteousness, which the Lord, the righteous judge, shall give me at that day: and not to me only, but unto all them also that love his appearing."

SARAH HUNT.

First Month 13th, 1888.

THE VALUE OF SILENCE IN WORSHIP.

ONE of our exchanges of the evangelical type in discussing the subject of prayer-meetings gives as of primary importance, the need that "all shall come purposed in spirit to wait upon the Lord." How this can be best accomplished the writer shows by citing the mode of worship of Friends, and the testimony is of value, coming as it does from those who have always practiced and advocated the very methods which are now so freely criticised as not being conducive to the best development of Christian life. The writer says:

"There is a great element of spiritual power in the habit of the Quakers, who have learned the art of waiting upon the Lord in quietness. There can be no doubt but that this silence has been carried to an unnecessary extreme in some cases by these most excellent Christians; but neither can there be any doubt but that they are essentially right in their theory. There is not one prayer-meeting in a hundred among our churches where a silence of a minute in length is not regarded either as a wicked and unprofitable 'waste of time,' or at least as a great embarrassment to both the leader and the people. How often do we hear the exhortations of the pastor, 'Now, don't waste the time, brethren;' 'Be prompt, brethren, and fill up the time, etc.' Does it never occur to God's people that in the moments in which silence is preserved and the heart withdrawn from men and things and lifted up to God, is the opportunity for the Holy Spirit to breathe upon them and stir up in their hearts the 'thoughts of God.' In a gathering where one more distinguished than all else is present, and especially when the company is met to honor him and hear from him, would it not be thought out of keeping and taste to fill up every moment of time with our own talk about him or in address to him, giving him no opportunity to speak, by our silence? Much more does it seem to us out of best keeping with the very object for which we have come together that we should wait upon God

and give him ample opportunity to communicate to us the things of the Spirit by the Spirit; not by any new revelations of truth but by stirring up our hearts with the truth already communicated through the Word, or by reviewing before our hearts and minds the various providences which have touched and affected us during the week. We sincerely believe that if, after an initial hymn, a portion of Scripture, and a prayer, the meeting would quietly wait in silence for a few minutes, say five or ten, there would come upon the assembly such an influence from the Spirit as would at once make the place fragrant with heaven and fill all hearts with the love of God. And during the further progress of the meeting, if no one were moved to speak or pray, let the quiet waiting go on, and sooner or later the Spirit would move some one to speak or pray who would do it *in power* and not *in words only;* not as a merely formal act or to fill up the time. There is too little silence and quiet in our prayer-meetings, and too much empty and profitless talking."

TEACHERS IN FRIENDS' SCHOOLS.[1]

ONE speaker (John H. Dillingham) said that a Friends' school is one exhibiting Friends' principles, for which it is needful that the teachers should be imbued with those principles. Another speaker remarked, that this is true, whatever may be our diversity of conception in regard to what those principles are, if such diversity exists. To make an x school, you must have x teachers to conduct it. One may ask, does it matter who teaches arithmetic, or geography, or logic, or psychology, in a Friends' school or college? My answer is, it does matter much who teaches anything whatever. Teachers are not (if they are worth employing) mere machines to grind out routine instruction on set topics. They are, or should be, men or women with personal character and influence; an effluence going from them toward pupils, which is felt not only during class hours, but between times, and which may last through life. I had once an opportunity of observing for some time the influence of an agnostic teacher, who gave instruction in chemistry and natural science. There was good reason to believe that no word was spoken by that teacher in school against religion; yet there was also clear evidence of a radiation of cold (to invent an expression) felt by pupils, adverse to their own religious feelings and progress.

If, then, there is anything in the simple and spiritual views of Friends, distinct both from the secularization of worldliness and from the formalism and ritualism of other churches, which we wish to perpetuate it must and can only be done by our schools and colleges being predominantly (not of course without occasional individual exceptions) manned and womaned with teachers who appreciate, accept, and exemplify those simple and spiritual holdings themselves. In other words, no school ought to be called or thought of as a Friends' school, at least two-thirds of whose teachers are not in mind and heart Friends. I believe that all the requisite ability and culture for such purposes can be found within the Society of Friends now. If not, let us hasten the day, by improvement of our schools, when it will be so. But, even, if need be, at some comparative loss of possible ability, distinction, and culture, let not Friends' schools be victimized by the triumph of secularizing intellectuality over Christian culture.

H. HARTSHORNE.

[1] From Notes on an Educational Conference, in *The Student* for First month.

SCRIPTURE LESSON, No. 6.

SECOND MONTH 5TH, 1888.

THE TRANSFIGURATION.

TOPIC: DIVINE RECOGNITION.

GOLDEN TEXT: "This is my beloved son in whom I am well pleased; hear ye him"—Matt. 17: 5.

READ Matt. 17: 1-13.

THE narrative given in the reading of to-day is also in Mark 9: 2-10, and Luke 9: 28-36; it is called "the Transfiguration," from the radiant glory exhibited in the countenance and person of Jesus, while he held communion with his heavenly visitants.

Peter, James, and *John*—three of Jesus' disciples who appear to have been very closely attached to him, and to have more frequently shared his seasons of special divine favor, and to have been brought into nearer sympathy with his work and mission, than any others of the chosen twelve.

Into a high mountain apart. This is commonly believed to be Mount Tabor. Luke adds, he went up there *to pray.* Jesus often went apart into the desert and upon the mountain slopes to be alone with God, thus setting an example to his followers of times of withdrawal from the busy multitudes, from the cares and vexations of life, that they may be in a quiet condition and hold spiritual communion with the Father of Spirits. These seasons may be to the true disciple what the Transfiguration was to Jesus. The realities of the heavenly state may be opened to their inner sense, and the voice of the Father heard in sweet acknowledgment of the Divine Sonship.

Let us make here three Tabernacles. This indicates the state of feeling that the occasion produced upon the three disciples. The privilege of having their beloved Master apart from the multitude, with nothing to distract or disturb the flow of feeling, and the words of instruction that were so full of encouragement, and, added to this was a selfish desire that they, the three who had from the first shared the vicissitudes of the Master's life, might here, in this mountain, consecrated by the holy presence, live in the enjoyment of one another, with nothing to molest or interfere with their happiness. But this was not the intention of Him who had called them to be his disciples. They had been given a glimpse—a foretaste of the rest and peace and glory laid up in store for the righteous, but they must labor and finish their work in the earthly harvest field, before they could enter into the joy of their Lord in the ingathering of his sheaves.

The lesson for to-day is that of "Divine Recognition," and it is of use to us only as we may find its application, or influence upon our own characters. We may assume without mistake, that all the history of religious or spiritual affairs of the past is valuable

for us just so far as it tends to establish or strengthen in us a reliance upon the inspiration born of the Divine Spirit in every soul, which cannot lead astray.

Under this view, Divine Recognition for us, must be an inward or spiritual effect. Can *we* obtain this Divine Recognition. Can *we*, by any mode of life or course of action, so bring our spirits into harmony with the Divine Spirit that we shall realize this Divine Recognition: "Thou art my beloved Son, in whom I am well pleased." There is no doubt that such a realization is possible unto every human being who is willing to obey the law of God within his soul. Paul, when he had given up to the Divine Power operating on his soul, realized this "heavenly vision." George Fox, as soon as he opened his soul to the influence of the Spirit of God, declared, "I saw the great love of God, and was filled with admiration at the infinitude." Again he says, "and as I walked toward the jail, the word of the Lord came to me saying, 'My love was always to thee, and thou art in my love.'" William Penn says, he "was suddenly surprised with an inward comfort" and a realization that he "was in the presence of God." John Woolman "heard a pure and ravishing voice as of an angel speaking." All of these thus had evidence that their lives were in harmony with the will of God, and that in them the Divine Father was well pleased.

But the lesson has a nearer application to us all, for Divine Recognition is not exceptional but is universal, and is experienced invariably when all opposing desires are given up and the promptings of the Divine Life within are obeyed, for then is realized a peace that passeth human understanding. Not a reader of this lesson but has had some experience of this character, has had some movements of that "inward comfort" which follow obedience to the Voice of Deity, which has led to some unselfish act or to the giving up of some cherished plan that was not pleasing to our Father in Heaven.

Let us ever bear in mind that the joy and unspeakable peace that follow right action *is* the approving and Divine recognition which we should endeavor always to deserve, and which we certainly shall obtain if deserved.

GLIMPSES OF LIFE ALONG A CORAL REEF.

(*Concluded from last week.*)

[During the summer of 1886 a party of naturalists from Johns Hopkins University spent a month among the Coral Islands near Abaco, Bahama. A very interesting article on the flora and fauna of the reef is found in the *Popular Science Monthly*, from the pen of F. H. Herrick, one of the party. From this article we make the selections which follow.—EDS.]

JOE KEY, forty miles northwest of Green Turtle, was the most interesting island we visited. Its windward side, facing the sea, is rocky and precipitous. A mangrove swamp nearly divides it into two, and on the inside there is a smooth beach and a good harbor for small boats. It was nearly dark when we landed, but our attention was soon called to the great number of pigeons which were constantly flying to and fro from one point to another on the island. Before going ashore, we rowed to a narrow inlet between a detached cliff and the main island, through which the tide flowed with a rapid current. Fish may be always found at such places, where they are apparently on the lookout for the food swept back and forth by the tides.

We could hear the whirring of hundreds of pigeon overhead, and their peculiar cooings *cu-oo-cu-oo cu-hu-hu*, which has a singularly melancholy sound in the woods at dusk. It is impossible to see out of these tangles where the branches and vines interlace over your head, and it is sometimes necessary to climb up and take your bearings. At the hour of twilight the pigeons are approached without difficulty. Besides the white-crowned pigeons (*Columba leucocephala*) there was also another species, called the "rock dove." The former is of a nearly uniform plumbeous blue, excepting its snowy crest. The rock dove is more brilliantly marked with brown, and iridescent green and blue. It is a pretty sight to see hundreds of these birds sitting erect on the trees, and to watch their rapid, incessant flight. If one is disturbed, all within gunshot take wing, and circle rapidly over the trees, sometimes encompassing the island before settling again.

The mosquito, which abounds everywhere along the keys, did not trouble us here, but the pest of the place was a microscopic midge, called the "sand fly," with black head and transparent body, whose burning touch was like that of a sharp needle on the skin.

The Bahama red-winged starling, looking much like our northern species (*Agelaeus phœniceus*), of which it is a variation, was common, and probably breeding on this key. It delivered its flute-like *warble-ee* as assiduously from the top of a palm as its relative does his from the button bush or alder of a New England meadow.

The black-headed or laughing gull (*Larus atricilla*) was nesting here also, as well as at most points where we touched. It is a common resident all along the South Atlantic seaboard. We found its nests and eggs at Portsmouth, on the North Carolina coast, the last week in May. It is easily distinguished by its black hood, which completely covers the head, ending abruptly on the neck. This cap is, however, exchanged for a white one in winter. These birds dwell in small colonies on the rocky keys, nesting a few feet above high-water mark. The nest is indifferently made of grass and seaweed, varying much in the amount of materials used, and contains from two to three large, olive eggs, mottled or spotted with darker pigments.

A handsome spike-grass (*Uniola paniculata*), whose wavy plumes are sometimes six feet tall, grows above the sandy beach. This same species occurs along the coast from Virginia to the Gulf of Mexico, where it is called "sea oats." The green blades of the "West Indian lily" (*Pancratium Carolinianum*), a member of the Amaryllis family, are found growing in large clumps at the water's edge. Its flowers, which were now nearly past, are pure white, and remarkably fragrant. We found here also the *Sabbatia gracilis* in the sand, and a small leguminous tree, with clusters

of reddish flowers, at which I saw the Bahama honey-creeper—a delicate little warbler—busily at work.

The Cuban nighthawk (*Chordeiles minor*) was breeding here, as at several other islands which we examined. It is called "pilepedick," from its peculiar note, which is well produced in the name. It has many of the characteristics of the bull-bat of the Eastern United States, tumbling along the ground as if its wings and legs were broken, if surprised on its nest, and producing that peculiar booming sound when on the wing by sweeping down from a great height in the air. The young, which we found as frequently as the eggs, resemble a pinch of gray down, and so perfectly do both they and the eggs match the gray rock on which they are laid, it is only by a rare chance if you find a nest without flushing the old bird. The young nighthawk is about as broad as long, and, unlike the callow young of most birds, it is covered from head to foot with a thick coat of down.

On our return we anchored the first night in a little harbor at Allons' Key, where two small fishing boats had already taken refuge from a threatening squall. We saw the ruins of several huts on this island, and the remains of a small grove of cocoanut trees, which had been blown down in the destructive hurricane of September, 1884. The place was so infested by mosquitoes that this little settlement had to be abandoned. It rained heavily in the night, but our men took an early start, and awoke us the next morning at five by announcing the discovery of a "loggerhead's track." The beaches had been leveled by the rain, so that any new impression could be readily seen. The turtle had ascended the beach to a point above high tide, had stirred up the sand, leaving a great heap over her eggs, and returned to the water, but a short time before we landed. This was shown by the ebbing tide, which had retreated only a short distance from her last tracks. The eggs were laid in a bunch, and covered with sand a foot and a half deep. There were just one hundred and thirty-nine of them. They resemble a white rubber ball, an inch and a half in diameter. The sea turtle's eggs have a peculiar flavor, but are very palatable. The glair becomes tough and leathery by boiling, and is always thrown away. The breeding season of the loggerhead (*Chelonia caretta*) lasts from May well into August, according to the statement of our guide, who also said that they deposited eggs several times in this period, producing as many as one hundred and eighty at the first laying, and perhaps no more than two or three at the last. The natives make a business-like search for these eggs each year, and sometimes surprise the female turtle on the beach. The extraordinary egg-producing power of these animals is all that preserves them from immediate extinction.

Large forest trees, such as pine, cedar, and mastic, which grow on Abaco, do not occur on the keys. We find here, however, smaller trees and shrubs in great variety.

The Genipa or seven-year apple is very abundant along the shores of the islands just above high-tide mark. It sends up from the ground slender, brittle stems a few feet high, bearing creamy-white flowers and a hard, yellowish-green fruit, which is inedible. The leaves are dark green and highly polished.

The wild sapodilla is equally common, and attains the height of a small tree. The axillary flower-clusters appear a little in advance of the leaves, which in June add a touch of the brightest spring green to every thicket. The fruit, which is not edible, is covered with a rusty-brown skin, and is usually terminated by the long persistent style. The cultivated sapodilla forms a good-sized tree, and appears to grow spontaneously wherever it has been introduced. It differs from the former chiefly in point of size and in the superiority of its fruit. Possibly the wild form is the parent stock from which the other, with its sweet, pulpy fruit, has been derived; but I have been unable to gather any facts relating to this point. A milky juice flows freely from the wounded bark of the sapodilla trees, forming a viscid gum, which the negroes use as bird-lime. It is also noteworthy that the *Isonandra gutta*, a Malayan tree, from the juice of which the gutta-percha of commerce is obtained, is also a member of the *Sapotaceæ* or Sapodilla family.

These islands have been largely colonized from the South, principally, perhaps, from Cuba; and the Gulf Stream and other agents which have brought the plant germs thither, have carried them also to the keys and coast of Florida, where they may have first become established. The seed-eating birds, finches, and starlings, which are common on Abaco and many of the small islands, serve also as important distributors of grains and seeds of other plants. The great number of shrubs bearing edible berries may be partially accounted for in this way. The annual hurricanes, on the other hand, are certainly powerful agencies in scattering seeds over wide areas. Knowing the frequency of their occurrence and their long duration, we can see how by this means alone an island would soon acquire a rich and varied flora.

It is not the men who make the greatest display in public, and do the greatest amount of fine talking that do the most good; it is the quiet, earnest, faithful, persevering workers who find something to do, and, instead of talking about it, go to work and do it, that in the long run, accomplish most for God and humanity. It is work that tells; and it is workers that the world needs. The mightiest forces in nature are the silent forces, that are always in operation, doing their work. And the men who accomplish the greatest good are the men who are always about their Father's business.—*Methodist Recorder*.

"In everything give thanks," said Paul in his first Epistle to the Thessalonians. "Glory to God for all things," said Chrysostom, the Archbishop, of Constantinople, when driven into exile and persecuted. The Christian can be in no possible situation in which giving thanks to God will not be in order, since it is always true that "all things work together for good to them that love God." We may not always see how they so work, yet that they do so work we have the assurance of God himself. This is enough for our faith, and enough for our gratitude.

HELPS AND HINDRANCES IN THE FORMATION OF CHARACTER.

TO continue the thought expressed in a late editorial in reference to child-training, we may well consider the several helps and the many hindrances that confront us in the formation of steadfast character. For it is character above all else that is the great desideratum. It has been said, and said truly, that "there is the only wealth in the world,—character; and there is only one poverty in the world,—loss of character." It cannot be bought with money, although it is often parted with for money; how poor, indeed, do those become who barter it thus!

It is formed in very many ways and the foundation for it must be laid very early in life, by example, by precept, and by personal contact. We cannot well convey the influence that will produce the best good by exerting it at arm's length. The continual presence of men and women possessed of fine qualities that are manifested in every-day intercourse, with the young, is a powerful agency in forming and moulding their characters. Hence the great importance of a careful selection of instructors for the children, with whom so much time must necessarily be spent in the acquisition of the rudiments of knowledge, that while these are being gained, no loss in regard to character be sustained. But, on the contrary, the daily evidence being given of subdued passions, firmness of purpose, and steadiness of nerve, with high aims and aspirations, all will be found great helps in the struggle a child may be making to attain to these qualities in itself; and their absence, although the individuals may be gifted with talents of high order and culture of the rarest, will be a mighty hindrance to the formation of character.

We meet in the world so much to retard our right growth, that life becomes a perpetual struggle if we desire to attain to a high standard, and to meet this struggle bravely is the one lesson we must well learn. In every condition of life this struggle is to be met, but most especially where wealth is abundant and where poverty reigns supreme, those in the middle ranks being the best situated to gain the best results. The wisdom shadowed forth in the petition of Agur, "give me neither poverty nor riches," still commends itself to the thoughtful, who cannot fail to perceive in the deterioration of character that marks the decline of many wealthy families by the disuse of the mental and moral, as well as the physical faculties; these are happily brought into play by the necessity of struggle for the means to keep each in a good healthy condition. As an enervating influence on character luxurious living has perhaps no equal, unless it be a poverty that paralyzes ambition, and creates a wretched content that is equally disastrous.

Addressing ourselves to the middle rank we may note as examples some of the hindering things that tend to demoralize character. A youth steps forth trusted with responsibility, for this must be thrown upon him ere steadfastness can be attained, it may be he is to make a purchase necessary for his own equipment. He hesitates as to what article is best, and is told he can buy, and if he is not suited after he gets it home, he can return it for exchange. Does not this action on the part of the tradesman, wise enough in exceptional cases, hinder the formation of decision of character and good judgment? Better let him suffer the consequence of an unwise purchase than thus enfeeble his character. Again, he is enticed to incur debt, and another weakness is added. He may be led astray to the transgression of wholesome rules, and a mistaken kindness interfere to prevent his reaping the just reward of his wrong-doing, and serious indeed may be the unsettling that will result. And so on and on, we might point out the quick-sands that undermine the firmness of character that it should be our pride and our duty to create, by wise counsel here, and by throwing a guard there, all the time appealing for aid to One who is ever watchful and ever ready to assist in the perfecting of his own handiwork if we only seek to know and to work in accord with his law.

CORRECTION. In the article of "A.," last week, there are two misprints which materially affect the sense. In the first column, (p. 37), 15th line from the bottom, the word *more* should be *none;* and in the 7th line from the bottom, *every* should be *my.*

THE second Educational Conference under the care of the Yearly Meeting's Committee is appointed to be held on the 4th proximo, (at 15th and Race Sts.), this city. The exemplification of teaching geography will be given by Susan Cate Smith, of Boston who was one of the instructors at the Summer School at Asbury Park, last summer, and made a favorable impression.

"WORDS are but counters—the coins of intellectual exchange. Listening to the word, you do not perceive the idea for which it stands unless you are already in possession of it."—*Selected.*

MARRIAGES.

FROST—HULL.—Twelfth month 31st, 1887, by Friends' ceremony, in the presence of David McAdam, Chief Justice of the City Court of New York, Sidney B. Frost, of Philadelphia, son of Daniel C. and Elizabeth F. Frost, of Killingly, Connecticut, and Amie A., daughter of J. Stanton and Hannah M. Hull, of Westerly, Rhode Island.

DEATHS.

BALL.—At the home of his daughter,——— Fawcett, near Centerdale, Iowa, Eighth month 31st, 1887, John Ball, of Pasadena, California, (formerly of Bucks county, Pa.), aged 58 years.

BARNSLEY.—Suddenly, of heart disease, at his residence at Hartsville, Bucks county, Pa., on Fifth-day the 12th inst., Joseph Barnsley, aged about 70 years.

BIRDSALL.—First month 13th, 1888, Anna M. Birdsall, in the 78th year of her age; a member and elder of Baltimore Monthly Meeting.

BUCKMAN.—In Newtown, Bucks county, Pa., First month 19th, 1888, Eli Buckman, in the 74th year of his age. Although not a member with Friends, he had been for many years one of the most regular attenders of Newtown Friends' meeting.

GRIEST.—At his home near Balbec, Jay county, Indiana, on First-day, First month 15th, 1888, after a short and severe illness, Salathiel T. Griest, in the 46th year of his age; a member of Camden Monthly Meeting, Indiana. He was of a generous disposition, benevolent, and kind.

HAINES.—First month 17th, in her 81st year Letitia P. Haines. Interment from Rancocas Meeting-house, New Jersey.

HANCOCK.—In Philadelphia, First month 16th, Anna T., widow of Biddle Hancock, in her 70th year. Interment at Mansfield, N. J.

HUSTON.—In Wilmington, Delaware, on the 20th of First month, 1888, Drusilla, wife of William Huston, and daughter of the late Mark and Sarah Brear; a member of Wilmington Monthly Meeting.

KIRBY.—At the residence of Josiah White, near Fernwood, Pa., First month 19th, Mary Kirby, of Haddonfield, N. J., in her 80th year.

PRATT.—In West Brandywine, on Third-day, Eleventh month 29th, 1887, Elizabeth J. Pratt, aged 66 years; a member of Bradford Monthly Meeting.

WILLIAMS.—At the residence of his son Stephen, near Urbanna, Ohio, after a short illness, Caleb Williams, aged 82 years; a member of Benjaminville Monthly Meeting, Illinois. At the interment at Falls Creek, Ind., on First month 20th, 1888, there was in attendance an unusual number of the old pioneers, and numerous tributes were paid to his sterling integrity, together with incidents connected with the early settlement and establishing fifty-nine years ago, of our meeting, he being one of the original members. J. L. T.

SARAH A. E. HUTTON.

At Richmond, Indiana, on the 6th of First month, 1888, at 11.30 p. m., Sarah A. E. Hutton, widow of John H. Hutton, and daughter of Edmund and Elizabeth Evens, aged 76 years and 5 months; a valued minister of Whitewater Monthly and Indiana Yearly Meetings.

She was born at Patuxent, Maryland, the 10th of Eighth month, 1811, and passed the earlier years of life in that vicinity and in Baltimore. In 1832 with her parents she removed near Richmond, and in 1838 to that city. In 1834 she appeared in the ministry, and her gift was acknowledged about 1836 by Whitewater Monthly Meeting. A severe attack of spinal trouble undermined her constitution and her health continued frail the rest of her life. Her ministerial labors were confined principally to her own Yearly Meeting, the only services beside being a visit about 1843 to Ohio Yearly Meeting, and attendance of Baltimore and Philadelphia Yearly Meetings. In 1836 she engaged for a few months in teaching as assistant with the late Eliza Ann King then Eliza Ann Smith, and on the 2d of Fourth month, 1844, in connection with her sister Elizabeth Haines, she took the charge of Friends' school at Richmond, a position in which her eminent qualifications for that service were manifest, and in which she was for several years very successfully engaged, and again a second time after her marriage. Her friends and scholars were devotedly attached to her, and in her meeting she was highly esteemed. Her marriage outside of Society was deeply regretted, and some estrangement ensued; but on her restoration she quickly regained the confidence and esteem of Friends. Now that her work is finished, we have confidence that she has entered the rest prepared for the children of our Heavenly Parent. And in conclusion, reference may be made to one of her earlier communications, that there was need faithfully to maintain our Christian testimonies against the pretensions of a corrupt ministry, or the time might come when the shackles of the Roman Priesthood would darken our fair country.

R.

THE SOUTH CAROLINA COLORED SCHOOLS.

REPORTS from the two colored schools of South Carolina, in which Friends are interested, are regularly received. At Aiken, Elizabeth S. Criley, in her report for the month ending First month 16, says "At the examination before the Christmas holidays quite a number of pupils were promoted, making two classes each in Rooms No. 1 and 2, where there had previously been but one. The promotion seems to have had a stimulating effect upon the pupils, as they are now working with renewed vigor. We have over three hundred names upon the roll, with a good average attendance. When the weather is favorable our chapel is a sea of bright, eager faces. Some have not yet returned since the holidays, but many new ones have come in to take their places. One of the great troubles we have to contend with is tardiness on the part of the pupils. Yesterday morning two little ones, aged eight and ten, coming for the first time, were very late. Upon being questioned as to their lateness, they told us they had to walk six miles. 'But,' said the little girl, 'we won't be late again, because we will start before daylight.' This morning was cold and rainy, but they were here by nine o'clock, having left home shortly after five o'clock. On the 23d of last month we spent the afternoon hours in distributing Christmas presents to the children, and their hearts were made very glad by the nice gifts sent them by the northern friends. Many of the children have no other Christmas greetings than those received here, and I think the kindness is fully appreciated.

"We held a Fair in the Chapel on the 21st of last month, and it was a grand success. We had tables arranged around the Chapel, and instructed the boarding students how to take charge of the different

'counters' and do the selling while the teachers overlooked and directed. Many of our boys and girls had never seen anything of the kind before, and were greatly pleased. Then the responsibilities put upon them made them feel that they had a special interest in the Fair, and some developed business qualities which quite astonished us. We realized about $65 after all expenses were deducted.

"Nearly all our boarding students went home to spend their holidays. Those who remained employed their time very profitably.

"In the Industrial Department the boys are kept busy in the printing office and carpenter shop, or making needed repairs outside. In the sewing classes special attention is being given to the patching of all torn garments worn to school. There is a marked improvement in the girls' sewing since the beginning of the term, and sewing hour is always hailed with delight. The little ones beg to go oftener than we can send them. We have a special sewing class for one and one-half hours on Saturdays for the benefit of the boarders, when they generally do some work to earn a little money.

"On every third Fourth-day evening of the month we have a 'parent's meeting,' where parents and teachers meet and talk over the affairs of the school and try to get into plans for working together for the good of the children."

In her letter from Mount Pleasant, dated First month 11th, Abby D. Munro says: "The winter thus far has been very mild, quite favorable to school attendance, and during the last month with one hundred pupils registered, our average attendance was 92. In age the pupils range from 6 to 17. We have none older. This is quite in contrast with former times, when we had a large number of young men and women, and yet our school is more advanced than it has ever been. Our 'Advanced Class' numbers 5, three females, two males, all 16 years old. Their studies are written arithmetic, which they have nearly completed, mental arithmetic, grammar, U. S. history, reading, spelling, and composition. One of the girls is an inmate of the Home, and I am hoping to prepare her for a teacher. The First Class, as we call it, numbers 14. . . . We think we have a very nice school, and should take a great deal of pleasure in having our friends visit us during these months while we are at our best, and while the country children remain. The holidays passed with the usual festivities. . . but there was very little drunkenness and no arrests in the village. . . . If I may be allowed to be the judge, I do not think our school was ever in a more flourishing condition, or there was ever more interest on the part of parents and pupils, than now. I have not had to ask a child to come, or to hold out any inducements more than are always held out—that of good, thorough instruction—in return for punctual attendance and application to their books. We are not giving any special aid to any pupil, only as occasionally we add a comfortable garment to a very scanty wardrobe, or put a pair of bare feet into some more favored child's cast-off shoes. Thanks to our friends for the barrels of clothing which enable us to do this."

A private letter from Martha Schofield, dated at Aiken, First month 19, mentioning that the salaries of the teachers mostly fall due on the 17th,—two days previously,—says "there is not more than $15 in the school treasury. . . A letter from W. T. Rodenbach, to-day, says he will send a check for $25, raised among the Sabbath-school children at Naugatuck, Conn., (where he lives). I will try to write to some old subscribers, and we are doing what we can to interest the boarders who come to Aiken."

To this we may add that the funds of the Association to help these schools are for the present exhausted, and immediate aid from those interested is very needful. Subscription books and circulars, setting forth the work of the Association, and giving its financial statement for last year, will be supplied to any who will write to the Secretary, Sarah H. Peirce, 3323 Powelton Avenue, Philadelphia.

NEWS OF FRIENDS.

—A Friend living at Dixon, Wisconsin, writes: "It is over eighteen years since we came to Wisconsin to be with our children. My husband is now in his ninety-third year; he has not been able to read or write for nearly seven years, and feels it to be a great blessing that my sight is tolerably good, so that I can read to him six and eight hours in the day and evening. We are fifty miles from any other members of our Society, and the nearest are a single woman and her orphaned neices for whom she is caring. We have twice attended Genesee Yearly Meeting, when it was held at Farmington, and a few weeks ago were at the meeting held in Chicago."

—At the last monthly meeting at Race street, (Phil.), on the 18th inst., the Treasurer's account having been examined and being correct, S. Robinson Coale was reappointed for the ensuing year. The accounts of the trustees of the Free School fund were found correct, and the net income, $420, was paid to the School Committee. Owing to the deaths of Samuel Townsend, William C. Biddle, Morris L. Hallowell and other changes, it was deemed best to appoint new trustees for the meeting-house property, and the names reported were approved by the meeting, as were also three proposed as trustees of the Free School fund. Trustees on behalf of the Monthly Meeting were appointed for the Central School property, which will likewise require similar action by Green street and Spruce street Monthly Meetings. Five additional overseers of men's branch were appointed, making thirteen men and twelve women in that station.

—Norristown's First-day morning meeting was strengthened and encouraged on the 22nd inst., by the presence of our friends Lukens and Jesse Webster. The latter spoke at some length, most acceptably, dwelling largely upon the love of the Father, the importance of faithfulness to known duty, and of our looking to the Light within for guidance in that duty, rather than to outward helps and examples. He was followed by his brother in some appropriate remarks, when, under a solemn covering of silence, the meeting closed. The attendance was good, the

audience being chiefly composed of Friends and Friendly people.

The second monthly gathering of the Young Temperance Workers was held on the evening of the 12th inst. Isaac Roberts, of Norristown, delivered the address. A recitation, "The Drunkard's Dream," was given by Emma B. Conrow; Julia Stout read "The Health," and Alfred Wright a part of a lecture by George W. Bain. A voluntary reading was given by Ellen L. Thomas. Referred questions were answered, and an increasing interest is being manifested in these small, but earnest gatherings.

L. W. H.

SWARTHMORE NOTES.

—The new Biological lecture room is being fitted up by the kind generosity of a member of the Board, to whom the college is indebted for many favors in the past. This makes room in the museum for the new cases, which are much needed, and which we are enabled to order by the generosity of another kind friend of the college. Swarthmore has many friends, who are unwilling to see its usefulness curtailed for the want of the necessary funds. Every dollar thus added goes to increase the advantages offered to the students.

—Louisa J. Roberts attended the meeting on First-day morniug, and spoke feelingly and effectually. She dwelt upon the text: "What shall it profit a man if he gain the whole world and lose his own soul, or what shall a man give in exchange for his soul?" She earnestly exhorted the young to profit by the great opportunities presented to them, so much greater than those of fifty or one hundred years ago. She pressed home the truth that religion must be a matter of individual experience, and that it must affect the life and conduct of every day. At the close of the meeting she appeared in supplication.

LECTURES.

—The lectures by E. J. Trimble-Lippincott, at 1132 Girard St., heretofore noticed, have been attended by an appreciative audience, and the course will be repeated in the parlors of Dr. Dixon, 1603 Girard Avenue, beginning on Sixth-day evening, 2nd Mo. 3. Also, another course will follow the one now closing at 1132 Girard St., (Women's Century Club), to be given on the same days, (Third-day of each week), at 4 p. m.

—At the Friends' Social Lyceum, at 17th St. and Girard Avenue, on the evening of the 8th proximo, Dr. Bushrod W. James will describe the Yellowstone National Park, with illustrations.

The trustees of the Peabody Education Fund have, in twenty years, distributed $1,647,749 among the following states; Alabama, $95,200; Arkansas, $103,475; Florida, $72,075; Georgia, $123,127; Louisiana, $96,870; Mississippi, $88,303; North Carolina, $138,315; South Carolina, $77,950; Tennessee, $306,975; Texas, $122,350; Virginia, $267,599; West Virginia, $137,010.

A STEP IN THE RIGHT WAY.

Editors Intelligencer and Journal:

THE Youths' Training and Employment Association of Chicago, Ill., (to which our friend Jonathan W. Plummer and a few other busy men have given much time and thought), has the offer of 300 acres of land in Cork Co., twenty miles south of Chicago, for a school of agriculture and manual training for boys, provided an endowment of $350,000 be raised by the citizens of Chicago. There is already a school at Norwood Park, under care of the Association, for poor waifs and homeless boys, where they are cared for and taught both hand and head work, and the design is to extend the training to agriculture, horticulture, etc., according to the capacity and turn of mind of the boys. It is not intended to keep them longer than to fit them for adoption into good homes. The movement has taken hold of the thoughtful, who see the great number of boys growing up to be criminals in that great city, and already some money has been subscribed.

This is charity in a right direction, the prevention of crime, and an example to other cities. How many well-equipped institutions of this character have we in the United States? A Chicago citizen desires to know.

An Inquirer.

THE WESTERN "BLIZZARD."

FROM a private correspondent living in Creighton, Nebraska, we gather the following facts in regard to the recent storm of cold that passed over that section. He says:

On the 12th the blizzard struck us at one o'clock p. m. the mercury then standing at 30° above zero. During the storm it kept falling, and by night was 10° below. By the morning of the 13th it had fallen to 24° below, and kept thereabouts, not rising above 20. On First-day, (the 15th), it fell to 30° below, and then began to rise; to-day (17th) it stood at 2° above zero. So for six days we have had almost continued zero weather. In this it compares with First month, 1885.

This storm was electrical; two persons living at a distance from each other, relate that during its progress electric sparks passed to their hands as they approached the stove. One whose stove was raised from the floor on little blocks of wood reported that sparks passed from the legs of the stove to the zinc which was underneath. Another, who was caught out in the storm, saw flashes of light in the distance which he took to be a light in a house, but on going in the same direction found no house there.

Several school teachers kept their scholars in the school-houses until next morning, rather than face the storm. The teacher at Plainview, a town a few miles from here, dismissed her school and started for her home with three boys, all of whom perished on the way. She reached her home but fell exhausted at the door.

It is the soul, we very well know, that gives color and character to circumstance, as it is health and appetite which give the pleasant taste to food.

THE LETTER FROM HOME.

BY MARGARET E. SANGSTER.

DAY after day there is plenty to do,
To wash and to iron, to bake and to brew,
And the feet that tripped o'er the purple moor
Go back and forth from the stranger's door.
In this new world there is much to learn
And the silver pennies are hard to earn;
But strong and gay can the brave hearts be
In the thought of loved ones across the sea.

Father and mother growing old,
Little Jeannie with curls of gold,
Grandame bowed in the ingle-side,
Sturdy Donald, his sister's pride—
Never a night the sun goes down
That the two forget in this stately town
To lift a prayer that the Lord may be
Close to the loved ones over the sea.

And here is a letter. Leagues of foam
Whiten the path to the cottage home;
Over the land and over the wave
It has flown like a dove so bright and brave.
Open it, Katie; Maggie, tell,
Quick, is the mother keeping well?
How did it leave her? Blessings be
On the letter that's safe o'er the stormy sea!

With eyes that glisten and cheeks that glow
The simple story they read, we know;
How the little sister at school is kept.
How for burdens scarce has the father slept—
The rent to raise and the crop so scant;
But God has promised they shall not want,
And thanks to the hands so kind and free
That sent the pound from beyond the sea.

That letter, all on single leaf,
In phrases a trifle curt and brief,
Yet throbbing sweet with the love that lives
Through time and change, while its best it gives,
Reading, the sisters laugh and cry
And the raptured moments enchanted fly,
For again in the shade of the old roof-tree
They are happy children across the sea.

—*Illus. Christian Weekly.*

FROM DAY TO DAY.

ONLY from day to day
We hold our way,
Uncertain ever,
Though hope and gay desire
Touch with their fire
Each fresh endeavor.

Only from day to day
We grope our way
Through hurrying hours;
But still our castles fair
Lift to the air
Their glistening towers.

And still from day to day
Along the way
Beckon us ever,
To follow, follow, follow,
O'er hill and hollow,
With fresh endeavor.

Sometimes, triumphant, gay,
The bugles play
And trumpets sound
From out those glistening towers,
And rainbow showers
Bedew the ground;

Then "sweet, oh, sweet the way,"
We smiling say,
And forward press
With swift, impatient feet
And hearts that beat
With eagerness.

Yet still beyond, the gay
Sweet bugles play,
The trumpets blow,
Howe'er we flying haste,
Or lagging waste,
The hours that go;

Still far and far away,
Till comes the day
We gain that peak
In Darien; then, blind
No more, we find,
Perchance, what we do seek.

—*Nora Perry, in Harper's Magazine.*

HOW I WOULD MANAGE MY CHILDREN: YES AND NO.

I CONSIDER no one so well qualified to discuss any subject as he who knows nothing about it. His fancy is not hampered by facts, nor are his broad and beautiful theories brought to naught by rude, disillusionizing experiences.

But I cannot for myself wholly claim this peculiar adaptedness to the work in hand, having in a philosophical spirit studied the management of many parents, wise and otherwise, and having also at different periods held the reins over the backs of sundry wild colts belonging to others.

While these were not the ideal beings I should expect my own to be, but mere ordinary—and sometimes extraordinary — "young ones," they have served to disturb many traditional beliefs on the government of the young, and have done much to convince me that the actual is not always so convenient and soluble as the theoretical. In fact, I have, by the agency of these cherubs, sometimes in impish presentment, been brought to a point of sympathy with that young mother who exclaimed, "I wish I knew half as well how to bring up children as I did before I had any." Nevertheless, I do not find myself wholly bereft of opinions, but have still on hand a curtailed but more carefully assorted stock, some of which have survived and some of which have been evolved from the experiences and observations of years. The first of these is a conviction that so far survives the wreck of time that I should attach a certain fixed value to my "yes and no."

For instance, when assailed by the incessant "Can't we do so and so?" of the restless schemers, I would try to form a habit of checking the almost instinctive reply, "Oh, no, I'd rather you wouldn't," until a moment's reflection showed me whether my objection was founded on solid reasons, or only on a

slight inconvenience or trifling preference for which it was not worth while to deny the child or subject myself to a contest. Having decided, I should adhere to my refusal in a manner, however genial, to foreclose teasing, or yield my consent ungrudgingly and sympathetically, not damping the pleasure of the permission, which, on the whole, I think is best to give, by manifesting the partial reluctance which I inwardly feel.

I am far from advocating that the decision of matters should lie with the judgment and will of a child, but it is surprisingly common that a child's eager desires are baffled when a little study of the subject and a little patience in considering the case would have shown the one in authority that it was practicable and wise to gratify them. This, too, will be in keeping with the strictest authority and the most unquestioning obedience in those cases where a refusal or command is, on the whole, called for. Indeed, it is the one who lets her hasty judgment the oftenest say "no" who vacillates and the most frequently ends by yielding a consent with such dignity as she can command, and whose "no" has a corresponding importance in the estimation of those shrewd mind-readers, the babies.

To tell the truth, the policy of certain parents by which a purchasing power, if I may so speak, is given to bad behavior, has always been one of the inscrutable mysteries of maternity which I could not be expected to fathom.

For instance, Tommy, in his high chair, sweetly and persuasively asks for jam. Mamma says, "No, jam isn't good for little boys." The child protests with increasing vigor, until the comfort of the family having been destroyed and Tommy's capabilities of temper fully revealed, mamma says at last, "Well, I don't know that it will hurt him any, after all," and yells, kicks, and thumps subside under the soothing influences of jam.

The point of mystery to the uninitiated is, why, if the sweetmeat is to be given at all, it should not be freely granted in response to the pleasant and suitable request in the beginning, in place of being reserved as the reward of a scene.

Perhaps, however, there may have been a faint impression on the mother's mind at the outset, that she was not going to let Tommy have the desired article at all. But where this species of contest is common, it strikes an on-looker that it would be wise for the parent to do some quiet reflection, and, as it were, take account of stock, accepting the fact that Tommy is the possessor of the master will. Then let her by all means give him the laudanum bottle, or the peachblow vase and hammer, but let her do it promptly and cheerfully on first demand, when she can carry the impression of granting the request of an equal, and not at the end, in the character of a subordinate who has entered into an unavailing contest with a superior and been beaten.—"*A Spinster*" *in The Christian Union.*

True honor is that which refrains to do in secret what it would not do openly; and, where other laws are wanting, imposes a law upon itself.

THE NEED OF INDUSTRIAL TRAINING.

OF all the facts such as statistics gather, what is the *most* common fact about our prison convicts? Not that they cannot read and write: of the 552 convicts received into the Eastern Penitentiary of Pennsylvania in 1886, 477 had had a "fair common-school education,"—and that proportion seems typical. Not that they have not been to Sunday-school: of the 564 convicts received in the same prison in 1885, 515 had been Sunday-school scholars for longer or shorter times. Not that they are intemperate: of the 552, 104 were total abstainers, and of the 564, 99 were total abstainers. The most common, the most generic fact, is, that *the convicts know no trade.*. Of those 552, 39 had learned a trade by apprenticeship; 10 had been apprenticed, but had left before finishing; 62 had "picked up a trade or two by working at them;" leaving 441 "entirely ignorant of trade knowledge." Of the 564 received the year before, 459 had no trade knowledge. Of the 461 convicts received in 1884, 361 had no trade knowledge. Of the 471 male prisoners received in 1883, 378 had never learned a trade. Between 1876 and 1885, this Pennsylvania penitentiary received in all, 1069 convicts under twenty-one years old; of these, 864 had fair common-school learning, but 993 had never learned a trade. How is it in a western prison? Of the 1,494 convicts in the Joliet prison, Illinois, 151 are "illiterate;" 127 can read, but not write; 1,087 have fair education; 129 are college graduates! That shows it is not lack of letters that takes men into crime. Of the same number, 413 are classed as "intemperate"; 764 as "moderate drinkers;" 317 as "total abstainers." That shows that total abstinence by no means keeps men out of crime. But light comes again when we learn that of the 668 received at Joliet between October and October, 1885–86, 478 had no trade knowledge. Do the prisons all around bear witness to the same fact? If so, it seems as if *the* weak spot in our educational systems lay plain in sight. After reflecting upon these figures, single out Chicago alone and consider three items more,—that Chicago spends yearly $18.93 for each pupil in its public schools, that it costs her $33.00 per arrest for each of her 44,261 arrests made in 1886, and that the city of Chicago never expended a dollar to teach a boy a trade. London pays from the city treasury $385,000 a year toward the support of trade schools, and Mr. Stewart asks, "May there not be some connection between this fact and the fact that in 1883, there was in London but one arrest for each 48 of the population, while in New York during the same year, there was one arrest to each 21 of the population; in Brooklyn one to 23; in St. Louis one to 20, and in Chicago one to 15?"—Ethelbert Stewart, in the *Journal of Industrial Education.*

The best of all companions is a simple, frank man, without any high pretentions to an oppressive greatness; one who understands life, and understands the use of it; obliging alike at all hours; above all, of a good temper, and steadfast as an anchor. For such a one we gladly exchange, the greatest genius, the most brilliant wit, the profoundest thinker.

WOMAN'S WORK FOR THE PROMOTION OF SOCIAL PURITY.

BY Miss Willard's request the branch of work under her care, hitherto called the Department of Social Purity, had the name changed at the recent National Convention to White Cross and White Shield Department, the former involving the following pledge: 1. To treat all women with respect, and endeavor to protect them from wrong and degradation; 2. To endeavor to put down all indecent language and coarse jests; 3. To maintain the law of purity as equally binding upon men and women; 4. To endeavor to spread these principles among my companions, and try to help my younger brothers; 5. To use all possible means to fulfill the command, "keep thyself pure." And the latter, this pledge: 1. To uphold the law of purity as equally binding upon men and women; 2. To be modest in language, behavior, and dress; 3. To avoid all conversation, reading, art, and amusements which may put impure thoughts into my mind; 4. To guard the purity of others, especially of my companions and friends; 5. To strive after the special blessing promised to the pure in heart. These are intended for use by parents, teachers, pastors, and others who have the care of young people, and who will use, in connection with the pledges, the carefully prepared literature of the National Woman's Christian Temperance Union, including the leaflets of Miss Ellice Hopkins, of England, and many equally good, written in our own country.

The White Cross work is for men and boys; the White Shield work is for women and girls; and the whole is carried on under three heads of preventive, reformatory, and legal. Miss Willard is assisted in this work by Mrs. Dr. Kellogg, of Battle Creek, Michigan, who has special care of mothers' meetings and furnishes literature for use therein; Dr. Kate Bushnell, of Evenston, Illinois, who is constantly speaking and organizing; Mrs. Ada Bittenbender, of Lincoln, Nebraska, a lawyer of fine reputation, and a most womanly woman, who has special charge of petitions and bills for the protection of women and who will spend the winter in Washington, working in this interest; and Mrs. Mollie McGee Snell, of Columbus, Miss., where the finest industrial school for women in America is located, whose special work will be to speak before legislatures, urging them to appropriate funds for the founding of girls' industrial schools. Thus equipped, the department is strong in all parts, and with corresponding superintendents in every State and Territory of the nation and in very many local unions, the sum total of good accomplished cannot fail to be great.

All of this work is carried on under the authority and management of the National Woman's Temperance Union.—*Union Signal.*

Much misconstruction and bitterness are spared to him who thinks naturally upon what he owes to others, rather than what he ought to expect from them.

Labor is the girdle of manliness.—*Canon Farrar.*

JESUS THE EMANCIPATOR OF WOMAN.

IN the Bay City (Mich.) *Tribune*, Mary S. Knaggs, reviews the condition of women in the ancient world, showing the general oppression which they suffered, as well as the occasional glimpses of something better in the treatment accorded them. She sums up as follows:

"In spite of these exceptional honors to the sex, woman when taken captive in war was subjected to the most brutal treatment, and her condition throughout the known world was one of complete subjugation. And while the interpreters of Christ's teachings have many times perverted them to the continuation of that condition, under the *régime* of Christianity slowly a broader interpretation has been reached.

"In his life he showed himself always the friend of woman. The human side of his nature came from a woman, and wherever he dealt or spoke with women he displayed a divine breath of recognition of equality before God. He taught the sanctities and fidelity of home life, and the mutual duty in the training of children. He taught that the law of chastity is equally binding upon men and women. He first disclosed himself as the Messiah to the woman of Samaria, and when bearing his heavy cross up the mount of crucifixion 'a great company of women' followed him. His religion is an exaltation of family life, a magnifying of the unity of the ideal life of man and woman; for in Christ 'there is neither male nor female.' The angel song 'good will to men' embraced women, and was a prophecy of their complete liberation. The principles of justice, tenderness, and truth embodied in the life and teachings of Christ must result finally in the full application of the rule which comprehends all human rights and duties, 'Whatsoever ye would that men should do unto you, do ye even so to them.'"

ABRAHAM LINCOLN AND STRONG DRINK.

IN the contest at Atlanta, a few weeks ago, on the question of Prohibition, the opponents of the measure employed a very scandalous fraud to deceive the colored people. They sent out among them, just before the election, a cartoon representing Abraham Lincoln striking off the shackles from the slave, and giving a pretended extract from one of his addresses, warning them against prohibition. It is needless to say that the so-called "advice" of Lincoln was a base forgery, and that he never uttered any such sentiment. On the contrary, he was a consistent total abstainer. The colored people, of course, revere his name, and a good many of them were no doubt misled by the picture. The following extract from one of Lincoln's addresses is given in an exchange and is presumed to be authentic:

"Of our political revolution of 1776 we are justly proud. It has given us a degree of political freedom far exceeding that of any other nation of the earth. In it the world has found a solution of the long-mooted problem as to the capability of man to govern himself. In it was the germ which has vegetated, and still is to grow and expand into univeral liberty of mankind.

"Turn now to the temperance revolution. In it we shall find a stronger bondage broken, a viler slavery manumitted, a greater tyrant deposed; in it, more of want supplied, more disease healed, more sorrow assuaged. By it, no orphans striving, no widows weeping; by it, none wounded in feeling, none injured in interest—even the dram maker and dram seller will have glided into other occupations so gradually as never to have felt the change, and will stand ready to join all others in the universal song of gladness. And what a noble ally this to the cause of political freedom! With such an aid its march cannot fail to be on and on, till every son of earth shall drink in rich fruition the sorrow quenching draughts of perfect liberty. Happy day, when, all appetites controlled, all passion subdued, all matter subjected, mind, all-conquerable mind, shall live and move the monarch of the world! Glorious consummation! Hail, fall of fury! Reign of reason, all hail!

"And when the victory shall be complete—when there shall be neither a slave nor a drunkard on the earth—how proud the title of that land which may truly claim to be the birthplace and the cradle of both those revolutions that shall have ended in that victory! How nobly distinguished that people who shall have planted and nurtured to maturity both the political and moral freedom of their species!"

POISONED SLEEP.

SCARCELY a week passes without some proof of the folly of a reckless or insufficiently careful use of narcotics. It is almost to be regretted that so many agents capable of producing mimic or poisoned sleep are known to the profession and to the public. It is now the exception instead of the rule to find a man or woman of middle age who is not more or less addicted to the use of morphia, chloral, bromide of potassium or some of the many sleep inducers or pain relievers which the nineteenth century has distinguished itself by evolving for the care and comfort of our less enduring, and increasingly sensitive and excitable humanity. It is nothing to the purpose that the deleterious effects of these potent drugs, when taken habitually, even in small quantities, have been again and again exposed. Practitioners have, as we do not scruple to insist, in and out of season, much responsibility for the growing fashion of taking narcotics or anodynes by mouth or hypodermically. It is so pleasantly facile to prescribe a remedy which is sure to give present relief, whatever may happen in the future; and those who have learned to purchase unconsciousness or ease at what seems to be a very small price, are only too ready to renew the experience when any fresh cause of sleeplessness or pain arises. Sooner or later some strong measure will need to be taken with the view of arresting this really serious "habit" of taking sedatives, extending its influence and gaining strength year by year. Meanwhile we do earnestly counsel our readers to refrain from having recourse to these drugs themselves, and to use their authority with patience in condemnation of a demoralizing and disastrous practice. The victims of the abuse must not simply be counted by those who die of it, but by those are left to drag out miserable lives, the victims of "cravings" and nameless and numberless sufferings which morphia, chloral, bromide—now cocaine—and a host of insidious poisons are the active agents in producing.—*London Lancet.*

PROTECTIVE WORK AMONG YOUNG GIRLS.

THE Boston Young Women's Christian Association has recently added another to its many departments of work for self supporting young women, which promises to become even greater in point of usefulness than any hitherto undertaken. This new feature is known as "The Travellers' Aid Department," and has for its specific object the protection of young working-girls on their first arrival in Boston. It is but the outgrowth of years of thought, and seems suddenly to have culminated into positive action both in Europe and America. The Association has been constantly reminded of this great need by the bitter experiences of hundreds of worthy girls coming to Boston from all parts of our own and foreign countries, and who, for the past twenty years, have claimed the protecting care of the Association Boarding Homes. This department was organized in April of the present year.

Since July 1st a lady has been employed by the Association to devote her entire time to this department. She meets coast and foreign steamers, cares for unprotected girls, aids others in finding friends, and advises such as are unaccustomed to traveling in regard to connection with trains, care of baggage, and the most economical and direct means of transportation. Cards are distributed showing the best ways of securing employment, with circulars of information directing girls to low-priced but respectable boarding and lodging houses, and also warning the unwary of danger from evil-disposed persons seeking their ruin. During the five months this work has been in progress, more than six hundred girls have been cared for in some one or more ways above mentioned.—*Faith and Works.*

IT is said that of the 120 Chinese youth who were sent to American colleges in detachments of thirty, under the charge of the Chinese Commission, all but about a dozen have obtained positions in their own country in different departments of the Government, as civil engineers or as naval officers or teachers in the naval school. Of the few who returned to this country, the majority are Chinese Consuls; some are attached to the Chinese Legation. One, Hong Yen Chang, a graduate of the Columbia Law School, is striving for admission to the Bar in New York.

TRUTH cannot be found, without some labor and attention of the mind, and the thoughts dwelling a considerable time upon the survey and discussion of each particular.

HE that corrects not small faults, cannot control great ones.

HYDERABAD AND GOLCONDA.

HYDERABAD has thirteen gates. We pass through one and over a bridge which spans the Musi River, and are now, in due procession, making a straight course throught the main street of the city. All the lesser animals, with the throng of pedestrians, get out of our way. Our elephants seem to have all rights, and care for nothing. They pass steadily along, and in due time I get accustomed to the sag of my howdah. . . .

We made only two or three halts while passing through the city, but for prudential reasons did not dismount. Having emerged from the gate of the city at the farther end of the main thoroughfare, we turned to the right, and took the road skirting the massive wall. We had a special permit to visit the Johan Numah, one of the principal palaces of Hyderabad. As we were now away from the warlike throng of Hyderabadese, we dismounted, and began a ramble through hall and gardens. The Johan Numah belongs to the family of one of the chief noblemen, Busheer-ord-Dowlah. Having gone through some buildings connected with the palace, but shielding it largely from public view, we came into a large court, which seemed to have been used for soldiers, both horse and foot, and the retainers of the prince. At the farther end of the court we came to a staircase, and entered the main rooms of the vast palace. Here were spacious halls, covered with carpets and rugs of many curious designs. The furniture was richly carved. Some of it was of dark old Indian woods, but a portion was of European and later origin. I was struck by the odd contrivances to amuse the members of the princely household living here. Here were clocks of odd workmanship, and at every convenient corner there were automata of the quaintest construction. All were in motion, and so contrived as to amuse by doing unexpected things. For example, I saw the figure of a grenadier, whose sole business it was to swallow minature fish. There were instruments for performing musical freaks. Stuffed birds could be seen everywhere, grouped into all possible combinations, so as to make the scene as nearly life-like as possible. I visited many other palaces in India afterward, and learned that it was an ancient usage of the kings and noblemen of Hindustan to employ the most accomplished artists in curious mechanism, whose sole business it was to contrive and construct odd and unheard-of devices of this kind to please the ladies of the Indian courts. In tho old days their time hung heavily. There were many women to be pleased, and they had their jealousies, and could be best appeased by having their fancy charmed by the sight and sound of these curious devices.

Having finished the halls of the palace, we ascended a staircase, and came out upon a beautiful and fragrant garden. My first thought was that the rooms which we had just left were immediately below us, and that the garden we were now in was on the roof of the palace. But on examination I saw that the garden was really only on a level with the roof, but was supported by a terrace so raised as to give the visitor the impression that he was walking over the palace roof. This too was evidently only a device to bewilder the guest into still greater admiration at his environment. This garden contained flowers of rare beauty and fragrance, and was laid off in exquisite designs. Having left it, we wandered through the grounds in the rear. Here we came into a labyrinth of pleasing and of most curious construction. It served its purpose, as I soon learned by getting lost in it. Always expect the Indian to do his work differently from the rest of the world. This labyrinth was not of the same order as the one in the Palmgarten in Frankfort-on-Main, or the less pleasing one in the outlying grounds of Hampton Court. But it served its purpose far better.

We now remounted our elephants and proceeded on our way around the old wall of the city. Our excursion was only to end with the four-mile ride out to the celebrated fort and tombs of Golconda.—*Bishop Hurst, in Harper's Magazine.*

THE AUTAKOUSTICON.

THE following remarkable passage is from the pen of Robert Hook, who at the time of its writing was Professor of Mathematics in the University of Oxford. It was written in 1664, more than 200 years before the first invention of the modern telephone.

E. H. MAGILL.

"And as glasses have promoted our seeing, so it is not improbable but that there may be found many mechanical inventions to improve on other senses of hearing, smelling, tasting, touching. It is not impossible to hear a whisper a furlong's distance, it having been already done, and perhaps the nature of the thing would not make it more impossible though that furlong should be ten times multiplied. And though some famous authors have affirmed it impossible to hear through the thinnest plate of muscovy glass, yet I know a way by which it is easy enough to hear when speaking through a wall a yard thick. It has not yet been thoroughly examined how autakousticons may be improved, nor what other ways there may be of quickening our hearing."

DR. Eckfeldt, of Philadelphia, and W. W. Calkins, of Chicago, have issued a monograph of all the lichens of Florida. They find of these curious plants no less than fifty-four genera, and three hundred and thirty species, and anticipate a large number more after critical investigation. It is interesting to note that the reindeer moss, *Cladonis rangiferina*, so well known as an inhabitant of the Arctic regions, is abundant in Florida also. It seems to be a lichen of thoroughly cosmopolitan habits.

TO-DAY is, for all that we can know, the opportunity and the occasion of our lives. On what we say or do to-day may depend the success and completeness of our entire life-struggle. There is to us, in fact, no other time than to-day. The past is irrevocable. The future is unavailable. Only the present is our. It is for us, therefore, to use every moment of to-day as if our very eternity were dependent on its words and deeds.

From the Woman's Journal.

CALIFORNIA AND BRITISH WOMEN.

IT may be interesting to your readers to learn that during my stay in California last winter, I saw the possible solution of a problem which has occupied many of the most thoughtful hours of my life, viz., the way to benefit the women of my own country by helping the overtaxed housewives of the Pacific coast. There are thousands of sensible, educated women in Great Britain who are skilled in housework, but who earn a very scanty pittance. They would be an untold blessing in the homes of California. I have already sent out two parties, and am organizing a third. The inter-state law prevents their getting any reduction on fares, and they have to strain every nerve to raise enough to carry them nearly seven thousand miles from home.

These ladies are all members of the British Women's Temperance Association, and committees of W. C. T. U., are to receive them at their destination in California. For those who go to New York and join the excursion at Albany, Mrs. M. Louise Thomas, President of Sorosis, with a committee of ladies, promised to meet all at the steamer on landing. To-night I hear from her that she gave them a dozen cans of tongue and ham, and boxes of choice biscuits, a quantity of fruit, and other comforts for their six day's railroad journey. She says:

"I have just seen our English friends on board the train for their long journey. They were all in the best of spirits. They could not have been more carefully guarded if their own fathers had been with them. There was no homesickness among them, but all were full of hope and happy anticipations of the lovely homes that await them. They took supper with me. I am much pleased with the quality of these women. More and more I realize, dear friend, that this is a great work. We are doing a good work for women, and with God's blessing I intend to devote myself to it here, as you are doing in Britain."

I may say that the class of women I desire to help are above the servant class—the industrious, poor, middle-class, educated women, who find it so hard to earn money here. When Luther's little daughter died, and his wife was weeping over the remains, he tried to comfort her by saying: "Don't take on so, Kate. This is a hard world for women." And so, if I can make a brighter pathway for the weary feet of my country-women, who sorely need it, I shall feel that I have not lived in vain.

My next party sails by the *Celtic* to New York, and will join the Southern Pacific excursion from Boston, January 24.

Since writing the above, just when I was feeling the burden of this great work upon me, there came a letter from a working-man in California with a check, saying he wished it to be used to help poor women who could not pay all their passage money, and what touched me most was that he desired they might not know the source of this help. I felt a reverence for my unknown friend that I cannot describe. It was the very first help that had come to me. My printing and writing had cost me much. I could not also pay passages, and this note of cheer has strengthened me much.

Yours for the sacred cause of woman,

MARGARET E. PARKER.

Penkith, Warrington, Scotland.

NEWS AND OTHER GLEANINGS.

—Judge Finletter, of Philadelphia, recently laid down the law as to the rights of pedestrians and vehicles at street crossings, in a manner calculated to dispel the very common but erroneous belief of car and wagon drivers that they have the right of way at street crossings and that it is the duty of the pedestrians to get out of the way. In the course of his charge he said: "Upon the streets of the city the wayfarer has the primary right, and when he reaches a crossing before any kind of vehicle he has the right of way, and it is the duty of those who are using vehicles to see that they do not interfere with that right or make its exercise dangerous. The right of way belongs to the vehicle which first reaches the crossing and all other vehicles must observe this right. A violation of this right is negligence. The ringing of a bell or any other notice does not give the right to cross."

—The wife of Senator Sherman is said to be an exceptionally fine housekeeper, and to understand cooking as well as a French *chef*. At her home in Mansfield, O., she keeps some fine Jersey cows, and superintends the making of her own butter.

—Prof. Maria Mitchell has resigned her position as professor of astronomy at Vassar College, which she has held ever since Vassar was founded, in 1865. She feels that she needs rest. The Executive Committee of the Board of Trustees laid the resignation on the table, and gave Prof. Mitchell indefinite leave of absence, her salary to continue till the annual meeting in June, when further action will be taken. The *Springfield Republican* says: "At that time it is not unlikely the distinguished astronomer will be made professor emeritus. She is in her seventieth year, and she had gained high rank in her science forty years ago."

—The Italian Minister of Public Instruction has issued a decree that women teachers shall receive equal salaries with men teaching the same grade.

—Several of the French railway companies and other public bodies have resolved on having their printing done on green instead of white paper. The reason for the alteration is that they believe the combination of white paper with black characters endangers the eyesight of their workpeople. Black on green has always been recognized as a good combination, and many railway tickets are so printed.

—"The Record of Crime" is perhaps a necessary but disheartening feature of the modern newspaper. We propose to make a new departure, and keep a "Record of Virtue." Any reader who hears or reads of a kindly, self-sacrificing, courageous, philanthropic, or honorable action will confer a favor by sending it to the *Journal of Women's Work*, 1132 Girard street.

CURRENT EVENTS.

SEVERELY cold weather prevailed in Pennsylvania and adjacent States, on the 22d and 23d insts. Temperatures several degrees below zero, were reported in some places. In the Northwest, on the 19th inst., there was a second cold wave, but not so severe as the previous one. It had the effect, however, of again filling up the cuts and suspending railroad resumed. The

weather reports showed the following temperatures below zero: St. Paul, 18; St. Vincent, 32; Huron, Dakota, 20; Yankton, 16; Bismarck, 26; Helena, 12; Fort Garry, 36.

SEVENTH-DAY of last week, the 21st inst., is reported to have been the coldest day ever known at Minneapolis, Minnesota. At 7 o'clock in the morning a standard Government thermometer stood 40 below zero, the lowest that can be registered on it. At Chippewa Falls, Wisconsin, the thermometer marked 68 below.

REPORTS from the wool districts of Texas show that thousands of sheep and cattle perished in the recent blizzard. It is estimated that 20,000 sheep perished in the counties of Lampassas, Brown, Hamilton, Corvell, and San Sabra.

THE mother of President Garfield died at her home in Ohio, on the 20th inst. Her remains were placed in the receiving vault at Lake View Cemetery, Cleveland, with those of her distinguished son.

IN the Iowa Legislature, on the 24th instant, James F. Wilson received a majority of votes in each house, for United States Senator, and was accordingly reëlected for six years.

AT a meeting of the Ohio Wool Growers' Association in Columbus, on the 24th inst., resolutions were adopted demanding for the wool manufacturing industry "protection as ample as that furnished by the act of 1867."

THE members of the Nicaragua Canal Survey Expedition are all well, according to a telegram from San Juan del Sur. Of the forty miles of canal route which require location by the surveyors, over ten miles had been completed up to the 12th instant.

THREE shocks of earthquake occurred in the vicinity of Newburyport, Mass., about midnight on the 22d inst. Houses four miles from town were violently shaken.

A FIRE in the frame and machine shop of the Rogers' Locomotive Works in Paterson, N. J., on the 23d caused a loss estimated at $100,000.

NOTICES.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about* 3300 *persons, reaching, say,* 15,000 *readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞ *When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.* ☜

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.

PALM

A true and perfect Soap for Babies, Children or Persons of Delicate Skin.

AFRICA—FIVE THOUSAND MILES from Philadelphia grows the stately palm tree, producing a beautiful orange-colored fruit, rich in oil of the most healing nature for burns, scalds or bruises.

We buy the best of this oil and make our PALM TOILET SOAP entirely of it. When the Soap is made it contains many of the healing properties of the oil.

For Persons of Delicate Skin and Children, some of our friends say it is the best Toilet Soap in the world. Price $1.25 per dozen.

532 St. John St., Philadelphia, Penna.

FRIENDS' INTELLIGENCER and JOURNAL

Memoranda for those who will aid in Sending in Subscriptions.

1. Rates for the Year 1888.

   Single subscriptions, $2.50 per year.
   8 copies, $2.25 each, a year.
   15 copies, $2.00 each, a year.
   ☞Note the change in last item from previous years.

2. "No Agents."

   We recognize no one as our "Agent" with the single exception of Friends' Book Association, 15th and Race Sts., Philadelphia. Those Friends who get up Clubs for the paper must be regarded as the agents of those subscribing through them. When money reaches our hands we receipt for it ourselves, and no one, (except F. B. A., as above), is authorized to receipt for us.

3. Concerning Clubs.

   a. It is, of course, our desire to get new subscribers, and retain old ones. Unless Clubs help to do one or both of these things, they do not aid the paper. We therefore hope to have in them (in the $2.00 Clubs, especially) *some new ones.* This is difficult, of course, in some localities, and in such we will not *exact*, though we *desire* it.

   b. Names and money, for clubs, should be sent to us in *one, two, or at most three,* instalments. We can wait till the person getting up the club is ready with the money, but we cannot accept single names and money, (unless for *new subscribers*), at intervals through the year, on Club account.

4. Subscribers' Names.

   When sending clubs, please carefully designate all "new" names; and in renewals, please use the same name as the paper has been coming to;—if for any reason th name is changed, please call our attention to this fact.

5. Discontinuances.

   We do not discontinue a paper, (unless for continued delinquency in payment), without the order of the subscriber. Persons wihing to "stop" *must so notify us.*

Association of Friends to Promote the Education of the Colored People of the South.

This association, formed at Philadelphia, in Sixth month 1886, represents the conviction of many Friends and others that continued systematic aid to the work of educating the colored people of the South is imperatively called for.

The special design of the Association, for the school year 1887–88, is to extend support to the Schofield Normal and Industrial School, at Aiken, S. C., under charge of Martha Schofield, and to the School at Mt. Pleasant, S. C., under charge of Abby D. Munro.

Subscriptions are earnestly invited. Checks, etc., should be drawn to the order of the Treasurer, as below.

OFFICERS OF THE ASSOCIATION.

HOWARD M. JENKINS, Chairman, 921 Arch Street, Phila.

SARAH J. ASH, Secretary, 1717 Vine Street, Phila.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall, Doylestown, Pa.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly *to raise funds.* These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

Statement of Henry M. Laing, Treasurer, to Seventh month 1, 1887.

HENRY M. LAING,
30 N. THIRD ST., PHILA.

Philadelphia, Sixth month 30, 1887.

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.

FRIENDS' PRINTING HOUSE, S. W. COR. 6th and ARCH.

GOOD OUT OF ILL.

SAY, Lord! for thou alone canst tell
Where lurks the good invisible?
Amidst the depths of discord's sea—
That seem, alas! so dark to me!
Oppressive to a mighty state,
Contentions, feuds, the people's hate—
But who dare question that which fate
Has ordered to have been?
Haply the earthquake may unfold
The resting-place of purest gold,
And haply surges up have rolled
The pearls that were unseen.

—*Victor Hugo.*

THE FUNDAMENTAL GROUND OF FRIENDS.

Editors INTELLIGENCER AND JOURNAL:

ON reading the article in your issue of the 21st inst., entitled, "Is a Reunion of Friends Possible?" the same thought was revived which claimed my attention on first reading the letter of Whittier when it appeared in your columns, which was this: Is it true that our branch of the Society of Friends "has been driven away from the original ground of Quakerism?"

It has caused me to critically rëexamine the principles upon which we claim to rest our organization, and the doctrines which are enunciated in our meetings, resulting in my own mind that in this statement Whittier and Ryder are both mistaken, or else I do not know what was the original ground of Quakerism.

So far as I am informed from the reading of the history of Friends, by Sewell as well as Janney, Clarkson's "Portraiture" of Friends, George Fox's works, Isaac Pennington, Robert Barclay, and William Penn, I understand that the original ground of Quakerism was that God revealed himself and his will concerning man directly to man; and this doctrine of Immediate Revelation was the fundamental doctrine of the Society down to the day of the separation, and has been and is to-day the fundamental doctrine of our branch of the Society. I well understand that in the enunciation of doctrine as drawn from interpretations of some passages of Scripture we differ from some of the teachings of the early Friends, and it would be strange indeed, if we are true to our fundamental principles, if this were not the case. We must remember that early Friends were gathered out of the Established Church of England, and had been more or less strongly indoctrinated with the teaching of that church, and that while convinced of the truth of the fundamental principle enunciated by George Fox, yet in expressing what they felt called upon to present to the people it was not strange that those expressions should be somewhat colored by their early education. Any careful observer of human nature knows that we do not at once lay aside all former modes of thought upon the adoption of a new truth, though that truth may antagonize our former ideas. Hence, in following the injunction of George Fox to "Mind the Light"—that is mind the Light of Truth, the Christ within,—to be obedient to what it unfolds to us in our day, not to what it unfolded to George Fox in his day,—we ought to be able to see more clearly how to distinguish betweeu what it requires of us, and what views in other ages have been enunciated as necessary for men to believe. Hence, because we do not accept or teach minor doctrinal views precisely like the early Friends at all points—because we make a closer discrimination between the man Jesus and the Spiritual Christ, the son of God, the power and wisdom of God, not distinct from him, but one of his "attributes," to say that we have been driven from the original ground of Quakerism seems to me to be an untenable view and improper.

And if a reunion of Friends ever becomes practicable it can only be on this fundamental principle: *That God does teach every man what is his special duty, in order that he may be accepted by Him.* Other matters of doctrine must take a secondary place, and they will, just as soon as every part of the body claiming to be Friends bases its doctrines upon the teachings of Jesus instead of upon the apostles, and makes the revelations of the past secondary to those of the present, and the revelations of God's dealings with man as recorded in the Bible as corroborative of what is required of man now;—instead of making them the authority upon which to base doctrine and methods of action, thus exalting them above the Power that qualified the writers to pen them.

JOHN J. CORNELL.

For Friends' Intelligencer and Journal.

A PLEA FOR UNITY.

Behold! how good and how pleasant it is for brethren to dwell together in unity.—*Psalm cxxx iii:* 1.

AS a spiritual traveller for the welfare of our Zion, and dwelling under the realization of what must be self-evident to every religiously concerned mind, that Truth tends to unity, how often my spirit has mourned over the divisions among the Lord's people called Friends; and of late years a deep religious concern has rested with me which seems to deepen and grow in the life more and more, now and then calling

for expression as the way seemed to open for it, by private interviews with dear friends of the two main branches of Friends. I feel the spirit of persuasion and kind entreaty, which is my understanding of the gospel spirit, and whilst I know there are obstacles on both sides in the way of an immediate union, I have so much faith in the power of the Truth to overcome these in time, especially in view of the fact that nearly all who took an active part in the troubles of 1827 have passed away, and time has healed many of the wounds and softened much of that bitter feeling which was the inevitable outgrowth of disunity and strife.

The query with me now is, Why should we, the children and grandchildren, keep alive this root of bitterness? seeing that we individually took no part in the division, why should we suffer a dividing spirit to keep us apart as strangers when we should be brethren? If then, we appreciate the spirit of the quotation at the head of this article, why can't we at least open this subject, *not in a spirit of controversy;* we have had enough of that, but in a spirit of condescension and brotherly love; *both sides* must manifest this spirit or we will never get any nearer together, and I invite and persuade both branches to come half way. In this spirit I now feel moved to write a few thoughts as they come to me, and hope they may find a place in the INTELLIGENCER AND JOURNAL, and also in *The Friend*; but still more to be desired, in the hearts and minds of those who read. In this step my heart was encouraged by reading John G. Whittier's reply to a congratulatory letter sent by a meeting of Friends held at Girard Avenue and 17th street, on the eve of his eightieth birthday, looking upon him as an unprejudiced witness, free from partisan feeling, from the fact that Friends of New England remained united. I here quote his letter of reply, or that part of it bearing on this subject, as published in the INTELLIGENCER AND JOURNAL of 12th mo. 31st, 1887:

"I heartily wish all who hold that name [Friend] were once more united. The great separation in the first instance, I have always looked upon as unnecessary and wrong; and its effects have been only evil. It fostered prejudice and hatred and all uncharitableness. It has crippled our power to do good. It has driven both sections away from the original ground of Quakerism. Is it not time to inquire whether there is not some way to bring all back to the true foundation laid by Fox, Penn, and Barclay?"

There are those no doubt in both branches who are nearer together than they think, and I feel that under this power of Divine love they will sometime be gathered; The Truth is mighty to convince and to overcome all obstacles and barriers, which now seem to be insurmountable; rest assured there is a sound centre, around which, and to which all who are really Friends at heart will eventually be drawn as one people again. Those who are only Friends in name will gravitate to the churches, where perhaps some really belong, and some who have little or no religious foundation will go back to the world; be that as it may, the time of *gathering* will come, as the time of *sifting* has already come. "The wheat will surely be gathered into the garner, and the chaff will be burned." When that time will be is not for us to say; it may not be in our time, but I believe it will come in the Lord's time, and that will be the *right time.* Friends, let us not hinder the good work; let us do what we can on both sides to prepare the way; let us strive for a better state of feeling, and a better understanding of one another.

Without going into unpleasant details which had best not be mentioned,—let the dead past bury its dead,—I feel it right in this appeal to compare the ground on which early Friends stood with some of the digressions of Friends of both the main branches of to-day, and I desire to leave self out of the question as far as possible, in doing this, (for, dear friends, this plea is not to gain a point in any partisan sense, but is simply a plea for unity). In my endeavor to present the ground of early Friends in relation to doctrines and the Scriptures, I shall quote from their own writings, and will preface it by a quotation from "Old Fashioned Quakerism," by Wm. Pollard, which I think is very much to the point:

"Their testimony to Christ as almighty and divine was a practical testimony, and as such it was more definite and unequivocal than that of any other religious sect.

"And their regard and love for the Scriptures were so marked that its plain teachings were accepted by them, and carried out in practice in their lives at great cost and suffering on points respecting which other churches seem still halting, as between two opinions.

"William Penn, George Fox, and Robert Barclay contended for the pure truths of the Scriptures, but denied some of the false interpretations of theology and the church in their day, as witness 'The Sandy Foundation Shaken,' 'Innocency with her Open Face,' 'Reason not Railing,' etc.

"The Evangelical sects (so-called) of William Penn's day declared and still declare their central truth to be the *Death of Christ.* The early Friends, going wider and deeper, proclaimed the great central foundation truth to be *Christ himself*—the Living Saviour, the same yesterday, to-day, and forever. They ignored no revealed truth—the human life of Christ, his death, his resurrection, his ascension, all for our sakes, they thankfully and reverently accepted and believed. But Christ the Living, the Indivisible, the whole Christ, he who had been *God manifested in the flesh,* and is now *God manifested in the spirit,* was the foundation rock, and on that rock they built and found safety and rest."

We see from the foregoing that early Friends did not reject the Scriptures, but only the false interpretations put upon them by the churches and theologians of that day. William Penn declared that the Scriptures were the only written creed of the Friends, and there is no doubt, from a careful and unbiased perusal of the writings of early Friends, that they also fully accepted the outward advent of Jesus as God manifested in the flesh, (see Penn's "Primitive Christianity Revived," page 58), also George Fox's letter to the Governor of Barbadoes, Barclay's Apology (Prop. v. and vi.), also the Journal of George Fox, (Vol. I., page 51); not denying anything in the record which we have in the New Testament, his miraculous conception, wonderful works, his life without sin, his teachings and example, his sufferings and death, all for our sakes; as William Penn

declares in "Sandy Foundation Shaken" "all as an expression of the Father's love," but not in the sense of imputed righteousness or plenary satisfaction. "God so loved the world that he sent his only begotten Son, that whosoever believed on him might not perish but might have everlasting life." He was the one holy offering for us, and put an end to the law of sacrifices and burnt offerings.

Whilst accepting the foregoing Gospel truths, and holding them as I believe in the unity, "*their characteristic or distinguishing point or principle* from other sects was—*The Light of Christ within as God's gift for man's salvation.*" (See Penn's "Rise and Progress," page 26.) They did not deny the outward, they accepted and affirmed it, and only objected to unscriptural doctrines which the churches of that day had framed by false interpretations of Scripture truths. The doctrine of the light was *the practical work in the soul*, but this does not require a denial of the record of the outward. "Justification," says William Penn, "consists of two parts or hath a twofold consideration; first, justification from the guilt of sin, and second, justification from the power and pollution of it. It is the power and efficacy of that propitiatory offering, upon faith and repentance, that justifies us from sins past, and nothing we can do, though [but?] by the Holy Spirit, can wipe out old scores or cancel old debts; and secondly the power of Christ's spirit in the heart, and obedience to its manifestations there, preserves us from the polluting power of sin." But living a sinful life and merely depending on an outward and historical faith in the atonement to save, will not suffice,for "be it known to such," says the same author, "these crucify to themseves afresh the Son of God, and trample the blood of the covenant under their feet." (See "Primitive Christianity Revived," pages 58, 59, and 60.)

It is surely evident that Wm. Penn, and his compeers did not deny the efficacy of that atonement and that blood shed, "that being reconciled to God in the death of his Son ye are saved through his life;" (Romans v: 10), neither is this taken in an allegorical or mystical sense, as Penn disclaims this in reference to this subject, (see page 61 of his work, "Primitive Christianity Revived").

As decided as the early Friends appear to have been on the matters I have mentioned, yet "they imposed no practice in their Dicipline as regards faith or worship, which is never to be done or suffered or submited to, requiring Christian compliance to those methods that pertain to church business in its more civil part, and concern." ("Penn's Rise and Progress," p. 58.)

Now, granting that the fathers of our church laid down no dogmatic or arbitrary creed for their members to conform to, is that any reason why we should abuse that precious liberty by denying and combating the truths of the gospel? They suffered for their testimony in defense of the Scriptures; some of latter day called Friends seem to act as though they thought they had a mission to combat and pull down what the builders accepted as true,—and even suffered all manner of cruel imprisonment, and death itself, to maintain. This latter spirit is not tending to unity among us, but is discouraging and driving to the churches many of our innocent young people. I know it is written "the letter killeth," but have we not reached the other extreme, in explaining away the Scriptures, accepting some of the sayings even of Jesus, and denying others equally plain and emphatic, also manifesting too much of a disposition to cavil and deny? while at the same time these very Friends will quote Scriptures, and in the same breath deny them. This has, from early life, seemed to me to be a strange inconsistency. Jesus quoted the Scriptures to the people of his day, and told them had they believed the Scriptures they would have believed in him, and if we had more Friends to-day who believed the Scriptures, we would have more believers in Christ. Jesus also illustrated many truths by parable, *yet he did not deny the literal.* Paul, in his epistle to the Galatians, speaks of the children of Hagar and the children of Sarah, and in comparing them by way of allegory, illustrates his inspired thought, but he does not deny the literal history and make out Sarah and Hagar a poetical myth.

Religion not only implies a practical work in the soul, but humble submission to Divine will in all things, and a loving reception of Divine Truth, and that Truth can not enter a closed unloving rebellious heart, neither can we fathom the deep things of God by the natural reason alone, but those who humbly seek shall find, and "if any man will do his will he shall know of the doctrine," and to those who say the miracles of Christ are contrary to nature's laws, and to reason, I reply they were not performed to illustrate nature's laws, but to illustrate deep spiritual truths, which are not unfolded by science, or the reasoning of the natural man, but by the mighty power of God. And to those who say "How shall I believe that which I cannot understand?" I reply, don't on that account deny it, but in humble waiting upon God, and following the leadings of his dear Son, who is the way, the truth, and the life, thou wilt learn all things necessary for thee to know, and thou wilt realize in the end, that "blessed are they who have not seen [that is, by reason or the sense of the natural man] and yet have believed."

There has grown up among some that are called Friends a spirit born of the turmoil and strife of sixty years ago; a want of reverence for religion and the Scriptures, and this false spirit has been like Satan transformed into an angel of light. Under the influence of the wonderful learning and knowledge displayed by some of this school, many have been deceived and shipwrecked. This spirit has been called *Progress*, and under that specious name it has sought to discard the Scriptures as among the things of the past, and of no use to us in the light of this day.

Early Friends would have had as much reason in discarding them (the Scriptures) in their day, for the same cause as we for so doing in this day, and I may say the same of the doctrines of the Atonement and other fundamental doctrines of Christianity. The Scriptures were no new thing at that time, (the rise of Friends); they were in fact over a thousand years old then, and if there is truth in our view of the un-

foldings of the Light, to give us an understanding of them, I can't see that the advances made in science and secular learning since that day, has anything to do with our appreciation of the Scriptures in their spiritual aspects. It is the Spirit that searches the deep things of God, not science; and the early fathers of this people certainly had a wonderful outpouring of the Spirit upon their minds. If this spirit of rationalism, as it is called, is an evidence of progress, I ask where are the fruits of it in the Society of Friends? and what have the advocates of it done for our organization? what strength have they given to it? Some tell me that we don't want to be held fast to what early Friends did and believed. Perhaps not in every minute detail, and in non-essentials, but Truth is the same, and the gospel truths that were true in William Penn's time are just as true now as they were then. Jesus Christ is the same yesterday, to-day, and forever, and his doctrine is the same. The doctrines of men change, but those that are of God never; the application of Truth to some external things may be changed without hurt; sometimes necessity requires it; but the principles of Truth never change, and it seems to me that just so far as we have deviated from the truth which they, (the fathers of this people), professed and believed, we have that far always declined, and it has not been *progress*, but *retrogression*. The fathers called the people back to Primitive Christianity, and I feel, in the spirit of my God, and his Christ, to call all Friends back to *Primitive Quakerism*, as the true ground of *true progress* and *vital Christianity*. Look around us, Friends, and see whether this is not true. Has not a departure from this primitive spirit been marked by decline in our meetings, and on every side signs of spiritual poverty and death? Instead of advocates of conversion to God, we hear such expressions as "let a man live right and be just, and it don't matter what he believes," "the moral life is all," etc. It does matter what a man believes in the heart, and even in the head, for actions are the offspring of beliefs, and belief gives vitality to the man's religion. "Peter, when thou art converted strengthen thy brethren." Jesus knew that Peter could not strengthen his brethren until he was converted. There is a want of *vital religion* among us, and this comes only by the new birth; "except a man be born again he cannot see the kingdom of God;" and we will see little of this kingdom, or the evidences of it in our members, until we have more conversions, and less dependence on mere morality, or still less upon that false spirit that passes by the name of Rationalism.

William Penn, in his appeal to young people, said: "O! young men and young women, let it not suffice that you are the children of the Lord's people; you must also be born again, if you would inherit the kingdom of God." (Penn's "Rise and Progress," . . 91.)

To those Friends called "Orthodox," I put the query, may there not be a danger of putting too much stress on the work of Jesus Christ without, which, according to William Penn in sentences I have quoted, is only what he calls the *first part* of justification, and thus falling into the mistake of the church, of declaring the death of Christ as the central truth? Whilst we must not ignore or undervalue that offering as the great culminating event of that life of Jesus Christ, as God manifest in the flesh, yet I do feel that it is still the mission of Friends to call the people to that Living Christ—that ever present Saviour. And the Christ within does not deny the Jesus Christ of Palestine and Calvary. We want the preaching of the whole Christ,—not Christ separated from his life and teachings, sufferings and death for our sins, but, I repeat, he that was God manifest in the flesh, and he that is now God mani fest in the Spirit. Paul said: "Though we have known Christ after the flesh, yet now know we him no more, but after the spirit." I feel, dear Friends of this branch, to kindly admonish you against so much as seemeth to me dangerous, not in a spirit of censure, but in kind admonition. You see how some, from laying too much stress on doctrinal matters, and not keeping the eye single to the Light, have denied the Light as a principle entirely, and have gone into the faith of the churches, and are even imitating them in forms of worship, and paying their ministry a salary, —a sorrowful falling away from a pure and undefiled religion taught by "a man sent from God whose name was George Fox."

I wish also to remind all Friends, only by way of caution, of the testimony of William Penn on this matter. He says: "A dry doctrinal ministry, however sound in words, can reach but the ear, and is but a dream at best; there is another soundness, that is soundest of all, *viz.*, Christ the power of God." ("Rise and Progress," page 81.)

Still further, dear friends, be as zealous in imitating the example of Christ as to confess a correct and sound faith in him, and the fruits of that spirit will be, and no doubt are, seen in your lives, and dealings with men, and the fruits of that (Christ-like) spirit are, among others, love, peace, brotherly kindness, and charity. Paul speaks of these great Christian graces, Faith, Hope, and Charity, and classes Charity as even greater than Faith. I would that there might be more mingling of both branches and all branches, that we might better understand each other. Though far be it from me to impugn your motives, yet it seems to me to be the spirit of the gospel to go wherever we can do good, and feel the call of the Master. "They that are whole need not the physician, but they that are sick." There are many honest young minds in the different branches, some outside of our branch as well as in, who are not unbelievers, in the sense of denying Christ, but are seeking to know the Truth. Is it right to cast these off, or shall we not rather be like Aquila and Priscilla, like Philip, and more than all, imitate the blessed Jesus, who did not turn away from doubting Thomas, but gave him the evidence he sought, and convinced him. "He that is weak in the faith receive, but not to doubtful disputation."

Finally, dear Friends of all branches, bear in mind Jesus Christ died for us all, and that his great love is still to us ward. To the radical and ultra, my desire is that you will be as tolerant of those who are

"Orthodox" in faith, as you wish them to be of you. Do not go to the Scriptures to combat them and pick out flaws. You will get no instruction from them whilst in that spirit; but, prayerfully wait and watch, and the key of David will be held out to you, and you will by it be enabled to unlock this treasure house of God, and you will be shown things new and old. If this were the practice among Friends, of searching the Scriptures like true Bereans (to see if these things be so) there would be more unity among us.

I desire also that all Friends bear in mind the testimony of William Penn in relation to the ministry of early Friends. In his preface to the Journal of George Fox he says: "The bent and the stress of their ministry was *conversion to God, regeneration, and holiness;* not schemes of doctrine and verbal creeds, or new forms of worship, but a leaving off in religion the superfluous, and reducing the ceremonial and formal part, and pressing earnestly the substantial and necessary, and thus reaching the inward states and conditions." Jesus testified before Pilate that he came to bear witness to the truth, and part of that truth was that he was to lay down his life for us, and that by reason of the sins of the world. Hence he came "to found a kingdom, not to promulgate a theology. He died not to formulate a creed or system, but to redeem a race."

These views are written in gospel love and not founded on the views of men, though I have quoted some from others. If I have succeeded in keeping out partisan views, I shall feel that the Teacher who teaches as never man taught has been with me, to guide and direct aright, for though I believe I am in accord in my views with that great and good man William Penn, I trust that I am looking for instruction to a source higher than men. In conclusion, I pray that the Good Father will open the hearts of those that read, to receive whatever of truth may have been dropped in this essay. I shall still labor and watch, like good old Simeon, for the salvation of my people, and for the dawning of that day of *peace and good will and unity*, when no longer shall be heard the query, "Art thou of Gurney or of Wilbur, or of Hicks?" but we shall all know even as we are known, that we are *of Christ, the whole Christ*, even "He that liveth and was dead, and behold he is alive forevermore."

FRANKLIN T. HAINES.

Rancocas, N. J., 1st. mo. 17, 1888.

WE die so soon! There's little time
Between the cradle and the tomb
To be kind to our fellow-men,
To lift them up and give them room.
We shall so shortly pass away,
Let us do good while yet we may!

'TIS not the dying for a faith is hard—some man of every nation has done that; 'tis the living up to it that's so difficult.—*Thackeray.*

THE wise man expects everything from himself: the fool looks to others.—*Jean Paul Richter.*

THE "SEPARATION" OF 1827.

Editors INTELLIGENCER AND JOURNAL:

I WAS much surprised to read, in the reply of the poet Whittier to the greeting sent him at the anniversary meeting, his opinion that the separation of 1827 was unnecessary; and I have been greatly interested in what has been further said in these columns upon the possibility of reunion.

I should suppose that no one who has known or read of the state of feeling in the Society at and before the time of the Separation, and of the measures adopted by a minority to secure the uniformity of belief which they thought the essential point, could doubt that the Separation was inevitable. I do not question the honesty or sincerity of that minority; but their honesty and sincerity made it all the more impossible for them to remain united with us. One party said to the other, "The essential doctrines of the Society have always been what we now maintain. The first necessity is that they shall be acknowledged and conformed to by all the members." The other party said, "The essential doctrine of the Society is that to every man is given a measure of Divine light, which will guide him into all truth. The first necessity is that all shall have the liberty of conscience which the Society has always maintained, to follow each the light thus given him." The claim of one was for freedom of belief; the claim of the other was that those only should have freedom of belief whose belief conformed to *their* test. The measures employed by those who thought uniformity essential, were such as plainly showed the sincerity of their belief that it must be secured at any cost. It may indeed be doubted whether a course might not have been adopted which in Philadelphia Yearly Meeting would have avoided withdrawing from the established meeting; but that the minority would eventually have withdrawn if the majority had not, I think cannot be doubted. That two sections differing so radically should remain united seems to me utterly improbable. The formal Separation was merely the outward consummation of a division in belief as to freedom and the rights of conscience which had already become irreconcilable.

I think that those who, like our beloved friend, the poet, think that the Separation was unnecessary, are led to this opinion by supposing all others to be as liberal and charitable, as tolerant of differences of faith in others, as careful not to trespass on liberty of conscience, as they are themselves. They think that division was needless because they know that they could have dwelt in peace and harmony with those from whom they differed; they do not see that the trouble is that those from whom they differed could not thus dwell with them! It is not hard to tolerate and associate with those whose beliefs are more narrow and rigid than our own; but we have to remember that it is a very different thing for them to tolerate and associate with us.

In considering the possibility either of having maintained the union of the Society, or of now restoring it, this seems to me the vital point. We have to ask first, not whether we could cordially unite and comfortably live and work in the same religious or-

ganization with the other branches of the Society, but whether they could thus unite with us; and I think that any one who has the least acquaintance with the various sections into which "Orthodox" Friends have become divided, will decide at once that there is not the slightest ground for such a hope. In the first place, it would be impracticable for any of the sections (unless, perhaps, a few English Friends and a small number of so-called "Wilburites") to unite with us; and in the second place, it would be even more impossible for them to unite with each other. The difference between the "Wilbur" Friends and the "progressive" element is even wider than that which separates either of them from us; and there is more estrangement and irritation, because the division is more recent, and debate of the points of difference much more active. Time has softened the differences of sixty years ago. Debate has in the main ceased, and we have adjusted ourselves to the change, —we have learned in a great measure to "agree to disagree," and to join with our brethren of "the other branch" in various works in which we can cordially unite. In this way has sprung up a sort of regard and kind feeling, and a readiness to meet on common ground, which cannot in the nature of things exist between bodies more recently separated from each other.

Let us not, however, deceive ourselves into thinking that this kind feeling means that a reunited organization is possible. The differences which separate our Orthodox Friends from each other are differences of doctrine; the difference which separated us and them was a difference of principle in government,—the principle of religious liberty. We could no more forego freedom of faith now than we could in 1827; they could no more unite in organization with those whose faith they believed unsound and dangerous. The peace and harmony in which we can now join with them arise from the fact that no bond holds us together. Let us gratefully recognize this fact and strive to increase brotherly feeling in every possible way; but let us at the same time equally recognize and value the precious inheritance of freedom of belief which the trials of the past have secured to us, and which alone can hold an intelligent, thinking, differing body of Christians in a harmonious brotherhood. F.

"Daily living seemeth weary
To the one who never works;
Duty always seemeth dreary
To the one who duty shirks.
Only after hardest striving
Cometh sweet and perfect rest;
Life is found to be worth living
To the one who does his best."

Do that which is assigned you, and you can not hope too much, or dare too much. There is at this moment for you an utterance brave and grand as that of the colossal-chisel of Phidias, or trowel of the Egyptians, or the pen of Moses or Dante, but different from all these.—*Emerson.*

For Friends' Intelligencer and Journal.

OUR SCATTERED FLOCK.

ATTENTION has frequently been called, and very properly so, to those members or professors with Friends who, in the pursuit of means to enable them to live and support families, have located far away from Friends; much concern and anxiety has been felt for such, and some care extended, and this should not only be continued, but there should be an increase of watchfulness in order that these may not drift away from the faith in which they have been reared.

We, as a religious body, believe that the mission instituted by George Fox has been the means of enlarging the spiritual vision, and elevating the moral standard of a multitude of people, and that this mission is not ended, nor will not be until there is a nearer approach than at present to the simplicity and beauty of life portrayed by Jesus in the "Sermon on the Mount," the characteristics of which are embraced in this "mission," and which it should be our earnest concern to continue. Yet while the thought is directed to those afar off, we are reminded of the Master's injunction, on an occasion of rebuking, for a certain neglect while giving attention to other matters, "These ought ye to have done, and not to leave the others undone," for have not we of the East a mission work of this nature at our own doors?

Because the struggle for subsistence has not led other of our members far away from our religious centres, we have failed to fully perceive the spiritual deadness that does creep in from the non-attendance of meetings, and the social commingling when thus gathered for Divine worship.

Our attention has been directed to a want of this character by the perusal of a letter recently written by a young married woman to an intimate friend of her own age, which reveals, in a straightforward, simple manner, a craving after spiritual food that is indeed touching. We feel at liberty to quote the language of the letter as being the most forcible way of presenting the thought. Out of deference to the feelings of the writer, names and places are not given, but we will simply state that this locality is one of many thriving towns that are the outgrowth of railroad enterprise that has so changed neighborhoods in the vicinity of large cities, and wherein many young Friends have found homes but not meetings. Here are her utterances: "I feel that I am growing so negligent of religious duties. I feel myself a child and so much in need of studies and talks on the Bible. My life in this respect seems empty. Of course, I would have to change my views very much before I could be other than a Friend, but I often wish I could believe in the views of churches. I should so much enjoy mingling with their large and enthusiastic schools and gatherings. Here in —— are four Sabbath schools, all have an average of fifty in attendance. And the strange part of it is most of the families here are Friends, that is, there are more Friends families than any other one religious sect, and of these not one, as far as I can hear ever goes inside of a Friends' meeting or any place of worship. I do think the Society is very negligent. There is a Catholic, Presbyterian, Methodist, and Baptist

church here. The three latter had churches about— miles distant, until the last three years, and none here. When the town got a good start, they all closed their churches, excepting for special times, and regularly held service and schools in chapels (or small rooms at first) in the town. Because here were the people. They have all grown. Friends are situated just the same. They have a meeting-house just the same distance off. If they would do like the churches and grow with the small towns where the people are, how much more good they would do for the people, and the people could do for the Society. It seems to me, as concerns the growth of the Society, this subject of growing with the towns is a very important one, and, so far as I am aware, never referred to."

Is there not a practical mission suggested here? And it is not in one place alone, but in many. We cannot change existing circumstances. We cannot go back to past times nor is it wise to look back upon them "mournfully." The best wisdom is to "improve the present," then we can "go forth to meet the shadowy future without fear and with a manly heart."

Do we not see there is that that "scattereth?" Yet, it may be made to yield an "increase." But there must not be a "withholding more then is meet," for this "tendeth only to want."

We would desire to arouse our Visiting Committee and others concerned, as well as touch the hearts of those gifted to proclaim the truth as held by Friends, to go forth amid such as are hungering, be they far or near. If there is *life* with us, as we believe there is, it will appear and bless the future as it has blessed the past, if only it is not withheld.

L. H. H.

SIN VERSUS ERROR.

Editors INTELLIGENCER AND JOURNAL:

AS one who takes a deep and heartfelt interest in the cause of Truth will you kindly permit me to express in your columns a few thoughts suggested by a portion of "A's" "Answer to a Query," in your issue of 1st mo., 21st? The writer says: "Faults, errors, sins,—what are they but unwise mistakes?" Here we have sin classed as an error or mistake, the doing of which, to my mind, is truly a great mistake to say the least, teaching, as it does, an idea which, if entertained, is capable of doing much harm to the spiritual nature. Sin is *disobedience* to the plainly-revealed and understood commandments of God, a willful violation of the Divine Law or Light of Christ in our souls; in short to take a step which the taker *knows* at the time to be wrong, this is sin. An error or mistake is to take a step in the dark, to do something which *seems* right, or at least not positively wrong, or perhaps, doubtful; but which afterwards is seen and felt to be wrong and hurtful in effects. Can any one fail to see the great difference? I have found in my experience that God knows the difference and that he punishes willful transgression; and this, I believe, every sinner will find sooner or later. Yet he is none the less a loving Father to me because of his justice; the very punishment I plainly see was given in love that I might thereby be induced to reform. If the prodigal son had found his sojourn in "a far country" as pleasant as the father's house, would he ever have "come to himself," and desired to return? Certainly not. "A babe learning to walk if it slip and fall" is not transgressing a known law or commandment, and to punish it therefore would of course be very wrong and cruel; but a child of 10 or 12 years who wilfully disobeys a well known and just law of its parents, deserves punishment, and if the parents truly love it, will receive it in some wise form. And now let me quote, for the benefit of those who may think with "A," that sins and mistakes are all one, these words of the "Beloved Disciple," whose great theme was God's Love: "If we say we have no sin, we deceive ourselves and the truth is not in us," 1st John, 1: 8. Read also verses 9 and 10, and verses 1 and 2 of Chapter 2nd. Let me say in conclusion that I have found all these words true in my own experience, yes, and also those of Paul, when, speaking of Jesus, (Heb. 7: 25): "Wherefore he is also able to save them to the uttermost that come unto God by him, seeing he ever liveth to make intercession for them." In accordance with and hearty endorsement of the "Request" of Lydia W. Hilles, in the issue of 12th mo. 31st, I herewith append my name and residence, being a lover of, and seeker after truth, and therefore not ashamed. HENRY ABEL COLEMAN.

Irondequoit, Monroe Co., N. Y.

COMMUNICATIONS.

FAIRFAX QUARTERLY MEETING.

Editors INTELLIGENCER AND JOURNAL:

IN reading the last issue of the paper, I notice that in reporting the quarterly meetings to be held in Second month, there is mention of the one at Fairfax, Va. Four years ago the time of holding it was changed to First month, to suit a number of Friends who thought it would be better and the meetings would be more largely attended. (It is over, having been held the 16th of this month.) In the first place, there are not so many to come as formerly, and in the second place, the very fact of its being changed to the coldest month in the year deters many from leaving their homes; consequently the attendance in comparison with those formerly held in the Second month has been small, and some of those who advocated the change are among those who could not venture. It is evident there is not the same amount of zeal manifested in the attendance of our meetings as there was in the days of our forefathers, who did not allow storms or mud to prevent them from attending to that religious duty, either at home or at a distance, often traveling on horseback a distance of thirty or forty miles. The late Quarterly Meeting at Fairfax was a very small gathering, much more so than usual; for the time of year the weather was favorable and roads good, yet Friends were afraid to venture so far from home for fear they might not be able to return when they desired.

Taking it all together some Friends feel there has been very little gained by the change.

No strangers from other parts of the vineyard were with us, which was also a cause of regret.

WAITING TO BE "GRACIOUS."

IN the reaction of Christian thought against the cruel dogma that declares there is a condition of the soul in which "no place of repentance" is found, though it be "sought diligently, with tears,"—that presumes to affirm the future good or ill of the individual is settled for all eternity before the child has learned to distinguish between right and wrong,—even before it has come into conscious existence,—in the reaction from this unjust charge against God, there is great danger that the pendulum of thought swing too far in the opposite direction, and justice, mercy, and forbearance, and all, those attributes that we assign to the Ruler of the universe as the highest conception we can form of a perfect Being, shall be rendered of none effect.

The Psalmist, than whom, perhaps, no other man in ancient or modern times had a clearer insight into the relations of man to his Maker, in one of his loftiest songs of rejoicing, breaks forth in thankfulness that "mercy and truth are met together, righteousness and peace have kissed each other." Analyze this as we do the expressions of modern thought, and it gives us mercy as representing the All-merciful, holding loving intercourse with truth, when that which is false, uncertain, and unworthy in the creature has given place to a condition in which mercy can restore the lost harmony of the soul, and encourage it to follow after righteousness, which is the only basis upon which peace can come in and take possession, righteousness making possible that relation implied in the salutation of peace and restoring love.

"Therefore," said the inspired prophet "will the Lord wait, that he may be gracious unto you,"—as if he had said, "I will be patient and forbearing, ready, when the time of extremity leaves no refuge from your enemies, no hope of escape, ready to be very gracious;" but not until the voice of sorrow and weeping is heard. It is then that he will have mercy, for he is also "a God of judgment." In this repentant condition the word comes to the soul, "This is the way, walk ye in it, when ye turn to the right hand and when ye turn to the left."

There is a vigor and robustness in the conception of the Divine Being, as one whose justice exemplifies our highest ideal of that attribute, one in whom that equity and fair-dealing, which we hold to be so essential in our intercourse one with another, fulfills our hope and promise of perfection.

Jesus, while over and over again calling the people to an understanding and acceptance of the love of God, always made repentance and amendment of life the conditions upon which this love could be bestowed.

"The Lord is very pitiful," . . . "He willeth not the death of the sinner," is a blessed and encouraging testimony, but that the condition of death is possible is implied in the solemn inquiry, "What shall a man be profited if he shall gain the whole world and forfeit his life?" In the gain of the world, he gains that which is transitory and perishing,—in losing his life, he loses that which is enduring, eternal, which must last while God exists. More than this, more than all else we can think of or desire, he loses the peace and joy vouchsafed the soul whose affections are set upon the things that are above, those possessions that no changes or vicissitudes in the world can molest, no moth or rust corrupt, no thieves break through and steal;—a soul that has come into oneness with the Father of spirits, that finds its riches in the gathering to itself and making its own all those graces of the Holy Spirit which make this life a perpetual feast, and give a foretaste of what the future has in store.

Our Father waits to be gracious. The Psalmist gives us the assurance from his own experience, "The Lord is nigh to all them that call upon him in truth." Let none be misled. It is here and now that the soul must be at peace with its great Original,—the Soul of all souls. By whatever name we may know this Power, it makes for righteousness in all, and no soul can be at peace with itself and the All-Soul whom, as Christian believers, we rejoice to call our Father, that finds not its highest good in realizing goodness as the true condition for the individual and for the race, goodness that permeates the inner life as full and complete as the blood current reaches every atom of the physical structure, a goodness that has not reached the full developement it is capable of until it attains to that perfectness implied in the exhortation of Jesus, "Be ye therefore perfect, even as your Father in Heaven is perfect."

NEVER fret children just before they retire to rest. Let the father's caress, the mother's kiss, be the last link between the day's pain or pleasure and the night's sleep. Send the children to bed happy. If there is sorrow, punishment or disgrace, let them meet it in the day-time, and have hours of play and thought in which to recover happiness, which is childhood's right. Let the weary feet, the busy brain, rest in bed happy.

MARRIAGES.

CHAPMAN—THOMAS.—On First month 25th, 1888, at Torresdale, Philadelphia, according to the order of Friends, George W. Chapman, son of Samuel B. and Tacy A. Chapman, to Helen Thomas, daughter of Edward and Harriet P. Thomas.

DEATHS.

BORTON.—First month 25th, 1888, Reuben P. Borton, aged 50. Interment from Moorestown, N. J., meeting-house

DIXON.—In West Philadelphia, Pa., on the evening of First month 23d, Mary W., widow of John W. Dixon.

FENIMORE.—Suddenly, on the evening of First month 19th, 1888, at Somers' Point, N. J., Edward L. Fenimore, in his 43d year.

IREDELL.—At her residence, near Weldon, Montgomery county, First month 25th, 1888, Rebecca A., widow of Thomas Iredell, in her 79th year. Funeral from Horsham meeting-house, Pa.

KNIGHT.—First month 20th, at Semerton, Phila., Owen Knight, in his 77th year; a member of Byberry Monthly Meeting.

LEWIS.—In West Philadelphia, First month 26th, 1888, Charlotte Maud, daughter of Enoch and Charlotte S. Lewis.

LIVEZEY.—First month 22d 1888, Edward, son of Mary B. and the late Dr. Edward Livezey, of Philadelphia, Pa., aged 11 years.

PACKER.—At Woodbury, N. J., at the residence of her son, Daniel J. Packer, on First month 22d, 1888, Eliza E. Packer, in her 88th year.

POST.—On First month 18th, 1888, in the 85th year of his age, Joseph Post, a prominent member of Westbury, L. I., meeting.

SHELMIRE.—At Cape May Point, First month 25th, 1888, Edward T. Shelmire, aged 65. Interment at Fair Hill, Philadelphia.

THOMAS.—First month 23d, 1888, George Thomas, of Upper Dublin, aged 57 years.

TYSON.—At the residence of her nieces, in Germantown, First month 24th, 1888, Mary J. Tyson, a member of the Monthly Meeting of Friends, of Philadelphia, in her 75th year.

SCRIPTURE LESSON, No. 7.

SECOND MONTH 12TH, 1888.

TOPIC: JESUS AND THE LITTLE ONES.

GOLDEN TEXT: "Suffer the little children, and forbid them not, to come unto me: for of such is the kingdom of heaven."—Matt. 19: 14.

READ Matt. 18: 1-7, 10.

OUR lesson for to-day is found with slight variation in Mark 9: 33–37, and Luke 9: 46–48. The disciples of Jesus had visions of royal honors and worldly greatness, and were frail enough sometimes to dispute with one another as to who would be given the chief places in his kingdom. That he might make them understand what his kingdom was to be, Jesus used the incident which we have before us, as an illustration.

Except ye be converted. The word converted means changed or turned; to turn or change from one habit of life, or set of opinions, to another. It means in this connection that all these feelings and opinions about the kingdom of the Messiah must be given up: from all notions of earthly greatness they must turn away, and become humble and teachable in spirit, finding their true place in all lowly service, and their highest happiness in ministering to the wants of the suffering and the distressed. They must be as the "little ones" in the Father's kingdom.

Who shall offend. Shall cause to stumble or fall; shall place anything in the way to hinder the progress or interfere with the happiness of those who manifest the trusting, confiding, teachable spirit of little children.

A great millstone. Mills anciently were turned by hand, or by beasts, when the mills were large. One of the modes of capital punishment practised by the Greeks, Syrians, Romans, and some other nations, was by hanging a millstone around the neck of the condemned and throwing him into the sea.

Their angels do always behold the face of my Father which is in heaven. To be admitted to the presence of a king; to be allowed to see his face continually; to have free access to him at all times, was deemed a mark of peculiar favor, and was esteemed a security for his protection. So the obscurest Christian is ministered to by those unseen influences, comparable to angels, that bring him into communion with the Highest. The allusion to the straying sheep portrays the love that reaches after the erring and rejoices over his restoration.

This is a beautiful story of Jesus blessing little children, and it conveys a great lesson to all who are willing to be instructed.

It teaches the wise and great that they must not give way to vanity; it teaches the sorrowful and struggling that they must be meek and patient; it teaches the young to be brave, and to preserve their innocence; it teaches every class that the virtues of childhood are the virtues to strive for.

We all know what these virtues are: innocence and truth are the greatest; then patience, meekness, and the desire to learn. Where children are allowed to develop at their best, they possess all these in a great degree, and we can well understand how Jesus wished his followers to have the same good qualities, and that it is still necessary for those who strive to follow his precepts to become as little children, that they may enter the kingdom of heaven.

But in the First-day school, this lesson appeals especially to the children and the youth. To you, of whom Jesus says, "Of such is the kingdom of heaven," this lesson comes right home. Will you not try to fill your thoughts with what is good and sweet, that you may continue to be in the spirit of God? Will you allow angry thoughts to be in your hearts, cross words to come from your lips, rough acts from your hands, to spoil this beautiful purity God has given you? You are flowers in God's garden, and will you not try to bloom in brightness and beauty to his glory?

There is a pretty story told of a very little girl who heard her father—who was the jailor of a prison—speak of a very hardened criminal with whom they could do nothing. She wanted to see him, and was allowed to come to the front of his cell. She called through the iron grating, "Won't you be good?" and the man was so softened by her sweet

voice, that he became changed. He was penitent and docile while in the prison, and after his release became a respected and useful man in the community.

All may not have an opportunity like this; but all can do something; and our duty is to let no opportunity for a good action escape us.

There was much inquiry among the twelve whom Jesus had chosen to labor with him, in regard to the kingdom of heaven, about which he had so often conversed with them, and which they understood and fully believed was to be established in their own nation by him as their long expected Messiah. We must not lose sight of the fact, that the Hebrew nation had never given up the central idea of their nationality, that Jehovah was their king and ruler, and under and by virtue of his appointment, the king occupied the throne, as the representative of the power and authority of Jehovah, who delegated to the royal incumbents all the rights and privileges he enjoyed.

It was the most natural conclusion of those who accepted Jesus as the one who was to restore the lost greatness of their nation, that he should sit on the throne of his great ancestor, David, and surround himself with those who had espoused his cause and ranged themselves under his banner, so to speak.

They were men with all the weaknesses and frailties that inhere in the race,—men too, groaning under the oppression of foreign rulers, who showed no respect for their religious convictions and trampled under foot every right and privilege they had enjoyed as a separate nationality.

That these disciples should be anxious and inquiring as to when it would be his pleasure to restore the kingdom to Israel,—that they should discuss the matter among themselves, and grow personal under the warmth of feeling thus engendered is not surprising; that they who had been most attentive to the Master, and had fully surrendered themselves to his guidance should expect to be given the chief places in the restoration, is most natural,—indeed they were more than mortal had any other thought possessed their minds.

It is here that the wisdom and divine insight of Jesus shine out most conspicuously. "He knew their thoughts;" and took the only way open to him to answer their question. It was not for him to know the purposes of the Father. "The day and the hour" of his coming to redeem and restore his people, had not been revealed. He would show them that the way to bring about this restoration was not by striving for earthly greatness, but by faithful serving, cultivating the innocent confidence and trust of the little child, who sees in the presence and protection of the parent its only safety in times of danger, its only comfort in distress. They had not counted the cost. They could not. When, as it is recorded in another place perhaps of this same occasion, Jesus asked them, "Are ye able to drink of the cup that I am about to drink?" they made answer, "we are able." Well might Jesus exclaim, "ye know not what ye ask." The answer gives evidence of a self-confidence entirely at variance with the spirit of the gospel which he taught, and it was his constant labor to lead them unto the spiritual conception of this kingdom of heaven, whose throne must be set up in every soul, if the peaceable fruits it yielded are to be secured.

THE LIBRARY.

SLAV OR SAXON? A study of the Growth and Tendencies of Russian Civilization. By Wm. D. Foulke, A. M. New York: G. P. Putnam's Sons.

WITHIN the last decade there has been a remarkable growth of American interest in Russian literature and affairs. The series of books by Count Tolstoï, which, by translation into English, have become available for general reading in this country, have done much to stimulate this interest in the literary products of Russia; while the critical aspect of European affairs, with the great nations continually armed and expectant of conflict, has made us consider more than formerly the strength, inclinations, and characteristics of that great empire of Eastern Europe and Western Asia, whose territory forms nearly one-sixth of the entire globe.

In this volume, the author, William Dudley Foulke, (of Richmond, Indiana), begins by citing a paragraph published in a periodical of St. Petersburg over a year ago, in which W. E. Gladstone, the English statesman, is represented as saying, in substance, that he desired the friendship of Russia, for she and England alone among the European powers had "a future." The others, he is alleged to have said, were "on the decline," and the time was not far off when Germany and France must disappear from the list of "first-class powers." Upon this text, W. D. Foulke dilates in his opening chapter, explaining more at length the reasons why, in his view, none of the other European nations than England and Russia can sustain themselves as rivals to the power of those two. And having settled it, as he believes, that the reasons for this opinion are conclusive, he then devotes the body of his book, as signified in the title, to a study of the social, military, and political features of Russia. In seven chapters he considers its territory, people, military autocracy, conquests and aggressions, history, the reforms of the last Czar, (Alexander II.), and "the present despotism," and in his last chapter presents his conclusions from this survey.

We hardly need say that this is a broad and very interesting subject; it is fair to add that the author has made a compact and vigorous study of it. His description of the institutions of Russia, and especially of those which seem to contradict the theory of the world's progress, in many passages is graphic. For example, looking back on Russian history, he says: "Somehow, events seem to take the wrong track. As civilization grows, it appears only as a new bulwark of imperial power. As knowledge enters, it strengthens only the hand of the master and teaches him how to weave more securely the toils which bind the slave. The development of agriculture fastens the serf to the soil; the opening of the mines adds new terrors to penal servitude; the conquest of the boundless steppes of Siberia provides a new place for horrible punishment to be inflicted up-

on the subject who offends. . . . . We learn in these pages that human progress is not universal, that the eddies which turn back are strong and deep. We read of the overthrow of liberal institutions, the subjection of free cities, the annihilation of enlightened communities, for the sole reason that these become inconvenient or dangerous to arbitrary powers."

If we were to note any criticism upon our friend's book it would relate to the general attitude which it seems to hold toward questions of the future. Its assumption appears to be that the relations of the nations of Europe hereafter are to be as they have been in the past—that the aggressive and grasping policy which has led up to the present vast armaments and perpetual danger of war is to continue in control; so that the great question necessarily must be, in comparing the Slav and the Saxon, Russia and England, which is the more powerful gladiator? "War is a game which, were their subjects wise, kings would not play at" is a saying which had much truth when first said, but which has become more and more true since. The wars of Europe are now not quarrels of peoples, but dynastic and class controversies. From their outcome the subject classes reap no benefit, notwithstanding all the pains and burdens which they have endured during the struggle. It seems impossible, therefore, to believe that there will not be a modification and eventually an arrest of the gladiatorial tendency of nations. Social influences are at work toward this result. We mean not merely such efforts as those of the avowed Peace societies, but those of the organizations in the more despotic countries, which are leavening the people with such views of their relations to society as will greatly impair their future usefulness as fighting machines, and will make it more and more difficult to procure vast armies to be sacrificed upon the altars erected by selfish aristocrats, or reckless devotees of military "glory." While it may be true that the relative importance and influence of some of the present "Great Powers" of Europe will decline, and others increase, we see no good reason for thinking that the temper and conscience of mankind are so little improved from those of the Dark Ages that these shiftings of national relations are to be continually accompanied and consummated by deadly wars. Nor do we believe that if the comparative decline of the other nations is to occur, (as it very probably may in such a case as Austria-Hungary), this implies of necessity a final contest between Russia and England for the supreme mastery of Europe.

Moreover, an idea of Russia, and theories as to her future course, cannot well omit a consideration of that view of the Russian character which is afforded by the writings of authors like Tolstoï. There are many scenes, incidents, and "touches" in them which disclose a people altogether different from that semi-savage and warlike conception which is the commonly received type of the Czar's subjects. We find them apparently a simple and kindly race, with that touch of nature which makes the whole world kin, and which therefore enlarges the community of feeling that must temper and soften the world's conflicts. Tolstoï's theory that he will find in the simple and laborious peasants the elements for a new and true Russian life, is well known, and even if it should prove to some degree fantastic there is in it such a conception of his country's conditions as must engage the sympathy of good people in all lands. To it we may surely turn with pleasure and even with confidence, for moral influences are greater than armies and cannon. An increase of the feeling of brotherhood diminishes the savagery of war and warriors, and as men in Russia stand disclosed to men in England, with the same features of character, face to face, and soul to soul, one can hardly doubt that they will learn to respect more each other's right to life, and peace, and a share of the abundant treasures of our common planet.

H. M. J.

For Friends' Intelligencer and Journal.

LETTERS FROM EUROPE.—XVI. WINTER IN BRUSSELS.

BRUSSELS, December 20, 1887.

FINDING it desirable to choose a resting place for some months where English schools were accessible, common report and private information pointed out this city as that which would best answer my needs and afford a pleasant residence. But what is pleasant is a matter of taste; and the variety of theatrical performances, operas, concerts, public balls, and private entertainments are no pleasures for us. Schools there are, and the climate is equable, and the atmosphere quiet, but the weather up to within a few days of this date has been gloomy and wet, though we are led to believe that in a few days a change for the better will take place, with a fair proportion of sunshine and no extreme cold. Indeed the climate is said to be a favorable specimen of that of England, without its fogs and dark days. Brussels being the capital of the country, the court is here with its hangers-on, and it is some amusement in our walks to see the fine equipages, horsemen, and horsewomen, and the military officers whose showy uniforms seem to tickle the vanity of even old and able men. Why else do they—even kings and emperors—have their portraits taken in military dress, hung all over with stars and ribbons, like the Black Madonna in the church at Rome?

The Belgian nobles, like the English, much affect country life, and only come to the capital after Christmas. The English, for this custom, have a good reason in the fogs and smoke that darken the days in London, and really render the streets dangerous at times. So their *very* great men, the "dukes," do not come up to "town" till May. The Belgians have no such deterrent, and perhaps their custom of coming about the beginning of the year may be a presage of good weather.

Within a few days there have been some notable personages here, among them the ex-Empress Eugenie, She is old and feeble, and walks with a cane. She was often on the street, entering the shops and talking affably with persons she had occasion to speak with, entirely without ostentation. What a fortune has been hers! Raised to the most brilliant throne

in the world; driven from it with fury and hate, a fugitive with her husband and only child, and then to lose him by such a death! Speared by a black African savage from whom he was running away, after having gone half 'round the world to seek and fight him! But imperial blood would be contaminated by any occupation less noble than war. Europe being at peace, the Orleans princes went to America to find it, and the hapless Bonaparte, a really fine young man, perhaps out of some regard for England, which had been their refuge, went to South Africa where the blacks were resisting the encroachments of the British colonists. And so he met the fate I have indicated.

Belgium is a neutral power and a very small one. Her independence is guaranteed by the great powers on condition that she takes no part in any war. But Belgium knows the worthlessness of treaties as a restraint on power, and keeps on foot a considerable army. Many of us can remember the birth of the kingdom, and the foundation of the dynasty to which the throne was given by election, and not "by the grace of God" the little older dynasties profess to hold by. The royal family, probably on that account, have made themselves generally acceptable to the people, and Belgium is said to be the best governed kingdom in Europe, and the best governed country except Switzerland. It needs good government to maintain six million people on an area about as large as Maryland, and the land none of the best.

But the king has other dominions and other subjects. He is sovereign of the Congo Free State, on the west coast of Africa, and lord of all the naked savages therein habitant, and this by the free election and choice of a company of traders who had never set foot in the territory or so much as seen one of its people. But his title has I believe been recognized by our government, and we will not scrutinize it further. After having recognized the transfer of sovereignty from the African natives to the European foreigner, our State Department sent out an agent to see what kind of a country it was, and the report of this agent, Tisdell by name, was such as to draw upon him the bitter hostility of the great explorer Stanley, who was the originator of the scheme for erecting part of "the Dark Continent" into a political State, and placing it under the rule of a respectable European power, with a trading company,—a faint copy of the great East India Company,—to "control" the trade of the country and "exploit" (as the phrase here is) the natives. Just now the king has a difficult question to solve in his capacity of sovereign. All that a savage has will he give for rum, and the question referred to is, Shall the company be allowed to send rum to the Free State? The stress of the matter is that it is impossible to wholly exclude rum from the country; if the company does not send it, illicit traders will, and will thus get all the ivory and ostrich feathers.

By the way, the question of the best mode of dealing with the Africans has recently raised a breeze in religious circles. A dignitary of the Church of England, on a public occasion, suggested that the preliminary work in the conversion of Africa might best be left to the Mohammedans. This idea being severely criticised,—as naturally it would be,—he or some one for him replied that the Mohammedans worshipped the one God, and necessarily the one true God, whereas the religion of the African was a belief in a multitude of evil spirits, and their worship consisted in incantations intended to pacify the spirits or to direct their attacks against others, and this under the direction of sorcerers who were to be paid for their good offices. Unquestionably, "Islam," the faith of the Mussulmans, was infinitely better than this. And moreover, Islam, where it prevailed not only put an end to cannibalism, as did Christianity also, but likewise to the use of rum, which Christians not only would not suppress, but even encouraged by supplying the article. Admitting this, the other side urged the addiction of the Arabs to the slave trade. The controversy is an idle one, for in point of fact the Mussulman makes a thousand converts to the Christian's one. The teacher of Islam, clothed with a few yards of white cotton, and carrying a piece of carpet to kneel on when he prays, is fully equipped for his missionary enterprise, whereas the outfit of a Christian clergyman necessitates considerable expense. A Catholic paper here, intervening at this point, urged the fitness of the monk as a missionary, who was almost if not quite as lightly equipped as the Mussulman, and contrasted both with the English clergyman encumbered with his wife and numerous progeny, for whom he felt bound to secure the comforts of a home, and the services of an army of native servants. His criticism, however, had reference to Asiatic rather than African work. But I have wandered away from Brussels.[1]

Belgium and Holland, now two distinct kingdoms, belonged in the sixteenth century to the crown of Spain, and had for sovereign Philip the Second. When the reformation, started by Luther in Germany, spread into the "Low Countries," as the provinces were called, his Catholic Majesty, to check the movement, decreed, among other things, that whoever should read or talk of the scriptures should be burnt alive, unless the offender should repent, in which case, if a man, he should be beheaded, or if a woman she should be buried alive. A revolt followed on the attempt to enforced the law, and was supressed by Count Egmont, a native nobleman, who however showed some mercy to his countrymen, thinking possibly that heinous as might be the crime of disobeying the king, a mother who did nothing worse (as Motley says) than read the Sermon on the Mount to her children hardly deserved to be burnt alive.

The Duke of Alva, whom Philip sent to govern the country and enforce his edicts, did not agree with Egmont in this opinion or approve the conduct which was founded on it, and his first act was to seize Egmont and his friend and co-laborer Count Horn, and to their intense astonishment order them both to be beheaded. In fact they could not believe

[1]Edward W. Blyden, late United States Minister to Liberia, of pure African race, in a book just published, entitled "Christianity, Islam and the Negro Race," takes the same view as Canon Taylor, as I gather from a newspaper notice of the book. He regards Islam as preparing the way for Christianity, and not as a finality.

Alva was in earnest until they were on the scaffold or really until their heads fell from their shoulders. The insurrection was renewed. Holland after a long contest secured her independence and established the Protestant faith, but Belgium got tired of the fight, resumed her allegiance to Spain and the church, and has ever since been devotedly Catholic, while she concedes to all the free exercise of their religion, and even places Protestant ministers on an equality with Catholic by paying all a moderate compensation for their ministrations.

Egmont and Horn are popular heroes, especially the former. Their statues stand in a public square, and their names are given to streets and public houses. The room where Egmont was confined before his execution, and the window from which Alva witnessed the act are still shown—but really the house has been rebuilt, though exactly like the original in order to preserve a monument dear to the people. The execution took place in the Grande Place, in 1568, and there is still the square so called, and the houses on the four sides very much, if not precisely as they were then. One of them certainly is unchanged. It is the Hotel de Ville, or town hall, which fills one side of the square. It was begun in A. D. 1401, and stood as it now stands when Egmont took his last look. It is a most interesting structure and one is attracted to it again and again. The tower is the most beautiful in Belgium, and to my taste equal to any I have seen. Motley, in his "Rise of the Dutch Republic," speaks of its "audacious height," (336 feet,) and "exquisitely embroidered . . . pinnacle of needle-work in stone, rivalling in its intricate carving the cobweb tracery of that lace which has for centuries been synonymous with the city, rearing itself above a façade of profusely decorated and brocaded architecture." This façade, among other decorations, contains some score of statues, besides numerous groups of smaller figures in the most grotesque attitudes carved with the skill for which the Flemish artists were long, and may still be famous. Many of the statues are of knights in warlike panoply, each with his shield containing armorial bearings, which to the expert would indicate his name and family. I cannot doubt they represent men who played a part in the troubled drama of the times. They may not be portraits, though they have all the characteristics of individuality. It is surprising how perfect the features remain after exposure for four centuries to the weather. But there is little freezing here and no driving winds, while the rains are fine and gentle.

Opposite the town hall is the King's house, which has been taken down and rebuilt precisely as it was originally, and the rest of this side and the other two are occupied by houses once belonged to the guilds, beneficent institutions for which the country was famous, and which comprised employers and employed, working together for their common interest. These houses are still kept as much as possible in their original condition. Of many the fronts are profusely gilded, and when the gilding wears off it is renewed at the expense of the city. In this square took place many of the grand tournaments described in the chronicles of the time, and a famous one of which Egmont was the hero.

The town hall is still used for its proper purposes. On the main floor are four fine halls chiefly used for occasions of ceremony. In one, the throne room, was held the ball given by the Duchess of Richmond on the eve of the battle of Waterloo, and broken up (or said to have been) by the booming of the cannon which commenced that terrible conflict. In another hall the "salle de marriages," take place all the marriages that are contracted in Brussels. Marriage here is in the eye of the law a civil contract and the ceremony at the town hall is as simple as the execution and acknowledgment of an ordinary deed. But the people, being good Catholics, are not content without the religious ceremony; and so when they have duly entered into the civil contract, the parties leave the hall as they entered it, the bride with her father, and proceed to church, where the nuptial mass is said and the promises renewed; and not till then does the husband take possession of his wife. Very devout Catholics, in order to emphasize their dissent from the civil idea, come to the marriage hall in ordinary morning dress, and having entered into the civil contract return to their respective homes, thus disclaiming any relations formed by that ceremony, and the next day are married in church with all befitting finery and pomp.

Brussels, though it dates from the time of the Crusades, is except in the region of the town hall, a modern city, and is flattered by the title of a smaller Paris, and indeed it has some features that would do credit to its prototype. The ancient city, the core of the present one, was surrounded by a moat and wall, six miles, as Motley says, in circuit. These have been removed within the last thirty years and the space levelled and planted with rows of trees, four or six, dividing the length into five or seven alleys, two of which, the exterior, are paved for heavy traffic, the central one macadamized for carriages, a broad dirt road left for horsemen, and the rest reserved for foot-passengers. Up to the end of October the trees were in full leaf, and thousands of nice people in the afternoons filled miles of the walks, and indeed they are not deserted even now, for the people walk out a great deal, and babies are sent abroad every day when it does not actually rain, however damp and inclement it may be. The babies' nurses, who supplant the mother from the hour of birth in all well-to-do families, are important and conspicuous personages. They are mostly stout healthy women from the country, whose vigor and abundance are attested by the chubby faces of their charges. They have a kind of official costume, an ample colored cloth coat, and a white cap decked with gay ribbons from which fly two long streamers of the same material a quarter of a yard wide. The dampness of the climate prevents any dust rising either from the macadamized or dirt roads, and numbers of children play and romp under the trees.

The greater part of the city is outside the circular boulevard, and so disposed that probably no house is more than a mile from that or some other boulevard. For there are several others connecting with

the central one, the principal of which is the Avenue Louise, leading to a park called the Bois de la Cambre, containing about 350 acres, beautifully laid out and planted. This park is part of the ancient forest of Soiguies, which extends beyond it I know not how many miles. There are in the city three smaller parks of about thirty acres each, laid out, planted, and provided with seats, and in one of them a fine band plays every afternoon in pleasant weather. Thus there is every inducement to tempt the people abroad, and they yield to it in great numbers.

There are marked differences between what appear to be different classes of the population. The well dressed and apparently prosperous are of fine size, the men tall, straight, and strongly built. I do not remember to have anywhere seen such fine looking men. But neither they nor the women are handsome in feature. The poorer looking classes are much shorter, but strongly built and of average good features, but there are many undersized and a noticeable number of dwarfs and hunchbacks. These are, in all probability, the children of women exhausted with excessive toil, such as we constantly witness, or with long hours of sedentary work, or are themselves the victims of this last, for children begin to learn lace making at the age of five and six years and the growth and development of many must be arrested or distorted by the position the work obliges them to maintain. Wages in Belgium are very low, yet, probably, not less than ten per cent. is spent in beer, which, moreover, besides taking so much money, generally unfits the man for work on Mondays. The principal food of the working class is brown bread, and they form coöperative societies for maintaining bakeries. To some workmen on a strike, recently, their fellows sent 40,000 loaves as their contribution.

Notwithstanding the diversity of the population and the consequent poverty of the people, who really are in a wretched condition, there is almost no beggary: that is to say, I don't think that more than once a day, even in the poorest part of this city, will one be asked for alms. And the people even of the lowest class seem to be comfortably, though very meanly, clad. There are no rags. They seem as the women say, to keep themselves "mended up." And this I think I may say is found to be the case everywhere on the Continent that I have been. In this species of thrift the extremely poor are superior to the corresponding class at home, and, if I can depend on my memory, to the poor of Great Britain and Scotland, where I have not been since 1882. There is no such squalor here as we see in England and America. Perhaps I should except the vicinity of Naples, but from Rome to Brussels I can confidently say the poor appear physically comfortable and have a good facial expression—or at least better than have the poor at home.

Brussels has the reputation of being a cheap city to live in. If it deserves that reputation, it is because of a custom which prevails here more than elsewhere, of apportioning prices with great exactness to quantity given or service rendered. The street cars charge from two to five cents, according to the distance traveled. A shoe may be mended and sent home for three cents, if the work be worth no more. Nor are people above availing themselves of small economies. The street cars by a cross partition are divided into two compartments one of which is a cent cheaper than the other, and the cheaper compartment is nearly always filled before any one takes a seat in the other, and with quite as good a class of passengers. In this respect, perhaps, living may be made cheaper in Brussels, but the first cost of the necessaries of life is by no means lower than elsewhere, so far as we can judge.

It probably conduces to this exactness that as the franc, the standard coin, is divided into a hundred parts, called centimes, and coins of this small value are in circulation, people are able to adjust prices more accurately to value than can be done where the smallest coin, as with us, is the cent, equal to five centimes.

There are said to be no large private fortunes in Belgium, and probably wealth here is distributed as evenly as in any other civilized country. The royal family are said to be quite wealthy, but when a short time ago, an estate was purchased for young Prince Badouin, heir to the throne after his father, the cost was only about thirty thousand dollars.

J. D. McPherson.

LETTER FROM GENOA, NEB.

[From a private letter from a Friend in Genoa, Nebraska, dated on the 14th ultimo, we extract the following.—Eds.]

WE have had a very extraordinary, and therefore very uncomfortable winter, there being for the past month an almost constant succession of storms, though not a very great depth of snow. Yet the temperature has frequently ranged below zero,—more so, in fact, than my records have ever shown before; and to add to our discomforts we have, in common with many other sections, suffered from a famine of fuel. Our supply being brought from Wyoming Territory, and the mines being owned by the Union Pacific R. R. Co., they have fixed the freight on all coal which would come in competition with them at such rates as render it unprofitable to bring it in; and as it is not to the interest of the railroad to increase the supply above the demand, we have to pay $7 to $8 per ton for what we can get. But we are looking forward hopefully to the Inter-State Commerce Law of Congress to set this matter right, being satisfied that it is only a question of time. Meanwhile, in our cities and towns, those who can afford it are burning considerable quantities of anthracite coal at $14 per ton, brought from the Lehigh region of Pennsylvania.

Our new meeting-house (of which thee has doubtless heard), is nearly completed, and mainly but for the weather would be now occupied for the purpose of its erection. Without any disposition to boast, I think it is the neatest and most comfortable house for its purpose, in this section of country. As it differs in some respects from other Friends' meeting-houses, I thought perhaps thee might be interested in a brief

sketch of it. The building is of frame, 24 feet by 36 feet, placed on a brick foundation raised about 2 feet above the ground, with a retiring-room in the rear and a vestibule and portico in front, the floor being on a level with that of the house so as to make it easy to get in and out of wagons. The outside of the house as well as the roof, is first covered with boards, then with building paper, then with siding and shingles—the object being to prevent the wind and snow from blowing through. The same thing was done in regard to the floor so as to insure comfort; the inside walls are plastered and wainscotted about 3 feet from the floor, and the ceiling is boarded in the same way; all the inside wood work is finished with Southern yellow pine as it cost less than good white pine, and is oil-finished, as being cheaper than paint and easier to keep clean. As all our meetings in our yearly meeting are held jointly of men and women, we have no need of a partition, and consequently, have none in our house. Our "gallery" for the elders (if such it can be called) is a platform raised one step above the floor with a hand-rail surmounting the part in front, with room enough for one row of seats on the platform and one in front of it on the floor. Our seats are after the style of school furniture, a combination of wood and iron, and have reversible backs so that they can be used for classes in First-day school work. Back of our house we have a shed 64 feet long, for the protection of horses,—the only one of the kind that I know of anywhere here, but I hope the example may induce others to do likewise, as it is clear that a merciful man should be merciful to his beast, and there are many who will not go to meeting when forced to leave their teams exposed to the wintry blasts.

SWARTHMORE NOTES.

—Prof. Charles A. Young, of Princeton, gave an address on "The Planets," on Fourth-day evening, the 18th inst. It was well illustrated by the stereopticon, and was much enjoyed by all. The College is indebted for these annual lectures of Prof. Young to the kind liberality of Dr. Susan J. Cunningham, the Professor of Mathematics and Astronomy.

—Subscriptions to the Endowed Professorship are coming in every day. It is hoped that Friends will see the great importance of finishing this subscription, and securing the Endowment before the coming commencement in the Sixth month. Some who have received no appeal, on seeing the notice in this paper, have sent in their subscriptions. Let others who desire to see our College placed on an equality with her sister colleges in this respect, do likewise. No college in this country pretends to maintain a liberal course of study, and a high standard of scholarship, without the aid of large endowments.

Barrels are made in the island of Jersey for the use of the Channel Islands farmers, which will fold up when empty, and thus, having been sent to market, can be packed into a small space on the return. The staves are fixed upon the hoops so that, the heads being removed, they may be rolled up. They are made perfect cylinders, and therefore occupy less space for the same capacity than ordinary barrels.

THE BURDEN.

TO every one on earth
God gives a burden, to be carried down
The road that lies between the cross and crown.
No lot is wholly free:
He giveth one to thee.

Some carry it aloft,
Open and visible to any eyes;
And all may see its form and weight and size.
Some hide it in their breast,
And deem it there unguessed.

Thy burden is God's gift,
And it will make the bearer calm and strong;
Yet, lest it press too heavily and long,
He says, Cast it on me,
And it shall easy be.

And those who heed his voice,
And seek to give it back in trustful prayer,
Have quiet hearts that never can despair;
And hope lights up the way
Upon the darkest day.

Take thou thy burden thus
Into thy hands, and lay it at His feet;
And, whether it be sorrow or defeat
Or pain or sin or care,
Leave it calmly there.

It is the lonely road
That crushes out the life and light of heaven;
But, borne with him, the soul, restored, forgiven,
Sings out, through all the days,
Her joy and God's high praise.

—*M. F., in Christian Register.*

ONE WOMAN'S WORK.

"Who having little yet hath all."

A NARROW sphere—how can you call it so?
Three pairs of baby eyes look up in mine,
And seem the gates through which a light divine
Transfigures all my life with tenderest glow.

Because I cannot paint with artist skill
The changing colors of the sea and sky;
Because I cannot write of visions high,
And move you all with pain or joy at will;

Because to learning's shrine no gifts I bring,
Nor take a foremost stand for woman's cause;
Because I trust unquestioning the laws
Which bring us snow in winter, birds in spring,—

You think my life is circumscribed and cold
In what should make it helpful, rich, and strong,
Ah, friend—these happy days are none too long
For all the loving duties that they hold.

Nor has the art you love been all denied,
For loveliest pictures every day I see
In childhood's careless grace and movements free,
From waking morn till dreamy eventide.

My Edith's braids, now brown, now golden bright,
Imprison tints no artist's brush has known;
The baby's deep blue eyes, which meet my own,
In living beauty mock all painted light.

Nor do you know, my friend, the critics bold
We story-tellers in our children find—
What store of wisdom and of wit combined
We need to point a moral, new or old.

And in reforms are we not learning late
A still, small voice need not be all in vain?
These tiny hands may hold great future gain,
"They also serve who only stand and wait."

And what in science or philosophy
Can pass in interest a childish heart
Feeling its upward way to take its part
For good or ill in life's great mystery?

God help us mothers all to live aright,
And let our homes all truth and love enfold,
Feeling that life no loftier aims can hold
Than leading little children to the light.

EMMA E. MAREAU.

THE "BLIZZARDS" OF THE NORTHWE T.

A LETTER from Dakota to the Boston *Journal* says: The term blizzard is of Western origin, and is intended to convey to the understanding the nature of a wind and snow storm, accompanied by an intensely cold wave, which for suddenness of approach, violence of onset, and appalling consequential horrors cannot be adequately expressed by any word known to dictionary makers. To speak of these peculiar storms as snow storms, in the sense that the term is ordinarily understood would be misleading. They may be more correctly termed cloud-bursts of what has been aptly called ice dust, of great extent, violence and long duration, so compact and firm as to be impenetrable to both sight and hearing, even in their own short range. When it is considered that this ice dust is frequently driven through the air by an intensely cold wind, at a velocity of from thirty to fifty miles an hour, it can be easily imagined how very small are the chances of escape to man or beast who is unfortunate enough to be caught in a blizzard at any considerable distance from shelter. I will here remark that these terrfiic storms are always preceded by several days of remarkably warm and pleasant winter weather. It was on the 7th and 8th of January, 1873, that I, having been a resident of Northwestern Minnesota, had a personal experience of a blizzard which, for severity and disastrous consequences, has had no parallel since until the recent one that swept over the great Northwest, causing such terrible suffering and loss of life to both man and beast. For four or five days preceding the approach of the blizzard referred to, the weather had been mild and springlike, especially was the forenoon of the day the storm began warm, sunny and delightful, luring men to the meadows for hay, to the "timbers" for fuel, or to town for business or pleasure. The wind blew freshly from the south and east till noon, when of a sudden it ceased and was succeeded for a brief period by an ominous calm that could almost be felt. Whoever turned his eye towards the northwest might have observed a black cloud rapidly approaching without comprehending its frightful significance. It is proverbial among seamen that a nor'wester in winter on the coast of New England always comes "butt end first." In this instance, though far from the Atlantic coast, the old nautical adage was fully and fearfully verified. In less than half an hour after the south wind had fallen calm, the storm was upon us in all its fury. It is doubtful if a man had been approaching my house at a distance of thirty rods, ten minutes after the storm struck, would have reached it. Being myself warmly housed, abundantly supplied with wood, water, and provisions, I suffered nothing except from the consciousness that whoever might be so luckless as to be exposed to the pitiless peltings of that storm must inevitibly perish. I was then living upon a prairie farm four miles from town and a mile or more from my nearest neighbors. As I listened to the howling of the tempest and pondered upon the fury and force of the elements I was inspired with a sense of my inconsequence and the overwhelming majesty of the powers of nature, which I will not attempt to describe. At the end of twenty-four hours the storm subsided, so that the young man living with me was able to climb into the gable-end door of my barn and feed the stock. It was a day later before they could be watered.

CALIFORNIA SUBMARINE VALLEYS.

PROF. GEORGE DAVIDSON has recently, in the "Bulletin of the California Academy of Sciences," described the submarine valleys which have been discovered by the Coast Survey along the California shore. The hundred fathom line is here usually about ten miles wide, and beyond this the descent is rapid to 500 or 600 fathoms. This marginal plateau is at various points intersected by more or less abrupt valleys, which, breaking through the hundred fathom curve, die out in the deeper water. One of these, situated in Monterey Bay, heads toward the lowlands at the mouth of the Salmas River; another, farther to the south, is at the eastern entrance of Santa Barbara Channel, and there are others near or in Carmel Bay. But the most remarkable of these depressions are to the north of San Francisco, scattered along the bold rocky coast which stretches north and south of Cape Mendocino, the most westerly point of California and of the United States (excluding Alaska). Within forty or fifty miles of the shore, south of this cape, the plateau of the Pacific reaches a depth of 2,000 to 2,400 fathoms. Just north of a submarine ridge extending from Point Delgada to Shelter Cove a deep valley runs sharply into the coastline, ending one and a quarter mile from shore. At its head this valley is 100 fathoms deep, but it deepens to 200 fathoms at the point where it breaks through the 100 fathom line. The sides are very steep. Between this valley and Point Gorda is another depression which reaches a depth of 520 fathoms, or about two-thirds of a mile, at the point where it breaks through the hundred fathom line; and between Point Gorda and Cape Mendocina there is still another which is 430 fathoms deep at a point six and a half miles southwest by south from that cape. The last valley is a wide one with green mud at its bottom.

Do to-day's duty, fight to-day's temptation, and do not weaken and distract yourself by looking forward to things which you cannot see, and could not understand if you saw them.—*Charles Kingsley.*

INDIAN BOYS AT WORK.

THE *Pipe of Peace* is the title of a small four page paper, issued in the interests of the Genoa Indian School, at Genoa, Nebraska. It is published semi-monthly and is in charge of two of the boys of the School. It is quite creditable in workmanship, and will, without doubt, be an efficient helper in various ways to the School. Among the items of interest we note the following in the issue of 1st mo. 14, 1888:

"A tailor and shoe shop have been added to the industrial departments of the school. Both are well under way. The boys are greatly interested in the work. Some twenty pairs of shoes have been turned out, and thirty uniforms are under way. It will not be long before all manufacturing will be done on the school premises. A blacksmith shop will soon be started, followed by a wheel-wright establishment.

"The boys are busy hauling ice and filling the ice house. The ice is very fine, ranging from twenty to twenty-four inches thick."

THERE are souls in the world who have the gift of finding joy everywhere, and of leaving it behind them when they go.—*Dumb Animals.*

NEWS AND OTHER GLEANINGS.

—A remarkable engineering feat has just been carried out in China in the face of unusual physical obstacles. This was the stretching of a steel cable of seven strands across the Luan River by Mr. A. de Linde, a Danish civil engineer, aided only by unskilled Chinese labor. The cable is strung from two points 4,648 feet apart. The height of one support is 447 feet above the present level of the river and the second support 737 feet above it. The vertex over the water is seventy-eight feet. The Chinese cable is the longest but one in the world. The telegraph air cable across the Kistna has a span of 5,070 feet; two similar cables across the Ganges, one 2,900 and the other 2,830 feet. A third line of 1,135 feet crosses the Hooghly, and in the United States there is one over the Missouri of 2,000 feet. —*Indiana Engineering.*

—The first instance of the holding of a regular meeting of an English scientific socitcy in this country will occur next fall, when the Council of the Iron and Steel Institute of England will meet here, probably in December. They come upon the invitation of American iron and steel manufacturers. Two hundred and fifty members, including some of the most prominent manufacturers and scientists of England and Germany, Westphalia, Sweden, Italy, and Spain, have promised to attend the meeting.—*American Machinist.*

—The floating gardens on the rivers of Cashmere are formed by the long sedges being interwoven into a mat, earth being superimposed thereupon, and the stalks finally cut under water, thus releasing them from the bottom of the lake. They are usually about twenty by twelve yards in size. A dishonest Cashmiri will sometimes tow his neighbor's garden away from its moorings, and thus appropriate its produce, which generally includes cucurbitaceous fruits and vegetables and a fine description of grape. —*The Highlands of India.*

—During the year 1886, the number of persons killed by wild animals and venomous snakes in Hindostan, was 24,841. This is an increase of 1,934 over the figures for the previous year. The fatalities from snake-bites rose from 20,142 to 22,134; while wild animals killed 2,707 persons, as compared with 2,765 in 1885. Tigers were responsible for 928 deaths and wolves for 222, these figures showing 90 more deaths from tigers and 26 fewer from wolves as compared with the preceding year. Elephants, leopards, bears, hyenas, wild-boars, bisons, wild-hogs, jackals, alligators, crocodiles, wild-cats and panthers had also their quota of victims.

—Nowhere in Europe have so many women crowded into the university lecture-rooms as in Russia. In 1886, there were 779 female students at the Russian universities. Of these, 243 were in the philosophical department, 500 in the physico-mathematical department, 36 studied only mathematics. Of these 779,587 were members of the Greek Orthodox Church, 137 were Jewesses. 748 were single, and 31 were married. The majority were daughters of noble, political, and military officials,—namely, 437; 84 were clergyman's daughters; 125 merchant's daughters, etc. In addition to these, there are several hundred Russian women studying at non-Russian universities, principally in Switzerland and in Paris. The majority study medicine.

—In a speech at Carnarvon, Wales, Sir George Otto Trevelyan said there had been no public house on his estate for thirty years. Among his tenants, it is asserted, there is no pauperism and "absolutely no discontent."

—Europe has 121,205 miles of railroad, and America has 155,757 miles; Asia, 13,791; Africa, 4,285, and Australia, 8,045. Thus the total of the world is 303,083 miles. These figures show that America possesses more miles of railroad than all the rest of the world.—*The Locomotive Engineers' Journal.*

—A syndicate of United States capitalists propose to build a railway from Quebec to the most easterly point of Labrador, from whence they will run fast steamers to England in eighty-four hours. By this route a traveler could leave Washington, D. C., on a Monday evening, and eat his dinner in England on the following Saturday.—*Exchange.*

CURRENT EVENTS.

HEAVY snows and extreme cold interfered greatly, for some days last week, with the operations of railroads in New York State and New England.

THE strike of the coal miners in the Schuylkill region continues, and no coal of any consequence is being mined there. The Reading Railroad authorities refuse to submit the differences to arbitration, asserting that "there is nothing to arbitrate." Meanwhile, much more than the usual quantity of coal is being mined in the Lackawanna and Wyoming regions, and the supply is sufficient for the demand, though prices to consumers have been unreasonably raised in this city and elsewhere.

PROFESSOR Asa Gray, the eminent botanist, for many years professor of botany at Harvard College, died in Cambridge, Massachusetts, on the 30th ult., aged 77 years.

A DESPATCH from Providence, Rhode Island, says the city of Bristol, Warren, East Greenwich, and other wayside towns were badly shaken up on the night of the 29th ult., by a dynamite explosion in Newport harbor, where efforts were being made to clear the harbor of the unparalleled ice fields. It is twenty miles from Greenwich and thirty from Providence, where houses were shaken very perceptibly.

ONE of the fishing fleet arrived at Gloucester, Massachusetts, from the Western bank on the 30th ult., being the first arrival from off shore for ten days. Her captain reported the gales of the last four weeks as being the severest

he ever experienced. He thinks the fleet on the banks must have suffered severely and that many disasters will be reported.

On the 30th ult., the Signal Corps Station at Nantucket reported upwards of fifty vessels in the ice near Nantucket; and from Great Point to Tuckernuck Shoals many of them were adrift, having lost anchors and chains. The ice was ten inches or more thick, and the most powerful tugs could render them no assistance.

The Pennsylvania Board of Pardons, at its meeting last week, decided to reopen the case of Samuel Johnson, the colored man who was convicted of the murder of John Sharpless, (of Delaware county, Pa.), and was to have been hanged on the 8th of this month. The case has been repeatedly mentioned in this paper.

The U. S. Senate has approved the Postal Convention recently concluded between the United States and Canada. By this convention articles of every kind or nature which are admitted to the domestic mails of either country will be admitted at the same rates of postage, and under the same conditions and classifications to the mails exchanged between the two countries. It is to go into effect the 1st of next month.

Ettie Shattuck, a young school teacher, was so severely frozen in Holt county, Nebraska, during the late blizzard, that on the 27th inst. she had both her legs amputated, and, it is thought, will live. On the night of the storm she took refuge in a hay-stack, but was unable to burrow deep enough to entirely avoid freezing.

NOTICES.

*** Friends' Charity Fuel Association meet this (Seventh-day) evening, Second month 4th, at 8 o'clock, in the Parlor, 1520 Race street. Wm. Heacock, Clerk.

*** The Committee of the Monthly Meeting of Friends of Philadelphia have arranged for a social gathering in the Parlor and Library Room at Race street, on Seventh-day evening, 11th inst., at 7 o'clock, to which the members are invited. Also such Friends who have not yet transferred their certificates, and others who are not members but attend the meetings at Race street, West Philadelphia, or Girard Avenue are solicited to be in attendance.

*** Quarterly meetings in Second month will occur as follows:

6. Nine Partners, Nine Partners, N. Y.
7. Philadelphia, Race St., Phila.
9. Abington, Abington, Pa.
10. Stanford, Crum Elbow, N. Y.
11. Miami, Waynesville, O.
11. Salem, Salem, O.
11. Pelham Half-Yearly Meeting, Pelham, Ont.
15. Easton and Saratoga, Easton, N. Y.
16. Shrewsbury and Rahway, Plainfield, N. J.
18. Short Creek, near Mt. Pleasant, O.
20. Centre, Bald Eagle, Pa.
20. Duanesburg, Albany, N. Y.
22. Stillwater, Plainfield, O.
23. Bucks, Wrightstown, Pa.
25. Blue River, Benjaminville, Ill.
27. Warrington, Monallen, Pa.
27. Canada Half-Yearly Meeting Pickering, Ont.
28. Burlington, Mt. Holly, N. J.
29. Southern, Camden, Del.

*** The next Conference of Parents, Teachers, School Committees, and others interested will be held under the care of "The Committee on Education of Philadelphia Yearly Meeting of Friends" on Seventh-day, Second month 4th, 1888, at Fifteenth and Race streets, Philadelphia, commencing at 10 o'clock, a. m.

Punctual attendance is desired.

The subjects for consideration are:

1st. Kindergarten Material in Primary Work. Subject illustrated with a class.

2d. How to make Geography interesting.

All interested are invited.

Wm. Wade Griscom, Clerk.

PUBLISHERS' NOTICES.

*** Matter intended for insertion in the Intelligencer and Journal should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** As a definite number of copies of the Intelligencer and Journal is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* Royal Baking Powder Co., 106 Wall-st., N. Y.

THE END OF LIFE.

We live in deeds, not years; in thoughts, not breaths;
In feelings, not in figures on a dial.
We should count time by heart-throbs. He most lives
Who thinks most, feels the noblest, acts the best.
And he whose heart beats quickest lives the longest:
Lives in one hour more than in years do some
Whose fat blood sleeps as it slips along their veins.
Life is but a means unto an end; that end,
Beginning, means and end to all things,—God;
The dead have all the glory of the world.

—Philip James Bailey.

THE EYE OF GOD.[1]

A few verses from Psalm xxxii. were read, and afterward the address as follows:

I am going to speak to you of the verses that I have last read: "I will instruct thee and teach thee in the way which thou shalt go: I will guide thee with mine eye. Be ye not as the horse, or as the mule, which have no understanding: whose mouth must be held in with bit and bridle, least they come near unto thee."

Whatever relation there may be between us and the inferior animals, we find in them the type of humanity. Three types seem to be referred to here. There are the beasts that are not held in, and perhaps cannot be. There are those which are made serviceable and held in the right way by careful guidance and constant restraint, like the horse and mule, with bit and bridle. There are those like the dog of noble breed, that looks into his master's eye and takes his direction from that eye, and knows without voice or gesture whither the master would have him and what his master would have him do. There are corresponding types among men. There are those whom we deem incorrigible. I do not believe that they are so. I do not believe that any human being is incorrigible by the might and love of the Creator, or will be incorrigible when that might and love are incarnated as they ought to be and will be one day in the Church of Christ. There are those who will go right, who will do what they ought to do by the help of the bit and the bridle. They need the restraint and guidance of rule and law. There are those whom the eye of God guides,—not that they are above law, not that they set aside law, but what the mere legal servants do because they are afraid of not doing, these do because they love to do it.

The eye of God! We believe in God, but not as if he were only in the past or in heaven. He is not in the creeds and catechisms or in the Bible, but here and everywhere, now and always, with you and me. His eye is upon our ways, upon our souls; and we may look into that eye. We know, or may know, on what that eye rests with pleasure, on what it rests with pity, on what it rests with condemnation; and we can, if we will, always do the things that please him, and can make his good pleasure our constant motive, our rule of duty, our reason for doing and for not doing, and still more for being and for not being. We can shape ourselves under the eye of God as he would have us. His eye, we know, rests with pleasure on all that rightfully gives us pleasure; on all the bright and happy and festive side of life; on all that refreshes and recreates; on all that can give us new strength for duty, or can bind more closely the bonds of family kindred or friendship; on all that gives joy to which there can be no counterpoise of regret or sorrow. In everything which we enjoy, let us feel that we are doubly glad if it is under our Father's eye, if we are following the direction of that eye in the pursuit of fit pleasures and enjoyments, and especially in the diffusion of pleasure and enjoyment among those whom he would have us make happy. For he would have us ministers of gladness, joy-givers, even as he himself is the universal joy-giver.

But how does he look on those slight beginnings of moral wrong and evil, on those first timid tentative steps in the way of transgression, the beginnings in which he sees, as we are prone not to see, the bitter ending or no ending; the first steps which, in his eye, are steps down a declivity that will lead to utter ruin? Oh, if we could read the glance of that all-seeing eye on those early turnings aside from purity and soberness and right; if we could feel the infinite pity with which he regards what seem to us but slight misdoings,—we should dread the first steps, the first thoughts, above all, the first heart movements in the way of wrong and evil. Let us then, whenever there is that movement of soul or thought, feel the divine pity resting on us,—a pity rising from the assurance of what these things will surely issue in, what they inevitably tend to, and must necessarily produce.

In our social relations, let us take God's view, who we believe, looks with equal eye on all, who has love and kindness and long-suffering for those with whom we are prone to be impatient, who looks with tenderness where we are prone to anger and resentment, who has unchanging love where we are prone to be influenced by party feeling or dissension, and to look with jealousy, suspicion, and dislike. Would we only endeavor to take God's view of those among whom

[1] An Address delivered by A. P. Peabody, D.D., on a recent occasion in Boston, and reported for the *Christian Register*.

we dwell, and among whom our daily intercourse lies, how gentle, how patient, how earnest in all good works and kind offices, how averse from everything that could give offense should we be! How would our social lives be refined, filled with love and mercy, bearing peaceful and blessed fruits!

In fine, as regards the whole way of duty, if we look upon it as something which we are forced to do because we are afraid not to do it, if we look upon virtue as a constraint, and upon conscience as a hard master, we may be kept from evil; but we shall lose all the joy there is in right-doing. But, if the eye of God directs us in our own consciousness, in our daily ways, and rests on those paths in which he would have us go, then those are ways of joy,—of ever-increasing joy, of a joy which shall wax fuller and fuller, until it shall have its consummation in his more intimate presence, when we shall see him, as it were, face to face.

The eye of God! We have what may bring that eye very close to us in him who bore God's image, in him in whose humanity we behold all of the divine that can exist in human form. I think that we all know how Christ, if he were on earth, would walk among us, on what his eye would rest with love, with approval, with pity, with condemnation; and we may follow him. And, if we follow him, we are walking with God. If we live as we know he would have us live; if we make his presence as we have it in this sacred record, a real presence to us, and think that he is really walking among us, as he is in spirit and in his undying love,—I am sure that the eye of God in Christ will make and keep us as God would have us. I do wish that all controversy with regard to Christ could be merged in the one thought of his divine humanity, and in the presence of God with us in that humanity. Oh, if we will but follow him, if we will but make him our way and truth and life, we shall know him as we can in no other way. We shall know him as we should not know him had we the eye of omniscience for what we call his nature and his offices. The only worthy way in which we can know him is by following him, by looking into his eye, and making that our director in life. Thus to know him is blessedness here on earth; thus to know him is life everlasting. This gives us guidance day by day. This knits our spirit unto his spirit. May God guide us by his eye, and lead us on and up to that home in heaven where that eye shall ever rest on us, as our eyes shall be ever turned to him!

M. Wiecyk has observed that the workmen in the petroleum-mines of the Carpathians, having to breathe an air contaminated with various hydrocarbons, carbonic acid and oxide, and sulphureted hydrogen, are not rarely subject to asphyxia. They are also exposed to tingling in the ears, dazzling, beating of the arteries of the head, syncopes, and hallucinations of usually an agreeable character. The respiration of petroleum-vapors induces, at first, feelings of lightness in the breast and greater freedom in breathing, but in the end, palpitations and general weakness. The rareness of consumption and infections and epidemic diseases among the workmen is remarked upon.

LETTER FROM SAMUEL COMFORT.

[A friend has sent us the manuscript of an old letter from Samuel Comfort, of Bucks county, without date, but written many years ago. It will, doubtless, be of interest to many readers.—Eds.]

It has come into my mind to write to thee and open a correspondence with one in whom I feel a deep and abiding interest, as, I believe, I also do in all who love the Truth and desire so to live and act as to stand approved in the sight of the Great and Almighty Being who knows all our hearts and to whom we are all accountable. Though we may feel poor and weak, not able to do any good thing, cannot see that we have ever done any good thing, and with the apostle can say, in me, that is, in my flesh, dwelleth no good thing, yet if we can appeal to the Searcher of hearts in the language of another apostle, "Lord, thou knowest all things, thou knowest that I love thee," we may receive a qualification and commission from time to time, to feed his lambs and his sheep. And not only so; but also when commanded to judge, or smite the mount of Esau, the first nature or birth that exalteth itself in its own strength and will and wisdom, which cannot inherit the promise, they not being made to it. That is not first which is spiritual, but that which is natural, and afterwards that which is spiritual. To this second birth, or birth of the spirit, the promises and blessings belong. Thou knowest these things better than I can tell thee, but yet I feel sympathy with thee in thy trials and exercises on account of the state of things amongst some of thy fellow-members and in the business meetings. Had little David gone against the giant in Saul's armor, the giant would, in all probability, have maintained his ground, but he could not stand before the power of the God of Israel, though the humble, confiding little David came against him in such simple armor as he that was clothed in a coat of mail despised.

The things that were written aforetime, were written for our learning; and I have been instructed by the account of Moses when he saw the oppression his brethren were subjected to, he undertook to relieve them and also to set matters to rights among his brethren—all this, too, in his own strength without any commission—but he found he was subjecting himself to difficulty, and doing them no good. I have no doubt he often remembered his futile attempt and profited by it; for when he was about to be commissioned and sent, he was not forward to undertake it, and made excuses, and after his doubtings and excuses were removed and he went, how careful he was not to attempt to do or say anything in the work or service he was sent to accomplish, but only as he was immediately instructed from time to time. Thus the deliverance of his brethren from their oppressors and taskmasters was brought about by Moses waiting for, and being obedient to, the word of the Lord to him.

The dealings of the Most High towards Israel as recorded in the Scriptures, may be useful and instructive to the Christian traveler. And I as fully believe that the accounts of His dealings with them and towards them as really and truly (and I may say

literally) took place, as certainly as there ever was such a people as the Israelites or nation of the Jews, or Egyptians, or Canaanites, or any other people or nations mentioned in the Scripture records.

What a lively figure is to be found in Israel (to whom the promises were made) being brought out and delivered from their oppressors and taskmasters and the many plagues that were brought upon them before they would let Israel go; and they would not fully consent to let Israel go and worship the Lord as he might require of them, until the first-born of Pharaoh and the Egyptians, their oppressors and taskmasters that held them in bondage,—until the first-born of all these was slain. Is not self and our own will the first-born of all the oppressors of the seed of God in the soul to which the promises are made? And while these live and rule, is not the soul oppressed and kept in bondage under them? Could Israel ever have had possession of Canaan whilst the old inhabitants of the land remained in it unsubdued? And could Israel have driven out and dispossessed the old inhabitants if the Lord had not helped them? And inasmuch as Israel outwardly could not remove the old inhabitants of the land out of their way without help superior to their own, so no more can we, or any of us, subdue or remove the old inhabitants in us out of the way without Divine aid, or know the seed or second birth to which the promises are made to be brought into spiritual Canaan—to possess and inherit it. Why should any doubt these things? It is given to me to testify to the truth and verity of these things without doubt or hesitation; and I believe it is given to thee also. And one end of my writing thus to thee may be to hold up thy hands and to assure thee that thou art not alone though some cavil and doubt.

An apostle testified "the law is a shadow of good things to come." Passing then from the old to the new covenant dispensation—from the law to the Gospel—we still find figures and shadows used, earthly things to represent heavenly things—heavenly things likened unto earthly things even by Him who was greater than Moses. The body of Jesus which was visible, may serve as a figure of the divine and spiritual body which is invisible in its conception and gradual growth from stature to stature until it grew up to a state of perfect manhood. And the death of his visible body on the cross may represent the natural man or life of self which must be given up to the cross, not that any man take it from us, but self and our own will must be offered up to the will of God—must die—before there can be a glorious resurrection of the new life in man. We must be unclothed of self before we can be clothed upon with Christ; the first nature or old man with his deeds must be subjected and give place, or yield up possession, before the new man after Christ Jesus can take possession of the heart. No cross, no crown; no dying to self, no living to God.

The conception of the body of Jesus by the overshadowing of the power of the Most High is a figure or lively representation of the conception of the divine life or birth of the Spirit in the soul. And we may be instructed by the fact that the full assent of the Virgin Mary was given before it took place. "Be it with me according to thy word"— in which very moment the prediction was effected. So also that there is no power but that of the Most High overshadowing the soul can cause a conception of the divine life to take place, and that the full assent of the soul is requisite, and when fully given the blessed new creation is begun.

The body of Jesus that was born of the virgin Mary, though miraculously conceived, yet was no more the son of God than was the body of Adam, which was entirely the product of the Almighty Creator without any human agency. It was the indwelling of the Spirit of the Heavenly Father, and the perfect subjection and obedience of all pertaining to the body of Jesus that made him the beloved Son of God in whom the Father was well pleased, and said, "Hear ye him." Thus the Lord Jesus became one with his Heavenly Father and prayed for those he had given him: "Holy Father, keep through thine own name, those whom thou hast given me, that they may be one, as we are." "Neither pray I for these alone, but for them also which shall believe on me through their word; that they may all be one as thou, Father, art in me and I in thee, that they also may be one in us." "And the glory which thou gavest me I have given them; that they may be one, even as we are one; I in them and thou in me, that they may be made perfect in one; and that the world may know that thou hast sent me, and hast loved them as thou hast loved me. Father, I will that they also, whom thou hast given me, be with me where I am; that they may behold my glory which thou hast given me: for thou lovedst me before the foundation of the world."

I reverently believe in the account given in the Scriptures of the Lord Jesus, the blessed and perfect pattern and example, and that he was that prophet the Lord promised to raise up and put His words in his mouth, and he should speak whatsoever the Lord commanded him; that the Jews killed the body of Jesus on the cross, but they did not kill the Christ, the life in him which was and is the light of the world; and that it pleased the Father to raise up the body of Jesus from the dead on the third day as a holy confirmation that he was the promised Messiah whom the Father had raised up and sent into the world. I may adopt the language of an apostle in his defense before Agrippa and some others? "Why should it be thought a thing incredible with you, that God should raise the dead?" Verily, there is nothing too hard for Omnipotence. Surely his power is sufficient to accomplish whatever he in infinite wisdom may see meet to be done. I had no thought of writing such a doctrinal epistle when I began to write, but could not come sooner to a satisfactory conclusion.

We are all favored with usual health, and in love to thee and thine, remain, thy friend,

SAMUEL COMFORT.

SUCH as are thy habitual thoughts, such also will be the character of thy mind; for the soul is dyed by the thoughts.—MARCUS AURELIUS.

WHAT DID THEY TEACH?

[The *Western Friend*, (Wilburite Orthodox) published at Varck, Kansas, in its issue for First month, sets forth in a particularly clear and vigorous article, the ground upon which Fox and Penn built, and upon which the Society of Friends organized. The following portion will be edifying, no doubt, to our readers.—EDS. INTELLGENCER AND JOURNAL.]

GEORGE FOX affirms with a positiveness and directness of assertion not made for any other event in his whole life, that the doctrine of the Inward Light was opened to him by immediate revelation. He says "the Lord God opened to me by his invisible power *how* every man was enlightened by the divine light of Christ." Paul, the great apostle to the Gentiles, certified that the gospel he preached was not received from man, "neither was he taught it but by the revelation of Jesus Christ." So, like Paul, George Fox affirms that he "*saw*" the same great doctrine of the *inward revelation* of the Gospel "in the *pure opening* of the light, *without the help of any man;* neither did I then know where to find it in the Scriptures—for I *saw* in the light and Spirit which was before the Scriptures."

When he went forth on his mission he affirms that "the Lord God and his Son Jesus Christ sent him," with a commandment to "turn people to that inward light." He says "I *saw* that as they received Christ Jesus *in his light* he would give power to become the sons of God." "I directed them to Christ the true Teacher within;" "to the divine light of Christ and his Spirit in their hearts;" "to the light in all your consciences;" "to the measure of the Spirit *in themselves* by which they might be turned from darkness to light;"—such is the language in which George Fox reports his own sermons all along through his Journal.

So steadfast through his life, in his doctrine was he, that when he died the ministers of the Second-day Morning's Meeting in London, in their address to the Society on his death, said of him, "He was in his testimony as a fixed star in the firmament of God's power."

So universally was this known and accepted by all Friends in that day and time, that when the whole Society was mourning the death of George Fox, William Penn, in a testimony which was published as a preface to Fox's Journal, makes this universal acceptance the ground for one of the most touching appeals for Friends to continue faithful in its profession to be found in the history of the Society. He says:

"And now, Friends, you that profess to walk in the way this blessed man was sent of God to turn us into, suffer I beseech you the word of exhortation, as well fathers, as children and elders, as young men. The glory of this day and foundation of the hope that has not made us ashamed since we were a people you know is *that blessed principle of light and life* of Christ which we profess and *direct all people to* as the great *instrument* and *agent* of man's conversion to God." . . . "in the feeling of the motions of this principle we drew near to the Lord and waited to be prepared by it. This being the testimony the man of God was sent to declare and leave amongst us and we having embraced the same as the merciful visitation of God to us, the word of exhortation at this time is that we continue to be found in the way of this testimony with all zeal and integrity, and so much the more by how much the day draweth near."

Of the ministers who had gone before George Fox, William Penn in his "Rise and Progress," says: "Which of them all ever directed men to a divine *principle* or *agent* placed of God in man to help him, and how to know it and wait to feel its power? Some of them have indeed spoke of the spirit, and the operations of it to sanctification and performance of worship to God, but *where* and *how* to find it was yet a mystery reserved for this further degree of reformation."

Revealed to George Fox, as the divine *plan* to bring the benefits of the death of Christ within the reach and capacity of every man, his mission, as a minister and reformer, which the Lord so marvelously blessed, was to turn people to this inward light as Christ's power by which they might intelligently and with assurance know the salvation of Christ to be wrought in them. So far-reaching was the effect in Christian experience, and on Christian doctrines, of the reception of this inward light that it had the force of a new gospel in that day and time. William Penn not only said that, "it was the glory of that day and the foundation of the hope" of those who received it, but that it was "the corner stone," "a fundamental principle," "the root of the tree of doctrine," making it far the most important doctrine in their system of faith. And Robert Barclay, (prop. vi. sec. xi.,) says, "This doctrine if well weighed will be found to be the *foundation of christianity, salvation,* and assurance."

To George Fox and the people gathered by his ministry, the Inward Light was no mere "*influence* of the Spirit." It was as they saw it in the light a divine *something* in man that always "made for righteousness;" "not an accident as most men ignorantly understand, but a *real* spiritual substance" are the words of Robert Barclay. And William Penn, with fine exactness of language, says of the ministry of George Fox, "he labored much to bottom the people upon the *principle* and *principal* Christ Jesus, the Light of the World that by bringing them to something that was of God in themselves they might the better know and judge him and themselves." This divine light the "something," "the spiritual substance" was the "great agent," "instrument," or "principle," by and through which communion and all spiritual relation was established and carried on between God as a spirit and the soul of man as a spirit. As such it was the immediate source of every grace and work in salvation.

There are great truths that pitch their shining tents
Outside our walls, and though but dimly seen
In the gray dawn, they will be manifest
When the light widens into perfect day.

—LONGFELLOW.

LIFE'S cares are many, but a cheerful spirit overcomes them all; and contentment makes a Paradise of earth.—B. W. S.

For Friends' Intelligencer and Journal.

"THE LAW OF THE LORD IS PERFECT."

The language, "The Lord's spirit will not always strive with man," implies that a condition may befall mankind where the human soul becomes so utterly reprobate that the germ of devotional feeling ceases to prompt to ask for divine favor; so completely actuated is it by long indifference, that importunity has become impossible; as in the case of Felix when reasoned with of righteousness, temperance, and judgment, his answer was, "Go thy way for this time, at a more convenient season I will call for thee." We do not read that he ever had another opportunity. Christ has been the life of God's people through all time, and as such, many, yes very many, have truly seen their day and rejoiced therein. It was their life. They were born of God. Christ lived in them. If it had not been so they would have been reprobates, for those who do not know of this union, this new birth, are reprobates, strangers, outcasts to true enjoyment and happiness, whose hearts are unannealed without having had the Refiner's fire kindled within them.

How essential then that we elect God's "portion," a measure given to every one, and become subservient thereto, that a more spiritual dispensation may be introduced, that our experience may be a continual growth in the inward work of divine grace. This "portion" or spirit in man, quickened by the inspiration of the Almighty, receives its understanding, which is never withheld unless we are unprepared to receive it. The Lord is not always with us, *i. e.*, he does not at all times make us conscious of his presence, and it is in the interim that we are liable and prone to fall into temptation, to submit to the power of reasoning, and become discouraged, because of these seasons of apparent desertion. Like the Hebrews in the absence of their Law-giver on Mount Sinai, who constained Aaron to prepare the golden calf that they might obtain deliverance from their Egyptain bondage, we fail to recognize the place of refuge and of strength, and in the great anxiety to be active, yield to the promptings of the imagination, whence come all manner of vageries, in which we reckon the state of quietude and waiting as death to the soul, and activity, the only sure means by which primitive Christianity may be regained.

The adoption of this as a truth soon gives it ready acceptance, and the query, "How shall we revive our faith and growth?" ere long is presented for solution. "All these are the begining of sorrow;" "But he that shall endure unto the end shall be saved." "Blessed are those servants whom the Lord, when he cometh, shall find watching. Verily, I say unto you, that he shall gird himself and make them to sit down to meat and will come forth and serve them." Again, it is implied in this injunction, that the Lord withdraws his presence, leaving them to persevere, and not become discouraged by delay, for it is in this passive state of patience and long suffering that we will become enabled to obtain through that Egyptian passage, the heritage of Jacob. "Watch, therefore, for ye know not in what hour your Lord cometh." It may be at night-time or at noon-day, in the field or on the housetop; turn not away . . . one shall be taken and the other left." Wheresoever the body is, thither will the eagles be gathered together."

CHAS. A. LUKENS.

Hoopeston, Ill.

WOMAN IN THE BRAHMO SOMAJ.[1]

It is of one of the most remarkable of these new associations in religious development, the Brahmo Somaj, established in India, that I wish to write, not on account of the theological reforms which it is seeking to introduce, but because of its relation to our special object—the advancement of women.

The wide extent of the movement for women indicates the importance of the subject and the fact that the time is ripe for it; that it is not the idle fancy of some dreamer only, or even the prophetic insight of one far in advance of society, but that it is a great tide of moral thought and life, which may seem to recede at times, but is destined to go onward until the whole ocean touches the highest mark.

It would not be appropriate here to discuss the theology of this new church; and yet, in justice to its leaders, I must say that they consider religious truth and spiritual life as the basis of all their work, and that they would not accept any statement of its beneficient, social, and moral results as adequate, which left this out. As an outward organization, the Brahmo Somaj dates back to 1830, and to the time of Ram Mohun Roy.

Mr. Potter says: "Ram Mohun Roy was one of the historic characters of India. He was a reformer of wide sweep, social, political, moral, religious. Early he abandoned the idolatrous religion of his countrymen, and sought, against the force of deep-rooted prejudices which no one man could sweep away, to restore what he believed to be the original Hindu faith, spiritual monotheism. A society was organized and incorporated under the name of the Brahmo Somaj, which means an 'assembly of worshippers of God;' and a building was secured for its use, the trust deed of which provided that it should be for the use of 'people of all sorts and conditions, without distinction as to creed or color, who should meet there for *the spiritual and no other mode of worship* of the Author and Preserver of the universe.'"

What interests us is the fact that, as soon as this intelligent and earnest body of thinkers began to consider the subject of religious and social reformation in India, they saw that it necessarily involved the improvement and elevation of women. The recognition of this necessity was gradual, and produced by the contemplation of enormities in the social customs regarding women, actually existing in their country.

While Ram Mohun Roy was contemplating the establishment of his new church, he was so shocked by the then existing barbarity of suttee burning that he was obliged to turn his attention to this practical work before he could go further in building up a religious institution. This horrible custom required that on the death of a husband the wife should be burned alive. She was expected to accept this fear-

[1] Ednah Dow Cheney, in *Woman*, (New York.)

ful doom joyfully as a holy sacrifice. But to feel the full horror of the custom, we must remember that the widow thus obliged to give up her life in agony and torture was not necessarily the loving and beloved wife, who, having found all her joy in the companionship and affection of her husband, might willingly seek to follow his spirit into another world, even by this fiery passage. We can conceive that Vittoria Colonna might, at this price, have been willing to purchase thirty-five millions of years in paradise with the husband whose death left earth a desert to her. But the widows of India were often young girls, betrothed before they knew even the meaning of marriage, and having never known the joy of mutual love. The Mohammedans had tried to abolish this custom, but without much success; and the English, of course, viewed it with abhorrence.

A year before the foundation of the Brahmo Somaj, in 1829, and chiefly by the exertions of Ram Mohun Roy, a law was passed by the Legislature forbidding this cruel practice. This was the first step toward the recognition that woman's life had any value except as a sacrifice to her husband. Their creed of to-day says: "The Brahmo Somaj believes the position and mission of woman in the theistic church to be very high; and unless and until men have learned thoroughly to purify their hearts in regard to women and to honor them, theism will not take root in this land." (*Faith and Progress of Brahmo Somaj.*) But even among enlightened Hindus, the old prejudices about women are deeply rooted; and the new society had a long, hard struggle to carry out more liberal ideas. The privilege of caste and the marriage customs were intrenched in the hearts of even many who had advanced ideas on purely theological subjects.

About 1839, the leadership of the new society passed into the hands of Devendra Nath Tagore, a man of great fervor of spirit, who "had strict and highly conservative ideas about the proprieties of Hindu marriage customs. Widow marriage was to him an abomination and intermarriage (between different castes) still worse. He wished to keep the new church up in the regions of spiritual ecstacy, and not expend its power in social reforms. But his pupil and successor, Keshub Chunder Sen, who entered enthusiastically into the work in his early youth, was fortunately broader and more practical, although he shared in the ecstatic devotion of his teacher.

Although Keshub was himself a member of an aristocratic household, he advocated the abolition of caste distinctions in the new church. He also saw that no church could be established for one-half of mankind only, and the first of his important reforms was the instilling of theistic principles in the mind of the female sex. He thus introduced a purer worship and a nobler thought into domestic life, and private prayers and religious services in the house were filled with the new idea. Gradually, all the social festivals connected with idolatry were replaced by annual gatherings, made beautiful with flags and flowers, with brotherly meals and social gatherings. From private prayers, the women were led to take part in public worship. Thus, the women were led to desire higher education, that they might hear and understand their new faith intelligently and speak for it reasonably.

Laying his foundation thus broadly in religious equality, this sagacious leader next turned his attention to the great practical evils of the marriage customs.

Marriage between different castes was entirely forbidden. Still worse, female children were betrothed in a tie as indestructible as marriage, even in infancy; and marriage was consummated at a frightfully early age, the child having no choice or will in the matter, and passing entirely into the control of her husband and his family. If the husband died even before the conclusion of the marriage or after, the child-widow became an object for every kind of abuse and scorn, so that we are told that Indian widows say that the abolition of the suttee has brought them only slow torture instead of quick release. Numbers of these wretches perish by suicide as their only escape from an intolerable life. The Brahmo Somaj first attacked the system of caste and abolished it so far as its own influence extended.

They then determined to do away with every evil connected with the marriage system. In 1870, they took the opinion of the best medical men on the proper marriageable age; and their suggestions on this point were adopted. The enforced celibacy of widows was set aside. Gross idolatry was removed from marriage rites, and absurdities in form and practice eliminated. Strict monogamy was enforced, and the marriage tie was made inviolable. Marriages were solemnized between different castes, the serious responsibilities of marriage were explained, and foolish expense and unnecessary pomp discouraged. After four years of intense struggle and anxiety, the Brahmo marriage act was passed in March, 1872.

When we remember for how many years English reformers struggled to pass so simple a measure as the bill to allow marriage with a deceased wife's sister, we must admit that the world sometimes moves as fast in the Eastern as in the Western hemisphere.

By this act polygamy was rendered impossible in the Brahmo Somaj, the new law making it penal. The minimum age of marriageable persons is fixed by law, and thus the bad custom of early marriages virtually abolished. Caste is simply ignored, and men and women can now unite themselves in wedlock with the perfect sanction of the law. This act protected not only members of the Brahmo Somaj, but all non-Hindu marriages. As yet only a small portion of the women of India have been benefited by these excellent reforms. There had been about a hundred Brahmo marriages up to the year 1879, thirty-five being intermarriages between different castes and thirty-six widow marriages.

Of course, those who cling to the old Hindu church still maintain its old customs; but the Brahmo Somaj made a great gain for the whole community in securing from British authority legal sanction for marriages made contrary to Hindu regulations. The first Brahmo marriage ever celebrated was that of Devendra's own daughter, in 1861. This marriage was according to theistic rites laid down by the So-

maj, excluding idol worship. The first intermarriage between castes—a still greater blow to conservative ideas—took place in 1862.

When we remember how many questions of inheritance and property are mixed up with marriage laws, we can realize what a service was done by disentangling the whole question and establishing the freedom of marriage on a sound legal basis.

We must confess with deep pain that the great leader, Keshub Chunder Sen, was not entirely consistent in his own practice. The prevention of the premature marriage of maidens, often betrothed at the age of ten or twelve years, was one of the reforms which the Brahmo Somaj was pledged to effect; yet he assented to the marriage of his daughter, a girl of unmarriageable age, to an Indian prince. Alas, for the weakness of human nature everywhere when temptation comes home to it! This unfaithfulness to his pronounced views produced great feeling in the society, and led to a division. All could but feel a loss of courage and strength from this unfortunate lapse of a trusted guide. Up to 1879, as I have before cited, there had been about a hundred Brahmo marriages—thirty-five intermarriages between different castes and thirty-six marriages of widows. While this latter item does not yet approach to the condition of civilization in England, where according to Mr. Samuel Weller, Sen., "there are more widows married than single women," yet it does show that a small number have been emancipated from the dreadful doom of Indian widowhood. In India, a second marriage is the only door of escape from a doom so dreadful that many Indian women wished for death as a way of escape.

(To be Concluded, next Week.)

SCRIPTURE LESSON, No. 8.

SECOND MONTH 19TH, 1888.

TOPIC: FORGIVENESS.

GOLDEN TEXT: "Forgive us our debts, as we also have forgiven our debtors."—Matt. 6 : 12.

READ Matt. 18 : 21-35.

THE question of Peter, with which our lesson begins, was most probably induced by what Jesus had said just before (verse 15) in reference to the brother who had committed sin against another.

The Jewish code enjoined the duty of forgiveness, and made it obligatory upon the person offended to forgive the offender three times, but should he be trespassed upon or sinned against the fourth time, he must take the consequences of his transgression.

A certain king . . . a reckoning with his servants. Many kings in the early times *farmed out*, or sold for a stipulated sum, the taxes laid upon a district or a subjugated province, the purchaser being one of his wealthy and trusted subjects. The king had no further trouble than to receive the sum agreed upon, which was often gathered up with much cruelty and great distress and oppression upon the people taxed.

Ten thousand talents. This represents many millions of dollars, and is used to illustrate the magnitude of the debt and the magnanimity of the king. Under the Jewish code (Leviticus 25: 39–46) the debtor and his wife and children might be, and were, sold as bondservants for a period of time sufficient to cover the debt.

Have patience with me and I will pay thee all. The debtor prostrated himself before his lord as was the eastern custom, and his entreaty brought him forgiveness. The treatment of his fellow-servants who were his debtors, fitly sets forth the want of the spirit of forgiveness we often manifest towards our fellows, while we are ready to petition our Heavenly Father to forgive our greater sins and trespasses against his most righteous and holy requirements.

There is probably no virtue which the average man finds it more difficult to exercise than that of forgiveness of wrong; there is, therefore, no grace of God which the average man finds it more difficult to comprehend. The principles upon which God acts in the forgiveness of sin are so large that the human spirit cannot easily accept them, and therefore it employs the intellect to explain them away. We have yet to learn that love and trust are greater deterrents from wrong-doing than fear; that men are more easily weaned from sinful courses by spiritual sympathy, than by inflicted penalty; that more liars have been cured of falsehood by implicit confidence than were ever cured by the rod; that love casts hate out of the human soul, and wrath and bitterness intrench it there.

We have no way to judge of the sincerity of repentance but by reformed conduct. But God who reads the heart answers to its first aspiration. The forgiveness is not merely a remission of penalty; it does not always even include a remission of penalty. Penalty may be a part of forgiveness, a necessary means for the redemption of the wrong-doer from the power and dominion of his sin.

If a man who has done wrong abandons his wrong-doing, and makes what reparation he can for it, and is willing to bear the just and natural consequences of it—he is by that very fact brought back into God's confidence and esteem. In this, as in all else, we are to be imitators of our Heavenly Father—like him exercise a forgiving spirit toward those who have either wronged us or have committed wrong in any way. When we ask our Heavenly Father to "forgive us our trespasses as we forgive those who trespass against us," we should remember that he expects us to be as magnanimous, generous, and trusting in our treatment of repentant wrong-doers as he is in his treatment of us.

There is scarcely a day passes that we have not need to exercise the spirit of forgiveness, so important is it that we do forgive those who in word or deed trespass against us, that Jesus made it a test of our loyalty to our Heavenly Father, and declared that unless we from the heart are willing and ready to forgive we can lay no claim to Divine forgiveness.

The conditions of human society are such that it is impossible to avoid offenses,—we jostle one another at all points, not intentionally let us hope, but unwittingly; our interests conflict, and we see things too much from our individual standpoint. Few are so large-hearted that they can sink themselves in the desire to see the right in another, and yet this is the meaning that the apostle would have us take of our

duty when he urges, "not looking each of you to his own things, but each of you also to the things of others." It is only as a measure of this spirit takes possession of our spirits that we learn to be patient and forbearing, and as these graces of the Divine spirit rule in our lives, we will find how necessary it is to let no root of bitterness spring up in the soul, and that to attain to the peace of God we must be as forgiving to those who wrong or misrepresent us, as we hope our Father in Heaven will be to us.

"To err is human,
To forgive, divine."

THE SUGGESTION OF "REUNION."

RECENT contributions to our columns in reference to the desirability and the possibility of a reunion of the several bodies of those who claim the name of "Friends" have been read, we have no doubt, with interest. They deal with and involve matters of vital importance, and merely to take into consideration the details of the subject is naturally to awaken the deep feelings and profound convictions of those who have given it thought. Perhaps we should say that we have printed the articles in pursuance of the general plan upon which we conduct the INTELLIGENCER AND JOURNAL: (1) to hold fast, with all firmness, to what we believe to be the essential principles of Quakerism; and (2) to allow on other, non-vital, subjects, a reasonable expression of individual opinion. When our readers ask that they may have the opportunity to relieve their minds, on suitable topics, in a courteous manner, and on a line which, (in our judgment), seems likely to be, if not edifying, at least interesting, we do not desire to apply to them any narrow or arbitrary rule of restraint.

As to the practical importance of a discussion of the subject named, we have no definite opinion. There is certainly no appearance of evidence that any other of the bodies of Friends desire to unite with ours. There are some indications that in some quarters there is an abatement of that spirit of condemnation and proscription which during many years laid waste all thought of fellowship, and for these, be they little or much, superficial or substantial, we express our heart-felt appreciation. Wherever the spirit of Christ prevails over that which is unkind, it is a place where he who claims to be a Friend must offer thanks.

But, supposing these evidences of nearer feeling to be substantial, what then? Would it be possible for other bodies to unite with us? Could they consent to our system? It is obvious that in this body of Friends there is but one strong bond of doctrinal unity,—the acceptance and belief in that glorious Truth which George Fox declared anew, and by his words and life made emphatic,—that which, as time rolls on, is more and more seen and admitted to be the basis of all true religion. The belief in this holds us together. We accept the declaration of William Penn that this is the foundation stone of Friends,—*the* foundation stone. Whatever else we may cherish is secondary to this. Upon other subjects we may hold, and do hold, variant and diverging views. We do not attempt to bring our members to uniformity of opinion in reference to the multitude of doctrinal matters which arise in the consideration of the Scriptures. Adhering to that noble and rational principle that while there must be unity as to essentials, there should be liberty upon non-essentials, (and in *everything* charity), we have defined the one essential thing to be the acceptance of the truth of Immediate Revelation. That is the rock of Quakerism. Other things may be important: this is vital. Upon it rests the structure that Fox builded, and within whose portals men like Whittier yet worship and testify. Upon it stands the Society of Friends which we know and adhere to, comforted there and encouraged by the memory of a great company of serene and gracious spirits, from Penn, and Pennington, and Barclay, down by a long line to Elias Hicks, and John Comly, and Joseph Parrish, and Lucretia Mott, and Samuel M. Janney.

What may be the outcome of the future none of us can know. It is not for any of us to demand that the stream of events must run in this channel or that. It is our present duty to hold fast to that which has been made known to us, and to recognize gladly and cheerfully every other testimony to the Truth. We see now no likelihood of a reunion, in the outward, of the separated bodies of Friends, but if we rest upon sure ground we may wait with serene confidence for the outcome of the future, whatever that may be.

THE Indexes for the last volume of the paper, (the year 1887), are now ready, and will be at once mailed to any who desire to bind. As the full edition of the paper is over 3,000, and as probably not more than two hundred bind their volumes, it seems hardly worth while to print and send out so many copies of the index to no purpose. We shall mail immediately to those who have already asked for them, and we shall also try, another year, to have the index ready nearer to the close of the volume.

DEATHS.

HARLAN.—First month 12th, 1888, at the home of his only surviving sister, H. A. Harlan, near Fallston, Harford county, Md., Joseph Harlan, in his 84th year; nearly a life-long member of Little Falls Monthly Meeting, and for many years an overseer of that meeting. He was a constant attender thereof, and very seldom was his seat vacant when able to attend, which was to within a short time previous to his death. At his Master's call he with joy received the pale messenger. His sun set in perfect peace. Not a cloud was there to mar the brightness thereof.

HAYHURST.—First month 30th, 1888, Abi Hayhurst, in her 89th year; a member of the monthly meeting of Friends held at Green street, Philadelphia.

POST.—At his residence, at Westbury, L. I., on the 17th of First month, 1888, Joseph Post, in his 85th year.

He was a strong advocate of Anti-Slavery, Peace, and all progressive movements; a valued and exemplary member of Westbury Monthly Meeting.

RICH.—At his residence, Middletown, Bucks county, Pa., First month 30th, 1888, Joseph Rich, in his 88th year; a member of Middletown Monthly Meeting.

STOKES.—On Third-day, Second month 7th, John W. Stokes, in the 75th year of his age, a member of the monthly meeting of Friends of Philadelphia. Friends are invited to attend the services at his late residence, 1921 Green St., on Seventh-day, 11th inst., at 11 a. m. Interment private.

YERKES.—Second month 3d, 1888, Hannah T. Yerkes, aged 76, daughter of the late Silas Yerkes, Sen.; a member of the monthly meeting of Friends held at Green street, Philadelphia.

EDUCATIONAL.

CONFERENCE AT FIFTEENTH AND RACE STREETS.

The Educational Conference held in the Race St. Meeting-house, Philadelphia, on the 4th inst., was largely attended, notwithstanding the very inclement morning; and this fact together with the close attention given to the exercises are evidences of the deep interest that is felt in these meetings.

The first subject, "Kindergarten Materials in Primary Work," was presented in a very suggestive way by Elizabeth E. Hailman, of Friends' school, Wilmington, Delaware. She showed by means of paper-folding how the elements of Drawing and Design may be successfully introduced into the lowest Primary grades; and this was followed by similar work on tablets of clay prepared on the spot bringing into use the ruler, pencil and wooden knife. These exercises were illustrated with a class of half a dozen boys and girls from the primary division of their school, who worked with diligence and evident interest, from the directions given them from the blackboard. Not only were the childrens' hands kept busy in giving intelligent expresion in outward and visible forms to the ideas they had in their minds, but their minds themselves were set to work and directed so they could comprehend what was presented to them, and also invent and present something of their own to other minds: thus thought and expression both can be developed, and the idea of beauty and harmony cultivated at a very early age. It was shown how these exercises might be used for number work, for language lessons, for geometry, etc. A great many questions were asked by the audience in regard to the age for commencing these exercises, the time given per week, the length of time this work is continued with school course, suitable books for mothers and others who may wish to do something in this line, etc., all of which were promptly answered. The work is begun in the lowest primary class, about three periods of half an hour each are given per week, and the results have been very satisfactory. The work should be carried at least as far as into the intermediate classes. "From the Cradle to the Grave" was suggested as a good work for mothers and primary teachers; and teachers present referred to a very valuable little work, "Primary Methods and Kindergarten Instruction," lately published by A. S. Barnes & Co., New York, by W. N. Hailman, father of the speaker. Mention was also made of Lectures on Kindergarten culture by the same author.[1]

In summing up it may be said that "The use of these materials" as briefly outlined "involves the use of the hands, brings about the training of the hands induces a respect for what hands do, results in respect for manual skill and respect for labor:" it doubtless secures a fuller, clearer, sounder, mental and moral development. In our ungraded country schools this material could be supplied at small cost and be made particularly valuable, as it would furnish teachers a ready means of giving their pupils interesting profitable manual and intellectual work to be done at their seats while other classes are receiving attention: and thus it would seem that teachers may readily find a way of keeping all pleasantly and profitably employed.

The second subject, "How to make Geography interesting" was well presented by Susan Cate Smith, of Boston. Though her way of teaching it was familiar to those who have kept up with the advances made in primary methods, it was doubtless new to many and very fresh and helpful to all, and needs to be repeated again and again before teachers will all leave what are, too often, the barren words and unproductive maps of our primary geographies, and come to the living and fruitful things of the children's consciousness. She spoke of the uses of geography as a means of fitting one to become an intelligent traveler either in the bonds of the flesh or on the wings of the imagination, and as a means of general culture. The first stage of geographical study deals with observation. We should take children where we find them and keeping within the range of observation lead them out into wider and wider circles, till by the aid of what has been seen, the eye of the imagination can correctly picture that which fills lands we can never hope to see. "Every little nook and corner," Humboldt says, "is an image of the whole world," and out of the one where we find the child and out of the school's ground where he plays we can lead him to create the world with its slopes, hills, mountains, springs, rivers, ponds, lakes, islands, peninsulas, etc., etc.; and he will be taught to locate cities, and study peoples, as he studies the fruits and

[1] "The Education of Man," by Freidrich Frœbel, translated from the German, and annotated by W. N. Hailman, A. M., published by D. Appleton & Co., will give the teacher a philosophic insight into the spirit of Frœbel's work.

fabrics that come to him from other places. A rainy day will offer a fitting theme and time to introduce him to rainfall, drainage, the eroding or wearing force of water, evaporations, etc., etc. In these early stages the aim should be to lay sight foundation, and fit the child to help himself. Later, he should be taught the language of the map so that he can see in it the things symbolized. The moulding-board and map-drawing come in play on fixing the elevations, and slopes, and contours. She would not have the outlines fixed by means of elaborate diagrams, but at first let them be determined by tracing and other mechanical means, and then be filled in with rivers, and cities, and political divisions growing under the hand of the pupils from day to day untill the outline and the filling are in the minds of the children fixed to remain forever. Pictures, descriptive articles in books and papers, language lessons, conundrums, poems, almanacs, time-tables, railway guides, newspapers,—all these may be used to add interest to the subject, and help to make the pictures real. In the second stage, when the text-book is used, *it should be mastered*, and such additional matter found as can be obtained from sources at hand, and children should be taught to help find interesting, useful, and appropriate matter. There are many books such as the "Voyage of the Sunbeam," "Lady How and Madam Why," "Huxley's Physiography," "The World at Home," etc., that may be very useful in the way of adding interest to the subject. If the things of most worth are studied, and that in the manner she authorised, there need be no fear that geography will be other than an interesting study.

For Friends' Intelligencer and Journal.

OUR EXPERIENCE WITH BEES.

There is no feature in the wide range of nature's economies that so impresses me with the great lesson they have the power to impart, as the prudence, thrift, and forethought of the "Honey Bee." No one who is observant of these tiny creatures can fail to be instructed and deeply interested in all their movements. Patient and industrious, never using their only weapon of defense except under provocation, they labor on, from the first flush of the morning sun, until he hides his bright beams beneath the horizon. And what foragers they are. We would think three miles a long distance to carry the loaded panniers that contain the store of food we lay up for "a rainy day," and most likely would place the burden on some other back; but these busy workers make no complaint if the fragrant pasture from which their store is to be gathered, lies that distance from their headquarters, and so keen and unerring of sight are they, that it is seldom one loses his way back to the hive.

And let us think, too, of what they gather? The most delicate tips of the daintiest fingers cannot reach without ruin to the blossom the tiny receptacle in which the sweets of nature are hidden away, —no means that man has ever yet devised can gather so deftly the golden dust showered from the bursting anther. How clumsy and awkward even an attempt would seem, yet the bee walks into the holy of holies of the smallest blossom, gathers the portion which remains for him after the purpose of perpetuation has been accomplished, or mayhaps doing his part to perfect the work, and make possible a continuance of the species. And he does it all so carefully and with such evident satisfaction, that it gives one pleasure to observe his movements.

It is now more than twenty years since the dream of my girlhood was first realized, and a little cottage "shared with a loved and loving one," made it possible to indulge my fancy for lawns and gardens, and the homely ways of a country house-wife with duck-ponds, poultry yards, and a hive of bees,—the latter a speculation entirely my own, since the hive and contents were bought at a sale, and transported some forty or fifty miles, the entrance to the hive secured by a fine gauze wire, and I the happy owner, superintending the shipping and delivery at the end of the journey. Under the scant shade of a peach tree, planted out the year before, and giving promise of its first bloom, my hive found a resting-place raised a little from the ground by a low bench. It was in the latter part of third month, and my tiny workers were soon ready to begin their labor. The stately maples that stood guard at the gateway invited them to a royal feast, and they were not long in clearing away the debris of the winter's wear and tear and making room for the young life that was soon to follow.

The hive was a "Langstroth," and gave opportunity to observe to a considerable extent the movements of the little colony which did not appear to have suffered in the least from the long journey; the combs were all in place and the busy hum of industry told of rich rewards in the future.

The hive was so contructed that the surplus honey was stored in boxes ranged on the honey-board which had holes corresponding to similar ones in the boxes, through which the bees found entrance and exit. These boxes were put in place before the bees began storing, and nothing further was needed to equip them for the work.

And how eagerly they entered upon it, what delight it was when the great cherry tree that overhung the kitchen porch was snowy white with bloom and the rows of "pie cherries" in the garden, the quince and pear and peach trees in the poultry yard, and the sweet pink and white of the young apple trees in the back part of the lawn, all offered near at home a repast that lasted until the blossoms of the garden and the flower-beds opened to welcome them!

The fall before the Nation's Centennial, we returned to our city home. The solitary hive had doubled and doubled again and again, and there were now eleven hives, all holding industrious colonies that supplied our own table plentifully with honey, besides yielding quite a snug profit on the first investment from the surplus for which a ready market was found. Of course we had to dispose of our bees with the other stock and fixtures of the country home. We had no difficulty in getting rid of all our hives except two, one of which had only been hived that summer. The question "What shall we do with these?" was solved

by bringing them to the city with us, and locating them on the roof of the bath-room—between the main and the back building, a little below the level of the the third story, and in that situation they have remained ever since. The first year or two they were at times troublesome—when the lights were lighted, and when preserving was going on, but they seem now to have become so used to their quarters on the roof, that seldom a stray one gets to the common level. They furnish an abundance of honey, and so far as we know have never swarmed. We are careful to give them plenty of box-room and to replace at once with others the boxes that are filled. Sometimes, the honey has been red, showing that some one had suffered loss in making fruit-jams, but by far the larger part is of the usual color, and quite as white and pure as when the bees had the whole country for a pasture. They are really so little trouble and give such a bountiful supply that I am surprised, more who live in the suburbs of our city do not undertake Bee Culture.

WHY FRIENDS OBJECT TO MUSIC.

Editors Intelligencer and Journal:

It is often a matter of serious inquiry among young people in our Society, whether there is any just basis for the discouragement that Friends give to the cultivation of music. It has been felt by many, also, that the Society, in its anxiety to avoid the harmful tendencies of music, has gone too far and deprived its younger members,—at least the very conscientious ones—of a source of pleasure that is productive of good. It is, however, a fact that music is found now in the homes of very many of our members—a tacit recognition of its attraction and value when under proper regulation. It seems to me that a clear understanding of the mental and moral effects of music, will show both that this recognition can be commended, and that the opposition the Society has always made to music rests upon very substantial grounds. This contradiction is only seeming, as I will try to make clear.

Friends object to music on two grounds. The first, which need not be enlarged upon, is that the associations and surroundings where music is usually to be obtained are not morally healthful, especially to young women and girls. The second, which I think the more important, rests upon what are now recognized to be the effects produced on the thoughts and feelings of those who listen to music habitually, or who devote any considerable amount of time to its study. Music, as we know, was originally vocal, and was the expression of intense states of feeling. As Herbert Spencer has pointed out, song (and consequently all music) merely exaggerates the natural language of the emotions, the degree of pitch, the quality of the tone, and the rhythm of a piece of music, produce their proper effects upon the feelings of one who listens with attention. The function of music, the writer goes on to say, is the development of sympathy; it tends to educate the tone of a speech as distinct from the words. Music in later times has far outrun our outward expression of emotion and now reacts upon it and advances it.

In view of this partial explanation of the nature of music, the grounds of objection to exclusive devotion to it are easily seen. Many of these objections disappear when people (as many do) study music on its intellectual side, or when circumstances have been such that the faculty of enjoying simple music has not been cultivated. If music is the exaggerated expression of intense feeling, would not one cultivated in that atmosphere be likely to undergo excessive development of the emotional side of his nature? It is well known that professional musicians are very often deficient in a sober estimate of things, and entertain views more or less distorted and unreal. Looking at the question from a material side, a recent writer in the *Popular Science Monthly* notices the effect listening to music has upon the formation of habit. It is, he says, the first step that counts in the formation of a new habit, and hence it is best to act immediately on any impulse or resolve to do a right action. If this is not done, the faculty of thus acting becomes weakened, and the opportunity is worse than lost. To allow a fine glow of feeling to evaporate without some outward expression, as is done continually by those whose sympathy with music is strong, must have a tendency to weaken the ability of the will to act promptly and definitely on even the smallest occasions.

In so far then as music is cultivated in moderation at home, I think we may value it as the promoter of sympathy and good feeling. On the other hand a great deal of harm may result from a cultivation that requires much time or thought, or which does not recognize that music is a subordinate means and not an end.

SWARTHMORE NOTES.

At a meeting of the Instruction Committee on Sixth-day, the 3d instant the following resolutions were adopted: "Resolved, that, whereas President Edward H. Magill has, at much expense of time, labor, and money, instituted a system of appeals to Friends and others, who may be interested in Swarthmore College, hoping to induce those who may be able and willing to do so, to subscribe money for the purpose of obtaining funds enough to endow one or more professorships in the aforesaid Institution;—We, of the Instruction Committee, do heartily appreciate his efforts, and commend his appeal to the thoughtful consideration of all who can spare even a mite for the end hoped for.

"Resolved, also, that we recommend that the Executive Committee endorse the aforesaid appeal in some such approved way as may bring their endorsement to the attention of the public." Extracted from the minutes. Eli M. Lamb, Chairman.

At a meeting of the Executive Committee, held Second month 3d, 1888:

It was, on motion, Resolved, that this Committee heartily endorses the appeal made by our President to secure sufficient subscriptions to endow one or more Professorships in Swarthmore College.

Extracted from the minutes.

M. Fisher Longstreth, Secretary.

—Dr. Charles S. Dolley will give his illustrated lecture on "A Summer among the Bahamas," on Sixth-day evening, the 10th inst.; and Eliza F. Rawson, of New York, will speak upon "Woman Suffrage," on Sixth-day evening, the 17th. The friends of the College are invited.

NEWS OF FRIENDS.

—Concord Quarterly meeting was held at West Chester, on the 31st ultimo. There was a large attendance. In the religious meeting, Allen Flitcraft offered prayer, and Ezra Fell, Lydia H. Price, James C. Stringham and others appeared in the ministry. The business was as usual at this meeting of the year.

—A correspondent writes: Caln Quarterly Meeting was held at East Caln on the 26th ultimo. The meeting was smaller than usual owing to inclemency of the weather. Jesse Webster gave a very good discourse. The three queries and their answers were read. A committee was appointed to hold circular meetings to try and stir up the luke warm members. The first of these will be held at Columbia, on the 5th of 2d month. Caln quarter is composed of Uwchlan, Bradford, and Sadsbury monthly meetings.

—A Temperance Conference, under charge of the Temperance Committee, was held at Pennsbury meeting-house, (Bucks county), on the 22d ult. The audience present fairly filled the end in which meetings are held. Samuel Swain opened with an address, Marion Lovett, of Pennsbury, gave a reading, and Amos R. Ellis a recitation. Several of the committee then addressed the meeting. Jeremiah Hayhurst, Joseph Flowers, Samuel Swain and George Justice all calling upon the young people, of whom there was a considerable number present, to give their influence, both by precept and example, to forward the good work. After a few moments of silence the conference closed, having been in session about two hours. As usual, temperance literature was distributed at the close.

A NATURALIST, describing the curious arrangement for breathing furnished to insects, says: "If we take any moderately large insect, say a wasp or hornet, we can see, even with the naked eye, that a series of small, spot-like marks run along either side of the body. These apparent spots, which are generally eighteen or twenty in number, are, in fact, the apertures through which air is admitted into the system, and are generally formed in such a manner that no extraneous matter can by any possibility find entrance. Sometimes they are furnished with a pair of horny lips, which can be opened and closed at the will of the insect; in other cases they are densely fringed with stiff interlacing bristles, forming a filter, which allows air, and air alone, to pass. But the apparatus, or whatever character it may be, is always so wonderfully perfect in its action that it has been found impossible to inject the body of a dead insect with even so subtle a medium as spirits of wine, although the subject was first immersed in the fluid and then placed beneath the receiver of an air pump."

FRIENDS' BOARDING SCHOOL AT NEWTOWN SQUARE.

SOME of the readers of the INTELLIGENCER AND JOURNAL may not be aware that there is a boarding-school for Friends' children or those Friendly inclined within the limits of Concord Quarterly Meeting. A few years ago some members of Newtown Meeting, Delaware Co., Pa., were desirous of affording an opportunity for children to receive a guarded education, where the fundamental principles and testimonies of our Religious Society would be respected and inculcated, and upon terms so moderate that many who could not afford to send to the more expensive schools would avail themselves thereof.

The school has been in operation now nearly two years as a boarding and day school, under the charge of Hanna R. Caley, and has more than equaled the expectation of its original projectors. James C. and Gertrude Stringham, formerly of Crum Elbow, New York, are superintendents, and have charge of the boarding departments. The school is situated in one of the most healthy and fertile districts in that rich county, and for both boys and girls.

The building is adapted to the accommodation of ten girls and twelve boys, and as many more day scholars; although the school room and dining room are already crowded, there is still room for two more boys in the sleeping department. Those having charge feel grateful for the success that has attained them, and hope the same success may annually be supplied by those who are glad to avail themselves of its low price, and the advantage of giving their children a liberal education under circumstances so favorable to increase their attachment to our society.

ASA GRAY THE BOTANIST.

THE death of Professor Asa Gray, the eminent botanist, which occurred at Cambridge, Mass., on the 30th ult., has already been mentioned in this paper. He was born in Paris, Oneida county, N. Y., November 18th, 1810. He was educated at the Clinton Grammar School and the Fanfield Academy, afterwards studying medicine at the College of Physicians and Surgeons of the Western District of New York. He was graduated a doctor in medicine in 1831, but turned his attention to the study of botany with Dr. John Torrey. In 1834 he was appointed botanist to the United States Exploring Expedition, under Captain Charles Wilkes, but, in consequence of the delay in starting, he resigned his post in 1837. Continuing his botanical studies, and being a clear and entertaining writer on his favorite branch, he became widely known, and, after declining the chair of botany in the University of Michigan, accepted the Fisher Professorship of Natural History at Harvard, a position which he held from 1843 to 1873, when he retired from the active duties of the office, though still retaining his connection with the school.

While still a very young man he projected and commenced with Dr. John Torrey, that splendid work, the "Synoptical Flora of the United States," which was to contain a brief description of every plant growing in this country. This was commenced

in 1838 and was issued in numbers until the Western exploring expedition began to make so many and such important additions to the American flora that he found the work would be very imperfect. It was then suspended until 1878, when, in connection with Mr. Sereno Watson and other eminent botanists (Dr. Torrey having died), the work was taken up at the place where it had abruptly broken off. It was the intention to conclude the description of the succeeding natural orders of plants and then return to and revise the account of the earlier orders. It is stated that the material for the work is in such good condition that, notwithstanding the death of the master mind, this intention will be carried out, and the flora of the United States will be adequately described in a single work.

This was his most ambitious literary work, but it is by his "Text Book" and "Manual" that he is most widely known. The "Text Book" tells in the pleasantest and simplest fashion the most important facts in the anatomy, physiology and classification of plants. The "Manual" gives a brief account of the plants found in the Northern United States east of the Mississippi, and is accompanied by a key by which the unlearned may determine the name of almost any plant he may find. It is scarcely any wonder that these two books have become not only the text books for schools, but the hand book for self instruction in thousands of families all over the Northern and Eastern States, and have made the name of Asa Gray familiar almost everywhere.

The honors Professor Gray has received from colleges and learned societies have been very numerous. Harvard made him an A. M., Hamilton, an LL. D., and the learned societies in many of the civilized countries of the world have honored him, but his most enduring fame is as the author of the simple little books which tell "How Plants Grow" and "How Plants Behave," and which have planted a crop of botanists in villages and hamlets all over his native land.

[An article contributed to the Philadelphia *Ledger* by Professor J. T. Rothrock, discusses the work of Prof. Gray, as follows.—EDS.]

Regarded as a man of science he was a wonder. Probably few men—certainly no other American botanist—ever approached him in keenness of observation or deduction, and his memory was no less remarkable. On one occasion I handed him a common-looking plant, with the request that he would give me its name. With hardly a trace of hesitation he replied, "that is so-and-so"—adding, "but I have not seen it for twenty years, and then only an imperfect specimen from Texas." The work of Dr. Gray, reckoned in pages, vast as that was, gives no real idea as to the value of what he did. It was his critical, accurate statement of scientific fact, or hypothesis, that gave special worth to all his labors. This desire for absolute, exact truth in his writing seemed to saturate his whole life. He was never satisfied with any sentence unless it expressed the very shade of meaning that he intended it should.

Of all our botanists, Professor Gray was the one most widely known abroad. He not only stood at the head of systematic botany in North America, but was by common consent placed in the very front rank among the systematists of the world. Higher recognition than he ever sought was cheerfully accorded him by his European contemporaries.

Professor Gray's repeated visits to Europe were, as a rule, in the interest of American botany. By consulting the various foreign herbaria in which the earlier collections made in North America were stored, he was able to make clear very many points in the nomenclature of our plants which could be settled in no other way. Here, then, his labors did more than those of any other man to put our American botanical nomenclature on a permanent basis and in accord with that recognized abroad, and this has been an inestimable gain to the science of our land. Had it not been for this work it would very often have been hard to indicate what plant was intended by a given botanical name. We might then, with perfect truth, say that Dr. Gray's great gift to his favorite science was precision.

So much for Asa Gray, the botanist. It was a great boon to know him as such; but it was a greater privilege to know him as a man. No one more fully recognized the whole breadth of duty to God, his neighbor, and himself than the subject of this communication; and but few exemplified so completely a perfect life in all these relations. He could be stern and inflexible when there was need, but his habitual mood was that of a man always anxious to render some one happy. He could not avoid knowing the high estimation in which he was held throughout the entire country, as his life for the past ten years was almost a continuous ovation. Men in all stations did him honor, but to the very last he remained, in spite of this, as simple-minded and as unassuming as a child. From ocean to ocean and from Maine to Texas there are those in whose aid he gave time, advice, assistance, and scientific information so freely and ungrudgingly that the manner of bestowal was even more prized than the gift itself. Asa Gray never grew old. His hair had been silvered and frosted for many, many years, but his heart was young, and his presence in a company became a fountain of perpetual youth, a source of pure joy, and an inspiration to many a younger person. He was, in the best sense of the word, an earnest Christian, who never for one moment felt a shadow of shame in his belief, or ever failed to regard his Creator as a loving father. No fashionable wave of doubt or of scientific scepticism ever blurred or dimmed his view of heavenly things. And we know—

——"To such as he
There cometh certain immortality."

O, many a shaft, at random sent,
Finds mark the archer little meant!
And many a word at random spoken,
May soothe, or wound, a heart that's broken.

SIR WALTER SCOTT.

THE glory of God in this world is the production of his own likeness in the hearts and lives of men; his own likeness, which also, by original birthright is theirs.

For Friends' Intelligencer and Journal.

WHAT CAN I DO?

WHAT can I do, what can I do,
To help in the world as I go journeying through?
The great round world with its oceans and lands,
The world that is asking for care at our hands,
The old, old world, to each comer so new—
What can I do? What can I do?

What can I write, what shall I say
To aid the next traveler coming this way,
In the old, old path so many have gone
And left kindly tokens to help us along?
I wish to help others in just the same way;
So what shall I write? What shall I say?

Do with thy strength, do with thy might
The work that lies nearest 'twixt morning and night.
The talents entrusted thee strive to increase,
Lest they rust in thy coffers and rob thee of peace.
The pathway of duty keep ever in sight,
Then work with thy strength, work with thy might.

Write what thou mayest—say what thou must—
A song for the weary, a prayer of trust,
Whatever good earnestly done in thy day
Must help the next traveler coming thy way.
To the thirsty a drop, to the starving a crust,
Give what thou mayest—leave it in trust.

L. W. W.

Newtown, Pa.

I SHALL BE SATISFIED.

NOT here, not here, not where the sparkling waters
Fade into mocking sands as we draw near,
When in the wilderness each footstep falters,
"I shall be satisfied" but oh! not here.

Not here where all our dreams of bliss deceive us,
Where the worn spirit never gains its goal,
Where haunted ever by the thoughts that grieve us,
Across us floods of bitter memories roll.

There is a land where every pulse is thrilling
With rapture earth's sojourners may not know,
Where heaven's repose the weary heart is stilling
And peacefully life's time-tossed currents flow.

Far out of sight while sorrows still enfold us
Lies the fair country where our hearts abide.
And of its bliss is nought more wondrous told us
Than these few words: I shall be satisfied.

I shall be satisfied! the spirit's yearning
For sweet companionship of kindred minds,
The silent love that meets with no returning,
The inspiration that no language finds.

Shall they be satisfied? The soul's vain longing,
The aching void which nothing earthly fills,—
Oh what desires upon my heart are thronging,
As I look upwards to the heavenly hills

Whither my weak and weary steps are tending,
Saviour and Lord, with thy frail child abide,
Guide me towards home, where all my sorrows ending,
I shall see thee, and shall be satisfied.

LYRA ANGELICANA.

How beautiful is faith; yet faith without works availeth nothing.—B. W. S.

THE HIDDEN SPARK.

CHANCE-SOWN, upon the wandering air
Borne by a lawless, plumy sail,
The vagrant thistle down the vale
Lays tribute on each laborer's care.

Deep-hid beneath the slumberous pines,
Long in its acorn lies the oak,
Yet rises at the woodman's stroke
Where now the sun, life-giving shines.

Through rough, brown clods of earliest spring
The plowman thrusts his eager share;
He knows the grain he buries there
Its ripened, glad increase shall bring.

Germ-hidden in the poet's heart,
A secret power, mysterious, sleeps:
It wakens and a nation weeps,
Swayed by the passion of his art.

For every seed that bides, a time,
For every germ, a sudden day,
A flame, a life, a soul in clay,
A burst into its glorious prime!

O mystery beyond our reach,
Safe hid in every germ of life,
What secret spring of spirit strife
Thus measures out a span to each?

—D. H. R. Goodale, in Independent.

CO-EDUCATION AT ADELBERT COLLEGE.

IT is definitely decided that Adelbert College shall no longer admit girls, and Cleveland, Ohio, is in a ferment of excitement. The decision is unpopular with the mass of the citizens, as well as with the young women now in the college. But the alumni, most of whom graduated before Adelbert admitted women, are opposed to co-education. Dr. Haydn, the new president, is also opposed; above all, a few rich men are understood to be willing to give large sums to the college on condition that the young women are excluded. Accordingly, the deed is done. The girls now in college will be allowed to finish their course, but will not recite with the young men; and no more girls will be admitted. There is some talk about providing an Annex for women in the future; but the college has not money enough at present to establish one.

Young women have been admitted to Adelbert since 1884, and it is admitted that they have taken more than their share of the honors. The two scholars who stand highest in this year's class are girls. Judge Upson, vice-president of the board of trustees, said in his speech at the inauguration of the new president:

"For those young women who have entered our doors in days past and are with us now, we have nothing but words of commendation. Their course through these not untroubled years has been characterized by fitting decorum, studiousness, and fidelity, crowned with success."

Judge Upson defended the exclusion of the girls at great length. He said that Ohio abounded in coëducational colleges, some of them so large and successful that Adelbert could not compare with them. There was no demand for another coëducational col-

lege, but a separate college—or rather two separate colleges, one for men, and one for women—would meet a real want on the part of parents who did not believe in coëducation.

Judge Upson favors the union of the two medical colleges that now exist in Cleveland, and enlarged upon the folly and needless expense of keeping up two colleges for the same purpose in the same city, when one strong institution would do as well and better. He went on to advocate the establishment, wherever possible, of two colleges side by side, one for boys, and the other for girls, and did not seem to perceive the inconsistency of his argument. Moreover, the proposed annex for girls is as yet "all in the air," and may never become an accomplished fact. Meanwhile, Cleveland girls who want a collegiate education will have to go away from home to get it, and much dissatisfaction prevails.

It remains to be seen whether Adelbert's new departure will be a success financially. It will attract gifts from the opponents of coëducation; but the money of the friends of coëducation will go elsewhere. The latter class is growing, the former steadily diminishing. Justice and liberality are principles to be followed, whether they pay or not; but in the long run they generally do pay.—*Woman's Journal.*

ASTRONOMICAL.

OBSERVATIONS THROUGH THE GREAT LICK TELESCOPE.

Since the 36-inch object glass of the Lick telescope, the largest instrument of its kind in the world, was put in place by Alvin Clark, Mount Hamilton, California, the site of the observatory, has been visited by the severest snow-storms on record in that section of the State. A recent dispatch from San Francisco says: The monster dome has been frozen so solid that it could not be revolved, and for most of the time the sky has been so overcast that satisfactory observations have been impossible. Last night, however, the astronomers succeeded in melting the ring of ice which prevented the movement of the dome, and a few photographs were taken for the purpose of determining the focal point of the photographic lens. The results obtained were considered satisfactory, though it was evident that slight corrections of the lens will be necessary before perfect work can be done. Professor James E. Keller, one of the small party of astronomers and optical experts now on Mount Hamilton, furnishes the following account of last night's observation through the great glass:—

After a week of fog and snow and patient waiting on the part of the occupants of the Lick Observatory a favorable opportunity for testing the powers of the great telescope occurred on the night of the 7th of January. The object glass had been placed in position on December 31, and a few stars had been observed for the partial adjustment of the instrument, but heavy clouds coming up soon brought all further work to a close. The night of the 7th, however, was perfectly bright and cloudless, and promised excellent observations. The great dome could not be turned, and the non-congealing liquid with which the annular trough around its base will be filled has not yet been provided, and the severe mountain weather of the preceding week had frozen everything solid. It was therefore necessary to watch the stars as they crossed the slit or opening in the dome, but as this is wide enough to give half an hour's steady observations no inconvenience was felt beyond the necessity of a little waiting.

The first star which showed itself in the slit when the shutters were opened was Rigel, a bright star of the first magnitude, with a small companion which is visible in a two-inch telescope. An observer accustomed to the Pygly instrument would hardly have recognized the two blazing stars which appeared in the field of view of the thirty-six-inch equatorial, so widely separated that it scarcely seemed proper to class them together as a double star. Later in the evening Bethel-guese and Procyon came within range, as well as many small stars. About 9 o'clock the great nebula in Orion came into view. It shone with wonderful brilliancy, and exhibited a wealth of indetails. This nebula is too extensive to be seen in the telescope at a single view. The widest field which could be employed was only sufficient to include the brightest of the central portion, and the great outlying streamers had to be examined separately by moving the telescope. In this way they could by followed out into space for millions of miles until they finally faded from view.

Numerous stars which passed over the opening after this were used to adjust the finder's circles and other parts of the instrument. A short calculation showed that the planet Saturn was due in a place opposite the site at half an hour after midnight, and Captain Floyd, Mr. Swazy, Mr. Clark, and myself, with a few workmen and one of the ladies, whose astronomical enthusiasm rose superior to the attractions of sleep, remained to see how it would appear in the field of view of the great telescope. At the computed time Saturn reached the edge of the opening and Ambrose Swazy, who, in spite of mathematics, had been watching for half an hour at the eyepiece, was rewarded for his patience by the first peep at the great planet. There was not one scientist or mechanic of the group of men gathered around the telescope who did not utter exclamations of wonder as the flood of light from the glorious object in the instrument entered his eye. It was beyond doubt the greatest telescopic spectral ever beheld by man. The great planet with the wonderful rings, its belts, and its satellites, shone with a splendor and distinctness of detail never before equalled.

The chief characteristics of Saturn in the great glass as compared to its appearance in a smaller instrument was the sharp outline of the planet's edges and the shadow projected on them, the number of strict paralysisms of the belts of the body of the planet, and a certain minute structure of the rings, which will be a revelation to astronomers. The change in the weather to-day indicates that the mammoth telescope will soon be in complete working order, when important results may be expected.

ENGLISH IDOLATRY OF PHYSICAL POWER.

THE reception given Sullivan in England is another illustration of the immense popularity of "sport" of every description in that country, and especially of everything of an amusing or entertaining kind that comes from America. The reception given to "Buffalo Bill" would hardly have been possible anywhere else. Sullivan's will probably not equal it, because he looks rather too much of a brute to be takeu up by the ladies; but if he enjoys the hospitality of the Prince of Wales, as he is said to have done, or be about to do, there is no knowing what may happen. Fordham, the jockey, who recently died, had almost as fine a funeral as Fred Archer, the other jockey, who died a year ago, and was in as comfortable circumstances. Both of them had as much space given to their mourning in the newspapers and public gossip, as any statesman, except perhaps Gladstone or Bright, would have. This tendency to the worship of the physical, or carnal, if any one likes the term better, is a very curious sign of the times. A recent writer in the *Saturday Review* treated it as a distinct indication of moral decay, and it certainly would be if other tendencies of a very different kind were not also very marked. The sneers often heaped upon moral reforms by people to whom Buffalo Bill and Sullivan are honored guests, is, however, a very curious phenomenon.—*New York Nation.*

IF ONE MUST WEEP.

Two meet life's lonely path along—
  Two part, and meet again no more,
Yet, ere they vanish 'mid the throng,
  Perchance one heart may never more
  Regain the peace it knew before;
If one must weep and one forget
'Twere better far they had not met.

The fleeting hour so quickly fled
  One never will recall again,
But one shall mourn the moment sped
  And peace of heart no more regain;
  While one will never feel a pain.
Since one must weep and one forget
'Twere better far they had not met.

W. E. HUNT.

SIR HENRY JAMES SUMNER MAINE, the eminent English writer on legal topics, died at Cannes, France, on Saturday, February 4, aged 66. He was graduated at Cambridge and was afterward a professor of civil law in the university. From 1862 to 1869 he resided in India as law member of the supreme government, an office which he filled with great honor. On returning to England he became professor of jurisprudence at Oxford, and the next year became a member of the council of the Secretary of State for India and was knighted. His published works are chiefly devoted to the origin and development of institutions, the condition of primitive society, and the growth of law and legal conceptions, subjects upon which he was the highest authority. Among these are "Ancient Law" (1861), "Village Communities" (1871), "Early History of Institutions" (1875), and "Modern Theories of Succession to Property" (1878).

ASTRONOMY IN THE COUNTRY.

To counterbalance the discomforts of winter observations of the stars, the observer finds that the softer skies of summer have no such marvellous brilliants to dazzle his eyes as those that illumine the hyemal heavens. To comprehend the real glories of the celestial sphere in the depth of winter, one should spend a few clear nights in the rural districts of New York or New England, when the hills, clad with sparkling blankets of crusted snow, reflect the glitter of the living sky. In the pure frosty air the stars seem splintered and multiplied indefinitely, and the brighter ones shine with a splendor of light and color unknown to the denizen of the smoky city, whose eyes are dulled and blinded by the glare of street lights. There one may detect the delicate shade of green that lurks in the imperial blaze of Sirius, the beautiful rose-red light of Aldebaran, the rich orange hue of Betelgeuse, the blue-white radiance of Rigel, and the pearly lustre of Capella. If you have never seen the starry heavens except as they appear from city streets and squares, then, I had almost said, you have never seen them at all, and especially in the winter is this true. I wish I could describe to you the impression that they can make upon the opening mind of a country boy, who, knowing as yet nothing of the little great world around him, stands in the yawning silence of night and beholds the illimitably great world above him, looking deeper than thought can go into the shining vistas of the universe, and overwhelmed with the wonder of those marshalled suns.—*Popular Science Monthly.*

WHATEVER is done for a child as a child must be done while he is a child. Axiomatic as this truth is, it is not practically held as a truth by parents, teachers, or preachers, generally. Those who are responsible for the training of children are inclined to feel that the most important period of a child's life is a little later on than now. Yet the time of times for the improving of a child's mind, and for the shaping of a child's character, is the present hour. He who fails to realize this is so far unfitted to have the custody of children.—*S. S. Times.*

NEWS AND OTHER GLEANINGS.

—The Supreme Court of Wisconsin rules that the law which permits women to vote "at all elections pertaining to school matters" does not permit them to vote for mayor, although in Wisconsin cities the mayor appoints the school boards, and the election of the mayor thus determines the character of the schools. The Circuit Court had decided the case in favor of the women. By the Supreme Court this decision is reversed.

—John G. Whittier has written a verse to be placed on the John Milton memorial window in the church of St. Margaret, Westminster, (London), which is paid for by George W. Childs, of this city. The verse is as follows:

"The New World honors him whose lofty plea
For England's freedom made her own more sure;
Whose song, immortal as its theme, shall be
Their common freehold while both worlds endure."

—Of the twelve men, including William Lloyd Garrison, who met in Boston on January 6th, fifty-six years ago, and signed the Constitution of the Anti-Slavery Society, only one, Oliver Johnson, now survives.

—During last month, the Baltimore *American* says, "there have been enough cases of heroism in this country to make a hundred thrilling romances. They show with gratifying emphasis that the element of courage is still a large part of the American character, and prove that such deeds do not necessitate great circumstances to make people brave."

—The Merced Canal, thought to be the largest irrigation work ever constructed in this country, representing an expenditure of five years of time and $1,500,000 of money, was recently opened. It is expected to irrigate about one quarter of the county of Merced, Cal., which lies in the heart of the San Joaquim Valley.

—The British are rapidly pushing their India railway system in Afghanistan. Bostan, a point twenty-five miles beyond Quetta, to which a railway is open for traffic, has become an emporium of Candahar. In a single week recently 500 tons of dried fruits, wool, and merchandise were brought there for carriage to India.

—"Portable sunlight" is the name given to a new illuminant, of which a public test has been made in Glasgow by the patentees. It is obtained by the evaporation of creosote, tar, or other hydrocarbon oils, and it produces an intense white flame up to 3,000 candle power, at a cost of about two cents per hour per 1,000 candles.

—Sharp shocks of earthquake have been felt in different parts of England and Scotland. A cablegram from London dated Second month 2d, says: Reports from Birmingham, Coventry, and Edgbaston, a suburb of Birmingham, show that disturbances occurred in those places. In Scotland the shocks were especially marked at Dingwall, County Ross, and at Inverness. The eartnquake was felt with severity at places on a line stretching from Fort William in the west, to Nairn in the east. The shock was also felt in other parts of the Highlands.

—The Jubilee Memorial to the Queen in favor of stopping the sale of liquor on Sunday has only recently been handed in. It was signed by 1,132,608 women, and is said to be the largest ever presented. Among the ladies who waited on the Home Secretary with it, were John Bright's sister, Mrs. Bright Lucas, President of the British Women's Temperance Association, and Mrs. Temple, the wife of the Bishop of London. They mentioned the significant fact that in one small town where there were forty-two liquor sellers, the wives of all but four had signed the memorial. —*Exchange.*

—In experiments during the past year, celluloid has proven an excellent sheathing for ships, in place of copper, over which it has some advantages. Another new application of a valuable material is the use of the lately cheapened aluminum for dental plates, which is better than rubber, and cheaper and stronger than gold.

CURRENT EVENTS.

We regret to annouce the sudden death of the eminent American conchologist, George W. Tryon, Jr., of Philadelphia, which occurred after a brief but seemingly not dangerous illness, on the afternoon of the 5th inst. He is best known by his great work, the "Manual of Conchology," which has been in process of publication for several years, and is about two-thirds finished. His loss is not only a great blow to conchological science the world over, but also a severe one to many who were privileged to know him in his daily walks, and to the Academy of Natural Science of this city of which he has long been one of the most active and influential members. He was conversant with the principles and testimonies of the Society of Friends, and during the ministry of George Truman he attended Race street Meeting.

The coal miners' strike in the Pennsylvania anthracite regions continues, and there have been some collisions between the officers of the law and strikers. At Shenandoah, in Schuylkill county, there was a serious riot, on the 4th inst. In the Wyoming and Lackawanna regions, where the men have been steadily at work, they have now made a demand for an increase of 15 per cent in wages.

The steamship *Colon*, at New York from Panama, reports that with the advent of the dry season work has been generally resumed on the canal, and there is a great activity on most of the sections. At the important station of Culebra preparations are making for uninterrupted work day and night. The electric light has been introduced there for this purpose. Other important arrangements have been made at many other points.

Prince Bismarck made a very important speech in the German Reichstag, (Parliament), on the 6th instant, reviewing the situation of Europe, and especially referring to the treaty of alliance between Germany and Austria, which has recently been made public. His speech is regarded as pacific, and calculated to help maintain peace, but this is uncertain.

The case of the Crown Prince of Germany continues baffling and serious. A dispatch from San Remo, (Italy), where he is, says: Dr. Mackenzie proposes to return to London, and report here again in a fortnight. There is no immediate necessity for tracheotomy in the Crown Prince's case, but it is feared it will be indispensable in the near future.

London, Feb. 7.—Advices from Shanghai say that nearly 2,000,000 persons are utterly destitute through the Hoang-Ho floods.

The Regents of the University of California have elected Horace F. Davis, of San Frrncisco, its president.

During last month there were 377 fires in New York city, the largest monthly record in the history of the Fire Department.

On account of the alleged misuse of its funds by the President and Vice-President, the Metropolitan National Bank of Cincinnati has suspended and will be wound up.

NOTICES.

*** The Committee of the Monthly Meeting of Friends of Philadelphia have arranged for a social gathering in the Parlor and Library Room at Race street, on Seventh-day evening, 11th inst., at 7 o'clock, to which the members are invited. Also such Friends who have not yet transferred their certificates, and others who are not members but attend the meetings at Race street, West Philadelphia, or Girard Avenue are solicited to be in attendance.

*** Quarterly meetings in Second month will occur as follows:

11. Miami, Waynesville, O.
11. Salem, Salem, O.
11. Pelham Half-Yearly Meeting, Pelham, Ont.
15. Easton and Saratoga, Easton, N. Y.
16. Shrewsbury and Rahway, Plainfield, N. J.
18. Short Creek, near Mt. Pleasant, O.
20. Centre, Bald Eagle, Pa.
20. Duanesburg, Albany, N. Y.
22. Stillwater, Plainfield, O.
23. Bucks, Wrightstown, Pa.
25. Blue River, Benjaminville, Ill.
27. Warrington, Monallen, Pa.
27. Canada Half-Yearly Meeting Pickering, Ont.
28. Burlington, Mt. Holly, N. J.
29. Southern, Camden, Del.

S., New York, 2 bbls.; Robert and Anna Biddle, Phila., 2½ bbls.; Through Amos Hillborn & Co., 3 bbls.; Unknown, 3 bbls.; Jonathan W. Plummer, Chicago, 147 First Readers.

We are very grateful for so many boxes and barrels of ready-made clothing, etc. We look over and mark a price on all articles, except those put in the give-way barrel, and two girls keep the little store in order and do the selling between school hours. All ribbons, feathers, and trimmings tied up in 5 cent and 10 cent bundles, are readily sold to trim some of the hats that come. We can use everything, and often need just what is left out. Narrow strips of carpet, to cover blocks for chalk erasers, old scissors; and even soiled ruffling does to dress dolls. Unless there is some mark *inside*, we cannot tell where it is from, and some are thus left unacknowledged.

MARTHA SCHOFIELD.

*** Religious Services will be held at the Friends' Home for children, 4011 Aspen St., West Philadelphia, next First-day, (Second month 12th), at 3 p. m.

Samuel S. Ash, and Samuel Swain, of Bristol, are expected to be present. All are invited.

PUBLISHERS' NOTICES.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

*** We particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

Association of Friends to Promote the Education of the Colored People of the South.

OFFICERS.

HOWARD M. JENKINS, Chairman, 921 Arch Street, Phila.
SARAH J. ASH, Secretary, 1717 Vine Street, Phila.
LYDIA A. SCHOFIELD, Correspondent, 1717 Vine St., Phila.
HENRY M. LAING, Treasurer, 30 N. Third St., Phila.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall, Doylestown, Pa.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly *to raise funds.* These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

HISTORY OF THE SCHOOLS.

Both these schools have been in existence since the early years of the work of colored education in the South, soon after the close of the war. The Aiken School was begun in 1868, with the support of the Germantown, (Philadelphia) Branch of the Freedmen's Union Commission (of which Sarah F. Corlies was Secretary, and Elizabeth Dorsey, Treasurer.) In later years it was sustained almost entirely by the exertions of Martha Schofield. In 1886, however, finding the burden of its support too great, she made an appeal to the Yearly Meetings of Friends, in Philadelphia and New York, for aid, and as part of the response to this appeal, this Association was organized at Philadelphia, in Sixth month, 1886.

The Aiken School has a valuable property (largely accumulated by Martha Schofield), which has been placed in the hands of a Board of Trustees. A beginning has been made in the formation of an endowment fund.

The school at Mt. Pleasant was established in the First month, 1866, in charge of Cornelia Hancock, under the supervision and with the support of the "Friends' Association of Philadelphia, for the Aid and Elevation of the Freedmen," and was maintained for a number of years by that excellent organization. In late years, however, its funds have been raised, from year to year, almost entirely by Henry M. Laing, Treasurer of the Association, who like M. Schofield, found this tax upon him too great.

CHARACTER OF THE SCHOOLS.

The Aiken School had last year 270 pupils, divided into nine classes, with eight instructors. This year, the attendance is larger, and an additional teacher is employed. There are, this year, about 300, of whom 40 are boarding students. Members of the highest class are prepared to become teachers. All are taught industries,—the girls being taught to cut, make, and mend garments, etc.; the boys instructed in printing, carpentry, and many details of labor about the school property.

The Mt. Pleasant School had last year about 100 pupils, with three teachers. They average somewhat younger than those at Aiken. The instruction of this school has been carried on for two years in a church, granted free of charge for the purpose, the school building having been demolished by a storm in the summer of 1885. (A special fund for rebuilding has been partly raised.)

THE NEED FOR CONTINUED AID.

Those engaged in the work of instructing the colored people appeal to us to continue a measure of aid. While some progress has been made in establishing public schools in the South, they are yet very insufficient. The school term in South Carolina averages not over three months in the year, and the schools themselves are too few, and seldom well provided in any particular. To withdraw from the field yet, seems like abandoning the colored people, in the very midst of the work for their elevation. Moreover, it is evident that for years to come there will be great need of schools which will do more than provide mere book instruction,—will, in addition to this, give practical training in habits of honest and orderly industry. Such work as this is done by these schools, and they are fully entitled to the confidence and help of all who are interested in the welfare of the hitherto unfortunate colored people. Money sent them is used with the utmost economy, and is made to yield the best possible maximum of results. The funds supplied by the Association go only to the compensation of teachers, and so far have not been sufficient for that purpose. The students either support themselves, or are otherwise aided.

*** THE ASSOCIATION EARNESTLY APPEALS TO THOSE INTERESTED FOR AID TO ITS FUNDS.

Statement of Henry M. Laing, Treasurer, to Seventh month 1, 1887.

SUNRISE.

THE world swings out toward the light,
And skies are growing clearer,
The gray of dawn is on the hills,
The golden glow draws nearer.

Forever when the night grows long,
And human moan ascendeth,
God-justice strikes the haughty wrong,
And his long-suffering endeth.

Since Calvary and Olivet,
There is no hopeless sorrow;
Wrong ever builds a tottering throne,
And Christ shall reign to-morrow.

—*Selected.*

ANNIVERSARY MEETING AT EASTON FRIENDS' MEETING, NEW YORK.

ON the 25th of Twelfth month last, an anniversary meeting was held at Easton Friends' meeting, Washington county, New York, it being then one hundred years since the house was built. Two essays in prose and two in verse were read on the occasion, which those interested have desired us to print. We give in this issue three of the four: the other will appear next week.—EDS. INTELLIGENCER AND JOURNAL.]

To-day we would pay a tribute of respect to this place, which is consecrated by so many hallowed memories, and speak a word for the great testimonies which the Society of Friends have so long professed.

How many voices have here spoken words of courage, of sincerity, and of heavenly wisdom, by which the honest hearted have been strengthened and instructed, conviction and reproof brought home to the delinquent, and visitations of the Father's love extended to the indifferent.

Could these walls rehearse what they have witnessed of all the varied phases, of the deepest experiences of life, the little that we can say would be as naught.

Here have the marriage vows of many of our ancestors been spoken; from this place many loved ones have been carried to their long home, and we have taken our first step toward that deeper life—towards the wisdom and the sacred joy which sorrow ought to bring us, and does to those transfigured souls whom we sometimes look upon and revere.

While other doors have been closed, these have been open to the philanthropist and reformer, as well as to the religious teachers, who have here given utterance to many soul-stirring and effectual truths. The strongholds of bigotry and superstition have been assailed with boldness, yet to the candid inquirer and sincere seeker, the language of encouragement, of consolation, and comfort has been breathed.

Elias Hicks made his first visit here in 1781. In his journal he says: "After stopping at Albany, we rode to Saratoga, since called Easton, and lodged with our friend Daniel Conwell. It was late in the night before we arrived, and the evening snowy. The country being newly settled, Friends' houses were generally poor, so that several times I felt the snow fall on my face when in bed. We attended the meetings belonging to this Monthly Meeting, four in number, Easton alias Saratoga, Danby, White Creek and Hoosick. The monthly meeting was held alternately at this latter place and Saratoga. We also visited nearly all the families belonging to this monthly meeting, and had good satisfaction, and a peaceful reward of our labors.

"At this time the King's party bore rule on Long Island, but the contending parties had such confidence in us, and favor toward us, that they allowed us to pass freely through both their armies, on religious accounts—a privilege which they would not grant to their own people."

Although he was one of those who stood near the Master trying to catch his spirit and sat most teachably and sympathizingly at his feet, yet he was reviled and persecuted because he called for a high righteousness and endeavored to remove the trammels of superstition and tradition that had fastened upon the Society.

Oh his second visit, in 1819, he had a concern to appoint a meeting at Union Village, where the most bitter things had been said of him. It was held in the Baptist Church, and attended by a large concourse of people from the surrounding country.

I recently heard from Allen Gifford, an account of that meeting, the details of which he evidently remembers. He said it was the most powerful sermon he ever heard—the truth delivered being brought home to the consciences of many, the influence of which still exists.

Friends formerly came from Peru, a distance of one hundred miles, to attend the Quarterly Meeting at this place. On one occasion Huldah Hoag came on horseback with a babe in her arms,—a zeal almost unknown at the present time.

There have been many bright spirits belonging to this meeting whose faces shone with the inner life of peace and the serenity of truth. Two of those, whom we have known, most deeply impressed me

The life of Esther Wilbur was an effective sermon in behalf of substantial goodness and liberal Christianity.

She was one of the early advocates of the anti-slavery cause in this place, and was actively engaged to remove whatever stood in opposition to the spirit of universal liberty and toleration.

"She did with cheerful will,
What others talked of, while their hands were still."

Hannah Peckham was an embodiment, in her daily home life, of industry, honesty, meekness, forbearance, and charity, "not only the charity of giving alms, of clothing the naked and feeding the hungry, but the greater, the more elevated charity of judging favorably the imputed or proved errors of others, a charity so seldom practised."

The conviction that the Christian has duties to be faithfully performed in civil society, has made Friends prominent in all reforms that have had to do with the advancement and welfare of their fellow-men.

The mild and persuasive treatment of the Indian by George Fox, William Penn, and others, seemed to insure their respect and confidence for succeeding generations. The Society has continued from that day to this, to take active measures to aid and civilize the Indians. The movement against negro slavery had its germs in the earliest Quaker days. Later, there was a bitter spirit of pro-slavery, and opposition to the reformatory movements of the day, in the Society; yet the anti-slavery cause had many of its most clear-sighted, radical, and intrepid supporters among Friends.

They believed in and advocated the equality of all human beings, and the place assigned woman, by them, has been an important means of elevating the sex to its right place, both in church and daily life. Many who are now foremost in advocating the civil and political rights of women, were educated under this influence.

The testimony Friends have always borne against wars and fighting is well known, so that they have commanded the esteem even of the vicious, and it has often operated as a shield from insult and abuse.

The history of the Society, in dealing with the subject of Temperance, has shown much vigor and determination. Many of the yearly meetings make intemperance a disownable offense. Their testimony in all places has given no uncertain sound, and of late years tobacco and other narcotics are included. The several yearly meetings have formed a Friends' Union for Philanthropic Labor, to promote the cause of prison reform, temperance, education, social purity, and arbitration.

While many are thus performing active and earnest labor, still others are needed to coöperate with those already engaged in the good work. The one hundredth anniversary of this meeting-house finds it occupied by only a few members, when the large building would scarcely accommodate the many who thronged its doors in years gone by.

Reasons have been sought for the decline of the Society, but no one cause is sufficient to account for it. A spirit of intolerance and conservatism, in contrast with that civil and religious liberty the early Friends endured persecution to establish has prevailed. Many have not lived up to their high profession, and have departed from that honest simplicity and faithfulness that so eminently characterized their predecessors. Others, who have felt called to publish the gospel, by their indiscreet forwardness have become too active in their own spirits, and have taken off the savor of many of the most favored solemnities by a long, lifeless testimony.

The essential truth which Quakerism has stood for, is the doctrine of the Inner Light; that the spirit of God is revealed through the spiritual nature of man. If that nature is to germinate and develop, it must be from the spiritual light which kindles and unfolds it. "There is a light that lighteth every man that cometh into the world. We cannot live wholly on the light of the past any more than we can raise fruits and flowers from the sunlight that shone two thousand years ago."

The radical difference between Friends and the Orthodox sects in regard to inspiration, lies in the fact, that while the latter limit divine revelation to the writers of the Bible, the Friends claim that the soul of man always was, and continues to be, accessible to his Creator, and still others as rationally claim that the spirit of God acts on the human spirit not directly, but through his messengers.

The Holy Spirit which inspired prophets and qualified apostles, continues to animate, guide, and comfort all righteous men and women, and the fuller and deeper our spiritual lives, the more we know of the great Eternal Source.

George Fox, Elias Hicks, and Lucretia Mott, were each a type of that growth of religious freedom, in their respective age and generation, that the fundamental principles of the Society of Friends was alone able to develop. They were denounced and persecuted because they were innovators. Our beloved Master was an innovator. No great reform was ever accomplished without some old tradition being forfeited. Well was it for the people that they had those teachers who could give to them inspired truth. They did their work, and great has been its result. It may be as truly said of them *all*, as of any one, that their voices were heard wherever an unpopular truth needed defense, wherever a popular evil needed to be testified against, wherever a wronged man or woman needed a champion, there they spoke the word that the spirit of truth and right bade them. "Their lives were ordered by divine laws, not by human opinions and customs."

The tributes recently offered John G. Whittier, on his 80th birthday, were a recognition of that fine and lofty service wrought solely by intellectual influence and moral inspiration. The Inner Light has led him at last through bitter contests, but with self respect and the honor of his country, to

"An old age, serene and bright,
And lovely as a Lapland night."

It is our high privilege and duty to carry forward those measures and principles to which so many true and earnest lives have been devoted. Obedience to daily requirements of duty, faithfulness to convictions of right, simple allegiance to the Lord,

will make our lives as theirs were, a blessing to all around us.

It may be our mission to lead on to that great Society of Friends towards which the age is groping its way. Quakerism as an organization may pass away, but the principles it has upheld will remain, because truth is eternal.

"The Lord of the seed field takes care of his own,
And the world shall yet reap what our sowers have sown."

CHLOE A. SISSON.

Here stands the old Friends' Meeting-house,
So strongly built of old;
How much of love and faithfulness
Could these dear walls unfold!

How many of our fathers dear,
And fathers' fathers, too,
To God have bowed in worship here,
Faithful their whole life through!

Here they have met the strong and true,
The youthful ones, and just,
And each here found the Counselor
To whom they looked in trust.

They met in silence, calm and sweet,
Or listened to the voice
Of some of God's own chosen ones,
Who bade their hearts rejoice

That they were free to worship Him
In their own simple way,
And learn of Him the rugged path
That leads to endless day.

But where are now those hoary heads?
Alas! they yonder lie,
Their bodies in the silent graves,
Their souls with God on high.

Year after year has rolled away,
One hundred years have passed,
And generations come and gone,
But still these timbers last.

Hewn from the old primeval wood,
And placed with greatest care,
From sill to rafter it was built
With strength beyond compare.

Its timbers rude, were firmly laid,
And, after years had passed,
Some changes by the Friends were made,
To give a neater cast.

Thus with the dear old Friends it was,
So strong their faith and true;
But younger ones came on the field,
Who wanted something new.

Some more attractions than they found
Within these simple walls,
And so they've gone with other sects,
Or walk in gayer halls.

For seventeen long and lonesome years,
For thus it seemed to some,
These doors were closed on Sabbath days,
For want of Friends to come.

One Friend, who in his younger days
Came here to worship God,
Heard in his soul the still, small voice
Say, "Bow beneath the rod."

"Go ask thy friends to come with thee,
And sit a silent hour."
And so he bowed with Christian grace,
And yielded to the power.

Again the doors are open wide,
And many gather here,
Though few of them 'mongst Friends are named,
Still all are Friends sincere.

May each and all who worship here,
Some benefit obtain,
To help them lead a better life,
True happiness to gain.

PHEBE A. HOAG.

Friends, the event we meet to celebrate to-day, played an important part during the last century, in moulding the past, and thereby controlling present public opinion.

I venture to say that there were but few of the older and prominent families who first settled in Easton, but what were nearly or remotely allied to the Society of Friends, and endorsed their principles. Hence the wide latitude allowed public and individual opinion and personal liberty, both in speech and action.

Three generations have listened to the soul-stirring appeals made within these walls to emancipate humanity from the thralldom of priestcraft, to hasten the fall of human slavery at home and abroad, and as far as possible by precept and example, to elevate manhood above the control and curse of passions, and above the terrible abuse of strong drink.

The questions discussed here, and the bold opinions expressed, have had no uncertain sound, but unhesitatingly advocated "justice to all, malice to none," and to-day there is not a building in town whose doors are so freely thrown open for the discussion of all moral questions as the Old South Meeting-house; and spiritually I can almost see written over the door in bright letters "Walk in friend, thou art welcome,—use, but not abuse."

A century ago this building was erected on its present site by a noble band of earnest toilers, just west of the old log structure built some eight or ten years previously.

Then the country was covered by the primeval forest, with only here and there a clearing, the smoke of the cabin floating above the tree-tops alone indicating the approach of civilization. Many a journey was performed on horse-back, blazed trees indicating the roadway.

During this period many grave difficulties had to be overcome. The smoke of the wigwam had not gone out; the Iroquois, the Hurons, the Delawares—the poor Indians still claimed the right to the soil, the home of their fathers, the last resting place of their fallen braves. Often in prowling throughout this region they peered in the windows of the little log meeting-house; once, on one occasion, sent expressly on the murderous intention of slaughtering all convened, had, dangling at their belts, bleeding scalps.

But the same over-ruling Providence they have ever trusted in prevailed. After viewing for a few

moments the silent worshippers, they departed just as stealthily as they came.

The government had just emerged from a long and cruel war, from which Friends kept aloof, all industries were at a standstill, except those of the firesides,—domestic manufactures alone were relied upon,—yet, amidst all these trials, under the providence of God they reared their meeting-house, and semi-weekly met and sat in solemn silence, listening to the still, small voice of their Saviour, speaking to them as man never spoke, in the innermost recesses of the soul—pointing to human duty amidst the trials and perplexities of life, declaring that the Inward Light which enlighteneth everyone is a "Manifestation of the spirit of God, graciously imparted to every rational soul, and is sufficient if faithfully regarded and obeyed to secure its salvation," proclaiming that "under the influence of this divine spirit there can be no war, no slavery, no oppression of any kind, no intemperance, no deception, no injustice, no impurity, no tale-bearing or detraction, no vanity, pride, ostentation, extravagance, nor any thing that destroys human happiness, while man was performing life's journey."

"That these precious favors could be obtained by an earnest, heartfelt desire and longing for them accompanied by humble, devoted obedience to every manifestation of duty, that all might enjoy them by going to the fountain head—the Inward Teacher, the Faithful Sentinel,—the Spirit of God speaking to his children in all ages, calling them to duty and rewards."

But to be brief, how changed! Where are the ancient worthies who worshipped here since this meeting was organized a century ago, gone? Moved on to the silent realms of the dead—the roll has been called and they have been mustered out,—born again. All that now remains to us is this worthy example, bright, living testimonies, written on the page of history, the crowning principle of which is "the Fatherhood of God, and the Brotherhood of Man."

In silence these bare walls and empty seats proclaim that although worshippers may decline, principles are eternal; that they nobly did their duty, bore their burdens during the heat of the day; that we have a duty to perform e're the rest of heaven comes, the shadow strikes us, and we too are compelled to wrap the mantle of forgetfulness about us and drop into the past.

L. P.

Not what a man has, but what a man is, is the true measure of a man's worth. It is his properties, rather than his property, by which he is to be estimated. And the way in which a man shows what he is, and what are his properties, is by his chosen activities in life. His tastes and their gratifying, his desires and their pursuing, are a resultant evidence of a man's character. "Be aware, therefore," says Marcus Aurelius, "that every man is worth just so much as the things are worth about which he busies himself." Hence it is true, in a sense, that what we do for others is the evidence of what we are in ourselves.—*Selected.*

CAPITAL PUNISHMENT IN NEW YORK.

Editors Intelligencer and Journal:

Enclosed herewith I forward you a copy of a memorial recently presented by the Representative Committee of New York and Genesee Yearly Meetings to the Legislatures of New York (now in session) for the abolition of the death penalty.

The memorial and bills designed to carry out its object having previously been presented and referred to the judiciary committees of both branches, arrangements were made to give us a hearing, on the 8th inst., and both committees agreed to meet us in joint session in the Senate chamber. In accordance with that arrangement Aaron M. Powell, of New York, and William P. Sisson and myself of Genesee, met the committee and were cordially and respectfully received, and patiently and attentively listened to, while we briefly and tersely presented our reasons for the abolition of the death penalty, which we did by an elaboration of the points made in the memorial, and giving our reasons therefor. We presented the thought that under the requirements of Christian principles, punishment for crime was designed to be reformatory and not retaliatory, and that the law that demanded a life for a life was simply retaliatory, and hence in conflict with the Christian principles under which we professed to live, and that the many and varied attempts made to avoid the consummation of the sentence after conviction for capital offenses, by a resort to legal technicalities are evidence of the shrinking in the public mind from administering such a penalty. The growing sentiment that it is not right, as evinced in the conscientious scruples which prevent so large a proportion of our best citizens from accepting jury duty in such cases, rendered the death penalty valueless as a deterrent from the commission of crime. It was shown that imprisonment for life without the hope of pardon except as noted in the memorial would obviate these objections, render convictions more certain, and promote less incentives for evasion of the penalty, and thus make life more secure, because it is generally conceded that it is not the severity of the penalty, but the certainty of its imposition that made it a deterrent.

It was also forcibly presented for the consideration of the committees, that whatever may have been regarded as the necessities of the past—it was no longer necessary to commit legal murder to secure society from the crime of the murderer—and the treatment we adopt towards the insane who in many instances are more dangerous than the sane murderer, was forcibly presented as an argument that society could protect itself from a re-commission of murder without the taking of life—and the thought was urged upon the committees that the infliction of the death penalty, tended to lessen the regard for the sacredness of human life, and thus contributed to the insecurity of society and therefore if we would deter individuals from allowing their passions when inflamed to lead them to destroy life, society in its aggregate, must refrain from legally taking life and thus show its respect for its sacredness.

Mendon Centre, N.Y. John J. Cornell.

MEMORIAL.

To the Legislature of the State of New York, in Senate and Assembly Convened:

We, the Representative Committees of Genesee Yearly Meeting of the Society of Friends and of the New York Yearly Meeting of the Society of Friends, whose members, of both Yearly Meetings, are residents of the State of New York, respectfully present for your consideration the following reasons for the abolition of the death penalty for what are generally known as capital crimes:

1st.—It is inconsistent with the Christian religion under which we are professing to live.

2nd.—It does not in experience prove a deterrent to the commission of similar crimes.

3rd.—The end sought to be obtained, which is the security of community, can be reached equally as well by imprisonment for life, provided the power to pardon is removed, or restricted to those cases in which evidence shall be furnished which clearly establishes the innocence of the convicted party.

4th.—Its abolition and the substitution of imprisonment for life would give the person convicted time for repentance, and thus better fit him or her to enter the presence of God in the future life.

5th.—It would prevent the execution of those who were really innocent, but whom a chain of circumstances had so involved as to lead to their conviction.

We therefore respectfully ask your honorable body to give the subject a careful consideration, with the view of thus removing that which to us appears a relic of barbarism; and giving to those who, under the influence of unhallowed passion, should subject themselves to the infliction of the death penalty under our present statute, a better opportunity to prepare for so serious and solemn an event as death, and at the same time, as we believe, adding to the security of society by making the infliction of the penalty imposed more certain, because imprisonment for life would remove the incentive that now moves so many to palliate, evade, or frustrate the infliction of the death penalty.

We would also respectfully urge upon you, in this connection, the adoption of some mode to restrict the pardoning power, as referred to, because we believe the manner in which this has been exercised in the liberation of some criminals whose sentences have been commuted, is one of the reasons why so many are willing to tolerate the use of the death penalty, and therefore such a restriction would give an added security to the community.

Signed by direction and on behalf of said committees,

WILLIAM CORNELL,
Clerk of the Representative Committee of Genesee Yearly Meeting.
CHARLES GRIFFEN,
Clerk of the Representative Committee of New York Yearly Meeting.

THOUGH we may not all possess the wisdom of Solomon, yet in every generation there probably are those as wise as he.—B. W. S.

WOMAN IN THE BRAHMO SOMAJ.

(*Concluded from last week.*)

THE spirit which animated the Brahmo Somaj could not be satisfied with merely destructive reforms, but endeavored to express its religious feeling in domestic life, and in appropriate social festivals which the Brahmos felt the need of substituting for the idolatrous ones to which they objected. "From annual gatherings, these festivals have come to be held many times a year. Their devotional character has intensified, their social importance has deepened. They repeatedly bring about the union of Brahmos and their wives from different parts of the country and they have opened the way to reforms."

This led to the interest of women in the church. "The women, reflecting on their condition,—moral, social, intellectual,—wanted to know more, see more, enjoy more, and, in short, felt the foregleams of better and brighter social destiny."

Weekly worship was instituted for ladies only, and sermons were preached suited for their special necessities. This grew into a special society called the Aryanari Somaj, which weekly holds its divine services, conducted by one of the ladies. Finally a separate gallery was provided for the ladies, in 1869, where they sit in large numbers and take part in the public worship of the Brahmo Somaj of India. But our Indian brothers have clear vision, and they have already begun to see that the work of the twentieth century, soon coming upon us, is to be a work not done *for* women, but in men; for Keshub Chunder Sen says: "With shame and humiliation I make this confession. Our men by a long course of training in vicious ideas about the other sex, are more or less unfit now to mix with women."

Another practical measure was the founding of homes in which families could live, the men and women sharing in family life on a truer basis than in the Hindu homes. By these measures so much has been accomplished that Mozoombar can say, "For the real workers in the Brahmo Somaj, it is a matter of no little satisfaction that, if they have been able to do nothing more, they have at least unlocked the door of that ancient prison, the zenana." It is impossible that right relations can be established until one standard of purity and morality is accepted for both sexes.

The next gain for woman was in education, and the Brahmo Somaj has done a noble work for her. The female improvement department was formed in 1870, to raise the intellectual, moral, and social status of Hindu women. In 1871 the female normal and adult school was established. This was the school in whose beginning the late Miss Carpenter was so deeply interested. It opened with fourteen pupils, but the number rose to twenty-four in a year. Four were unmarried, three widows, seventeen married women. A literary association (Bama Helthaishinee Sara) was formed under the presidency of Keshub Chunder Sen. Meetings were held once a month and the discussions published in the *Bama Bodhini Patica*, or *Ladies' Journal*. Since then the universities have been opened to women; and as fast as the young Hindus are fitted for it, they can

receive a truly liberal education. Mozoomdar says; "The *Paricharika* is a monthly magazine in Bengali, published for the benefit of the other sex, among whom it has been popular, and some of whom have contributed to its columns from time to time.

"Weekly lectures are given in the Ladies' Institution, on history, natural theology, female biography, and natural philosophy. About fifty ladies attend them regularly. A ladies' committee, consisting of English and Hindoo ladies of the most distinguished position, has been formed."

In confirmation of my own statements, which are mainly drawn from the writings of Mr. Mozoomdar, and other publications of the Brahmo Somaj itself, the following notes are kindly furnished me by Dr. S. F. Norris, a medical woman who went to India under the auspices of one of our missionary societies, and who has resided there for many years:

"A few years ago no Hindu gentleman dared appear in public with his wife. If they were to go to the same place, they went in separate carriages, *his* a few rods in advance of hers. But in Bombay they are now beginning to go out together, both walking and driving. This is partly due to European influences (there are ten thousand Europeans there), but more to the 'Prarthana Somaj' or prayer league. This is similar to the 'Brahmo Somaj' of Calcutta, and its members are nearly all from high castes. They abjure caste and idolatry, eat and drink with Christians, Musselmans, or Parsis, educate their wives and daughters, and treat them as though they were nearly as good as themselves. They are also striving to do away with the custom of early marriages. Their ladies accompany them to their *mundir*, or church; and one of them plays a harmonium accompaniment to their hymns.

"The members of the 'Prarthana Somaj' take their wives and daughters to public places, walk and drive with them; and now the orthodox Hindus are following their example to a certain extent. They have one or more private schools for their daughters and many of their wives are being instructed at home. They are also organizing evening schools for the industrial classes, having already established four of these schools for the people who work in the mills.

"In Calcutta, the Brahmo Somajists are conducting a fine institution for young women, called the 'Victoria Institution,' and a similar one for young men, called the 'Albert Institution.'

"Ramabai, the learned Brahman widow, was a member of the 'Prarthana Somaj' when she left India for England. Through her influence several associations of women were formed which promise to aid her in carrying out her purpose; namely to advocate the proper position of women in the land. She headed the procession of two hundred high caste women when they appeared before the Education Commission with a petition asking that the precious boon of education might be given to Brahman women and a law be enacted against early marriages."

But the movement in India is not a utilarian movement alone, but confessedly and primarily a religious one. The meditations and philosophy of this spiritual people have led them to the distinct avowal of a doctrine which expresses in theological language the great underlying principle which, if it permeates the thought and life of a people, must lead to a recognition of the equality of woman and her permanent value in her own personality, and not merely as a help or adjunct to man.

The Brahmo Somaj acknowledges the doctrine of the Divine Maternity, and it has become customary to address the Diety as Mother. This idea is not a wholly new one either to Eastern thought or to some Western churches, its revival shows how deeply they have felt the importance of doing justice to the feminine principle.

Mr. Mozoomdar, in his closing chapter on "Divine Maternity," says: "Properly speaking, the Supreme Spirit can neither be our father nor our mother. He is absolutely beyond these and all other human relations. * * * * We, in the littleness of our speech and conception, apply to him names, and realize him in relations that are most sacred and dear to our hearts. And we know of no name and no relation nearer or more sacred than that of Mother. * * * If all women could be viewed as incarnations of the Motherhood of God, feminine beauty, refinement, and affection would become holier objects than they now are." He closes with these words: "God as Mother shall rule in our hearts, in our homes, and in our church, drawing men and women together as one holy family."

One of the devotional hymns of the Brahmo Somaj contains these tender words:

"Hold, hold thy patience, contain thy tears,
Have hope, do not despair,
The cry of the sinner will be heard by the Mother,
Sorrow will not last all thy days.

"On the lap of mercy, giving thee rest,
The Mother will wash thee in waters of joy,
And console thee with sweet words,
Therefore cease to mourn."

It has seemed to me worth while to recount the brave work done by a little band of men and women in a distant country, because it gives us strength and courage in our own struggle. It shows us how it is connected with every great uplifting in thought and life. We may find that we can learn much from those we have often despised and rejected. And, as we catch in these deeds and utterances some faint echoes of words spoken and brave acts done on our own continent, we may remember that we are not working for ourselves alone, but that everything done for the good of woman here is felt around the globe. For twenty-five years we have demanded the medical education of women. Now, the woman physician enters the zenana to carry comfort and healing where no man is allowed to enter; and women from Japan and China and India are coming to our schools, to carry back this precious knowledge with them.

Let us work with our brothers and sisters for the emancipation of woman from all false restrictions, for higher ideas and simpler form of marriage, for the purity of man—the companion of woman—for the elevation and happiness of domestic life, for the education of woman in all that can enable her to

serve the highest and best, with heart, mind, and soul, in the recognition of her great mission on earth and of her maternity as the representative of the divine life and love.

ERROR AND SIN.

Editors INTELLIGENCER AND JOURNAL:

In a recent issue of your paper was a frank and earnest expression of objection to the classification of error with sin, as being hurtful to the spiritual nature. If I may be completely exonerated from any thought of wishing to encourage religious discussion in a controversial spirit, I should like to try to give it the clearest and simplest answer in my power. But to be just it is necessary to go back to the difference in standpoint between the writer and myself, from which we see the truth. There can be no doubt that what he says is truth for him. To me, for some reason, it means little. I do not know why, unless because, although true, it is not the truth which my soul most needs to-day. Sin, the deliberate transgression of a known law of God, is to my mind the greatest of all errors, the most utterly foolish of all mistakes. The sinner gives gold for rubbish; destroys his own best wealth and power, stands in his own light, burns down his own house. Would he do it if he really knew? He attempts to combat the Infinite Good, that Father whose love constantly wills us better things than we know how to wish for ourselves. I feel it to be a vastly unequal conflict, evil against good. Time and effort devoted to unworthy objects are time and effort wasted; Infinite Love will conquer. Think for one moment of the disparity between the sinner and his God. Since a finite being cannot imagine anything so great as infinity, I will use the following illustration. Suppose every star which we can see upon a clear night (added to every star which the telescope reveals) to be a sun more or less like our own, and surrounded by a few planets as is ours; and that every one of those planets was constructed to offer at some one period of its existence, food and shelter to an average of 3,000,000,000 human beings as is our earth. Then God, being infinite, is able to enter minutely into the daily life, thoughts, and deeds of every man, woman, and child of them all; and that with as tender an interest as if each were the only human being living. This, I believe, to be true, and is nearest to an infinite love that I can imagine. In time it most surely wins us all to put our entire collection of energies into its work—to teach the erring what is true wisdom. Let us then allow it to flow through us in a healing stream of beneficent goodness. We have a glorious inheritance in the teachings of the early Friends. Quakerism means the right to think for one's self, so one think humbly, prayerfully; to grow, according to the laws of our separate personalities, out of one spirit, as do the various plants out of one earth. Our privilege of individuality cannot be over-estimated so long as we remember the duties of aspiration, happiness, and self-sacrifice. Truth is like a superb palace of varied outline; it looks very different from different standpoints. Yet all sincere views must have some element of truth in them. And it is not only truth that we seek, *that* is close at hand always—we could not escape it if we would. But we seek the highest truth which we are capable of appreciating, and assimilating to our needs. For instance, to a class of small children in First-day school was put the question "Which do you like better, giving or receiving Christmas presents?" They replied unanimously and with perfect truth, "receiving." Yet Christ said "It is more blessed to give." So it is, at a later stage. Two opposite truths may at different times meet the urgent needs of the same soul. One must know the undoubted blessedness of receiving before he can fully appreciate the words of Christ, the higher Truth. It seems to me that the knowledge should do away, wherever it penetrates, with all intolerance and controversy. All Friends should be friends. The higher and truer the civilization, the more distinct units men become, and the mightier force they wield when they combine for any good purpose. Let us then, as true Friends, build upon the one simple, beautiful corner-stone of our faith, that obedience to the voice of God in the soul is able to perfect us individually, and to bring in the reign of peace and joy, the kingdom of God upon earth. A.

West Chester, Pa.

SCRIPTURE LESSON, No. 9.

SECOND MONTH 26TH, 1888.

TOPIC: THE RICH YOUNG RULER.

GOLDEN TEXT: "Ye cannot serve God and Mammon."—Matt. 6: 24.

READ Matt. 19: 12-26.

ONE came to Jesus,—a young man. Mark says "he came running" (10: 17). Luke calls him "a lawyer" (10: 25). It is probable he held some position in the synagogue, or was a member of the great council of the nation.

He fell upon his knees. This was the customary salutation where it was desired to show respect or regard.

Master. This appellation gives evidence of the estimation in which Jesus was held as a teacher. In the old version this thought is strengthened by the addition of Good before Master. *Why asketh thou me concerning that which is good? One there is who is good.* This seems intended to turn the mind of the inquirer to God, as the direct source of all good. Then citing him to the commandments, the keeping of which according to the teaching of Hebrew Law would give great happiness, Jesus hears the reply, *"All these things have I observed:"*—he was righteous so far as the moral law required, he had grown to manhood under its wholesome and salutary influence, but there was an unrest, a sense of something that had not yet been attained. It was this unsatisfied feeling that brought him to Jesus.

What lack I yet? There was only one thing in the way, and Jesus knew what that was, when he said, *"Sell that thou hast and give to the poor."* All the righteousness of his previous life had been under the law, and was but a reasonable duty,—there had been no sacrifice for love's sake, no parting with that which he valued, for the good of others,—he had not been born from above, not arisen to the conception of religion as a giving of self. His great possessions had been as a wall of separation between him and the

needy, struggling multitudes. He could not see their want, and was not prepared to surrender all his treasures for their benefit. The test was too great, and he went away sorrowful, made sad by the conviction that he could not be a disciple of Jesus while his heart was engrossed with his worldly possessions, yet so wedded to these things that he was unwilling to give them up.

It is easier for a camel, etc. This was a proverb in common use among the Jews, and is still common among the Arabians. It is intended to show how impossible a thing may be. There is in this no condemnation of riches as such, but the condemnation lies in setting the affections upon them, making them the sole object of desire for the sake of being rich.

They who have great possessions have great responsibility; to hold and use for the common welfare is an important trust, committed to human keeping, and it can only be safely and wisely administered by him who recognizes his responsibilty as a steward of the King of kings.

Doubtless each of us will, if watchful, find that there are things we so greatly desire, that to secure them we incline to sacrifice the welfare of others and our own best interests. As the love of his earthly possessions kept in the heart of the young ruler the feeling that there was something yet lacking in himself, so in every heart the undue clinging to selfish gratifications hinders spiritual growth.

Some are ambitious for fine dress, some for wealth; one sacrifices unduly to reach literary attainment, another to be dainty and stylish in habit. There are many, many things, which, if indulged, weaken in us the essentials of a wholesome life dedicated to truth and right. If our lesson to-day has aroused the earnest query, What lack I yet? and the heart can sincerely say, "Take what thou wilt away," let the impression be so fostered that it may mark an advance towards that rich life which comes from living close to the "Giver of all good."

The rich young ruler is an example of the unsatisfying power of worldly treasures. It is even more than this, for it shows that moral rectitude will not give rest and tranquility to the soul. "I shall be satisfied, when I awake with thy likeness," expresses the deep feeling of the soul willing to part with everything that stands in the way of its peace.

Human goodness must have its part and place, but the soul's insatiable longing for life eternal is not satisfied until it is brought into oneness with the eternal source of life and immortality.

The divine requirings are always graduated to human needs. Our Heavenly Father only asks us to part with that which stands in the way of our acceptance with him. Jesus expressed this thought when he declared "He that loveth father or mother, son or daughter, more than me, is not worthy of me," and again he said in substance, he that is not willing to part with houses and lands and all earthly possessions, when they stand in the way of dedication to the higher interests of the spiritual life, will, like the rich young ruler of our lesson, go away sorrowful.

THE OLD AND THE NEW.

WHILE the new wine of to-day's thought may not find safety and preservation in the old bottles of yesterday, there is great instruction in the teaching of Jesus, as it relates to the things that are both old and new in all that concerns our religious life.

He uses as an illustration the householder. He had been discoursing with the twelve about the kingdom of heaven, comparing it to "the treasure hidden in the field," to "the merchant seeking goodly pearls," to "the net cast into the sea." All these he had carefully explained, and at the end of the lesson so faithfully set before them, he, as a wise teacher, queries: "Have ye understood all these things?" and upon their answering that they had, he makes the application, bringing home to them the duty that the knowledge they have just gained lays upon them. "Therefore," said he, "every scribe who hath been made a disciple to the kingdom of heaven, is like unto a man that is a householder, who bringeth forth out of his treasure things new and old."

This lesson is valuable not alone for their sakes to whom it was given, but for us, also, that we may set a proper estimate upon the inheritance of wisdom and knowledge that has come down to us, and use it for our own profit and for the good of others. All are of value, both the old things that belong to the ages long past as well as the newer treasures of our own time. This is exemplified in the estimate that we set upon the imperishable things that are handed down by inheritance,—the gold and silver and sparkling gems—the beautiful things that grow more and more precious as they pass on to successive generations. We all know something of this feeling, and can well understand the meaning of the great Teacher, in his application of this thought to the Hebrew scriptures.

It was the office of the scribe to expound these scriptures, and preserve the records in their integrity. As the scribes became disciples of Jesus they were not to set aside the lessons of wisdom and truth contained in the scriptures that it had been theirs to expound and make clear to the Hebrew people, but they were to make use of these as he was doing, as confirming the testimony he had been annointed to

declare, and thus establish the unity that existed between "the law as given by Moses" and "the grace and truth which came by Jesus Christ."

And while whatever was written aforetime must in the nature of things be secondary to the fresh revealings of to-day, the things that are new take precedence of the old,—the living reality give inspiration to the now and here, the old has a priceless value in that it makes plain to us one important lesson which we do well to keep in mind, the lesson of the eternity of truth and goodness, and the constant and unfailing love that ever seeks to bring the human family into harmony with truth and goodness,—that has "no pleasure in the death of the wicked, but that the wicked turn from his way and live."

As this great love gains the mastery it makes each one over whom it obtains the controlling influence so conformed to the "law of the spirit of life in Christ Jesus" which it represents, that he becomes "a living epistle, known and read of all men," making a record of fruitfulness in every good word and work that shall have its influence in all coming generations.

MARRIAGES.

WALKER—THOMAS.—In Norristown, Pa., on Fifth-day, Second month 9th, 1888, under the care of Radnor Monthly Meeting of Friends, Mary R., daughter of Elwood and Annie L. Thomas, and Ivins C. Walker, son of Isabella B. Walker, of Chester Valley, Pa.

DEATHS.

JONES.—At Darby, Pa., First month 29th, 1888, Louisa Castner, wife of Isaac T. Jones, formerly of Philadelphia; aged 75.

MEREDITH.—At his residence, near Pennville, Jay Co., Indiana, on the 26th of First month, 1888, James Meredith, in the 76th year of his age. A consistent member and Elder of Camden Monthly Meeting. He had stepped out of the house in the evening, apparently in usual health, but not returning as soon as expected, a search was instituted, and his lifeless body was found near the house a few minutes later. He grew to manhood in Montgomery county, Pa., and went to Wayne county, Ind., in 1835. He was married First month 1st, 1840, to Mary Malsby, who survives him. They remained near Richmond until the autumn of 1853, when they moved to the locality of his death. He possessed a quiet, pleasant manner, and was very exemplary in all his associations. J. B.

REEDER.—In Newtown Township, Bucks county, Pa., on the 8th of Second month, 1888, of Pleura-Pneumonia, George C. Reeder, a member and overseer of Wrightstown Monthly Meeting.

"A LOVE of truth is laudable, but we must be careful not to mistake for it the love of our own opinions."

GUARD well thy speech, for words thoughtlessly spoken oft-times make enemies of friends.—B. W. S.

NEWS OF FRIENDS.

FRIENDS IN FAIRFAX QUARTER.

Editors INTELLIGENCER AND JOURNAL:

IN looking over the paper of the 4th inst. I was sorry to find such a gloomy view of the condition of our Society in this section, as was expressed by a writer there, under the heading of "Fairfax Quarterly Meeting."

The smallness of the late gathering of that body is therein attributed to want of zeal and fear of inclement weather.

The real condition of things within the limits of Fairfax Quarter can hardly be appreciated by many Friends who will read this article, who are situated in neighborhoods where their proximity to their meetings and their railroad facilities enable them to leave home in the morning, attend their quarterly or other meetings, and return the same day to their homes, and all done with but little exposure or discomfort. From such a neighborhood as this I came, over twenty years ago, to a branch of Fairfax Quarterly Meeting, and I have not ceased to admire the zeal and energy displayed by these Southern Friends, in their efforts to attend all their meetings, however remote they might be.

Fairfax Quarter is composed of four monthly meetings, widely separated; the two extremes, Hopewell and Alexandria, being about eighty miles apart, with the other two, Fairfax and Goose Creek, lying between. In the winter, the Quarterly Meeting is held at Fairfax, in the village of Waterford, in Loudoun county, which is accessible by rail from Alexandria and Washington. Friends from Goose Creek and Hopewell must reach it by means of their own conveyances. Those from Hopewell must travel from thirty to fifty miles, and during the journey must cross the Blue Ridge Mountain and the Shenandoah River. As the river is not bridged at the usual crossing place, it frequently becomes impassable, either from high water or ice. When this is the case, Friends must either stay at home, or go by way of Harper's Ferry, (where there is a bridge) thereby considerably increasing the distance.

Under such circumstances as these, does it not require considerable zeal to induce people to leave comfortable homes, in the winter season, for a five days' trip in order to attend quarterly meeting?

Yet they do it; and those who went from this section to our late quarterly meeting at Fairfax, had to start in the early morning, in a storm of snow, rain, and sleet. Notwithstanding this, I do not know of any who had expected to go who were deterred on account of the weather. On the contrary, all who thought their own health and the condition of their families warranted them in leaving home, started, having faith to believe they were in the line of their duty, and would be cared for. And the result justified their faith.

Though the number may have seemed small, it included both sexes, and all ages, from the little child to the man and woman who have considerably passed their three score and ten.

Does this look like lack of zeal, or warrant the feeling of discouragement which seems to be manifested in the article referred to?

I was not one of those who was favored to be in attendance, but so far as I have heard from those who were there, the united testimony is that they "had a good meeting," and that although no ministers from other meetings were present, yet those of our own household who felt called to hand forth words of encouragement to those assembled, were much favored.

Would it not be better for our Society if we would try to take a more hopeful view of things than some of us seem inclined to do?

ANN B. BRANSON.

Hopewell, Va., Second month 6th.

Editors INTELLIGENCER AND JOURNAL:

Your last issue contained a short article in reference to the time of holding Fairfax Quarterly Meeting with some remarks rather unfavorable to the change made a few years ago.

While the writer seemed to attribute the small attendance of Friends to the change of time, we regret the entire failure to note the excellent attendence of the neighborhood people, the good order that prevailed, and the united expression that the ministry had been with life and power, as in days of old, encouraging, comforting, and strengthening.

While some of our members have not favored the change, to many of them it has proved entirely satisfactory. While the number of members from a distance was comparatively small, we must remember that many have been removed and the decrease in the size of our meetings is not altogether owing to a want of interest or zeal.

Those who came informed us they never performed the journey at this season with more comfort and *I* felt that it had been a favored occasion.

M. F. S.

Waterford, Second month 7th.

PHILADELPHIA QUARTERLY MEETING.

This Meeting, held on Third-day, the 7th inst., was unusually large. There were in attendance Allen Flitcraft, of Chester, Pa.; Isaac Wilson, of Canada; Watson Tomlinson, of Byberry; Joseph B. Livezey, of Mickleton, N. J., and John Haines, of Moorestown, N. J.; besides the ministers belonging to Philadelphia Quarter, all of whom were in attendance. It was gratifying to have Deborah F. Wharton among the latter, and to witness her interest in all that came before the meeting.

The deep and impressive silence was broken by Allen Flitcraft, who spoke from the prophecy, "Unto us a child is born, unto us a Son is given, and the government shall be upon his shoulder, and his name shall be called, Wonderful, Counsellor, Mighty God, Everlasting Father, Prince of Peace." He was followed by Isaac Wilson, who offered words of comfort to one whom he felt was discouraged, reminding her that as after the gloomy days, after the storms and the rain, the sun shines out clear and bright, so this dark, discouraging season will presently give place to the sun of God's light which will bring brightness to her mind. He then took up the subject of the former speaker,—The Christ-child that is born unto us, and the Son given, of which he said we have heard in the outward. This child must be born in our souls, and as the government is placed upon its shoulders, our earthly desires will be done away with and we be enabled to do that which accords with the will of our Heavenly Teacher. And this Son is born unto us every day, not a day of twenty-four hours, but every time a noble impulse is born in us, and this is the beginning of a new day.

Watson Tomlinson and Joseph B. Livezey spoke briefly and with much earnestness, and a few words from J. Haines closed the services of the meeting for worship, which was felt to be an occasion of more than usual interest and spiritual refreshment.

In the business meeting, minutes for Allen Flitcraft and Joseph B. Livezey, from their quarterly meetings were read, and as they indicate Gospel service amongst us, Friends were encouraged to do all that is in their power to aid them in this Christian labor. The queries usually replied to at this time were read and considered. The committee to visit subordinate meetings made a report showing they had been attending to the work. A nominating committee was appointed to bring forward at the next meeting the names of Friends to serve as a new visiting committee, as the changes that have taken place since the appointment leave many vacancies in the ranks. Other matters of routine business were transacted, and under a feeling that the proceedings had been owned and blest by the great Master of assemblies, the meeting concluded.

At the Select Meeting, held on the afternoon of the 6th, the recommendation of the ministry of Margaret P. Howard by the monthly meeting held at Race street, and of Edwin L. Peirce, by that held at Green street, came before the body, and after due consideration both were confirmed. R.

FARMINGTON QUARTERLY MEETING.

This was held at Macedon, N.Y., Second month 1st, 1888, the meeting of ministers and elders being held on the 31st ult. The quarterly meeting convened on the 1st inst., mostly composed of members of our own quarter. A few were present from the province of Ontario, Canada. The weather was mild and without storm; that of the week previous having been excessively stormy for four days, it was followed by an agreeable calm.

After the meeting had sat in a profitable quiet, J. J. Cornell opened a subject which had rested on his mind with peculiar force, that Friends were too apt to rely on and act according to the usages and belief of our predecessors in the dawn of Friends' Society. Rather, he believed, we should be prepared to receive the light of Truth as revealed direct from God. Edwin Ewer gave an earnest exhortation to build upon the true rock of life, which is Christ.

In the meeting for discipline, there was considerable business of interest, but no queries were answered, as this was one of the alternate quarterlies, when they are not required by our discipline.

In the evening of the 1st inst occurred our Quarterly Temperance Conference. There was much earnestness of feeling manifested in impromptu remarks, and incidents were related of the evils of intemper-

ance, which were listened to with close attention by many young people present. The selected readings were excellent, illustrating beautiful and impressive truths; at the close the writer felt it had been good to be there, and that whenever occasion required, we should endeavor to inculcate temperance in all things.

On Fifth-day 2d, was the public meeting. John J. Cornell was drawn forth to explain the account of the Garden of Eden, the tree of knowledge, and the trees of the garden,—the latter, as symbolic of the passions of man,—to be trained, cultivated, and subdued. He showed it infinitely better for the soul to yield a willing obedience to the behests of a loving Heavenly Father than an unwilling compliance for fear of punishment.

William Barker followed briefly, with the scriptural injunction: "Choose ye, this day, whom ye will serve. If Baal, serve him: if a righteous God, serve him," and portrayed the peaceful results of the one, and the sorrowful repentance following the other. Under a precious solemnity the meeting closed.

S. A. G.

—A private letter to one of the editors says: "We have just returned home from an absence of a week to attend our quarterly meeting, held at Macedon Centre, N. Y. We were met there by J. J. Cornell, wife, and mother. After the meeting we returned with them to Mendon, to their home. We had a very enjoyable time both at the meeting and socially. "Macedon meeting is composed mostly of aged ones who are quite feeble; insomuch that they have thought best to lay down the meeting held in the middle of the week. I was sorry for it, and could not but so express it. For it seems to me every meeting, however small, when laid down is weakening the structure. If the little ones are not kept up, soon there will be no large one."

COMMUNICATIONS.

REMARKS ON "A PLEA FOR UNITY."

Editors Intelligencer and Journal:

In the contribution "A Plea for Unity," published in your paper of the 4th inst., considerable stress is laid upon the term used by an "Orthodox" Friend, in his book, "Old Fashioned Quakerism," (which the author of the article quotes with much satisfaction), "God manifested in the flesh." It was shown long ago by Sir Isaac Newton that this was an unscriptural term, and in the revision of the Scriptures the phrase has been corrected, so that such language is not now in them at all.

Our friend, F. T. H., in the article alluded, to does not state which branch or party amongst our Orthodox Friends he would have us to unite with; it would certainly not be those whom Whittier, a few years since, characterized as having "abandoned the one distinctive root doctrine of our Religious Society—that from which it derives all that is peculiar to it in doctrine and testimony and which alone gives it a right to exist." Our friend has, no doubt, Philadelphia Friends in view in the union which he proposes as between us and them of religious fellowship. Now let us inquire whether such a union is within the possibilities of the present or of the future time. In the first place, we must have a Discipline,—a code of rules to govern us,—and hence it cannot be expected that our Friends would consent to accept our Orthodox Friends' present law which speaks of their members attending our meetings as "of evil tendency, as though they were meetings of Friends," and advises their "monthly meetings to testify against them,"—that is such of their members as attend our meetings. They have inserted in their Discipline, page 124, upon the subject of the Scriptures, as an evidence of their faith upon the subject of the Trinity, the text formerly found in John 5:7, which text has been found to be a perversion of the Scriptures, and is left out in the Revision. They have also altered their Discipline in very many respects since 1827,—notably the increase of power and authority given to the elders, and to the Meetings of ministers and elders, and the Meeting for Sufferings, and have even given to quarterly meetings the power of laying down monthly meetings, so that monthly meetings can be dissolved at the pleasure of the quarterly meeting. And upon the subject of the publication of books by members of the Society, the Meeting for Sufferings is invested with a supervisory power over the members of the yearly meeting, and of the quarterly meeting also.

I mention these things in the feeling of love and tenderness to our friend F. T. H., as well as toward our Orthodox brethren, amongst whom I number many dear friends.

B.

VIEWS ON WEIGHTY QUESTIONS.

Editor Intelligencer and Journal:

Having full faith in the original Quaker idea of the complete individuality of every human soul, as a recipient of inspiration—in other words "the Light Within,"—it would appear that the views expressed by J. J. Cornell in your issue of Second month 4th, are truly wise and should be heartily appreciated.

They are to the effect that we should be obedient to what the "Light" unfolds to us in our own day, "not (necessarily) to what it unfolded to George Fox in his day."

If we dare believe this a true definition of early Quakerism, it surely is endowed with a power of growth most hopeful to the world: for, standing upon this platform we may accept the "Light" of all the abounding knowledge, of every kind and on every hand, as it is spread before this age so amply, "enabling us," as Cornell says, "to see more clearly how to distinguish between what it (the Light) requires of *us* and the views in other ages that have been enunciated as necessary for men to believe."

We have also read with interest the well written "Plea for Unity," by F. T. Haines, in which is shown much ground for thought and comment; but, it appears to me, too much of a looking back towards a failing "Light," rather than to the clearer lights of a more experienced period of the world's growth.

When Friend Haines says, near his close: "Finally dear Friends, of all branches, bear in mind Jesus Christ died for us all," he indicates that either his light or my own, according to my soul's best intui-

tions and experience, combined with all the knowledge patiently gleaned during a life of seventy years, is, one or the other, misleading.

Friend Haines! Jesus of Nazareth *lived* for us, as did all wise and good men, before and since, from whose life and example we may reap benefit. This is according to the "Light" revealed through thousands of good and rational men. If he was a God, or the Son of God in a special sense, (as many still believe), *he could not die.* The Jews could only destroy the earthly body he lived in, liberating the God, or the Son of God, to arise to his glory, power, and beatitude,—his own proper life. If he was a man, they did the same, and released his real self-hood to dwell likewise in some of the heavenly mansions in that brighter sphere, essential to the very life of the infinite cosmos,—*i. e.*, "provided from the foundations of the world."

There was no *death*, no logical sacrifice, in either case, only a *release* through suffering, (as is our human lot), to a higher, a more perfect life.

I will not enlarge further, though my heart and mind are full.

JOHN G. JACKSON.

Hockessin, Delaware.

SILENT WORSHIP.

Editors INTELLIGENCER AND JOURNAL:

I PRESUME that Friends generally are not aware that silent worship was employed by the ancient Egyptians, long before the Christian Era. In Kenrick's "Ancient Egypt under the Pharaohs," I find the following, which is given as a passage from one of the older Hermetic Books: "Before all the things that actually exist, and before all beginnings, there is one God, prior even to the first god and king, remaining unmoved in the singleness of his own Unity; for neither is anything conceived by intellect inwoven with him, nor anything else; but he is established as the exemplar of the God who is good, who is his own father, self-begotten, and his only one parent. For he is both a beginning and god of gods, a monad from the one, prior to substance and the beginning of substance,—the first that conceives and the first that is conceived; on which account it is worshipped *only in silence.*"

Apropos of this subject, I might add that my friend, Taylor Bradley, who had charge of the Winnebago Indians at one time, informs me that in that tribe they were accustomed to wait upon the Great Spirit in silence.

S. S. GREEN.

Beatrice, Neb., Second month 8th.

PROFESSOR GRAY AND THE UNIVERSITY OF MICHIGAN.

Editors INTELLIGENCER AND JOURNAL:

IN your article on "Asa Gray the Botanist," in issue of 2d mo., 11th, you speak of Professor Gray as "declining the chair of botany in the University of Michigan." Perhaps your statement is misleading, for it seems that he resigned the chair of botany in the University of Michigan to accept the professorship of Natural History at Harvard. I quote from *Scientific American* of the 11th inst.: "The chair of botany in the University of Michigan was offered to him, which he accepted on condition that he be allowed a year of study in Europe. . . . . He visited Europe, carrying with him a commission to purchase a library for the college. He selected a nucleus for the collection of books with great judgment. It is said the collection thus selected is still looked upon with great pride by the university. He never entered upon the duties of the position of professor there." Very respectfully,

LOUIS B. AMBLER.

Kennett Square, Pa.

THE FIRST-DAY SCHOOLS.

EXTRACTS FROM MINUTES OF THE GIRARD AVENUE BIBLE CLASS.

PHILADELPHIA, First Mo. 15, 1888.

THE consideration of the eighth chapter of the Gospel according to John was continued from last meeting.

The 44th verse was taken up and explained. The term *devil*, as used here, does not necessarily signify a personal being; it means simply *evil.* As those who are led by the good Spirit of God are called children of God, so those who are controlled by evil dispositions may similarly be termed children of evil or of the devil. This evil, as manifested in the hearts of men, has been "from the beginning" a murderer or destroyer of their peace and well-being and an enemy of all that is good. When we thus understand these words of Jesus, they lose their offensive aspect and appear only the plain statement of the simple truth. He did not reject any of his hearers; he moved among them, ate with them, loved them, invited all to come to the knowledge of the truth and be free. History testifies to the extremely low moral condition of the Jews at that time; and the appearance among them of so exalted a character as Jesus, aroused by contrast, like the strife of darkness with light, that bitterness and hatred which led finally to his death. He was too far above his generation to be permitted to live. It becomes us, therefore, to throw the veil of charity over their blindness, remembering those words of Jesus himself, "Father, forgive them; for they know not what they do."

The expression, "If ye abide in my word," was thought to have a deeper spiritual meaning than "word" in its ordinary sense implies; just as in the saying, "If a man keep my word, he shall never see death," Jesus evidently did not mean the death of the body. In this connection, it was remarked that between the spiritual and the material or natural there is no distinct line of separation; they are blended into one. Since progress from the lower to the higher condition is gradual, rising slowly by imperceptible steps, how can we know when one has experienced the "new birth?" It is common for Christian professors to say of a good man who has done many good deeds, "All this is very excellent, but he has not been 'converted,' he has not 'experienced religion;'" forgetting that good deeds, as a rule, spring from goodness of heart, and the good heart has its religious experiences. It is true, the

soul that is engrossed with earthly vanities and ambitions or unlawful indulgences, and the soul that is devoted to life's earnest and most sacred duties, are, indeed, very far apart; yet there is no necessary conflict between the natural and the spiritual part of our being, and we should endeavor to bring them more and more into harmony with each other and with the divine. This additional thought was also expressed: as at its natural birth the child does not at once become fully conscious of its condition and surroundings, so he that is "born of the Spirit" grows gradually into the consciousness of his higher state. Faithfulness in the performance of those duties which are made known to us in each condition prepares the way for advancement to a better.

W. S. W., Secretary.

SWARTHMORE NOTES.

—At a recent special meeting of the Alumni Association it was decided to establish an Employment Bureau, to aid the graduates of the College in obtaining positions. The following were appointed a committee, representing the different professions, to draw up a plan for the organization of this Bureau, and report at the annual meeting in the 6th month: William P. Holcomb, Teaching; Arthur W. Bradley, Business; Isaac G. Smedley, Medicines.

—Andrew D. White, ex-President of the Cornell University, visited President Magill on Sixth and Seventh days of last week. They were once fellow-students in Yale College. President White spoke to the students in the collection on Seventh-day morning, reminding them of the great progress that had been made in this generation, and of the weight of responsibility resting upon them to make the record of the 20th century a proper advance upon that of the 19th. His remarks were received with deep interest and profound attention.

—Some may receive the "Appeal" for the Endowment Subscription a second time. Such will please remember that in sending out a very large number of these, amounting to some thousands, this will sometimes happen, but they will know that it was a clerical error, and did not occur from a disposition to unduly press the subscription.

—The Reception of the Sophomores by the Seniors on Seventh-day evening, the 11th inst., was an occasion of much interest, and brought to the college a number of the former members of the class of '88.

—In connection with the First-day school exercises, on the 12th inst., a very impressive paper was presented by Elizabeth Powell Bond, entitled "The Oil of Gladness." The text taken was: "Thou lovest righteousness and hatest wickedness; therefore God, thy God hath anointed thee with the oil of gladness above thy fellows."

"The highest revelation," said Emerson, "is that God is in every man." The incarnation is as universal as human life itself.

The quieter my body is, the more active in me are my thinking powers.—*Goethe's Mother.*

For Friends' Intelligencer and Journal.

TO JOHN G. WHITTIER.

"Whose eighty years but add a grace
And saintlier meaning to his face,—
Whose hopeful utterance through and through
The freshness of the morning blew."—*J. G. W.*

Oh that the muse would but inspire
A worthy theme to offer thee;
I fear mine's but a tuneless lyre,
Fit only for the willow tree.
Thy name, a nation's household word,
Greenleafed and garlanded with flowers;
Thy voice, that of the wild song bird,
Thrilling the soul with magic powers.
Thy thoughts come purer than the snow
Crowning Katahdin brightly now;
Yet freer than the winds which blow
Around that mountain's heaven-kissed brow
Thy acts have been throughout thy life
In full accord with thought and word:
Hath mingled with the world's wild strife,
And through its din thy voice is heard.
When semi-treason to the state
Was branding slavery as a wrong,
Or helping bondsmen from their fate,
Thy words were clear, pronounced, and strong.
And when the self-made spoiler dared
To light war's horrid torch of flame,
And freedom stood with bosom bared,
Afraid to breathe her own sweet name,
Thou wouldst not leave her to her fate,
But with thy counsel, not the sword,
Joining those chosen spirits great,
Served her with pen and glowing word.
The flag at Bunker Hill unfurled,
'Mid the first sword-flash freedom saw;
(The dearest flag in all the world,)
Thou christened, the "symbol of light and law."
Each war-worn veteran clasps thy hand,
As brother tried, they look on thee,
Counting thee first in the patriot band.
With Quaker faith, pure, set to poesy,
And I unto thy shrine did come
A pilgrim in my boyhood time,
Leaving those sports so dear to some
For droughts of thy inspired rhyme.
And through my manhood's riper hours,
Have drunk thy soul-inspiring lays,
They are the dew, the sun, and showers,
Strewing with bloom life's meadow ways.
A bond betwixt us twain is this,
I too have kept the old time faith,
Have ever deemed an earthly bliss,
The quiet, country meeting-place;
Have learned in this wild region lone,
Where priestly church stands wide apart,
That each may have a church their own,—
The temple of the human heart;
Where he may turn in direst need,
To find the dear Christ ministering,
Without the cant of form or creed,
Only sweet words of comforting.
I loved thee in youth's budding flower,
From only meeting thee in song;
Have reverenced through my manhood hour,
Thy firm rebuke of country-wrong.
And passing through that furnace with thee,
War,—cruel, sad, beyond all measure,
Making our nation grieved, though free,

Through floods of death, and loss of treasure,
Brought in full view thy wondrous powers,
Thus adding to my love of yore:
And love thus fanned through all these hours
Intensifies at thy four-score.

R. K. EASTBURN.

For Friends' Intelligencer and Journal.

LIFE'S MELODY.

BY M. ALICE BROWN.

Lips there are whose music
Fills the air around;
Day by day outpouring
Harmony of sound.

Gentle tones of pleading
Swift the message runs,
These with grave persuasion
Win the erring ones.

Silvery mirth and laughter,
Cheerful ringing notes,
Gladdening hearts about them
As their music floats.

Softly by the wayside
Dropping words of cheer;
Sounding from the rostrum
Thrilling tones and clear.

Spoken by the home-hearth,
Words that bless each day;
Thence perhaps the soft wind
Wafts them far away.

Homely phrase or cultured
Note on note is pealed;
Tones with right according,
These true music yield.

These with never discord
Sound throughout the land,
While their echoes render
Symphony most grand.

Lombard, Cecil County, Md.

THE WORK OF "ISLAM" IN AFRICA.

[We print below a summary of the remarks of Canon Isaac Taylor, of the English Established Church, on the subject of the comparative results of the Mohammedan and Christian missionary movements in Africa,—referred to in a recent letter of J. D. McPherson, in this journal. The address was delivered at a "Church Congress" at Wolverhampton, England, some weeks ago, (perhaps in the Eleventh month), and, as our readers probably are aware, has caused much controversy. We do not wish, in printing it, to be understood as at all endorsing the idea that Christians should leave the Mohammedans to work upon Africa, though there are two facts which are evident: (1) that "Islam" is much more easily accepted by the barbarous races; and (2) that as long as rum and dishonest traffic come close behind our missionaries, Christianity is presented at a sad disadvantage. The great objection, *outwardly*, to Islam is that it degrades woman; any religion, so-called, which does this, has a fatal defect at its heart.—EDS. INTELLIGENCER AND JOURNAL.]

AT the Wolverhampton Church Congress Canon Isaac Taylor read a paper on "Islam in Africa," at the outset of which he said that over a large portion of the world, Islam, as a missionary religion, was more successful than Christianity. Not only were the Moslem converts from Paganism more numerous than the Christian converts, but Christianity, in some regions, was actually receding before Islam, while attempts to proselytize Mohammedan nations were notoriously unsuccessful. We not only did not gain ground, but even failed to hold our own. What was there in the doctrines of Islam which gave it this unique power of making converts and of retaining them? Why did it touch those whom Christianity failed to reach? Was it our fault, or our misfortune? Could it or could it not be remedied? This was the practical question. Islam must in some way satisfy the religious needs and aspirations of the Indian and African races, or it could not thus succeed. It must be acknowledged that, though quite unfitted for the higher races, it was eminently adapted to be a civilizing and elevating religion for barbarous tribes. It was a step upward, but the step was not too high. Christianity was too spiritual, too lofty.

Islam had done more for civilization than Christianity. He was somewhat suspicious of the accounts of missionaries; but take the statements of English officials or lay travelers, such as Burton, Pope, Hennessy, Galton, Palgrave, or Reade, as to the practical results of Islam when embraced by a negro tribe; paganism, devil worship, fetishism, cannibalism, human sacrifice, infanticide, witchcraft, at once disappeared. The natives began to dress, filth was replaced by cleanliness, and they acquired personal dignity and self-respect. Hospitality became a religious duty, drunkenness became rare, gambling was forbidden. Immodest dances and the promiscuous intercourse of the sexes ceased, female chastity was regarded as a virtue, industry replaced idleness, license gave place to law, order and sobriety prevailed. Blood feuds, cruelty to animals and to slaves were forbidden. A feeling of humanity, benevolence, and brotherhood was inculcated. Polygamy and slavery were regulated and their evils restrained. Islam, above all, was the most powerful total abstinence association in the world, whereas the extension of European trade meant the extension of drunkenness and vice, and the degradation of the people; while Islam introduced a civilization of no low order, including a knowledge of reading and writing, decent clothing, personal cleanliness, veracity, and self-respect. Its restraining and civilizing effects were marvelous.

In his opinion, we ought to begin by recognizing the fact that Islam was not an anti-Christian faith, but a half-Christian faith, an imperfect Christianity. Islam was a republication of the faith of Abraham and Moses, with Christian elements. Judaism was exclusive. Islam was cosmopolitan, not, like Judaism, confined to one nation, but extended to the whole world. If the imperfect laws of Moses were divinely sanctioned because of the hardness of men's hearts, might there not also be a divinely appointed work for the imperfect law of Islam? Islam must be regarded as an imperfect Christianity. Mohamet declared, "The God of the Christians is my God." Moslems acknowledged our great teachers,—Abraham, the friend of God; Moses, the prophet of God; the Lord Jesus, the Word of God; and Mohamet,

the Apostle of God. In the creed of Moslem the Lord Jesus stands the highest of the four. Though the teaching of Mohamet fell grievously short of the teaching of St. Paul there was nothing in it antagonistic to Christianity. It was midway between Judaism and Christianity. It is better than Judaism, inasmuch as it recognizes the miracles, the teaching, and the Messiahship of Jesus Christ.

The Church of England, which he held to be the noblest and purest form of Christianity, suited to the highest Aryan civilization, had not been able to make any permanent impression on the African. It was too good for him. Islam, with its material paradise, or the Salvation Army, with its kettledrums, or the Church of Rome, with its black madonnas, might be able to descend to the level of the negro ; but the Church of England, with its thirty-nine articles, would not be the church of equatorial Africa for many generations. In conclusion, he suggested that if Christian missions were to make any way in Africa, we must change our tactics. European teachers would never Christianize Africa—the experiment had been tried and had failed. The climate alone was a fatal obstacle, and the social gulf was too wide. The heathen tribes could only be converted by bringing over from the United States civilized negroes in large numbers. With regard to the Moslems, even this expedient offered small chances of success. Was it not worth while to try another method? Could we not attack the fortress of Islam from without? Instead of raising antagonism by denouncing Mohamet as a false prophet and Moslems as infidels, let us begin by showing, not how much Christianity differed from Islam, but how much it resembled it.

WONDERS OF THE HIVE.

In a late number of the *Independent*, Julia Allyn, writing of "The Wonders of the Hive," presents some curious and interesting facts in regard to the modern methods of Bee Culture. After giving credit to Dr. Langstroth for the changes that have been made since he began to study these wonderful insects, she continues:

Let us begin with a few bees and watch their growth. A full colony may contain fifty or sixty thousand bees, but four thousand, one pound—about a quart—is enough to start with. Bees are sold by the pound and sent in wire cages across the continent, supplied with food to last during the journey. Full colonies are sent also from one end of the country to the other. Queens, wonderful to relate, come to us from Syria and from Cyprus, through the mails, in a little cage with a few worker bees for company. Her majesty may be in the bottom bag of tons of mail matter, on board the steamer, and yet she generally lives and arrives in good spirits apparently. However, queens thus caged and mailed do not always survive. Selling bees by the pound is carried on extensively. The bees are shaken into a funnel and then emptied into a cage made of wire cloth.

Our four thousand bees arrive. The expressman handles the cage as carefully as he would a dynamite bomb, and looks relieved when he gets it off his hands. The cage is open wire on all sides except the end where the provision boxes are. It is warm and the bees are fanning to create a breeze, keeping their wings in rapid motion. Water is sprinkled over them until it runs down among them ; but it does not run far, for it is eagerly gathered up and in a moment it is gone. Then on all sides of the cage may be seen, in every mesh of the wire cloth, a bee's tongue. Every bee next to the cloth thrusts out his tongue for more water. A drop of water on the end of the finger is placed near a protruding tongue and others begin to crowd and jostle each other, exactly like folks, in attempting to reach it.

They are given all they want, about half a drop a piece, or in all about two thousand drops.

In the old-fashioned hives, the bees' comb is attached to the top board and hangs free except where joined to steady and to brace. In the modern hive these combs are simply in frames and resting upon rabbits and, hanging free, may be removed at will. This is essentially the difference between the old and the new.

The hive most in use contains ten frames. Into a hive containing four frames we place the bees. Taking off one end of the cage, the bees are poured into the hive like a quart of blackberries, the hive covered up at once and not molested again for twenty-four hours; or, the cage may be placed at the entrance of the hive, and the bees orderly and systematically will walk in and take possession of the new home. In order to make them as compact as possible, the four frames are divided from the rest of the hive by a division board so that this small colony has only a little more than a third of a hive in which to keep house, and, that the colony may become strong speedily, every frame is filled with a sheet of "foundation." This foundation is the nearest approach to artificial comb, and in this case only the form is artificial for it is made of pure bees-wax. sheets of wax, some as thin as paper, are run between rollers engraved to leave upon the wax the copy of the base of the cells. A sheet of broad foundation, five or six sheets to the pound, supplies wax enough to build two-thirds of the comb. The foundation is thinned down, drawn out, and the bee supplies the rest of the wax from his own body; the tiny white scales of which come out between the plates of the abdomen.

Twenty-four hours later we look into the hive. We find that already some of the foundation wax has been drawn out; that is, made into comb. The cells are not yet made full depth, but deep enough to permit the queen to lay in them. She is impatient. She knows that there is no time to be lost. She must raise a large family in order to build up before winter comes. The egg looks like a bit of ivory about a sixteenth of an inch long. Just as soon as an egg is laid we have a sense of relief and security, for it shows the queen has been uninjured during the journey, and further, if this queen be lost, the bees can produce another from this egg. In a hive with ten frames full of comb there are more than one hundred and fifty thousand cells. The queen has been known to lay three thousand eggs in one day, discovered by supplying a queen with

empty combs for twenty-four hours and counting the eggs laid.

As soon as the egg is laid, or soon after, half a drop of honey or honey and pollen mixed, is placed in the cell with the egg, the egg floating in it or surrounded by it, that the bee, as soon as hatched, may have food. It is a tiny worm at first, then large enough to fill the bottom of the cell curled up. In ten days the worm is sealed up; that is, the opening of the cell is closed and the young bee is left to develop himself. In twenty-one days the bee gnaws one side of the cap of the cell and then pushes his way out, lifting the lid-like cap. His first act in the new world is to take a sip of honey.

His legs are yet stiff and wings not very free but he is of the same size as the others. He waddles around and gradually unlimbers himself with the help of more honey, and soon he becomes a nurse to the young bees, or hatched larvæ, and by and by he is ordered to stand guard at the entrance, or to sweep out or to fan, or to go afield for honey or propolis, and if in the busy season, July and August, his life ends in four or five weeks.

NATURE IN THE DESERT OF MIDIAN.

"For the most part, the Sinaitic region is one of unvarying calm and stillness. By day the sun rises through a dull haze in the east, then springs into a clear and speckless sky, through which it slowly moves hour after hour in constant unclouded majesty, bathing the earth in an unvarying flood of light, until, toward evening, it begins to sink into the purple haze that lies along the west, and, turning it for a few minutes into an ensanguined sea, drops down below the horizon and is hid. Night at once closes in—the glow in the west rapidly fades away—darkness descends upon the face of the earth, and with darkness a hush of silence, even deeper than that of day. One by one the stars come out in the solemn, blue-black sky, till all their hosts are marshaled, but only to look with many-colored eyes—yellow and red and white and violet—without noise and without motion on the sleeping earth beneath them. Even when the yellow glory of the moon rises above the horizon and walks, or rather floats, in the softness of the limpid firmament, there is little stir of life, or sound, or movement. Bats, perhaps, come out and flutter their wings; the cry of a hyæna or a jackal is heard in the distance; but such sights and sounds are 'few and far between,' and when they occur, seem rather to intensify the stillness than break it."—Prof. Rawlinson.

Man needs some higher aid than he can get from his intentions, his aspirations, or from the universal human conscience. He who would "abide" in truth, strength, and purity, must find the secret springs of these in the Most High.—*George Gordon.*

Unless a man has trained himself for his chance, the chance will only make him ridiculous. A great occasion is worth to a man exactly what his antecedents have enabled him to make of it.—*William Matthews.*

COLD STORAGE HOUSES.

The cold storage houses for use in a larger way, as for large creameries, cheese factories, or for dealers in dairy goods, are constructed upon the simple principle of an icehouse, without any packing around the ice, but with a water-tight and well-drained floor over a lower apartment. There is a space of a few inches left between the body of ice and the wall, through which air can circulate and pass down to the room below. A number of holes or gratings are made in the floor for the cold air to descend. The house is built with non-conducting walls, having usually a space of a foot between them, packed with dry sawdust, or a new and most excellent material known as mineral wool, which is made of furnace slag, blown by a blast into fine threads. These cold storage houses are now in frequent use by fruit growers, butchers, brewers, and poultrymen as well as dairymen, and are extremely useful.—*American Agriculturist.*

BOOKS.

A good book is a lasting companion. Truths which it has taken years to glean are therein at once freely but carefully communicated. We enjoy the communion with the mind, though not with the person of the writer. Thus the humblest man may surround himself with the wisest and best spirits of past and present ages. No one can be solitary who possesses a book; he owns a friend that will instruct him in the moments of leisure or of necessity. It is only necessary to turn over the leaves, and the fountain at once gives forth its streams. You may seek costly furniture for your homes, fanciful ornaments for your mantel pieces, and rich carpets for your floors; but, after the absolute necessaries of a home, give me books as at once the cheapest and certainly the most useful and abiding embellishments.

The emancipating movement appears to be rolling on in Brazil. A New York *Herald* despatch from Rio Janeiro announces that "every morning brings the news of tens of liberatory acts, conferring freedom at once or in one or two years upon units to hundreds of slaves. Thus, just before Christmas the Ferreira family, of Campinas, engaged to give liberty to their 1,500 slaves at the end of this year; the planters of Tiete freed on Christmas 1,800 at once; in San Carlos do Pinhal, on the 29th, 1,540 were promised freedom at the end of this year; Sorocabo has liberated all of its 460 slaves, and is now a free county, as has Indiatuba, also, its 700 remaining slaves. As for the lesser acts of emancipation, from 100 down, they are getting beyond record."

The character-builder in our civilization is home. Where you get a wise father and a wise mother, you will get noble children and noble citizens in spite of all other hindrances.—*E. P. Powell.*

I want to feel a holy aptitude to give my heart to God, and to walk in his ways; I do believe I shall go to heaven if I have heaven in my heart now.—*Paul Pastrior.*

NEWS AND OTHER GLEANINGS.

—The flavor of the cucumber comes from a peculiar poisonous ingredient called fungin, which is found in all fungi, and is the cause of the cucumber being offensive to some stomachs.—*Chemistry of the World.*

—The development of the telegraph system in this country is one of the marvels of modern civilization. From a mere experiment on a single wire between Washington and Baltimore in 1844, within the memory of many persons yet living, it has grown to be one of the governing forces in our philosophy of material and social progress. The Western Union Company alone now has 580,000 miles of wires; and the messages which it handled during the year ending June 30, 1887, reached a total of 47,394,530.

—Alcohol is the most dreadful offspring which chemistry has bequeathed to us, and the day when the vinous fermentative process was understood and the still put into operation was the darkest and most rueful day in the history of mankind.—*Popular Science News.*

—A beautiful memorial to Helen Hunt Jackson and her labors in behalf of the Indians will be the Ramona Indian Girls' School, which is building at Santa Fé, N. M. The building will cost $30,000 and will accommodate one hundred and fifty pupils. Students will be retained from two to five years. A New York architect contributed the design, which is patterned to some extent on the old cliff dwellings of New Mexico and Arizona. Government aid will largely pay for building the school, but the cost of furnishing must be defrayed by private subscriptions. A fine portrait of Mrs. Jackson has been given, and one rich woman devoted her jewels to the furnishing of a memorial room.—*The Unitarian.*

—The Boston *Journal* says it is well known that birds are very sensitive to tones of the voice, and are terrified at any loud, angry words. A lady who wished to make a bobolink stop singing, at last scolded it in a loud voice, and then took up a scarf and shook it in rebuke at the caged bird. In a moment the bird was still, but a short time after made a fluttering about the cage. Its owner turned to the bird, and was shocked to see it fall dead. Unkind words had killed it. We know of two cases similar to this. In one case a canary bird, and the other a mocking-bird, died within five minutes after having been spoken to in a violent, angry tone.

CURRENT EVENTS.

THE case of the Crown Prince of Germany having become serious, the operation of tracheotomy was successfully performed, on the 10th inst. It afforded relief for the present, and the patient has been reported as doing well.

THE British Parliament reassembled on the 9th instant. Discussion of affairs in Ireland was begun, and is likely to absorb, as heretofore, a large share of attention.

A LETTER from James G. Blaine, dated at Florence, Italy, on the 25th of last month, was published in the American newspapers on the 13th inst., in which the writer says his name "will not be presented to the National Convention."

THE coal miners' strike in the Schuylkill region continues, though there are several collieries now at work. No progress has been made in the efforts at arbitration and settlement. The Congressional Special Committee to inquire into the matter began its sittings in this city on the 15th instant.

THE Department of Superintendents of the National Educational Association met in Convention at Washington, D. C., on the 14th. A resolution was adopted providing for a committee of seven to report next year the outline of a practical course of instruction in manual training. Several papers were read and discussed.

PRESIDENT CLEVELAND, with members of his family and Cabinet, expects to leave Washington on the 21st inst. for a short trip to Florida. The party will spend one day at Jacksonville and one at St. Augustine.

A SECTION of one of the elevated railroads in course of construction in Brooklyn, New York, fell on the morning of the 14th, and crushed in the fore part of a street car, which was passing under it at the time. Four persons were killed and nine injured.

NOTICES.

*** There will be a Conference of parents, teachers, and others interested, in Friends' meeting-house, Fourth and West streets, Wilmington, Delaware, on Seventh-day, Second month 18, at 10.30 a. m.

W. N. Hailmann, A. M., Superintendent of the Public Schools of La Porte, Indiana, will discuss "The Educational Value of Manual Training." He will be followed by one or two others especially interested in the subject.

Superintendent James MacAlister, of Philadelphia, expects to be present and participate in the exercises.

Train leaves Broad St., Philadelphia, at 9.10 a. m., and arrives in time for the Conference. All interested are invited to be present. ISAAC T. JOHNSON.

*** A circular meeting will be held in Washington, D. C., at Friends' meeting-house, near Eighteenth and I streets, on First-day, the 4th of Third month, at the time of their regular meeting, at 11 o'clock. Friends at a distance, feeling an interest are desired to attend.

*** The Temperance Committee of Concord Quarterly Meeting of Friends will hold a Temperance Meeting at Wilmington, Del., on First-day afternoon, the 19th, at 2 o'clock, in the Friends' meeting-house.

J. BYRON THOMAS, Clerk.

*** A meeting of the Committee of Philadelphia Yearly Meeting on the subject of Isolated Friends in the West is desired to be held on Seventh-day, Second month 25, at 2 o'clock p. m., at 15th and Race streets meeting-house, Philadelphia, room No. 1.

HOWARD M. JENKINS, Clerk.

*** Joseph B. Livezey, an approved minister, of Woodbury, N. J., having a minute for religious service in and near Philadelphia, proposes attending the meeting for worship at Ninth and Spruce streets, First-day morning, 19th inst., 10.30 o'clock; and at Fair Hill Meeting (Germantown Avenue and Cambria streets,) at 3.30 o'clock same afternoon. It is desired that an invitation be extended to our members as well as others.

*** Quarterly meetings in Second month will occur as follows:

20. Centre, Bald Eagle, Pa.
20. Duanesburg, Albany, N. Y.
22. Stillwater, Plainfield, O.
23. Bucks, Wrightstown, Pa.
25. Blue River, Benjaminville, Ill.
27. Warrington, Monallen, Pa.
27. Canada Half-Yearly Meeting Pickering, Ont.
28. Burlington, Mt. Holly, N. J.
29. Southern, Camden, Del.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.*
ROYAL BAKING POWDER CO., 106 Wall st., N. Y.

HENRY M. LAING, Treasurer, 30 N. Third St., Phila.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall, Doylestown, Pa.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly *to raise funds.* These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

HISTORY OF THE SCHOOLS.

Both these schools have been in existence since the early years of the work of colored education in the South, soon after the close of the war. The Aiken School was begun in 1868, with the support of the Germantown, (Philadelphia) Branch of the Freedmen's Union Commission (of which Sarah F. Corlies was Secretary, and Elizabeth Dorsey, Treasurer.) In later years it was sustained almost entirely by the exertions of Martha Schofield. In 1886, however, finding the burden of its support too great, she made an appeal to the Yearly Meetings of Friends, in Philadelphia and New York, for aid, and as part of the response to this appeal, this Association was organized at Philadelphia, in Sixth month, 1886.

The Aiken School has a valuable property (largely accumulated by Martha Schofield), which has been placed in the hands of a Board of Trustees. A beginning has been made in the formation of an endowment fund.

The school at Mt. Pleasant was established in the First month, 1866, in charge of Cornelia Hancock, under the supervision and with the support of the "Friends' Association of Philadelphia, for the Aid and Elevation of the Freedmen," and was maintained for a number of years by that excellent organization. In late years, however, its funds have been raised, from year to year, almost entirely by Henry M. Laing, Treasurer of the Association, who like M. Schofield, found this tax upon him too great.

CHARACTER OF THE SCHOOLS.

The Aiken School had last year 270 pupils, divided into nine classes, with eight instructors. This year, the attendance is larger, and an additional teacher is employed. There are, this year, about 300, of whom 40 are boarding students. Members of the highest class are prepared to become teachers. All are taught industries,—the girls being taught to cut, make, and mend garments, etc.; the boys instructed in printing, carpentry, and many details of labor about the school property.

The Mt. Pleasant School had last year about 100 pupils, with three teachers. They average somewhat younger than those at Aiken. The instruction of this school has been carried on for two years in a church, granted free of charge for the purpose, the school building having been demolished by a storm in the summer of 1885. (A special fund for rebuilding has been partly raised.)

THE NEED FOR CONTINUED AID.

Those engaged in the work of instructing the colored people appeal to us to continue a measure of aid. While some progress has been made in establishing public schools in the South, they are yet very insufficient. The school term in South Carolina averages not over three months in the year, and the schools themselves are too few, and seldom well provided in any particular. To withdraw from the field yet, seems like abandoning the colored people, in the very midst of the work for their elevation. Moreover, it is evident that for years to come there will be great need of schools which will do more than provide mere book instruction,—will, in addition to this, give practical training in habits of honest and orderly industry. Such work as this is done by these schools, and they are fully entitled to the confidence and help of all who are interested in the welfare of the hitherto unfortunate colored people. Money sent them is used with the utmost economy, and is made to yield the best possible maximum of results. The funds supplied by the Association go only to the compensation of teachers, and so far have not been sufficient for that purpose. The students either support themselves, or are otherwise aided.

*** THE ASSOCIATION EARNESTLY APPEALS TO THOSE INTERESTED FOR AID TO ITS FUNDS.

Statement of Henry M. Laing, Treasurer, to Seventh month 1, 1887.

RECEIPTS.

Cash received per	Edward H. Magill,	$823 41

Philadelphia, Sixth month 30, 1887.

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.

FRIENDS' PRINTING HOUSE, S. W. COR. 6th and ARCH.

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER Vol. XLV. No. 8. | PHILADELPHIA, SECOND MONTH 25, 1888. | JOURNAL. Vol. XVI. No. 787.

MISPRIZED.

When Joy and I were used to spend
The days together,
We missed not Sympathy as friend;
She doth be dumb; she doth not lend
Her voice to fill the song-some weather.
We need none else, blithe Joy and I;
We are content together.

When Grief and I acquainted grew
With one another,
Ah! many voices echoed new,
But not one brought the comfort true
That did the silence of that other,
Who reconciled pale Grief and me,
With tears, to one another.

—*Julie M. Lippmann in S. S. Times.*

MEMOIR OF SARAH A. E. HUTTON.[1]

Sarah Andrews Evans Hutton was born Eighth mo. 10, 1811, at Sandy Springs, Maryland, and died First month 6, 1888, at Richmond, Indiana. She was a minister among Friends, and a woman of mark in her physical development, in her mental endowment, and in her spiritual gifts.

Small, slender, neat and graceful in her person, she never weighed more than 90 pounds, and for many years not so much as that. Her mind was strong, versatile and active, and she was both industrious and discreet in its culture.

But it was her spiritual nature that was deepest and brightest and the distinguishing attribute of her character. A continuing and earnest student of the Bible, she read it in the abounding faith that the power that inspired the teachings in the Word was always present to open her understanding to the things she ought to know.

When about seven years old her parents, Edmund and Elizabeth Evans, left Sandy Springs, after the loss of their tannery by fire, and domiciled in Baltimore, where the family remained until Sarah was twenty-one years of age, when all removed to Indiana. At about the age of seventeen, she, with her younger sister, went to Westtown boarding school, but after six months' instruction therein she yielded to the idea that a woman ought to understand some industry that would enable her, in an emergency, to be her own support, and with characteristic promptness she at once repaired to Philadelphia and entered upon an apprenticeship to learn the millinery art, leaving her sister at Westtown; but a year later, when her sister left school, she accompanied her to their home in Baltimore. Here she went into general society and was much admired for her personal charms, her brightness of intellect, her suavity and gentleness in bearing, and her taste in dress.

After a little time in this mode of life an incident occurred that illustrates the state of her mind at this time. She was dressing for an evening party at Joseph Townsend's and in adjusting a bit of rich lace at her throat a doubt sprang up in her mind about the propriety of this kind of personal adornment, and as the concern rested with her during the evening, she laid it aside on her return home, and its like ever afterward avoided.

In 1832 her father and his family removed to Richmond, Ind., and here Sarah was a favorite in social society, and noted for her propriety in dress and conduct and her sprightly intelligence in conversation; and in the fullness of her appreciation of the principles of Friends and her devotion to duty, she was led to speak for the Master in meetings for worship within a short time after her arrival in her new home.

Some years after this she took charge of a Friends' school, under the auspices of Whitewater Monthly Meeting, and thereafter, with a slight interruption, teaching was her continued vocation for many years. As a teacher she placed herself in close relationship with her pupils, maintaining good government chiefly by love and admonition, but appealed to corporeal chastisement when moral suasion proved unavailing. Perhaps few if any teachers have been more successful in their work, and rarely if ever has an instructor had a larger measure of love and esteem from the instructed.

[In 1857 she was married to John H. Hutton, of Richmond, Ind., who died in 1873. Two years later her adopted daughter Alice died while at school in Normal, Ill., to the intense grief of her mother. Yet with characteristic regard for the pleasure of others, she did not slacken her energy in the discharge of her private or public duties, or allow her grief to manifest itself in public to the clouding of other hearts.]

In the pursuit of knowledge her studies were broad and liberal. With the history, principles, and traditions of Friends she made herself familiar; in general and ecclesiastical history she was well read; in general scientific progress she took a deep and balanced interest far beyond the average of intelligent people; with the statecraft of the civilized world and the higher social problems of the age she

[1] This memoir, which we give almost entire, was written by J. F. H. for the Richmond, (Ind.) *Palladium*, in which it appeared 1st mo. 24, 1888: it is now republished at the request of many Western Friends.—Eds.

kept herself well informed, and to the humanitarian movements of the time she gave discriminating consideration, in her last years devoting much earnest attention to the various questions of the day touching the duties, the privileges, and the proper sphere of physical and moral labor for women. Even at the time of her death she was reviving her acquaintance with the French language for a purpose she had at heart. Within three days of her demise she queried with the writer whether the aged were apt to become unobservant of the things about them and to grow indifferent to the world, adding that for herself she felt as deep an interest in the affairs of society and the world at large as she ever did.

Sarah Hutton's call to the ministry appears to have been sudden and unanticipated, and occurred perhaps within a year of her arrival in Richmond with her father's family. Sitting in meeting she felt the impulse, recognized its source, laid off her bonnet, arose and delivered her message. Her father quoted to her I. Corinthians xi., 5: "But every woman that prayeth or prophesieth with her head uncovered dishonoreth her head." As she did not feel that she should have anything further to say, she gave no practical heed to her father's suggestion, and possibly did not interpret the quotation as he did: but when, shortly, she again essayed to speak she laid aside her bonnet but drew her handkerchief over her head; and when, presently, a third time she was called and a second time availed herself of her handkerchief that she might not prophesy with her head uncovered, and her father still urging, she secured and wore a cap and continued its use throughout her life. Her ministry rapidly grew and the monthly meeting placed on her the official seal of an approved minister on the 25th of Eleventh month, 1835, when a little over twenty-four years of age, and at her death she had been in the Master's public service about fifty-four years.

Her mission in the ministry did not lead her into a special line of teaching, and she was never lengthy in her communications. While she would at times expound the doctrines of Friends or address her discourse to the demands of the occasion, the general drift and uniform tendency of her speaking in meetings for worship was persuasive and inviting, pointing out the truth and the manner of its manifestation, and picturing the peace and joy that came of its appreciation. Love was the main theme of her sermons, and it was the fruits of holy love that she called on all to enjoy. Her messages were often pointed, terse, and sententious, but they were void of offense and never left a sting. Perhaps no one so long in the service has had the work of her ministry so uniformly acceptable or so rarely the subject of adverse criticism.

Notwithstanding the great satisfaction she gave in meetings for worship, these meetings were not the exclusive field of her fruitful labor. In the business meetings of Friends her influence was, perhaps, superior to that of any other member of Indiana Yearly Meeting. Blest with executive ability, with a clear perception of what was needed at the moment, and with a marvelous discretion to say the right thing in the right way at the right time, she came to be looked upon almost as an oracle, and her utterances would illuminate a dark subject, and unravel even a tangled subject so that as a rule all would fall in with her view and acquiesce in her judgment; nor was this comprehensive insight into business matters confined to the formal meetings, but in the minutest details included the outside affairs for the comfort and good of the society, embracing First-day schools, social gatherings of Friends, and all the series of assemblies created by special appointment.

One of her pupils, now a woman of mature years and wide experience, in a private letter thus feelingly speaks of Sarah A. E. Hutton. "She was a rare teacher and always had a large school. Many of the best families in town, not Friends, being her patrons, and many from other places coming to Richmond to be under her instruction. Her school girls always admired her so. She used to take us into meeting on Fourth-days and such sermons as she would preach!

We took such satisfaction in her intellectual and literary ability, so much of our good preaching being marred by illiteracy. Is not goodness more attractive in a beautiful dress? All goodness is attactive, but we are more ministered to when it is an all-round harmonious goodness, *if it is true.*

As a minister, I think in some ways she has never had her equal in our Society. Her mental powers, and her wide reading and study, (keeping abreast of the times in educational matters,) her scholarly attainments and quick, comprehensive judgments, were remarkable. Her spiritual interpretation of the Bible, (with which she was very familiar) was certainly inspired. I shall never cease to be thankful that I attended Indiana Yearly Meeting last fall. She rose from a sick bed to attend the meeting, and was so frail at the beginning of the week that she could hardly sit through the session. But her strength seemed marvelously renewed, and she entered into the exercises of the meeting with all the zest and earnestness of former years. Indeed I never saw her more earnest and impressive. She dwelt especially upon the future of women. Her view seemed projected into the coming century; and she made a prophecy of woman's future work and responsibilities. Dwelt upon the imposed conditions and environments resulting largely from the earnest labor of the more widely educated and largely endowed woman. Spoke of the new opportunities, schools, colleges, industries, philanthropies, etc., which were fitting women for a vast place in the world. She had a sight of it and it cheered her closing days. She urged us to go on and be faithful in our place and day, and large results would follow. I felt sure we should never listen to its like again. Indeed we all felt that her presence and her earnest words to us, especially in our women's meeting, were a parting benediction.

If we can only find, after seeking first, the kingdom of God and its righteousness in our own hearts, *all things* else will be added unto us; for then nothing is withholden.

THE PEACE-LOVING MENNONITES.

[The following article, by William Tallack, published in the *Herald of Peace*, (London), gives many interesting and some new details concerning that peaceable and simple body of Christians, the Mennonites. It seems necessary to remark, in the interest of historical accuracy, the omission in the article of any definite reference to the large and important movement of Mennonites to Pennsylvania, in William Penn's time, and a little later. This began with the migration of the first Germantown settlers, in 1683, and continued until toward the middle of the Eighteenth Century. The movement from Southern Russia to Kansas, and other of our western States and Territories is quite a recent thing, as also that to Manitoba,—which we think is of much smaller volume than the Kansas movement.—EDS. INTELLIGENCER AND JOURNAL].

AMID the fertile meadows of Friesland, in East Holland, near the town of Bolsward, there stood for many centuries, a flourishing Abbey bearing the name of the Oldeclooster. In 1535 it was the scene of a terrible conflict. A party of 300 excited Anabaptists, headed by one Peter Holtsagher, and accompanied by many women and children, marched upon the Abbey, took the monks by surprise, and expelled them from their comfortable dwelling. The Abbot appealed to the Governor of Friesland for help, and a regiment of soldiers, with artillery, soon appeared upon the scene. The Anabaptists refusing to surrender, were subjected to a siege of several days; but at length they were overpowered, and the victors took cruel vengeance upon them. A gallows was erected outside the Abbey, on which twenty-four of the Anabaptists were at once hanged, fifteen more were beheaded, and the rest of the men were slaughtered in various ways. The women and girls were taken to Leeuwarden and drowned in the canal, close to the old Guard-house, which is still to be seen by the visitor to that city.

Amongst the victims of this massacre was an Anabaptist named Simonsz, whose brother Menno, then a Roman Catholic priest, witnessed his death. This scene made a profound impression upon Menno. It gave him a lifelong horror of war and of every form of either offensive or defensive fighting. He admired the zeal and fervor of the Anabaptists so much that he became convinced of the truth of their leading principles, and leaving the Roman Church, joined their body. But he would have nothing to do with arms thenceforth. After what he had witnessed his whole soul shrunk with detestation from every kind of resort to the sword. He saw that both the Anabaptists and the German Reformers generally had made a great mistake in resorting to force for the propagation and defense of their religious tenets. Menno, therefore, advocated a policy of non-resistance and of absolute reliance on the Divine protection, and on the convincing power of truth itself. But most of his contemporaries were unprepared for such a doctrine as this. The Anabaptists, like the Cromwellian Puritans of the following century, were active partisans of Jewish and Old Testament modes of dealing with their enemies; so Menno had to withdraw from his new friends. On the other hand, the German Reformers treated him with even more decided contempt, so that speedily poor Menno found himself, like his Divine Master, "despised and rejected of men." A price was set upon his head, and for a long period he was literally a fugitive and a wanderer upon the earth.

But he steadfastly adhered to his pacific convictions, and gradually his gentle, loving spirit and his fidelity, at any price, to non-resistance principles, attracted to him the love and respect of a few friends, who entreated him to become their minister and teacher. The number of these adherents increased in spite of persecution. Among their bitter opponents was Martin Luther; but another German, a warrior nobleman of Holstein, Count Ahlefeld, was so struck with admiration of the meek but brave heroism of Menno, that he offered him an asylum on his own estate, near Hamburg. There, sheltered from all foes, whether Catholic or Protestant, Menno spent the last few years of his life, and there, at the age of sixty-three, he peacefully died, in 1559 (just after the accession of Queen Elizabeth to the English throne).

He had become the founder of a Church of many thousand adherents, who became known by the name of Mennonites, and as such retain an organized existence to the present day. They have chiefly inhabited Friesland, North Germany, and the Vosges mountains, west of the Rhine; but under the stress of occasional interference with their scruples, many of them have emigrated, in the first place, to South Russia, and more recently to the United States and Manitoba.

Menno's views strikingly resembled and anticipated those of the Society of Friends, who came into existence nearly one hundred years after his decease. Some of his followers subsequently joined that body, and amongst them was William Sewell, the Quaker historian. Like that body, Menno not only taught non-resistance principles, but also advocated great simplicity of life. He held that a college training was not necessary as a preparation for the ministry, and also insisted that the ministers amongst his people should render their services gratuitously. He established a strict but loving Church discipline, under the administration chiefly of officers named "Elders." When members of a Mennonite congregation moved from one locality to another, they were expected to bring with them "certificates" of good character from their former brethren and elders. One of the primary rules of their body was as follows:

"In respect to the wearing of arms, the elders cannot deem it allowable that any member should so far comply with the ordinary fashion, as to carry a rapier, or even a staff; but all participation in warfare, even at the command of the Government, is quite forbidden by the elders, except in regard to the unarmed servants of members."

Towards the authorities everywhere, both in Holland and Germany, the Mennonites, acting on their founder's example and precept, manifested a most loyal and respectful submission. Their special devotion to commerce and industry, together with their harmless and virtuous behavior, won for them the high appreciation of the most warlike monarchs. And it is a very important and noteworthy historic

fact, that these gentle, consistently non-resistant people have obtained and enjoyed, during nearly three centuries, more practical regard to their conscientious scruples, and more executive indulgence from demands of military service, than any of the other Protestant denominations on the continent.

They have contributed so largely to local and civic prosperity, in various districts, that even German Emperors and Russian Czars have invited them to settle in their dominions, on the express condition that they should, amongst other privileges, enjoy absolute exemption from military service. And it is further noteworthy that only when some of the Mennonites themselves manifested a disposition to relax their ancient fidelity to pacific principle, did the military governments attempt to deprive them of the exemptions won and maintained by them during ages of surrounding violence.

But, as is the case with some other people, long prosperity relaxed the pristine fervor of the Mennonites in various ways. They gradually abandoned some of their original simplicity; they desired a more learned ministry, and set up training colleges for their pastors. Their young people were not brought up to the old hatred of warfare; and so, gradually, at least in Germany and Holland, they have lost their hard won and long cherished privilege of exemption from military service.

The Prussian King, in 1847, manifested some disposition to curtail their privileges, but at length, in 1867, Bismarck and the present Emperor took the decisive step of withdrawing from the German Mennonites their exemption from the conscription and from military obligations. But in recognition of their past services to the State, certain alleviations of this rigorous order were permitted. In a few instances, hospital or other unarmed public service was allowed in lieu of joining the army; and in other cases, faithfully conscientious members of the sect were permitted special facilities for emigration to America or elsewhere. But the young Mennonites, in general, have, since 1867, been placed on the same footing, as to the conscription, with other Germans.

And it must be confessed that these Mennonite youths have, in most instances, shown that they had not been trained to prize the convictions of their forefathers; their peace principles had already been widely relaxed. In 1870, hundreds of them willingly took up arms against France. This circumstance is recorded by a modern Mennonite historian, Mr. Max Schön, with gratification. And he adds, that he, like his brothers of the sect, was proud to take a part in what he terms "that glorious war against the hereditary enemy of the German nation."

But some of the Mennonites, elsewhere, have been faithful to their earlier convictions. Especially in South Russia, where also the modern government has withdrawn the former privileges of exemption from military service, many hundreds of the sect have quietly refused to comply, and, in consequence, have emigrated to America, chiefly to Manitoba, where they have carried their great skill in the cultivation of hemp, which, whilst they lived in Russia, had been so profitable to the resources of that Empire. But now their Manitoban hemp trade is becoming a formidable rival to the Russian commerce in the same material. It was a very foolish policy, on the part of the Russian Government, thus to drive away such profitable subjects.

Many Mennonites still remain in Holland, especially in Friesland, where they retain much of the religious earnestness of their forefathers. But it is to be desired that both they and their German brethren had more consistently and lovingly adhered to the pacific and Christ-like doctrine and practice of their brave but gentle founder, Menno Simonsz. The declension of the Continental Mennonites from their former detestation of militarism, conveys an instructive reminder to the friends of Peace everywhere, of the importance of a frequent recurrence to the example of the Saviour himself.

THE EASTON MEETING CENTENARY: ESSAY IN VERSE.

[We printed, last week, three of the essays read at the celebration of the Centenary of Easton Friends' meeting, N. Y., or Twelfth month 25th. We now give the remaining one.—EDS.

WHEN Israel's race from bondage fled,
Signs from on high the wanderers led;
The cloud by day, the fire by night,
Cheered that host in its weary flight,
For help was near the chosen band
To lead them forth to the promised land.
But when from Duchess county came
That band of "Friends," without a name,
To land upon a cheerless soil
And enter on a life of toil;
We ne'er can know the trials then
So bravely faced by earnest men.
To hew their way in forest wild
Which ne'er by man had been defiled;
And where the wild beasts roamed at will,
The terror of each dale and hill;
At night, the bloody panther's yell
Resounding through each rocky dell,
And up Mount Willard's dizzy steep
The crafty fox and wild cat creep.
While all along the Hudson's tide
The otter and the beaver glide;
And over every hill and plain,
Where now are fields of waving grain
The brawny monarch of the wood
In wild and solemn grandeur stood.
To scenes like this came Rufus Hall,
Sturdy of limb, and stature small,
To carve from nature, wild and free,
The homes so dear to you and me.

We pause to-day from worldly strife,
To honor him and his useful life,
And lay the chaplet of our praise
O'er hero grand of former days.
Not his the fame of battles fought,
But glowing deeds for peace he wrought.
Zebulon Huxie also came
To find a home and carve a name
On the hard scroll of Christian strife,
And honor us by worthy life.

What peaceful lustre here is shed
Around these hills by worthy dead.

In cabin homes, with leafy shade,
With God a righteous peace was made.
'Twas he first built the altar fire
A century has not seen expire;
'Twas there they saw the Inner Light,
And heard the still small voice,—
With firm resolve, to do the right,
By voluntary choice.

This was the seed—the harvest came
To bless their efforts and their name—
While round their hearts was hourly spun
The warp and woof of deeds well done
And bloodless victories grandly won.
The word was scattered far and near
That Friends indeed had settled here,
With purpose strong and hearty cheer.

Lit were the fires in many a glen
Ne'er haunted by the feet of men,
And cabin homes, with native pride,
Were built on every mountain side.
Around these pioneers there grew
A settlement of faces new;
And Christian grace and social cheer,
Were shed abroad, both far and near.

Each neighbor was a welcome guest
With kindness heartily expressed.
There was one want, which all had felt,
That in those peaceful valleys dwelt
A common impulse, born of love,
The heavenly light which shines above
To guide the living light within,
From quicksands and the shoals of sin.

That bush to Moses, flamed with fire,
Which touched his heart with great desire;
The stone at Bethel Jacob set,
Is still the family altar yet.
For men of every race and age
That ever lived on history's page,
Which flourished long, in peaceful hour,
Has felt the need of heavenly power.

That common impulse, born on high,
Which does each Christian grace supply;
That secret bond of brotherhood,
Which all time's changes has withstood;
The ark that bears God's living seal;
The covenant which all Christians feel,
Clusters around the Pillar grand,
Reared by the patriarch Jacob's hand.

These pioneers of Christian grace,
In searching for the proper place
To rear the stone; the ark to set
Where coming souls would ne'er forget
Where peace and quiet could be found,
Came to this spot of hallowed ground,
Where we have gathered here to-day
Our tributes at their feet to lay.

If aught could make these Friends forget
The bond to which their seal is set;
If aught on earth could charm or force
Their worship from its destined course
This Pillar, reared by vanished hands,
Their earnest loyalty commands.
The deeds of love, by peace made dear,
The altar fires kept burning here,
Should touch each heart with grateful praise,
To honor those of former days.

To those without an evil heart
God's blessings at this hour impart.
If aught in malice still we feel,
At this old altar let us kneel
In the shadow of those bygone days
To offer up on high our praise,
That through God's mercy still we live,
Ready and willing to forgive.

In looking at the backward track,
One feature grand it seems to lack.
No hymn of praise, or song of love,
Rose to the great white throne above.

The nightingale will close her wing
Her softest, sweetest notes to sing,
When mourning o'er deserted nest;
She finds a pure and peaceful rest
By warbling forth her grief and pain
O'er lost ones she can ne'er regain.
In every nation, race, and clime
Since man has known recorded time,
Has worship pure, of tuneful praise,
The stamp and seal of ancient days;
The song of Miriam by the sea,
From bondage when her race was free;
The tuneful lyre of David's praise
Is record clear of ancient days,
The fourscore years of Whittier
So grandly honored, far and near,
That great apostle of the free,
Whose heart beats warm for liberty,
Whose hallowed songs our souls inspire
And fill our hearts with holy fire.
God gave to man the gift of song
To cheer his weary way along.
Many a wanderer bowed with grief,
In song has found his soul's relief.
The anthem grand, that peals on high
To realms of love beyond the sky,
Can lead the soul to victory.

We pause to spread the record here
Of many a deed to friendship dear;
Honor and virtue—greatest prize
That ever dazzled human eyes—
Was shed abroad, from peaceful mind,
With gentle words of counsel kind.
Those hands of thrift that paved the way
To better things in coming day.
No widow's want, or orphan's cry,
Was ever passed unheeded by.
While that content, where peace is found,
Has influenced the world around,—
The seed which fell on fertile ground.

These qualities in just degree,
Adorned with quaint simplicity
In dress and manner, speech and deed,
Were portions of the father's creed.
Those early lessons, taught of yore
By patriarchs that have gone before,
Have left an impress, far and near,
Life's joys to sweeten and to cheer.
Our fathers *here*, with one accord,
Waited the presence of the Lord,
The coming of the Spirit's power,
To solemnize the quiet hour.
Here, too, in ancient days there came,
To worship God and bless his name,
The mothers of the steadfast few

Who kept the faith, with purpose true,
Their holy covenant to renew.
Long may such faith by trial led,
From God's most bounteous store be fed;
And love and peace around each heart
A blessing at this hour impart.

THE RECORD OF OLD ON THE SEVEN SEALS.

THE inspired penman says: "I wept much that none was found able to open the Book and to loose the seals, but he said unto me 'Weep not, for the Lion of the tribe of Judah hath prevailed to open the book, and to loose the seals.'" The first of all is the call "Come and see." Kindly is the inquiring condition met by a loving Father who in his boundless mercy offers one thing after another, as we are prepared to receive them; as Jesus Christ said to his disciples in the outward advent: "I have many things to say unto you, but ye cannot bear them now," the unchangeable truths of Christianity are, and ever will be, "hid from the wise and prudent of this world and revealed unto babes," and Jesus said: "I thank thee, O Father, that thou hast hid these things from the wise and prudent and revealed them unto babes, for so it seemed good in thy sight." And so it will ever be; we are led along step by step in the great work of regeneration ere we can say, "I live, yet not I but Christ liveth in me, and the life I now live in the flesh is by faith in the Son of God." O blessed attainment, a consummation of the soul's desires and hopes; and through self sacrifice and bearing the cross! The deep things of God are revealed through his spirit, as we are prepared to receive them; they are precious gems bestowed in his own free will to furnish evidence of his guardian care over us by day and by night. We need not be curious to inquire into the secrets the Almighty has held in reserve to himself, or at least for a season best known to himself; enough is given to make clear individual duty, and it should satisfy. I may close in the language of dear old Simeon: "Now lettest thou thy servant depart in peace, for mine eyes have seen thy salvation which thou hast appointed before the face of all people a light to enlighten the Gentiles and for God's salvation to the ends of the earth."

SARAH HUNT.

RAMMOHUN ROY.

THE religious development in India known as the Brahmo Somaj, of which an interesting account has just been printed in our paper, is by the author of that article traced to Rammohun Roy of whose efforts to reform the religion of his countrymen, some account is therein given. Doubtless the reader of this paper will be glad to know further of the religious experiences of this remarkable man, which we have gathered from a volume containing "The Precepts of Jesus" and several other essays written by Rammohun Roy, to which is added a biographical sketch of the author. The book was published in New York in 1825, and may be found in many of the libraries of our older Friends.

Rammohun Roy was born about 1780, in the province of Bengal and received the first elements of his education, with a knowledge of the Persian language, under the parental roof. He was afterwards sent to Patna to learn Arabic, and here he studied logic and mathematics. His parents were wealthy Brahmans of high rank, and a knowledge of Sanscrit, the sacred language of the Hindoo Scriptures, was indispensable. For this purpose he went to Calcutta. He also studied English, and at an early age renounced the religion of his ancestors. He began his literary career by publishing a work which he entitled "Against the Idolatry of All Religions." This created him so many enemies that he found it necessary to remove to Calcutta in the year 1814. An office which he held under the government brought him frequently into English society. This increased his facilities for speaking and writing the language correctly, and his religious inquiries led him afterward to study Latin, Greek, and Hebrew.

A careful study of the sacred writings of the Hindoos, we are told, had convinced him that the prevailing notions respecting the multiplicity of deities and the superstitious devotion to the licentious and inhuman customs connected with them, were grounded upon an utter ignorance, or gross perversion of their religion, which appeared to him, to inculcate pure Theism and to maintain the existence of one sole God, infinite in his perfections and eternal in his duration, and requiring of his worshippers a mental rather than a corporeal worship, accompanied by strict and exemplary virtue.

"My constant reflections," he writes, "on the injurious practices of Hindoo idolatry, which more than any other Pagan worship, destroys the texture of society, together with compassion for my countrymen, have compelled me to use every possible effort to awaken them from their dream of error; and by making them acquainted with the scriptures, enable them to contemplate with true devotion, the unity and omnipresence of nature's God." That this might be done, he translated from the Sanscrit into the Bengalee and Hindoo languages, "The Vedent," an abridgement of the sacred writings that had been made two thousand years before. He also printed an abridgement of "The Vedent" for gratuitous circulation. This abridgment was afterwards translated into English, "with the expectation," as he states in his preface, "of proving to his European friends, that the superstitious practices which deform the Hindoo religion, have nothing to do with the pure spirit of its dictates."

From the perusal of the New Testament in his long and uninterrupted researches into religious truth, he found, as he asserts, "The doctrines of Christ more conducive to moral principles, and better adapted for the use of rational beings than any other which had come to his knowledge, but the doctrine of the Trinity, as he found it professed by Christians with whom he conversed, presented an insuperable obstacle to his acceptance of Christianity.

However, as it so fully approved itself in other respects, and his piety and candor would not allow him at once to reject the system as false, he determined upon a careful study of the Jewish and Christian scriptures in the original Hebrew and Greek. From this he arose with a conviction that the doctrine of the Trinity is not inculcated in them, and he therefore felt able to regard the Christian religion as true and divine. He was now prepared to embrace the religion of the the New Testament, and to enter more fully into the work of instructing his countrymen therein. For this purpose he compiled a pamphlet embracing the precepts of Jesus as given in the four Gospels, which he entitled "The Precepts of Jesus, the Guide to Peace and Happiness." This was about the year 1820. In the introduction he says: "I decline entering into any discussion, . . . and confine my attention at present to the task of laying before my fellow-creatures the words of Christ. I feel persuaded that by separating from the other matters contained in the New Testament the moral precepts found in that book, those will be more likely to produce the desirable effect of improving the hearts and minds of men of different persuasions and degrees of understanding."

The closing paragraph is so in harmony with our own way of looking at these things that it is in place here; he writes: "This simple code of religion and morality is so admirably calculated to elevate men's ideas to high and liberal notions of one God, who has equally subjected all living creatures, without distinction of caste, rank, or wealth, to change, disappointment, pain, and death, and has equally admitted all to be partakers of the bountiful mercies which he has lavished over nature, and is so well fitted to regulate the conduct of the human race in the discharge of their various duties to God, to themselves, and to society, that I cannot but hope the best effect from its promulgation in the present form."

Rammohun Roy was severely criticized by a paper published in the interests of the missionary work then in operation in India, because of his evident denial of the deity of Jesus. This led to the issuing of other tracts in defense of the position he had taken.

In 1830 he was sent by the king of Delhi as ambassador to London, and died near Bristol three years afterward.

L. J. R.

Say to them that are of a fearful heart, Be strong, fear not. Behold, your God will come with power, even God with a recompense. He will come and save you.—*Old Testament.*

There is no ethical fitness for Heaven in the heart of him who on earth is unkind, mean, and unforgiving. He has not an atom of heavenliness in him.

You are troubled by the invariableness of law: make it the method of a divine intelligence, and your trouble vanishes. You have Providence then, not once in awhile, but always.—*A. W. Jackson.*

From "The Interchange," (O.), Baltimore.

A FEW THOUGHTS ON THE MINISTRY.

The ministry Friends covet is not the out-come merely of a willingness to serve the Lord, and "to bring souls to Christ," although these are always the accompaniments of a true ministry; but it is a ministry which has for its authority a clear and indisputable call from the Lord for us to that special line of service; a call so certain that in the exercise of the gift bestowed, it is made to appear even to others that *The Lord has called*: a certain unction accompanied the words spoken that reaches the witness for Christ in the hearts of those who hear. I think, when a child, I could tell the difference between a God-appointed and a man-appointed minister,—between one able through holy help to bring forth things new and old out of the heavenly treasury, and one depending on his own native ability and training, however entertaining this might be. The true ministry usually has small beginnings; it commences prostrate before God and continues in the same humble, dependent state, growing thereby; it waits upon God for his direction, both as to time and matter, and thus escapes the danger of disturbing the worship of the congregation. It does not work with *any* selfish object in view, and by itself, but coöperates with God; and thus, if it be not from unfaithfulness or from some secret disqualifying sin, the true minister may find peace in silence as in speech, both exercises being alike his Master's will.

The true minister lays every faculty of his mind at the disposal of Him who called—he wants to be used and it is a great joy to him to be thus honored—yet the zeal stirred up in him, he wants to be a zeal of God. He sees the dangers attendant upon the acquisition, through practice, of fluency and self-confidence, and of a habit of preaching; he passes much time in meditation, in communion with his Heavenly Father—he is apt to be known as a quiet man—he is a student of the Bible, but not after the manner of men; rather is he a diligent and devout reader of the Bible, looking to God for instruction therein—he prefers this to commentaries. Being under the direction of the Most High, and knowing the essence of his keeping, the true minister of Jesus Christ desires no training but that which can be obtained in his school; he is slow to give advice to his fellow workers as to how they should prepare themselves for the work, and do this and that to keep themselves "abreast of the times;" he will not enter into bargains of any kind with those he is to preach to; praise will pain him, while "the reproof of the righteous will be unto him as an excellent oil." Christ will be known as a faithful, unflattering, and unfaltering Elder, close by all the time, encouraging the humbled, and restraining the forward servant. A pure gospel minister is always a reaching minister to some. "Lord send out thy light and thy truth and let them lead me." Samuel Emlen.

He who shows justice and charity in his conduct accomplishes the noblest of all works. An upright man is in his own way the greatest of all artists.—*Cousin.*

INSTRUCTION OR ENTERTAINMENT.

EVER since the days of George Fox, and with him the formation of the Society of Friends, one characteristic of the Society has been solidity. That is, Friends have been a sober minded people, with a leaning towards "social amelioration and practical philanthropy," and in educational matters, given to the advocacy of those branches of learning that deepen thought and broaden the understanding in a practical sense, rather than to the pursuit of accomplishments tending to display. The result of this course having proved advantageous not only to individuals, but to the general welfare of communities, it should be the the earnest concern of every true Friend to continue to uphold these characteristics, and it needs a most careful watch to keep our schools and our various intellectual entertainments firmly on this line.

The tendency of this age is to ease in the acquisition of things mental as well as material, and in the great variety of illustration that advanced science has rendered possible, it is a question whether the constant appeals to the eye do not detract from those faculties in a teacher that should be stimulated to present to the learner, such word pictures of persons and places, that can be made vastly more informing and ennobling than many of the art representations thereof.

Not that we would wholly ignore illustration, that would be to go backward and would be most unwise. But in arranging for courses of lectures let there be much of good talking rather than the too free use of the stereopticon, as it sometimes happens that the speaker feels it to be of secondary importance to cultivate well his descriptive and conversational powers, relying on the pictures to cover up defects. In such cases, the hearer, with a confused mass of imagery in mind, is conscious of a vague and almost indescribable feeling of having been somewhat entertained, but not instructed.

The taste for fine description can, and should, be cultivated, then will a foundation be laid, not only for entertainments that will be improving, but for the reading of well written and instructive books, and one corner-stone of a solid character put in place.

In the matter of school entertainments, the simple and natural recital of well committed selections from the writings of the good and the great, as well as original productions of merit, are far more impressive and more lasting in effect than a variety of personification which often creates anxiety and unrest. Yet we do not ignore the fact that there is need of some play amid so much of solid work, but let this be as the dessert to a feast, of a delicate and humorous character.

Social gatherings that combine intellectual attractions can also be made largely instructive and elevating if the watch is well kept that these do not succumb to the popular tide for much amusement and little work. The plea of recreation so often urged is not always valid, for change is rest, and it need not necessarily be a change to that which is frivolous and has in it no element of improvement to mind and spirit. One good custom of our modern times is the greater frequency in the mingling of the old and the young in these social gatherings, a custom that tends to the improvement of both.

A few words as to the character of First-day school instruction, a place where it may be considered quite unnecessary to mount guard; yet even here the watch should never be relaxed, lest irreverence sometimes creep in where only the truly devotional should find foothold. We desire no cant or pretense of piety, or undue cultivation of the emotional, only a simple trust and gradual leading of the child-soul, step by step, to a greater knowledge and higher ideal of the one great source of all good; a reverent regard for all things, even the smallest of his creatures, as well as for the temples wherein he dwells. A solid character here will not, in future years, "be tossed about by every wind of doctrine," but be prepared to meet advancing thought and assimilate or reject it, as the steady inward guide directs. To such an end we may all cheerfully work, if we at the same time only prayerfully watch.

EDITORIAL NOTES.

AN article elsewhere printed, from the *Christian Union*, inculcates a theory of objection to the prevalent habit of perpetual activity,—a habit which we might regard as especially American, though, as it appears in the close of the article, there is criticism of it in England, also. The discussion of the theories can hardly fail to suggest the thought that the bulk of teaching is in the direction of "using every moment." A great many chapters of this advice are given every week and every day; a great many poems might be collected which urge it. In fact, the whole tendency of existing social movements is toward an ideal condition in which no part of time shall pass by unutilized.

We do not undertake to decide, in this paragraph, between these two doctrines. It must be confessed

that it will not do to preach systematic idleness or to encourage the inclinations of the lazy. At the same time, *is* it always idleness to be apparently unemployed? and is it not desirable to escape from excessive unrest into mental and physical quietude? Labor is necessary as well as noble, but whether it should never be intermitted except in sleep, and in death, is another question.

* * *

VERY brief mention, if any, has been made in this paper of the death of Mary Howitt, the distinguished English author, wife of William Howitt. She died at Rome on the 2d of the present month, aged about 84 years. Her maiden name was Mary Botham; in 1823, at the age of nineteen, she married William Howitt, who like herself was a member of the Society of Friends, and subsequently, during their extended life, the two produced, separately and in collaboration, an extensive list of books, including numerous translations, compilations, etc. Her husband died in the Third Month, 1879, at the age of 84, and since that time Mary became a convert to the Catholic church, following a daughter who took that step. She had gone to Rome to attend the Papal "jubilee" ceremonies, and was presented to the Pope, subsequently to which she fell ill. She was buried beside her husband in the Protestant cemetery at Rome.

MARRIAGES.

SHOEMAKER—TYSON.—In Baltimore, Md., Second month 8th, 1888, by Friends' ceremony, Dr. Samuel B. Shoemaker, of Philadelphia, and Mary Dawson, daughter of James W. Tyson.

DEATHS.

BUCKMAN.—In Newtown, Bucks county, Pa., on First-day, 19th of Second month, 1888, Stacy C. Buckman, in his 79th year. Although not a member he was a regular attender of Newtown Friends' meeting when health permitted.

FOULKE.—Second month 18th, 1888, of pneumonia, at his home, Gwynedd, Montgomery county, Pa., after a week's illness, Daniel Foulke, aged 74 years; an Elder of Gwynedd Monthly Meeting, and for a number of years Assistant Clerk of Philadelphia Yearly Meeting.

HANCOCK.—At her residence, Burlington, N. J., Second month 18th, 1888, Harriet Hancock, aged 86. Interment from Mount Holly meeting-house.

HANCOCK.—At his residence, Columbus, N. J., Second month 11th, 1888, Clayton Hancock, in his 88th year. Interment from Mansfield meeting-house.

KEESE.—At the residence of his son, Wm. B. Keese, 872 Fulton street, Chicago, on the 1st of Second month, 1888, Willets Keese, aged 74 years, 2 months, and 6 days.

His parents were Wm. and Jemima Keese, of Peru, Clinton county, N. Y., the one an Elder and the other a Minister in the Society of Friends. While residing in his native state, Willets is said to have been an active member, much interested in anti-Slavery, Temperance, and other reform movements. In 1855, owing to ill health in his family which it was hoped a change of climate might improve, he moved to Illinois, settling not far from Chicago. During the last seven years he and his invalid wife, Caroline, have resided with their son at Turner Junction and in Chicago, to which city they had removed.

His interest in our little meeting led him occasionally to travel the distance of thirty miles to attend it, returning the same day on account of the ill health of his wife who received his constant care. During the few months of his residence in our city his attendance with us was as regular as health would permit. A quiet, unobtrusive man, faithful in all his duties, loving the true and the good, we do not doubt that he passed into the happier life fully ready, as he was anxious for the summons.

Chicago, Ill. J. W. P.

LAING.—At Rahway, N. J., on the 14th inst., Alve Edgar Laing, formerly of this city, aged 76 years.

LEEDOM.—Second month 16th, 1888, Eddie, son of Edmund and Sarah Leedom, of Upper Darby, in his 45th year.

LIPPINCOTT.—At East Moorestown, N. J., on Second-day, Second month 13th, 1888, Elizabeth E., daughter of the late Charles and Jane Lippincott.

MACY.—At Hudson, N. Y., on the 8th of Second month, 1888, John I. Macy, aged 78 years; a consistent member and elder of Hudson Monthly Meeting.

MONTGOMERY.—In Camden, N. J., Second month 9th, 1888, Mary C. Montgomery, daughter of the late James Carman, Sr., in her 78th year.

RICH.—At his home, near Edgewood, Bucks county, Pa., on the evening of First month 30th, Joseph Rich, in the 88th year of his age; for 27 years a valued elder of Middletown Monthly Meeting.

At the early age of ten years he moved with his parents to Middletown where he continued to reside until his death, during which time his place at meeting was seldom vacant, until the infirmities of age gradually crept ever him. His added years did not lessen his interest in the Society he loved so well, and his loving counsel to faithfulness will be cherished by those who were privileged to receive it. In 1829 he was married to Mary Palmer, which union was blessed with seven children, all of whom survive him, and it was a pleasure for him to say, "My children as they have left the parental home have settled almost in sight of me." His love for his family was strong, and annually they gathered around him, bringing their children and grandchildren. Punctuality, justice, and mercy marked his path through life and as a sheaf of wheat that is fully ripened, this dear friend has been gathered into eternal rest.

Henceforth, O Father, may he be a link to bind our human hearts to thee. S.

SHOEMAKER.—First month 21st, 1888, in Montgomery county, Enoch Shoemaker, in his 84th year.

TAYLOR.—On Second month 13th, 1888, Augustus Taylor, of Swarthmore, Delaware county, Pa., son of the late Mahlon K. Taylor, of Taylorsville, Bucks county, Pa.

THOMAS.—At the residence of Edward L. Taylor, near Edgewood, Bucks county, Pa., on the 19th of Second month, 1888, Rachel Thomas, aged 57 years; a member of Makefield Monthly Meeting.

YERKES.—Second month 14th, 1888, Lewis Yerkes, in his 82d year. Interment from Lower Merion meeting-house.

WE need nothing more than the conception Jesus has given us of God to make sure that no spirit will ever be debarred from returning to allegiance whenever it desires; that there can be no period in eternity when the Infinite Arms will not be wide open for any prodigal, penitent, and poor, that longs to escape from his miserable husks. There is no doom that will ever prevent this.—*Thomas Starr King.*

SCRIPTURE LESSON, No. 10.

THIRD MONTH 4TH, 1888.

TOPIC: SERVING OTHERS.

GOLDEN TEXT: "The Son of man came not to be ministered unto, but to minister."—Matt. 20: 28.

READ Matt. 20: 17-29.

And as Jesus was going up to Jerusalem. This was the last journey he made to Jerusalem. It was near the time of the Passover, and many were going in the same direction, the Jewish law requiring all the males to be at the feast. (Ex. 23: 17.) It was that he might have greater privacy that he separated himself and the twelve disciples from the company.

Behold we go up to Jerusalem. This was to prepare them for what was to follow, as it was nscessary for them to be informed of what awaited him in that city. It was during this journey that Salome, the wife of Zebedee and mother of James and John, made the ambitious request for her sons which opened the way for the lesson on serving now before us.

It is evident from the manner of her approaching Jesus, *worshipping*, in the original, *kneeling* before him as one having rule and authority, that the disciples were still looking for Jesus to take possession of the throne of Israel, and, as its king, appoint themselves to the highest offices in the kingdom. To sit on the right and left hand of a king was the greatest honor he could bestow upon his friends. (Psalm 110: 1. I. Kings 2: 19.) Jesus shows by the answer, "ye know not what ye ask," how entirely his disciples were absorbed by the thought of earthly greatness.

The Cup. This often signifies to be afflicted or punished. The figure is taken from *a feast* where the master of the feast extends the cup to those present.

Not mine to give. This shows a limitation to the power of Jesus, which accords with all his previous utterances. "I can of myself do nothing" was his own testimony.

The ten . . were moved with indignation. The tender consideration of Jesus for his disciples and the conciliatory spirit so often manifested toward their human weaknesses, is nowhere more apparent than in this instance. It was quite natural that the ten should be offended, and it was only as he led their thoughts to the higher sense of service and ministry that the lesson of his own life became to them an example and an incentive to shape their lives in accordance therewith. The great stress laid upon the duty of compassionate interest and helpful service in the welfare of others, in all the teachings of Jesus, makes the religion he came to establish, essentially a religion of good works. Yet so little had the thought of the human family been turned into channels of kindly feeling one for another, or of God as a being of love and compassion, that a system of doctrines was soon formulated, which so hedged in the humanities of his precepts, that *to believe* came to be regarded as more vital to the salvation of the soul than *to do*.

Looking back to these dark passages of ecclesiastical history,—to the cruelties perpetrated in the name of religion, by those professing to be the disciples of Jesus, one can scarcely comprehend how it was possible that the spirit which breathes only peace and good will throughout the whole gospel could have been overlaid and silenced by the prejudice and passions of men, until all that was holiest and best in its teachings seemed lost.

But as it was in the history of the Hebrew people in the time of their apostasy, the old prophet fleeing from his persecutors, believing himself the only one left, was assured that a remnant still held to the faith of their fathers—so in these degenerate times there were here and there those who were faithful witnesses, comparable to the seven thousand who had not bowed the knee to Baal or kissed his image. In lonely and isolated places there were disciples tender and compassionate,—disciples who saw the Christ in every needy and suffering fellow-being, and who shared with such the scant store of their own poverty, and the larger bounty of an overflowing compassion, limitless as the love which constrained the offering.

We of these broader, fuller, and happier times can form no estimate of the weight and influence of such ministries at a time when to befriend one who was under the anathema of the church, was to become a partner in the heresy; nor can we ever be placed in a condition that would make such atrocities in the name of religion again possible. Yet there are many things in creeds and confessions that must be eliminated from the religion of Jesus as now understood by the majority of its confessors, before it takes its true place in the world, and becomes "The glad tidings of great joy," it is its mission to bring to all the nations of the earth.

NEWS OF FRIENDS.

STANFORD QUARTERLY MEETING.

THIS occurred on the 10th of 2nd month, and was an occasion of much interest. This meeting was held at Crum Elbow, Duchess county, and though a low temperature with much snow prevailed at the time, it was fully the usual size. The meeting for ministers and elders on fifth day was small, but several members of the Yearly Meeting's Visiting Committee were among the number, and Isaac Wilson, from Bloomfield, who left his distant home in the severity of winter to visit Friends of New York Yearly Meeting was also present with a minute of unity and concurrence from West Lake Monthly Meeting, Ontario. Many hearts were warmed by his presence and labors and he was cordially welcomed. In the quarterly meeting, on Sixth-day, he was lovingly engaged in testimony. The beautiful figure of the many mansions in the Father's house was brought to our view, as applicable to present life, our gifts of love, joy, peace, meekness, gentleness, faith, become exalted dwellings, fit habitations for th e immortal soul. He was much enlarged, opening clearly the condition of the "prodigal son," his noble resolve to return while in his low degraded state, the full ness of love exhibited by the father who saw him "afar off," his joyful return, reception, and acceptance, with the robes of the Christian virtues for his adorning, the conduct of his elder brother, all vividly and beautifully portrayed, showing that the sacrifice of the will and the affections were important to man's restoration. He

was much appreciated, and we trust that as he goes on fulfilling his mission of love to the churches, many hearts will follow him with interest and sympathy, and be warmed with gratitude to the Father of all, that he was sent forth to cheer, strengthen and encourage us. Brief and pertinent communications were also given by Philip Dorland, of Saratoga, and Thomas Stringham, of Crum Elbow, and the meeting adjourned to Creek in Fifth month next.

M. M. R.

Rayville, N. Y. Second Mo. 10.

SALEM QUARTERLY MEETING, OHIO.

A FEW Friends gathered on Sixth-day, the 10th inst., at 3 p. m., at the meeting-house, and it being but a short distance to the residence of Doctor Eli Garretson, they decided to go there,—as he and his wife are both members of the select body, and both invalids, and unable to get out,—which they did, and had a very satisfactory season. On Seventh-day, the 11th inst., pleasant weather and good roads, Friends assembled at the eleventh hour a fair attendance. The silence was broken by short communications from Joseph Heartby and others, after which the attention was turned to the business transactions and state of Society, at which time a letter was read, addressed to the meeting, by Margaret A. Garretson, which is as follows:

"Although I have been prevented by sickness for four months from meeting and mingling in a collective capacity, the relish for Society is not diminished; believing that He who is with and over all careth for all, individually and collectively. He is with the lone traveler, the weary and heavy laden, those upon beds of sickness, or employed in social and domestic affairs. His light shineth over all even in darkness, and the darkness comprehendeth it not,—comparable to the erring one, who seeth not the goodness of the Lamb of God. See how it was with the prodigal: while yet a great way off in sin, that heavenly light still shone upon him, and when he saw his condition and became humble, the Father was willing to receive him back into the fold with great rejoicing. It is not all of life to live, to merely have a being, to exist; each has a duty assigned him, which, if cheerfully performed, will bring peace and joy. May we then ask oftener than the returning morning, of One who giveth liberty and upbraideth none, to guide us through each day's pursuit, keep and preserve us as in the hollow of his holy hand, that when the bridegroom calleth, our spirit may be wafted back to the Father pure and spotless."

Ruth Hannah Nichols then offered a few remarks, and the entire meeting was thought to be a season of favor.

A FRIEND.

NINE PARTNERS' QUARTERLY MEETING.

NINE PARTNERS' Quarterly Meeting convened at the Nine Partners, on 6th of Second month. The meeting for ministers and elders met on the Seventh-day before, at 3 p. m. There was about the usual attendance for the winter season; many of the aged members living remote, are not always with us. We were favored with the presence of Isaac Wilson, a minister, with a minute from West Lake Monthly Meeting, held 20th of Tenth month, 1887, at Bloomfield, Canada; also John William Hutchinson, of New York, Joshua B. Washburn, of Purchase Quarterly Meeting, and others. Their presence contributed largely to the interest of the meeting.

The meeting for worship on First-day morning was larger than usual, the sleighing being good and weather mild. After a time for silent communion, Isaac Wilson arose with the words: "Born in a stable, cradled in a manger; no room in the inn." Then applying the text with the query, if the hearts present were so filled with other guests as to close the entrance from admitting the babe immortal an entrance there? The gospel stream seemed full to overflowing; all were filled, none went empty away. Much satisfaction was expressed by those present.

On Second-day morning the meeting assembled for worship and discipline. The gathering was not so large as the day previous, but it was a season of divine favor. Isaac Wilson again communicated from the 1st chapter of St. John, 46th verse: "Nathaniel said unto him Can there any good thing come out of Nazareth? Philip saith unto him, Come and see." There were present two ministers, not of our fold, who had never attended a Friends' meeting, one of the Reformed Church, the other a Methodist. Both manifested their interest and attention until the close, a long, interesting discourse of the life and character of the Messiah. The Methodist said he felt "like shouting 'Amen' all the way through." Both were well pleased with the meeting. At the later meeting, the usual routine business was transacted. After the closing minute was read, by request the meeting resumed its joint session, and after a brief but impressive silence Friend Wilson arose, and in language I cannot express in writing, feelingly addressed our sisters, and then turned to the brethren. The feeling seemed to be we were all of one mind in the same place, and the divine presence of our Heavenly Father was spread over all. Thus closed the session of a very interesting Quarterly Meeting.

J.

SHREWSBURY AND RAHWAY QUARTERLY MEETING.

THIS meeting, held at Plainfield, N. J., on the 16th inst., was *not* largely attended, but was thought to be a very satisfactory meeting.

Robert and Esther Barnes, of Purchase, N. Y., were present as members of the Yearly Meeting's Visiting Committee as well as in the capacity of concerned Friends. Elizabeth H. Plummer, from Bucks Quarter was also in attendance under a religious concern. The ministerial labors of each of these Friends were acceptable, and highly appreciated in the quarterly meeting and also in the public meeting the day following, as well as in the monthly meeting the day preceeding the quarter.

The monthly meeting was very small particularly on the part of the men, a number of whom were detained at their homes by sickness.

The two monthly meetings which constitute this quarter are situated about forty miles apart; conse-

quently it requires some religious interest on the part of those who attend the quarterly meetings regularly to be present on every occasion.

The proportion of young people who go is quite limited, but they generally feel themselves well rewarded when they do attend. The social mingling of the members of different ages is one of the good features that is promoted, and should be encouraged. If there is not a succession of young members to come forward and take the places of the fathers and mothers, the Society will not be maintained, in its present condition of usefulness.

The Temperance Meeting, held by the committee on that subject, was also small but quite satisfactory to those present. It was addressed by Nathan Harper and others.

—Robert M. Croasdale, accompanied by Simon Gillam, visited the monthly meetings in Bucks county, composing Bucks Quarterly Meeting, in the Second month, and had an appointed meeting in Doylestown on First-day afternoon, the 5th inst.

—At Radnor Monthly Meeting, on the 9th instant, Margaretta Walton attended, with a minute from Fallowfield Monthly Meeting, setting her at liberty to visit the families composing Radnor, Haverford, Merion, Valley, and Schuylkill meetings.

COMMUNICATIONS.

THE QUESTION OF MUSIC.

Editors INTELLIGENCER AND JOURNAL:

THE article in last week's issue, entitled, "Why Friends object to music" arrested my attention, because it has been an unsolved problem to me; and hoping to receive some light thereon, I read T. A. J.'s communication, but found it quite unsatifactory to me; therefore, I wish to reply to some of the statements, which to my mind are entirely erroneous.

The conclusions arrived at, through reasoning upon wrong premises, are most peculiar.

The first objection is, "the associations and surroundings where music is *usually* to be obtained, are not morally healthful, especially to young women and girls." I have never yet, in a life time of fifty years, heard music under such circumstances, and I suppose such is the experience of most persons. Music in churches and concerts and homes is usually elevating and inspiring; where it is not so, is the exception. One might as well object to making use of the horse because he is put to a bad use at races; or to playing innocent games, because they can be used for gambling. There is a right and a wrong way to appropriate all the good within our reach.

I am unacquainted with Herbert Spencer's views on this subject, but T. A. J.'s thoughts are somewhat ambiguous. "Where the faculty of enjoying simple music has not been cultivated," he says, Is it beneficial or otherwise to enjoy simple music?

Again I quote: "Would not one cultivated in that atmosphere [music] be likely to undergo excessive development of the emotional side of his nature?" Surely the emotional side is well developed in our society, that is very apparent; but it certainly cannot be attributed to musical education, since, it has been almost unknown among us.

Professional musicians are no more deficient in a sober estimate of things than professors of other sciences; "the ability of the will to act promptly and definitely" does not in the least depend upon the amount of sympathy with music. The "exclusive devotion" to music is certainly hurtful; so is exclusive devotion to any occupation.

A harmonious development of all our powers, will tend to produce a well balanced and sterling character; and I would not have music excluded, for it has its use in the world's great school, not as an end, but as a means whereby our spiritual life may in some measure be nourished. E. H. B.

Philadelphia, Second month 13th.

THE QUESTION OF FRIENDS' SCHOOLS.

Editors INTELLIGENCER AND JOURNAL:

THE command has been given to write, but the feeling is my powers are so unequal to the task of expressing that which is struggling for utterance. The feeling came with the reception of the appeal from Swarthmore College, soliciting aid. I would not stay the course of any good thing if I might, but a question has taken possession of my mind and I have discovered it to be abiding with many others in like manner. It is whether the funds already expended in Swarthmore College might not have been used to greater advantage for the Society of Friends, if good schools, under the care of the Society, had been scattered over our country, to which the hungering and thirsting after knowledge, among those whose restricted means forbade the thought of a college education might have turned to slake that burning thirst which some of us remember so well.

Comparatively few Friends' children have been able to attend Swarthmore College and comparatively few of those who have attended have graduated, and we have yet to have it shown whether those who have attended for a short period have been better qualified to meet a life of labor, and in many cases sore privations, than they would if allowed to attend for a longer time some good school provided nearer home for them.

If there is one thing I feel to have proven conclusively, it is that that good which is extended to its utmost limits of good, shedding the fullest, broadest light upon the most, is the nearest in approach to the One High, All Good. Therefore in this thought I give the only excuse for writing on the subject, and while it is too late to change it now even though it could be proven best, I would only call attention to the fact that there is a need far extending, for which Swarthmore is not adapted and is beyond. And though I would not wish any one to withhold support and aid where wisdom directs the giving, yet we feel that many, especially in the West, cannot give to this without taking as it were the food which belongs to their children,—giving it unto strangers.

The need of an awakening to the truth, that Friends' schools are a necessity in the West if we mean to keep the lambs in the fold with us, grows stronger each day. I leave these thoughts with you, trusting that at least one seed therein may germinate and bring forth good to some of the little ones over

which our hearts yearn and who need every preparation possible to meet the snares and temptations scattered broadcast over the road before them.

MARIANA B. TRUMAN.

Genoa, Nebraska.

LECTURES FOR FRIENDS' LIBRARY.

IN the absence of Dr. Dolley, who is, unfortunately, in ill health, the Library Association of Friends enjoyed a remarkably interesting and valuable lecture by Prof. Wilson, of the University of Pennsylvania, on Fourth-day evening, the 15th instant, at the lecture room of Friends' Central School. Prof. W. presented in a plain and simple manner the particulars of plant nutrition, respiration, and assimilation, as ordinarily accomplished. Then he gave a series of studies of pitcher plants, illustrating how these curious plants are nourished by animal matter which they are enabled by a wonderful structure to procure. Honey glands for attracting insects, closed pitchers containing water for their prison, and a ferment of the nature of pepsin to dissolve the food, were represented by the aid of the stereopticon. The droseras were also shown in detail, so that all present who were unfamiliar with the facts, were able to realize the observations made by accomplished naturalists like Darwin and Mrs. Treat. The "Venus Fly Trap" found in North Carolina, the Bladderwort of ponds in the vicinity of Philadelphia were beautifully demonstrated as were the parasitic Dodders. The Dutchmen's Pipe and the Epiphytes, growing on the roots of beech trees, also illustrated abnormal habits of nutrition.

We regret that no notice appeared in our columns of the excellent lecture by Prof. Beardsley, of Swarthmore, on "A Trip to the Yellowstone." It was highly enjoyed by those present.

Tickets for the two remaining lectures of the course may be had for sixty cents. That by Prof. R. E. Thompson, of the University, on "Ireland" will be given next, on Fifth-day evening, Third month 8th, and will no doubt be an interesting discourse.

FROM THE MT. PLEASANT SCHOOL.

OUR friend, Wm. M. Jackson, of New York, sends us a letter from Abby D. Munro, giving a report of the school work at Mt. Pleasant, remarking that by its publication it will reach a larger circle of those interested. Under date of Second month 10, she says:

Dear Friends: I have nothing to report for the month of January as no changes have been made, and everything has gone on smoothly and well. We registered one hundred and twelve, and the average attendance has been ninety-six, and the absences have been almost entirely among the smaller children, as it is quite an uncommon thing for one of the more advanced pupils to be absent for a day. It is very healthy here this winter. The weather has been unusually mild and pleasant. We are eagerly looking forward to the time when we shall get in a building of our own, with the conveniences we need, and where we shall have more comfortable seats for the pupils, especially the smaller ones. A great many of them do not touch the floor with their feet, and it makes them very uneasy, and any teacher knows how hard it must be to teach so advanced a school without blackboards, maps, or charts. As I understand there is in the treasury fifteen hundred dollars. Five hundred more are needed for the building. We want to commence very soon now, that we may get it finished before school closes. If we had but a few pupils it would make little difference, but with so large a school and three teachers, all in one room, it is very hard work. It seems like spending a good deal of strength for naught. Will not the good friends make an effort to help us? It is a call, I trust, we shall never have to make again. The county schools have already closed so there is little dependence to be placed upon them. It seems much like spring here. Green peas are up, in our garden, and one of the truck farmers is already shipping asparagus.

ABBY D. MUNRO.

SWARTHMORE NOTES.

—Thomas Wentworth Higginson, of Cambridge, Mass., will speak at the College on Fifth-day evening, the 1st of Third month, upon "Literature as a Profession." The friends of the College are invited to attend.

—The subscription to the Endowed Professorship is increasing at the rate of about $1000 a week. The many letters received are very encouraging. It is hoped that Friends who have not received the "Appeal" will also send in their subscriptions. Several have already done so.

UNNEEDED.

"According to the mind of God our perfection does not depend upon our much doing. This was Martha's error, which our Lord rebuked."

LORD is my service at an end?
I am so slow to comprehend!
Why comes this pause which seems to say,
Thou hast no work for me to-day?

Do I not hoard my time for Thee?
Do not my hand and heart agree
To yield to Thee their best, their all?
Dear Lord why hast Thou ceased to call?

Where lies my load of previous care?
Whose are the tears that I might share,
Or whose the joy that I might make
My equal joy for Thy sweet sake?

The world is just as full of woe,
For sin in hand with grief must go;
But now the world seems distant grown,
And I unneeded and alone.

Ah, how Thou dost Thy will reveal,
To interrupt my restless zeal,
That I in solitude may heed,
May own, my all surpassing need.

Much serving often hinders Love;
And care, forgetfulness may prove:
The busy hand may cheat the heart,
That else might choose the better part.

Who waits in holy idleness
Can never learn to serve Thee less,
But rather learns how poor, how vain,
Is all he hath accounted gain.

Then give me, Lord, no work to-day,
But give what none can take away,
The portion evermore most sweet,
To sit, like Mary, at thy feet.

And quicken Thou my inward ear,
That I, like her, Thy word may hear,
In inward silence that shall drown
All voices other than Thine own.

The soul that seeks no end but this,
The end of zeal can never miss,
But even midst her toil shall be
In holy solitude with Thee.

H. M. K.

THE BETTER PATRIOTISM.

Who serves his country best?
Not he who, for a brief and stormy space,
Leads forth her armies to the fierce affray.
Short is the time of turmoil and unrest,
Long years of peace succeed it and replace;
There is a better way.

Who serves his country best?
Not he who guides her senates in debate,
And makes the laws which are her prop and stay;
Not he who wears the poet's purple vest,
And sings her songs of love and grief and fate;
There is a better way.

He serves his country best
Who joins the tide that lifts her nobly on;
For speech has myriad tongues for every day,
And song but one; and law within the breast
Is stronger than the graven law on stone;
There is a better way.

He serves his country best
Who lives pure life, and doeth righteous deed;
And walks straight paths, however others stray,
And leaves his sons as uttermost bequest
A stainless record which all men may read;
That is the better way.

—*Susan Coolidge in The Congregationalist.*

THE HABIT OF PERPETUAL ACTIVITY.

A visit to any place that is the Mecca for those seeking either rest or cure arouses the question, Has the spirit of the Wandering Jew distributed itself or infected American men and women till rest has become impossible? Watch a group of men gathered together at one of these resorts, and not one will have assumed an attitude of rest unless he is smoking or reading. The attitudes of the unemployed suggest alertness, as though they were waiting for a train that was behind time, and that would probably not stop for them unless they exercised some physical power. When reading the newspapers, it is not the leading articles that receive attention, but the short paragraphs that present a variety of subjects that do not require thought. Only here and there will a man be found who has mastery enough over himself, who has cultivated a habit that will allow his mind opportunity to hold and digest a thought that does not relate to money-getting; few, comparatively, are able to think to a definite conclusion, logical and satisfactory, on any subject. Yet it is this power that enables a man to be classed with that very small body of citizens that we may refer to as "men of affairs." It is the pettiness of the subjects to which men give their minds that robs them of their power to grow to the full measure of the stature of men created in the likeness of divinity. The rush of men in every direction as though life, success, depended not on the thoroughness, but on the speed with which business was accomplished, is one of the mistakes of the age. It is acknowledged that the men who know how to spend a vacation, the men who know how to rest, are the men who know how to work. How few their number! Women show this same spirit of restlessness, but in another way. Looking about your circle, how many women do you know who are able to sit still, evincing in their attitude physical and mental repose? And yet this is one of the greatest charms in a woman. It gives her a wondrous command, not only over herself, but others. Such a woman by her presence gives out a spirit of rest. She gives sympathy, not by what she does, but by what she does not do; the very quiet of her attention breathes rest and comfort. The reserve power, of which every one who approaches her is conscious, makes her a tower, a refuge of strength and refreshing. It is to those who know her what the quiet haven is to the sailor just escaped from the storm-tossed sea. This spirit of repose comes first from a consciousness of the fatherhood of God, the consciousness of the immeasurableness and immutability of God's love; secondly, of the utter uselessness of undue anxiety, of the largeness of life, and in acceptance of the smallness of individual affairs in comparison with our relation to the world by which we are surrounded.

When we realize that there is no such thing as an act or decision that affects ourselves alone, that we cannot live in the small circle to which we have adjusted our individual interest, we learn to stop and think with a degree of leisure that grows as we learn the repose that comes from recognizing our divine and human relation to the world.

Comparatively few women are able to sit with their hands unemployed. Go through hotel parlors, look at any group of women assembled without gloves, and fingers are busily engaged in some work that is kept for leisure (?) time. The great majority of women would no more think of planning for a week's trip without embroidery silks, linens, and worsted, than of going without a bonnet. It is a rare thing to travel now without finding a percentage of the women on boat or train provided with fancy-work which so absorbs attention and eyesight that the beauties of the country through which they are passing are as lost to them as though they were blind. A group of women delude themselves into the belief that they are improving their minds if one of their number reads aloud while the rest give eyesight and two-thirds of their thought to the work in their hands; it is almost comical to hear the whispered comments and questions that so constantly reveal the slight thread of interest that connects the minds to the intellectual subject that has called them together. It is the same if an interesting subject is under discussion; it is interrupted with—"Just wait until I get my work." To sit still with unemployed hands and give

the whole of one's attention to a book or discussion when there is the possibility of "working" is to declare one, if not lazy, at least indolent. But this nervous activity bears about the same relation to true industry that the hemming of a ruffle for the adornment of a child's dress does to the education of that child in ways of integrity.

A student at one of the Oxford woman colleges last year became so annoyed because her fellow-students filled their time to the exclusion of social intercourse that she founded a society for the "Cultivation of Graceful Leisure." The members were required not to open an instructive book before nine a. m., and should spend a part of each day doing nothing as gracefully as possible. Unfortunately for the future, the society was not a success, but it would be well if such a society existed in every home, for it would give time and opportunity to cultivate not only grace of body, but of soul. It would smooth the wrinkles in faces prematurely old; it would mellow sharp voices, it would give opportunity for the spirit of affection to come forth with shining face from the closet to which the habit of the times has driven her, and men and women would look into each other's faces with expressions of interest, instead of passing by with hurried nods, fearing the loss of minutes that count in the measure of eternity.—*Christian Union.*

HOW TO MAKE BOYS USEFUL AT HOME.

An impression seems to prevail among well-to-do parents of to-day that there is nothiug for a boy to do when he is out of school and at home. No idea which you can entertain is more erroneous or likely to result more disastrously for your boy than this sentiment, which I have often heard from the lips of mothers themselves. I have said the impression that the home furnishes little or no occupation for a boy prevails among well-to-do parents, because I find more industrious habits among children of the thrifty poor. Possibly this is a significant fact when we consider how many of our most honored men have risen from poor parentage and humble homes.

I do not think the average boy will know of himself what there is that he can do about the home. You must set him to work. And you must begin when he is so young that the habit will be a fixed one before he is old enough to seriously rebel against your authority. A child can very early be taught to pick up his blocks and save his mother or nurse the trouble. I have heard a mother say that a child of three years was too young to learn to hang his own little coat and hat on a certain peg in the closet. Now, when a family cat will for years, upon entering a certain room, walk deliberately to a cushion which she has been taught as a kitten to lie upon, I think a three-year-old child of ordinary intelligence could be taught without any great exertion the association of ideas between his coat and a certain place set apart for its keeping. These are little things, but they are the beginnings of greater ones.

As soon as your boy has reached the age when he is allowed to go beyond the garden limits, or to venture upon the pavement unattended, know for a certainty that, if you do not keep him busy at home, he will find abundant occupation upon the street and will seek his companions among the busy idlers there. The opportunity for influencing your boy is then lessened, and likely to soon cease altogether. There seems to exist some strong magnetic attraction for a street life, which once entered upon is with great difficulty relinquished. The home magnetism should be stronger than the magnetism of the street, and if it fails of being so the mother has failed in an important part of her mission as a mother. We will imagine a home where the children are out of school and busy with their several occupations. One girl is taking her music lesson, another reading an interesting book. A third is sitting on the floor making a dress for her doll. The mother is upstairs sewing. The one boy in the family alone has nothing to do. First he stretches himself at full length upon the sofa, until finding this monotonous, he leans over the back of his father's chair and teases his sister who is reading until her patience is thoroughly exhausted. The music lesson over, he sits down and drums upon the piano until his mother, nervous and tired with the sewing, calls to him from upstairs that he must let the piano alone. Nobody hears his remark that there is nothing for a fellow to do as he saunters to the window with his hands in his pockets. He looks idly up and down the street a few moments; then there is a rushing noise, a banging of the outside door, and tranquility pervades the house till tea time. The mother folds her work away at dark with the satisfaction of having accomplished so much that afternoon. Years after, when the children's work is all folded away because the children have grown into men and women, many a mother who thought she was doing her duty by her boys sits and grieves over the disappointment of her life. She was always a good housekeeper. Her fall and summer sewing was promptly done. Her boys only have been failures. They have disappointed their parents and clouded their home horizon. Perhaps the mother's keenest grief consists in the indifference of her sons to the sorrow they have caused. But who cared for them in the best and truest way when they were boys at home? Mothers, teach and train your boys in useful employments, and when the world calls them for advanced work their industrious habits and memories of the home they helped to make beautiful will cling closely about them and follow them wherever they go.

There are so many ways a boy can help about the home that I hardly know where to begin to enumerate them. If the mother wants her work-basket, or a book from up-stairs, why send the daughter on the errand? Why not rather send the boy, and so teach him his first lessons in gallantry? If you have a boy with any sort of mechanical taste, give him, if possible, some tools, and a work-bench, and materials to work with, and a suggestion or two now and then as to something to make. If you have no room for a workshop, a corner in an attic is better than nothing. Is there a hinge or a lock out of order, a broken slat of a blind, or loosened round of a chair that you have been trying to put in order for so long that there

boy do it. Give him a pot of glue, and let him understand that everything which can be kept in order with glue is his special province.

A bracket saw or a simple printing press are desirable additions to the workshop. The boy must be taught that success with these implements does not depend upon the quantity of work which he can turn out, but upon the skill of his workmanship. In the emergencies attending housekeeping, you do not know how useful a boy can be until you put him to the test. Is your housemaid away or ill? Let the boy make his bed or set the table. Some mothers seem to think this unmanly. I think it is the manly boy who makes his own bed rather than to stand by and see his mother make it. I know boys who took the books from large library bookcases once or twice a year, dusted and reset them as carefully as their mother could have done. They were taught to do it carefully; and that was an important part of their doing it.

Is there a wood-box to be filled, or coal to be brought for a fire? Let the boy do it, at a regular hour each day. If you are preparing for Christmas, let him crack the nuts for your dessert. He will eat a good share of plum pudding; why should he not help stone the raisins, and thus grow to feel that he has a personal share in the holiday preparations?

If your boy is fond of flowers, teach him to water the plants in your window, and not only to water them, but to do so without spilling a drop of water on carpet or furniture. Boys can very easily learn to make scrap-books. Save the multitude of pictures which find their way into the house in this age of illustrated advertisements and papers of every description. Let them cut out the pictures themselves and put a few at a time into some book given them for the purpose, and by Christmas time they will have a number of pretty and acceptable gifts for children. I knew a boy of nine or ten years who knit several pairs of worsted reins for presents one Christmas. It occupied him happily for many an hour. * * * * * * * *

Boys should also be taught to read aloud to their mother while she is at her work. They can talk over what they read; and the mother must be quick to see if the boy is tired, and can often rouse his interest afresh by taking the book and reading a few pages herself in a bright way, and will make him a better reader by this method. Boys are not such invariable rovers as many would have us believe. They are ready to love their home and stay there if the home is made lovable. Here lies deep-seated a reason for our wayward boys. Many mothers are absorbed in housekeeping, not home keeping. I hear them say it is so much easier to do a thing themselves than to teach their boy or girl to do it. What has ease to do with the future of our boys? It is well that sewing and sweeping be done; well that we have finely appointed houses and servants. But if these come through neglect of our children's higher training, let us have fewer decorated houses, fewer dainty garments, fewer afternoon teas, and more time to develop useful and home-loving boys.—*Sara Wyer Farwell in Christian Union.*

TWO WAYS OF LOOKING AT IT.

The story is told of a little city girl who was treated to a visit to the country. Her entertainers had a tame robin which enjoyed the liberty of the lawn and porches, with the occasional privilege of hopping indoors. A country child, if she had any pity for the robin, would have regretted that the bird, through domestication, had lost its free and happy instincts. But the city child's pity took a different view. "Poor little bird," she said, "it has got no cage!" The city child's idea of birds was that they were born to live in cages, and thus being made helpless are therefore made happy by the obligation of their captors to keep them supplied with food and water. Her sympathies were naturally excited in behalf of a cageless bird,—that is to say, houseless specimen; and, though the cage would have been the last thing the robin would have desired, the little girl would have charitably locked him in, to beat his feathers off in rebellion against the wires. There can be no doubt of the charitable impulse of the little child. And there is little question of the sincerity of the charitable designs and desires of the thousands of good men and women who give time and money for philanthropic objects. There is, however, room for fear that, with the sincerity of the child, men and women have also its innocent ignorance. They see many "poor little birds" that they would provide for in modes to which the birds would vehemently object, if they were consulted. Indeed, they do object; and much of what is considered sullen ingratitude and unkind rebellion among the beneficiaries against their well-meaning benefactors is simply the natural protest of "poor little birds" against the cages provided for them. By this it is not meant to say that hospitals and refuges for the sick and destitute are charities misapplied. There is and always will be need of such provision. And the relief they give to suffering human beings cannot be overestimated. The point to be made is this, that "poor little birds" are too much enfeebled by the aid they receive, when that aid goes to depriving them of the feeling of self-reliance. The caged bird is no bad emblem of the hereditary and unmitigated specimen of the pauper class. To no small extent civilization has made its charitable work the provision of huge cages for human birds who might better be left to go abroad and help themselves. In the good time coming, it may be hoped that the prevention rather than the relief of want will be the direction of charity. Meanwhile, we may be careful of our pity for the "poor birds who have no cages."—*The Monthly Register.*

Fourteen counties in Michigan, which have already held elections under the Local Option Law of that state, have decided in favor of absolute Prohibition. It is estimated that at least twenty other counties will take the same course.

It is the blessed light of religion that illuminates the world; it penetrates the inmost recesses of the human mind, and enables us to see the path that we should follow.—B. W. S.

THE NORTHWESTERN "BLIZZARD."

THE Hartford (Conn.), *Courant*, of a recent date, says: We were shown yesterday a private letter from a Hartford gentleman, now living in Kansas, saying that the recent reports of damage by the blizzard out there were gross exaggerations. Now we receive a similar statement, sent officially from Dakota, by Mr. George R. Scougal, the president of the Board of Trade of Yankton. Mr. Scougal's statement is certified by J. H. Teller, mayor of the city, by the editors of the local papers, presidents of the local banks, and others. It is not a sweeping denial, but a full statement, which seems to be fairly written and without concealment. It says the great storm of January 12th was phenomenally sudden and severe, and caught people as they were about their every day affairs in a pleasant day. In Yankton county only three lives were lost. "There were probably 75,000 children in school in Dakota. Of all these, so caught by the storm, over an area in Dakota of 150,000 square miles, not over 175 lives in all were lost, or at the outside 200." Of the 48,000 head of live stock in Yankton county, only 50 were lost. The description of the storm says:

The storm was phenomenal in suddenness and severity. Upon a warm day, when it was thawing, with a slight snow fall or rain in places, into an atmosphere loaded with moisture, came a severe northwest wind. The moisture was frozen in its ultimate particles, and came with the wind like doubled fog or a wave of dense smoke, and it grew colder for twelve hours. In southeastern Dakota the storm came in the middle of the day, at a time when the most people were abroad.

WINTER VIGOR OF CROWS AT OMAHA.

A WRITER from Omaha, Neb., to an exchange paper discourses the strength of the crows to endure the severe winter. He says:

This is not a wooded district, and the question I wish to ask is: Where do these myriads of birds find shelter from the intense cold that relentlessly stiffens man and beast during the winter storms that sweep over these western prairies? Here and there one comes upon a frozen bird, a black tuft in the white snow, in the track of the blizzard, like a mourning badge; but uncounted flocks of cawing crows still come with the dawn from the east, and sweep away at night in black columns, as if Nebraska winters had no terrors for them.

These crow colonies are well organized, and evidently know what they are about. The wonder is that their instinct, which in the crow and raven borders close upon intelligence, does not send them further south during the cold season. With the regularity of the sun they come each morning across the river from Council Bluffs, filling the air with their hoarse calls. They are perfectly tame, and feed with the poultry in private premises, and try titles with the dogs for the bones, in which contest they are usually victorious. They are the street scavengers of the city, and as numerous as the children in the populous districts.

CONFERENCE OF FRIENDS' PHILANTHROPIC UNION.

THE fifth Conference of the Friends' Union for Philanthropic Labor will assemble in New York, on Sixth-day, Sixth month 1st, at 10.30 a. m., or at the close of New York Yearly Meeting. The Committees on Philanthropic Work of the coöperating yearly meetings are expected to appoint representatives. It is requested that all information and special reports be forwarded as early as possible to the following chairmen of sub-committees having particular subjects in charge, to be by them compiled and reported to the Union, viz:

Arbitration—Levi K. Brown, Goshen, Lancaster county, Pa.

Temperance—Joseph A. Bogardus, 177 West street, New York.

Prison Reform—Jonathan W. Plummer, 52 E. Lake street, Chicago, Ill.

Corrupt Literature—Mercy J. Griffith, Emerson, Jefferson county, Ohio.

Social Purity—Aaron M. Powell, 58 Reade street, New York.

Compulsory Education—Allen J. Flitcraft, 205 La Salle street, Chicago, Ill.

Indian Affairs—W. C. Starr, Richmond, Ind.

Education of Colored People in the South—Wm. M. Jackson, 335 W. 18th street, New York.

The Yearly Meeting Committees are also requested to forward several reports on Philanthropic Work directed to the Secretary of the Executive Committee, Eliza F. Ramson, 102 W. 93d street, New York.

JOHN WM. HUTCHINSON Chairman.

NEWS AND OTHER GLEANINGS.

—The six powers contiguous to the North Sea—Great Britain, France, Belgium, Holland, Germany, and Denmark—have entered into an agreement whereby the sale of spirituous liquors to fishermen and other persons on board fishing vessels is prohibited.

—When before the House Committee on Territories, on the morning of the 15th inst., David Dudley Field protested against the retention of certain of our Territorial names when the Territories to which they belong shall become States. On general principles he held that a country so rich in Indian names as this ought in no case perpetuate European names; and he cited New York as about the worst designation that could have been given to a State. He protested against North and South Dakota as unnecessary and confusing. He objected to New Mexico because it was meaningless, except as a remnant of Mexico. He suggested instead Montezuma, holding that the personage of that name was the greatest of our aboriginal chiefs, and deserved to have his memory perpetuated. He protested against Washington as likely to lead to confusion, and suggested Tacoma as both euphonious and distinctive.

—A practical railroad engineer, of extensive observation and experience, writes, in answer to the question whether the frost weakens rails, that, contrary to what is commonly held in regard to this point, a low temperature does not decrease the strength of rails, though accidents are more likely to occur from broken rails in cold weather. The reason given for this latter fact is that the ground, when frozen solid, is rigid, losing the elasticity which acts as a safeguard in fine weather, and thus, when a train runs on

such a roadbed, something must yield, and, as the rail is the weakest point, it gives way. Extended experiments, says this writer, have been made with testing machines on steel and iron rails, the results of which show that the cold does not weaken the metal at all; the frost is also likely to diminish the safety of bridges by causing the metal to contract and produce an unequal strain on the trusses, etc.

—As an instance of the practical results of the Fish Commission's work, one fact may be stated. The shad catch from Cape Fear to Cape Cod, in 1880, was 4,800,000, and was then declining. In 1881 the commission commenced distribution, and in 1885 the catch numbered 5,125,000; in 1886, 5,750,000; in 1887, 6,700,000. In round numbers the increase in the value of the catch was $400,000, and at a cost of less than $20,000 annually.

CURRENT EVENTS.

ANNOUNCEMENT was made on the 18th inst. that an agreement had been reached between President Corbin, of the Reading Railroad, and a representative of the coal miners to end the strike in the Schuylkill region, and after resuming work, to confer on the points in dispute. At the writing of this paragraph, some of the strikers have resumed, and some still stand out. It is uncertain whether the difficulty is over. The strike in the Lehigh region continues.

A FRIGHTFUL disaster occurred at Mount Vernon, Illinois, on the 19th instant, at 4.35 o'clock in the afternoon. A cyclone struck the town and demolished nearly 300 houses, occupied by 1,200 to 1,500 people. In the fall of the materials many persons were buried under the debris, and thirty-five were killed, while twice as many more were injured, eight or ten so seriously that their recovery is despaired. Preceding the destructive wind was a heavy fall of rain for half an hour which drove all the inhabitants to shelter. This was followed by a slight hailstorm, accompanied with lightning, and then the cyclone, of the usual funnel form, appeared.

THE Commissioners representing the United States, Canada, and Great Britain, who have been in session at Washington for some weeks on the "Fisheries Question," have agreed upon a new treaty defining what privileges, etc., American fishermen may have in the Canadian waters. The treaty has been sent to the U. S. Senate, but has not, at the present writing, been made public.

NOTICES.

*** A circular meeting will be held in Washington, D. C., at Friends' meeting-house, near Eighteenth and I streets, on First-day, the 4th of Third month, at the time of their regular meeting, at 11 o'clock. Friends at a distance, feeling an interest are desired to attend.

*** A meeting of the Committee of Philadelphia Yearly Meeting on the subject of Isolated Friends in the West is desired to be held on Seventh-day, Second month 25, at 2 o'clock p. m., at 15th and Race streets meeting-house, Philadelphia, room No. 1.

HOWARD M. JENKINS, Clerk.

*** Quarterly meetings in Second month will occur as follows:

20. Centre, Bald Eagle, Pa.
27. Warrington, Monallen, Pa.
27. Canada Half-Yearly Meeting Pickering, Ont.
28. Burlington, Mt. Holly, N. J.
29. Southern, Camden, Del.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent*. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER Co., 106 Wall-st., N. Y.

WEST PHILADELPHIA BARGAIN FOR SALE.

THREE-STORY double house, thirteen rooms, modern conveniences, porches, plenty fruit and shade trees. Lot, 50 x 150 feet. For full particulars apply to J. F. GREEN, 112 South 40th St.

SWARTHMORE COLLEGE
OPENS NINTH MONTH THIRTEENTH.

Thirty minutes from Broad Street Station, Philadelphia.
Under the care of Friends, but all others admitted.
Full college course for both sexes; Classical, Scientific, and Literary.
Also a Manual Training and a Preparatory School.
Healthful location, large grounds, new and extensive buildings and apparatus.
For Catalogue and full particulars, address
EDWARD H. MAGILL, A. M., President,
Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.
NEWTOWN SQUARE, PA.
Terms, $150 to $175 per year.
Apply to HANNA R. CALEY, Principal, address, (during vacation), Media, Pa.
Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,
A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,
FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—
A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hou from New York city. For catalogue and particulars, address,
SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

ABINGTON FRIENDS' BOARDING and DAY School near Jenkintown, Pa., Bound Brook R. R. Ten miles from Philadelphia.
Second term begins First month 30th, 1888. Courses will be arranged to furnish a thorough English education and to prepare pupils for college.
Board and tuition $145 to $165 per school year. Tuition alone $25 to $45. For further information address,
ARTHUR H. TOMLINSON, Principal,
Jenkintown, Pa.
Or
CYNTHIA G. BOSLER, Sec.,
Shoemakertown, Pa.

FRIENDS' CALENDAR FOR 1888
NOW READY.
A handsome lithographed card bearing a tablet, giving a carefully selected quotation from Friends' writings for each day of the year. Price, 50 cents. By mail, 55 cents.

FRIENDS' ALMANAC FOR 1888.
Containing an account of the times and places of holding the meetings of Friends on the continent of America. Price, 10 cents each. $1.00 per dozen.

FRIENDS' POCKET ALMANAC FOR 1888.
Price, 10 cents each. $1.00 per dozen.
FOR SALE BY
FRIENDS' BOOK ASSOCIATION,
S. W. Cor. 15th and Race Sts., Philadelphia.

Association of Friends to Promote the Education of the Colored People of the South.

OFFICERS.

EXECUTIVE COMMITTEE—Edward H. Magill, Swarthmore, Pa.; Sarah H. Peirce, Philadelphia; George L. Maris, West Chester, Pa.; Mary Ann Fulton, Wilmington, Del.; Amos Hillborn, Philadelphia; Alfred Paschall, Doylestown, Pa.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly *to raise funds.* These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

HISTORY OF THE SCHOOLS.

Both these schools have been in existence since the early years of the work of colored education in the South, soon after the close of the war. The Aiken School was begun in 1868, with the support of the Germantown, (Philadelphia) Branch of the Freedmen's Union Commission (of which Sarah F. Corlies was Secretary, and Elizabeth Dorsey, Treasurer.) In later years it was sustained almost entirely by the exertions of Martha Schofield. In 1886, however, finding the burden of its support too great, she made an appeal to the Yearly Meetings of Friends, in Philadelphia and New York, for aid, and as part of the response to this appeal, this Association was organized at Philadelphia, in Sixth month, 1886.

The Aiken School has a valuable property (largely accumulated by Martha Schofield), which has been placed in the hands of a Board of Trustees. A beginning has been made in the formation of an endowment fund.

The school at Mt. Pleasant was established in the First month, 1866, in charge of Cornelia Hancock, under the supervision and with the support of the "Friends' Association of Philadelphia, for the Aid and Elevation of the Freedmen," and was maintained for a number of years by that excellent organization. In late years, however, its funds have been raised, from year to year, almost entirely by Henry M. Laing, Treasurer of the Association, who like M. Schofield, found this tax upon him too great.

CHARACTER OF THE SCHOOLS.

The Aiken School had last year 270 pupils, divided into nine classes, with eight instructors. This year, the attendance is larger, and an additional teacher is employed. There are, this year, about 300, of whom 40 are boarding students. Members of the highest class are prepared to become teachers. All are taught industries,—the girls being taught to cut, make, and mend garments, etc.; the boys instructed in printing, carpentry, and many details of labor about the school property.

The Mt. Pleasant School had last year about 100 pupils, with three teachers. They average somewhat younger than those at Aiken. The instruction of this school has been carried on for two years in a church, granted free of charge for the purpose, the school building having been demolished by a storm in the summer of 1885. (A special fund for rebuilding has been partly raised.)

THE NEED FOR CONTINUED AID.

Those engaged in the work of instructing the colored people appeal to us to continue a measure of aid. While some progress has been made in establishing public schools in the South, they are yet very insufficient. The school term in South Carolina averages not over three months in the year, and the schools themselves are too few, and seldom well provided in any particular. To withdraw from the field yet, seems like abandoning the colored people, in the very midst of the work for their elevation. Moreover, it is evident that for years to come there will be great need of schools which will do more than provide mere book instruction,—will, in addition to this, give practical training in habits of honest and orderly industry. Such work as this is done by these schools, and they are fully entitled to the confidence and help of all who are interested in the welfare of the hitherto unfortunate colored people. Money sent them is used with the utmost economy, and is made to yield the best possible maximum of results. The funds supplied by the Association go only to the compensation of teachers, and so far have not been sufficient for that purpose. The students either support themselves, or are otherwise aided.

*** THE ASSOCIATION EARNESTLY APPEALS TO THOSE INTERESTED FOR AID TO ITS FUNDS.

Statement of Henry M. Laing, Treasurer, to Seventh month 1, 1887.

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER Vol. XLV. No. 9. | PHILADELPHIA, THIRD MONTH 3, 1888. | JOURNAL. Vol. XVI. No. 788.

GROWTH.

THE living stream must flow, and flow,
And never rest, and never wait,
But from its bosom, soon or late
Cast the dead corpse. Time even so

Runs on and on, and may not rest,
But from its bosom casts away
The cold dead forms of yesterday—
Once best, may not be always best.

That which was but the dream of youth,
Begot of wildest fantasy,
To our old age, perhaps, may be
A good and great and gracious truth.

That which was true in time gone by,
As seen by narrow ignorant sight,
May in the longer, clearer light
Of wiser times, become a lie.

I hold this true—who ever wins
Man's highest stature here below,
Must grow, and never cease to grow—
For when growth ceases, death begins.

—*Alice Cary.*

DOUBT.[1]

"Prove all things; hold fast that which is good."—1 Thess. v., 21. "Be not unbelieving, but believing."—John xx.: 16.

IN the Cathedral Church of Copenhagen, amid Thorwaldsen's famous group of the Twelve Apostles, stands the figure of a grave and meditative man, with earnestly questioning face, rule and measure in hand, as though prepared to bring all things under strict verification, whose name no one needs to ask, so plainly does the statue stand for the doubting Thomas. Thomas was, according to the traditions of the early church, a born skeptic, a constitutional questioner, whose faith followed his understanding, who could not rest on external authority, who brought even Christ's words to the bar of reason, and, failing to elicit an intelligible answer, withheld his assent—in short, a genuine rationalist. Yet this Thomas was one of the twelve disciples, a full member of the Apostolic College! What are we to think of such an anomaly? Did Thomas steal into the apostolic band, and was he allowed therein on sufferance, as a warning to those who should come after? or did he come honestly among the believers, maintain an honorable standing there, and yield us an example which we should follow? Was his doubt a sin or a virtue? Are we to anathematize or canonize him? The presence of such widely different judgments of St. Thomas betrays the antagonistic views held concerning doubt itself.

Scientific and philosophic searchers after truth, far from apologizing for his weakness, honor the doubt of the saintly rationalist. To these men doubt is no terrible bugbear, but a useful and indispensable servant of truth. It is the very principle of progress into truth—the stepping-stone to knowledge, the key to all that is valuable.

The great academician, arguing the utility of doubt, defined philosophy as "the art of doubting well." The inspirer of the scientific method in modern English research declared "that he who would become a philosopher must commence by repudiating belief." The history of science is a history of insistent repudiation of traditional beliefs. It has questioned every most common notion; has haled to the witness-box every most familiar belief, and has cross-questioned every testimony, accepting nothing on hearsay, believing nothing on authority, proving everything.

By this method alone, say its followers, has it gained the wide sweep of knowledge in which to-day we rejoice. It has questioned its way to knowledge. It therefore holds nothing exempt from doubt. Its first axiom is, that which is to be known is to be known by doubting. Doubting, we question; questioning, we uncover; uncovering, we discover. Doubt is the pioneer of knowledge, clearing with sturdy strokes a way through the tangled undergrowth of ignorance and error. The gospel of science is, "We are educated by doubt." "Pilgrim's Progress" has been rewritten lately for our age in a book entitled "The Agnostic's Progress from the Known to the Unknown." The teacher, Experience, is therein made to say to the pilgrim—"Quæstor" (seeker)—that "only through doubt can faith in the true be reached. Blind superstition is no faith. The wicket gate of doubt is the first stage in the pilgrimage to the home of Truth."

On the other hand, churchly teachers speak very suspiciously of St. Thomas, and frankly denounce doubt. The pious view the apostolic rationalist with a shudder, and the clergy who rejoice in being "sound" confuse him with the devil. The St. Thomasian sect has always been in ill repute.

Men who want to understand what they believe, or at least *why* they believe; who desire to believe, not upon external authority, but upon personal conviction; who decline to receive any testimony which does not verify itself to their judgment or their conscience; who refuse to delude themselves with conventional notions instead of realities; who insist on going down through superficial ignorance, veiling it-

[1] A sermon at Appleton Chapel, Harvard College, Mass., 4th month, 12, 1885, by R. Heber Newton, of New York.

self in words, even though it be sanctioned with the authority of councils without number, until they come to something which answers to the Spirit's touch and testifies reality; who would thus reduce the mass of dogmas to the few eternal intuitions of essential religion and to the simple historic facts of Christianity—these men are always the "suspects" of the church. To the church at large, doubt is the one damning sin. For passion and ambition and greed the church has a voice of mercy, but for doubt she has a voice of wrath. It is unnecessary to illustrate this fact. Sermons, hymns, prayers, Sunday-school lessons, biographies, are full of it.

There is much to warrant this arraignment of doubt. We are enveloped in mystery. Every most fundamental conviction is nothing more than a belief. We accept on faith all that is most essential to our happiness, our hopes, our life. We know ourselves as personal beings only by faith. We trust the affirmations of consciousness. We know God only by faith. We trust the declaration of our souls —the common belief of man. We look forward to a continued being beyond the grave, through the eyes of the soul; instinctively feeling a hope of eternal life, but unable to prove our expectation. Religion vanishes into moon-mists of sentiment if faith fails. We live, we walk by faith. Loss of faith is, therefore, the one supreme evil. Doubt that leads to it is to be anxiously shunned.

This doubt, say our ecclesiastical authorities, not without reason, is what is threatening the church. That men no longer unquestionably bow to the decrees of church councils, that they no longer hesitate to apply to the scripture the criticism which other books receive; that they question, investigate, doubt —this is the worst sign of the times. An atmosphere of doubt is thus spreading, in which the truth is clouding over. The faith once delivered to the saints is becoming a fog-bank. There is no hope but in the exorcism of this evil spirit. Doubt must be stamped out. Books that gender it must be eschewed. Men must seek the shelter of authority. Young men, most open to this noxious spirit of the age, must fly the "devil-born" doubt as they would a plague. They must surrender thought rather than lose faith.

Thus doubt is both praised and denounced. Can it be Janus-faced? Can it be at once an angel of light and an angel of darkness? How are we to regard it? We must analyze it for our answer.

What science and philosophy mean by the doubt which they laud is the spirit which will not be content with traditional notions until they have been verified by close and searching examination; the critical, investigating, reasoning spirit which holds all received opinions, that cannot substantiate themselves, as superstitions; which, suspicious of its own judgments seeks to free from the thralldom of prejudice; which wants to understand, and will believe only when it does understand, or when it finds that it cannot hope to understand, while forced to own a fact—the spirit whose proper synonym is Inquiry. This doubt—Inquiry—is all that is claimed for it. Without it there would be no progress in philosophy or science, or in any wisdom whatsoever, theology not excepted. This true doubt is not, as is so often supposed, a proud and arrogant spirit, which scorns to be taught, and thinks to guage everything by its measure.

Lord Bacon beautifully said that the interpreter of nature must be its servant, and that "there is no other entrance open to the kingdom of nature, than to the kingdom of heaven into which no one may enter except in the form of a little child." This doubt is the child's doubt, forever bothering the parent to know why a thing is so; forever turning up the crust of superficial notions with some deep-thrusting question; wanting to understand, willing to be taught, ready to be shown that it cannot understand, and yet must accept the fact. Its end is not negation, but affirmation. It seeks not to throw away the wheat, but to sift out the chaff. It desires thus to gain and hold the truth. Its legitimate fruition is rational belief. Thus, when it vainly strives to understand and cannot, it does not withhold assent and refuse to own aught which defies explanation. But, going all round the mystery, feeling it over and being persuaded of its reality, it humbly bows before *the fact.* Thus philosophy rears its systems upon foundations which have never yet been unearthed—the mysteries of consciousness. Thus science evolves her systems out of conceptions which baffle her analysis, and accepts as axioms principles which she cannot prove. The true doubt, coming up everywhere against insoluble mystery,—satisfying itself that it is now, at least, insoluble,—frankly owns the truth transcending thought.

Thus doubt has a legitimate and needful function in the church. The apostle of faith has sanctioned it, bidding his disciples "prove all things; hold fast that which is good." Religion involves in itself philosophy. Its data are given primarily by consciousness. I am; I am more than matter; I, through being spirit, conceive of one from whom I am; I own the conception of duty rising toward this God, the law of life asserting itself in the instinctive aspirations after goodness and righteousness; I hope for life beyond the grave: these are the fundamental postulates of religion—utterances all of faith, which consciousness dictates but cannot prove. Healthy minds will act, in general, upon these beliefs unquestionably, spontaneously. Healthy minds will yet, in growing, come to the stage where these beliefs obtrude themselves upon the attention, challenging question. Healthy minds will not be content to hush into silence any alarming whispers; will want to lay the spectral doubts; will push them back until satisfied that they are spectral; until assured that the testimony of consciousness is the *ultimate authority,* and to refuse it credit is to impeach all knowledge, destroy all faith, overturn all life in darkness; until satisfied that these beliefs are avouched by the common consciousness of humanity; that they are guaranteed by reason, as necessary beliefs, in harmony with all that is known, promising the only solution of all that is still unknown; that they are indorsed by conscience, as the very voice of the power not ourselves, felt in ourselves, making for righteousness—and then doubt blossoms into faith.

Christianity involves science. It is founded on facts. It bases itself upon a person. It expresses itself in a literature. It has produced a history—the Christian Church. These are phenomena demanding scrutiny, asking investigation. Was Christ an actual person on the whole, such as he is reported to have been? Are the New Testament writings genuine and trustworthy? Is it necessary, sooner or later, to question these things? The belief which has never questioned them is insecure. It does not know its own foundations. It cannot give a reason for the hope that it cherishes. There are difficulties involved in these facts. They can never cease to be feared until grappled with, and their strength proven. It is possible to wrestle with these questions and extort an answer from them, to assure our minds of the reality of these facts, and thus of the solidity of the faith which grounds itself upon them. Men have so done for eighteen centuries—men of acutest minds and most incredulous natures. Doubting, searching,—painfully, honestly, thoroughly,—they have found no denial possible to the fact that the Christ portrayed in the Gospels lived substantially as reported of him; and in this fact they have found the high-water mark of moral truth, a manifestation of God in the flesh, and have called him Master and Lord.

For the assurance of its own faith, then, the church must doubt, either in all her members or in certain fitted minds. For the maintenance of health, the prevention of superstition, she must continue to doubt. This doubt is necessary to life. Progress in understanding man and God can be had only by constant questioning; by correcting old errors, lopping off new growing ones, cutting truth down to its roots, stopping its fatal tendency to leafage, and thus revitalizing it. It is this doubt which germinates every reformation, which contains the life of Protestantism. Protestantism is healthy and living, because it proves all things. Only, let it be borne in mind, that to any such normal course of doubt it must come, alike in the church at large and in individual souls, naturally. When it fairly forces itself upon the mind, then it is due in the order of growth. As soon as the dogma husk is constricting the growing thought, that thought will strain the shell, even to bursting. The ripe nut rends the burr. Until then it is unripe, and will be apt to sicken him who partakes of it too freely. Hold your dogmas as long as you can honestly. Nature will teach you when they are outgrown.

But in thus analyzing the true doubt, to justify its laudation by science and philosophy, and the theology born of them, we are prepared to interpret the church's condemnation of doubt. Doubt is not the normal state, though a natural and necessary experience. It is a transitionary phase, an incident of growth. The normal state undoubtedly is faith; credit in the business sphere, reliance on the senses in the ordinary life amongst the things of the outer world, confidence in the operations of the mental faculties in the realm of the understanding, trust in the utterance of consciousness concerning spiritual realities. Loss of faith in the business world means panic; in the thought world it means the evanishing of all knowledge; in ordinary life, amongst the outer things, it means madness; in the spirit world, it means what the New Testament calls "death." Chronic doubt is paralysis of life. When a man begins to question, when he goes on to doubt, and all his soul seems shaken as with the omens of upheaval, it may be a sign of life—the travail throes of a new faith. But if the throes continue, if they settle into chronic agonies, and no faith comes, there is an abnormal state which betokens some organic wrong. This is a case coming under the pathology of doubt rather than its physiology. If a man goes round and round the great central faiths, never satisfying himself about them, never assuring himself that they declare realities, perpetually re-opening questions which the common sense of mankind declares closed, forever uneasy lest he is deluding himself in accepting the currency of belief on which all life transacts itself; if, in hopes of stimulating growth, he keeps ever disturbing the roots of knowledge, ever pulling them up to see that they are there; if, under pretense of insuring the safety of his superstructure, he is ever burrowing beneath his knowledge, sinking shafts through every belief, and running openings for freer ventilation under every conviction, until his whole being is honeycombed with doubt and undermined with suspicion—we know what the state of mind is, and what its consequences must be. Hunting the shadows, darkness becomes a second nature. Burrowing underground, the eye loses its power of seeing, and blindness sets in. Disturbing the roots, the plant dies. Eating out the foundations, the building crumbles in—burying the soul in its ruin.

(*Concluded next week.*)

TEMPERANCE ESSAY.[1]

THE PRINCIPLES OF REPUBLICAN GOVERNMENT AND THEIR APPLICATION TO THE TEMPERANCE REFORM.

In offering this essay, it is proper to state that it is not my object to present evidence that the use of intoxicants has become a giant evil; for this, every intelligent person must know. And so much has been written and said, clearly demonstrating—what experience is continually proving—the suppression of the traffic in intoxicating beverages, by law, is a condition indispensable to the suppression of this evil, that to be reiterating proof of this, seems to me to be assuming a lack of intelligence in the audience. For whoever will for a moment consider what it is that the temperance reform purposes to accomplish,—the extirpation of the intoxicating drink-habit,—the eradication of the sources of so much vice, crime, and misery as are engendered by the corrupting associations of the drinking-saloon,—the securing of public safety from the control of liquor organizations arrayed against law and order, social decency and social observances,—must surely see that the setting up of the open dram-shop by the State, with a license to do all that we labor to suppress, is not, and

[1]Prepared for and read at a "Temperance Conference" at Friends' Meeting-house, Fifteenth Street and Rutherford Place, New York City, 28th of 1st mo., 1888.

cannot be, consistent with any temperance reform. Whoever supposes that the dram-shop may exist under severe restriction, and allows temperance amelioration to go on promoted solely by moral influences, must overlook the fact that no license system has ever been a success as a repressive measure; and when we consider that intoxicating drink produces its own ulcerated appetite, and excites the cravings for more, we can easily see that the legalizing of the liquor traffic means, of necessity, a constantly increasing array of saloons and a constantly increasing liquor traffic; and such a result no mere "restriction" has ever been able to prevent, even under monarchial governments where the enforcement of the "restrictive" features of license laws is more certain than it is, or possibly can be, under republican government.

But some may claim that "high license" does restrict. To such I will admit that I do not know what is "high license." But if $500 or $1,000 is considered a "high" price for the privilege of degrading manhood, prostituting womanhood, and alluring youth to destruction, then I can say that we have had enough experience with such laws in this country to judge quite accurately of their effects. The result of their application is generally at first to reduce considerably the number of places licensed; but in no instance is there proof that they have reduced the quantity of liquor sold, and in but rare instances have they permanently diminished the number of saloons. I am informed by a resident of Plainfield, N. J., that there were five more licensed saloons there last year under a $500 license, than the three years before under a fee of $75. In Nebraska, by the census of 1880,—with license from $50 to $100,—there was one licensed saloon to 451 inhabitants. In 1881 the fee was increased to $1,000, with many other added requirements, and the next year its advocates claimed that the number of saloons was very much reduced; but the census of 1885 showed that there was then a licensed saloon to 292 inhabitants; and perhaps no state can boast of a more carefully drawn and better executed "high-license" law—so called—than Nebraska. In Chicago, Ill., where the license fee has been increased from an average of $52, in 1882, to $500, in 1887, the increase of population during the five years was 35 per cent. and the police court records show an increase of 53 per cent. in crime, while the brewers' statistics show that the consumption of malt liquors has increased 80 per cent.

Such laws have invariably produced a large revenue that has acted as a bribe upon voters. Any system of making the liquor traffic a source of revenue is a consent to an evil for a price which, by its paralyzing effect upon the conscience of the voters, demoralizes public sentiment. Therefore all such are corrupt and corrupting systems; and whoever votes for such a system for the sake of the revenue it yields, is as guilty of selling his vote and accepting a bribe as the man who receives a "greenback" for casting a certain ballot.

Therefore the important question that needs to concern us as temperance people, is "How can the liquor traffic be suppressed under our Republican Government?" and it is to this point that I purpose to confine this essay.

If I say some things that are so self-evident that you will think that I ought to have assumed that everybody knows them, you must not be surprised; for I have often been amazed at the thoughtlessness, not of the illiterate class, but of the educated, intelligent, professing christian citizens, relative to the duties of the christian citizen to the civil government in a republic, and the nature and functions of political parties in a republic; and out of the ignorance that results from this thoughtlessness there grows much bitter partisan strife,—a great deal of unchristian ill-feeling.

The fundamental theory of republican government is that the will of the majority,—not as some get it, "the will of the whole of the people," and in practice, not even a majority of "the whole of the people," but a majority of the voters,—shall be the supreme law of the State or Nation. Therefore, while under a monarchial government a virtuous people may have a bad government by a bad king, or a vicious people have good government by a good king, in a republic the civil government is necessarily just what the people make of it, and their power is unlimited. There are no constitutional guarantees that they may not annul. The only security we have against the establishment of a "National Religion," lies in the virtue and good sense of the voters to not demand it. Consequently anything like the alcoholic liquor traffic which degrades and demoralizes the citizen, is tenfold more dangerous in a republic than in a monarchy; and when we consider how much suffering has been brought upon the human family by bad civil government, an instance of which is furnished in the history of our own Religious Society, when many hundreds of its member were lying in British jails for conscience' sake, every one must see how important is the duty which every good citizen owes to every other good citizen of a republic, to use every power he possesses for the promotion of good civil government.

But I have heard some good people say, "the less one has to do with civil government the better he is off." So far as personal pecuniary interests are concerned my experience has taught me that it may be true. But is it honorable, is it manly, is it just, to shirk the duties which we, as good citizens of a republic, owe to the community in which we live,—the State and nation of which we are a part,—because it involves some personal sacrifice?

There are no rights without responsibilities, no privileges without corresponding obligations.

When the people of these United States rejected the reign of King George, and claimed the right to govern themselves, they assumed the responsibility of governing. While the Society of Friends did not approve of a resort to arms to deliver this people from the reign of a king, no people ever more emphatically protested against kingcraft, nor more clearly advocated republican government than they. Every part of the history of the human race furnishes evidence that civil government of some kind

is indispensable to the welfare and happiness of mankind.

While under monarchical government the individual may truly say the responsibility of governing lies with the king and his officers, and feel that he has done his whole duty to the nation when he obeys its laws, in a republic it is not so. In a true democracy the citizens must not only respect the laws, or rules made for the welfare of society, but they must make them and see that they are observed.

The "will of the majority" being the supreme law, there is no possibility of settling any important question of civil government in a republic, or of ascertaining whether a majority is in favor of, or opposed to it, except by a division of the people upon it. And when the question to be settled is one affecting the whole nation, it would be as impossible to ascertain which side had a majority without systematic and thorough organization of both sides, as for a thousand capitalists to construct and operate a railroad successfully without first organizing a company. The capital would all be there in the latter case without organization as with it, so would the votes all be there in the other case without organization as with it; but in neither case could concert of action be secured, nor any intelligent use made of the powers they possessed, without organization.

When the divisions of the voters of a republic upon any question of civil government are organized they are political parties, and the only legitimate political parties. Hence the proposition that political parties in a republic are properly but divisions of the people upon important questions of civil government. Whatever they are more than this is beyond their legitimate sphere. Whenever they cease to be this they become mere tools in the hands of political demagogues for the promotion of personal interests, —mere "machines" for the production of political corruption. Hence the inevitable tendency to corruption whenever the question upon which the voters of a republic have been divided into parties has been settled or ceases to exist.

As the human mind is so constituted that when a great number of people agree to act together on one subject, they will radically disagree upon any other affecting their varied interests differently, there never has been—and necessarily never can be—but one great question settled at a time in a republic. And when one question has been settled and another arises affecting the interests of the people differently, a new division of the people is required; and as prejudice against the names of opposing parties prevents the free transfer of advocates and opponents of new issues, from one old party to the other which they had before opposed, we see that by the operation of natural laws—which are not dependent upon any man or set of men, but that are as unalterable as the laws of gravitation,—the friends of a new issue can be united only under some new name; or, in other words, the only party that can take up a new issue successfully, must be a new party, as was clearly demonstrated in the organization of the Republican party to unite the opponents of slavery, which neither of the old parties at that time could do.

The "will of the majority" being "the supreme law," how is effect to be given to that will?

A majority of the voters of a state cannot go to its state-house to make laws. A majority of the voters of a county or city cannot go to the court-house to prosecute a criminal. This majority must choose its agents to carry out its will! These agents are public officers. We often hear people speak sneeringly about public officers being "the tool of a party," seemingly unconscious of the fact that legislative and executive officers cannot honestly be anything else in a republic, but "tools of a party."

In monarchial governments public officers are the rulers, but in a republic they are the servants of the people. They are elected to carry out the "will of the majority." It is to be assumed that the party electing them is a majority, or they would not be elected. When such agent fails to act in accordance with the principles of the party that elected him, on all questions involved in his election, he is a traitor and unworthy the support of any party. No man can vote for the agent of a party without giving his moral support to that party and endorsing its principles. Whoever believes that it would be for the best interest of the state to suppress the traffic in intoxicating liquors, and votes for the agent of a party that approves of licensing and permitting it to continue to exist, is untrue to himself and unjust to the state; for he does not give the state the benefit of his best judgment, there being but this one way that the state provides for a citizen to cast his influence in the civil government. The state takes no account of our sentiments,—it makes no note of our prayers or our tears; it makes no record of our sermons or speeches,—the ballot only is recorded. The opinions of those who cast no ballots are not considered. While love of country should prompt every patriot, the recognition of a common brotherhood,—that lies at the foundation of the christian religion,—should compel every christian citizen to perform his public duties; and any man,—even though he be lay member, deacon, elder, or minister of a religious society,—who casts the same kind of a ballot that the liquor seller does, thereby casts the same influence in civil government; and any person who reads the organs of but one political party, is no better prepared to cast a ballot intelligently than is a juror prepared to render a just verdict, when he has heard evidence on but one side of a case.

If, as England's great statesman, William E. Gladstone, says, "It is the function of civil government to make it easy to do right, and difficult to do wrong," then to have a republican government that can perform this function, it must be controlled by those whose governing principle is to do right regardless of any considerations of personal interest or human expediency. A republic controlled by its vicious elements is more dangerous to the rights and liberties of the people, than a monarchy. We sometimes hear people say that "moral issues should be kept out of politics." I can readily understand why corrupt men who are managing political parties in their own personal interests, should advocate such an idea, but am surprised that any good citizen should.

The continued existence of our republican government depends upon keeping moral issues in politics. It is the only possible way by which the best class of our citizens can be induced to take part in civil government. When the only issues are which individuals shall have the emoluments of office, good citizens lose all interest in the contest. It is only on the line of some great moral issue, that the good christian citizens can be separated from the vile, and united in an organization by themselves. Where both the vicious and moral elements are mixed in a political party, experience has taught that the vicious class will control its action, as a gallon of filth thrown into a hogshead of pure spring water will make the whole filthy. The questions upon which the voters of this nation were divided into the Democratic and Republican parties, have been settled, and as a natural consequence there is no question before the people of this nation to-day, upon which either of them is united. There is not a legislative or executive policy being considered at the present time that has not advocates and opponents in both. The Republican party was formed to unite the opponents of negro slavery, which affected the interests of the people very differently from the liquor traffic; consequently, there has always been in this party those who advocated as well as those who opposed this traffic. As the advocates of "the saloon" were as loyal to the issues upon which the party was formed, as any other class was, they had just as good a right to be in the party as any others; and being there, should not be censured for trying to protect their own interests.

But some may say, "Slavery" was a moral issue, and if the "liquor dealers" are such an immoral class as they are sometimes represented to be, how came they to get on the moral side of a moral issue?

I answer, slavery was a political as well as a moral issue. A brief reference to the circumstances under which the Republican party was formed will explain the matter. The slaves were under absolute prohibition, therefore, nearly one-half of the population of the Southern States did not furnish any customers for the saloons, and wherever slavery was extended, to that extent it limited the liquor traffic, hence a natural antagonism between "the traffic" and slavery. But the liquor dealers had a stronger motive than this. In the early part of the "50's," the Slavery question was coming to the front, as the Liquor question is now. The Whig and Democratic parties at that time were both divided upon it, as both old parties are divided on the Liquor question at the present time; and neither of them being prepared to meet it, both were looking about for some other issue to divert the attention of the people from slavery, as the old parties are now trying by some means,—such as the disturbances of relations with Mexico, or with Canada, or with matters between Ireland and England, or questions of revenue, or anything, it does not matter much what,—to divert the people from the Liquor question.

As the "Washingtonian Movement" had awakened much temperance sentiment, old managers thought that offered the best chance to kill the "Abolition movement." So they began to pass prohibitory laws, and between 1850 and 1856, such laws were enacted in about a dozen states. The liquor dealers saw that if the people did not divide on the slavery question, they would on the liquor business, and wipe it out of existence. Therefore the continuance of their business depended upon having the people divide on the former, and to do this, it was necessary to organize the opponents of slavery under a new name; and the result was that as soon as it was found that the people could not be diverted from the slavery question, and the Republican party was fairly organized, this prohibitory legislation was repealed. This was the whole secret of the passage and repeal of so many "temperance laws" during that period.

These two powerful motives that the liquor dealers had for helping to build up the Republican party drew many of them into it; and at the present time this saloon element in it is greater than its majority in all the pivotal states, consequently it cannot take any action which this saloon element will not consent to. Therefore I hold that it is unreasonable and unjust to censure and denounce the Republican party for not taking effective action against the liquor traffic, which it has no more power to do than the old Whig party had to resist slavery. If it should attempt any such action, this "saloon element" would leave it at once; and as democratic prohibitionists would not join it under any circumstances, it would be in such a hopeless minority that it could not accomplish anything.

As all efforts to divert the people from the slavery question in the "50's" proved abortive, so will all these diverting efforts of party leaders now, for "the liquor question stands next on the Nation's Calendar;" and as the opponents of the traffic will be a new party that can be organized only under some new name, and the liquor dealers will find it to be to their interest to unite in one organization, one of the old parties must cease to exist, and the other become "the rum party."

The life—the vitality—all goes out of a reform party when the questions upon which it was formed have been settled. Let no one be so silly as to suppose that anybody is "killing the Republican party." It is following its predecessors in the course of nature, as every other reform party in a republic must, when the object for which it was organized has been accomplished. I have been identified with the Republican party, and have an interest in its history; and on account of that interest I would much prefer that its name should go down to future generations as having accomplished a glorious mission, and died when its work was done, than to have it survive, and become "the party of rum," thereby casting a shade over the honorable record it has made in delivering our nation from the curse of negro slavery.

It is a delusion to suppose that an evil that has reached the proportion that the intoxicating liquor traffic in this country has, can be suppressed without such concert of action on the part of its opponents as can be obtained only by thorough organization; and the sooner all those who believe that it would be

for the best interest of our nation to suppress this unrighteous traffic, learn to be true to themselves and just to the state, and cease to support for office the agents of all those organizations that are hampered by a saloon element, the sooner there will be a division of the people on this line, and the civil government put in the control of an organization that will contain no distillers, brewers, or liquor-dealers, to prevent the enactment and enforcement of such regulations as will deliver every part of our nation from the reproach of giving legal sanction to, and being in partnership with, this demoralizing, crime-breeding, and death-dealing traffic. I was once as anxious as anyone that the Republican party should take up the "temperance cause," and deliver our land from the scourge of the liquor traffic, as it did from negro slavery; but it now being so self-evident that it never could have done it, I recognize in the ordering of events the working of a wisdom higher than man's, that relieves me from all anxiety about results.

SCRIPTURE LESSON, No. 11.

THIRD MONTH 11TH, 1888.

TOPIC: JESUS ENTERING JERUSALEM.

GOLDEN TEXT: "Blessed be he that cometh in the name of the Lord."—Psalms 118: 26.

READ Matt. 21: 1-15.

THE entering of Jesus into Jerusalem, as their kings had done, is recorded by all the other evangelists (Mark, 11: 1-11; Luke, 19: 29-39; John, 12: 12-16.) It is the only occasion on which he yielded to the wishes of his disciples and entered Jerusalem as their kings had formerly done. In Judea there were few horses, and these were chiefly used in war.

To ride on a horse was sometimes an emblem of war; to ride on a mule or an ass was the emblem of peace. Kings and princes commonly rode those animals, and it was considered a mark of rank and dignity. (Judges, 10: 4. I. Kings, 1: 33.) Riding as Jesus did was the appropriate way for a king to enter his capital, and the acclamations of the multitude who went out from Jerusalem to meet him, joined with the hosannas of the multitude who followed, the spreading of their garments along his pathway, and scattering palm-branches, were all the customary demonstrations of gladness with which the people of Israel welcomed their kings, and it shows that they owned and honored Jesus as their long expected Messiah, whose reign was to be most glorious.

All the city was stirred. There was great excitement: the multitude with him, their triumphant shouts, and the evidences that he was accepted by them as their king, must have excited the whole city.

Jesus entered into the Temple. Here he assumed the authority of a king, and cast out all who were profaning its courts. What was really the Temple was never entered by Jesus; no one except the priests was permitted to enter therein, and he was not a member of the priestly order. It was in the several courts surrounding the Temple that he taught, and from the outer one, or the court of the Gentiles, that he cast out all those who made merchandise of doves and other things offered as sacrifices. In the time of which we are studying, this portion of the Temple courts had become more a place of traffic, and much business not connected with the service of the Temple was here transacted.

It is written. The first part only is a quotation, from Isa., 56: 7. It was Jesus who charged them with making it "a den of robbers." These buyers and sellers made the temple a place of gain. The sellers took advantage of the poor and robbed them by charging enormous profits upon what they were obliged to have as sacrificial offerings.

It was the work of Jesus to turn the religious thought of his people to the higher and diviner idea of sacrifice, and while he as a Hebrew continued to observe the ritual of worship, all his labor as a teacher was in the direction of self-dedication and a devotion that was without ostentation and outward display. There is great need for this same labor now, and the gospel minister can find no work of his Master more in the line of his own duty than this.

THE TEACHER OF THE FUTURE.

Now looking forward fifty years, instead of backward, and judging from the present tendencies, what can we affirm that the teacher of the future is to be, what his qualifications, and what his professional career? It will be safe to say that he must possess some natural aptitude for the office; a bright intellect and a warm heart; a knowledge of things beyond what is required to be taught; a professional training or its equivalent; a winning presence in person and manners; in short, a model character intellectually, morally, and socially. Such will be the requisites for an appointment.

To retain his place he must never cease to be a progressive man. His professional education must never be suffered to come to an end. He must read the great thoughts of great writers on social organization, on the demands of an advancing age; must in some measure keep up with the world in popular science and literature; he must enrich his mind by studying the lives and success of great educators of the past, and know something of the results of the experiments of successful living teachers.

Above all, he must in his daily work observe and experiment for himself, just as if he were a self-made teacher, remembering the words of Richter, "All is but lip-wisdom that wants experience." His inquisitive eye must watch and note all that passes before his eye in the little world under his care. That is his laboratory for analysing human character, his practical school of philosophy. He will daily test and revise his own work, and feel his way along like the careful investigating philosopher, generalizating the results of his own observation and experiments, and then verifying his generalizations by new tests. Something of this kind is within the reach of everyone who is born and educated to be a teacher.—*Barnas Sears.*

THERE is no place for the child, after all, but the Father's bosom; and all uneasiness is explained by our need to be there.—*Rufus Ellis.*

THE PRACTICAL CHARACTER OF RELIGION.

IN the interest that attaches to the personality of Jesus, the magnetism of his presence, and the warmth of his devotion, the more practical side of his life and teaching has been in a large measure overlooked and neglected. His calmness and self-control under the most trying circumstances shame our poor attempts at composure, and the quality that we reckon as manliness, stands as an incentive to humanity and the highest ideal of its possibilities.

Jesus was never taken at a disadvantage, and this was not due to his being "very God," as some assume, but to his God-likeness. "In the image of God," was written of the first historic man; "made like unto his brethren," is the record of the Divine Son," and herein lies that which brings his life and words within the domain of human experience, and gives them weight and authority in the affairs of men.

Prophets and teachers had been sent in all the ages that preceded his coming. and in all the ages that have succeeded, the world has not been without "the voice crying in the wilderness" of its uncultivated humanities, "Repent ye, for the kingdom of heaven is at hand." But what of all these who have come in the name of the Lord? How stands the case as viewed in the clear light, shining out in the Christ and his gospel? The wisest, truest, and most devoted of all, weighed in his balance are found wanting.

His was unreserved dedication to the work of lifting man up, not on the emotional side of his nature only, but physically, socially, intellectually, and spiritually, and each of these was so blended and interfused with the other, that even in supplying the wants of the hungry and famishing, he drew them nearer socially, and turned their thoughts to the still greater need of the hungry and famishing soul. Jesus was moved with pity, but it was always practical and coöperative. They who received his help had a part in the ministry of healing. If capable of nothing more than to believe, that belief was required; and the faith, small as a grain of mustard-seed found acceptance.

Faith is always an essential element of success; it gives steadfastness of purpose, and courage to persevere in what is undertaken. Jesus found it necessary to remind his disciples on many occasions of its value, yet the faith that is without practical results will do little for us in our christian progress, and we shall find that every quality that adds to the moral worth of mankind in the family and in the community, gives to the religious character a strength and solidity that will be enduring.

They who are without this moral basis, may "run well for a season," but will rarely endure to the end.

Jesus illustrated this thought in the parable of the two builders. One set his house on a sandy foundation, comparable to the distractions and uncertainties that fill the mind when more solid and enduring qualities have failed to gain a lodgment; the shifting winds of folly and impulse, the storms that swept away the unsubstantial foundation and brought ruin and disaster to the building, well portray the condition of multitudes of the human family.

Not so is it with him who, having forethought and discernment, builds upon a foundation so solid and enduring that it is able to stand all the shocks and convulsions that may beat upon it. This is a matter in which there can be no compromise; we are either among those who are carried about by every wave of feeling, yielding a little here and a little there, until it is hard to discover the true aim of life, or we are holding fast "the beginning of our confidence steadfast to the end."

The injunction of the Apostle Paul to his Gentile brethren, addresses itself with emphasis to the whole Christian Church, "Be ye steadfast, unmoveable, always abounding in the work of the Lord, forasmuch as ye know your labor is not in vain in the Lord."

MARRIAGES.

BEDELL—HICKS.—At Clinton Corners, Dutchess Co., N. Y., on Second month 22d, 1888, at the residence of the bride's parents, by Friends' ceremony, George D., son of William Bedell, to Etta, daughter of Walter D. Hicks.

PUSEY—COATES.—Under the care of New Garden Monthly Meeting, Second month 2d, 1888, at the residence of the bride's mother, Marshall Yeatman Pusey, of London Grove, son of Jesse D. and Hannah D. Pusey, and Emma Simmons Coates, daughter of Emeline and the late Simmons Coates, of West Grove, Pa.

WATSON—WOOLVERTON.—On Fourth-day, Second month 22d, 1888, at the residence of the bride's father, Chas. S. Woolverton, Stockton, N. J., by Friends' ceremony, under the care of Solebury Monthly Meeting, George J. Watson, of Philadelphia, to Hettie F. Woolverton.

YERKES—LIPPINCOTT.—At the residence of the bride's mother, Second month 22d, 1888, under the care of the Monthly Meeting of Friends of Philadelphia, William Austin Yerkes, of Fox Chase, Philadelphia, and Emily T., daughter of Mary A. and the late George Widdifield Lippincott.

DEATHS.

BROOMALL.—At Media, Pa., Second month 22d, 1888, Rebecca, wife of George Broomall.

BROWN.—At Waynesville, Ohio, Second month 14th, 1888, Allen Brown, aged 79 years and 4 months.

BUTTERWORTH.—In Philadelphia, Second month 24th, 1888, Keturah E. Butterworth, in her 81st year. Funeral from Mt. Holly Meeting-house, N. J.

JEANES.—Second month 25th, 1888, Isaac Jeanes; a member of the Monthly Meeting of Friends of Philadelphia, in his 77th year.

JONES.—At his residence, Baltimore, Md., Eighth month 11th, 1887, John Jones, in the 71st year of his age. His parents were Charles and Sarah Jones, of Norristown, Pa. Interment at Friends' cemetery, near Baltimore.

JONES.—On Second month 18th, 1888, at the residence of her son-in-law, Caleb M. Taylor, Edgemont, Delaware county, Pa., Ann W., widow of Benjamin Jones, late of Whitemarsh, Montgomery county, Pa., aged 83 years, 3 months; for many years a useful and consistent member of Plymouth particular meeting. Interment on the 23d, at Plymouth.

LAWRENCE.—Second month 17th, Wistar Evans, son of Joseph T. and Annie M. Lawrence, aged 15 years.

MATTHEWS.—At the residence of his brother, Dr. Robert M. Matthews, Second month 2d, 1888, Dr. Joseph B., son of Joshua and Elizabeth Matthews, in the 33d year of his age. Interment at Friends' cemetery near Baltimore. Dr. Matthews graduated at the University of Vermont, Seventh month, 1887.

SCARBOROUGH.—In New Hope, Pa., Second month 24th, Dr. John W. Scarborough, aged 53 years. Interment at Wrightstown, Pa.

SHERSWOOD.—At Cincinnati, Ohio, Eleventh month 5th, 1887, J. Henry Sherswood; a member of Miami Monthly Meeting held at Waynesville, Ohio.

TWINING.—Second month 18th, at Newtown, Bucks county, Pa., Croasdale Twining, aged 80 years.

NEWS OF FRIENDS.

EASTON AND SARATOGA QUARTERLY MEETING.

Editors INTELLIGENCER AND JOURNAL:

It may not be amiss to give a brief account of Easton and Saratoga Quarterly Meeting, held at Easton, 14th, 15th, and 16th of Second month. This meeting is composed of four small monthly meetings, Granville, Troy, Saratoga, and Easton, all of which were well represented, considering the depth of snow in this, our northern latitude. With the exception of Granville, where the meeting is held once a year, in Eighth month, Easton is the northern limit of New York Yearly Meeting. Although a remote limb, as it were, it has in no wise been left without support from the main body during the past year.

On the present occasion we were favored with the company of Isaac Wilson, of Canada, whose earnest labors through four long meetings, for our spiritual welfare, have been appreciated beyond our power of expression. Old and young, members and non-members alike, drank from the overflow of his heart. May those loving words of counsel, and soul-enlivening influences sink deep into our very lives, and bring forth that rich fruitage he so craves for his fellow-men everywhere.

Select meeting was held in the north meeting-house, as it is termed, another being in the southern part of the town, in both of which meetings are held. On Second and Third-days meeting convened at the latter house, the old established place of worship, which our forefathers reared one hundred years ago, as accounts have been forwarded to the INTELLIGENCER AND JOURNAL.

Although but few of the descendants of these worthies are left to occupy the seats made vacant by their removal to a higher life, a goodly number of those interested in Friends and Friends' principles, sat with us, to partake of the feast, and with very few exceptions by request remained through the business meeting.

One who was a stranger to our order remarked that he saw nothing there to hurt any one, and I believe that expression was a reflection of the feeling of many souls present.

It seems as if such seasons as these cannot fail to stimulate us to greater activity in searching to know what our duties are, and in the more faithful performance of them. Such a course must needs bring the reward of peace, and an assurance of "well done." B. E.

DUANESBURG QUARTERLY MEETING.

THIS was held at Albany, N. Y., second month, 20th., the meeting of Ministers and Elders being held on Seventh-day afternoon. This meeting was well attended. Isaac Wilson, of Canada, and several Friends from Stanford Quarterly Meeting were present. After a short season of quiet, Isaac Wilson spoke words of encouragement and cheer, and very impressively alluded to the close and tender relation of minister and elder, of the watchful care necessary, and of the kindly encouragement given to those small beginnings in the ministry that are so often suppressed for want of these; at times perhaps a look of sympathy, a tone, a pressure of the hand, may be God's instrument to open the flood-gate of feeling for some over-burdened and exercised mind. Friends should have a care that these are not withheld.

On First-day morning the meeting-house on Plain St. was nearly filled with an unusually appreciative audience, many not of our society being present. Friends from Easton Quarterly meeting also joined us at this time. The deep silence was broken by our friend I. W., with these words: "Except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you."

He dwelt at some length upon the spiritual application of those outward symbols which Jesus used so freely in all his teachings, making plain and clear all that seems dark, or mysterious, or contradictory, in this part of the sacred record, harmonizing all with the one thought, Christ in us, the only hope of present and eternal peace. At the close of the meeting there were many expressions of satisfaction from those not accustomed to the teachings of Friends. Another meeting was held by appointment on First-day evening, when Isaac Wilson spoke again, in clear and forcible language, from this declaration of Jesus: "I am the resurrection and the life; whoso liveth and believeth in me shall never die," enlarging upon the thought that living in Christ is essential to belief in him, and gradually unfolding this wonderful

resurrecting power in the soul of man,—its first gentle leadings or pointings to duty, its divine anointing and glorious revealings of truth. But in the attainment of all this, man's consent and coöperation are required. We are not to make the garden, but to dress and keep it, and then with human passions and propensities all under divine control, the life at last becomes "hid with Christ in God." And this truly spiritual condition is reached only by constant watchfulness and prayer. He made an earnest appeal to the young to come again to the Father's house, to leave the dry husks which afford no nourishment for the soul, but partake of that bread that shall bless and strengthen and sweeten every enjoyment in life.

Then, under the hallowed influence of prayer the meeting closed.

On Second-day morning, George T. Powell, of Ghent, N. Y., spoke earnestly upon the subject of Temperance and purity of life, as opposed to bodily defilement through all forms of degrading vice, very impressively quoting these words: "Know ye not, that ye are the temple of the living God?" and at the close alluding briefly to the education of the young, and the over-anxiety of educators to crowd the young minds with scientific truth at the expense of moral training, alluding to the sad condition in business circles, according to the reports of failures, embezzlements, and fraud.

Isaac Wilson followed in a similar train of thought, bearing upon individual duty, urging us to allow nothing like depression or discouragement to cloud the mind, but by activity in good works, look forward to the increasing prosperity and usefulness of our Society, and not of it alone, but in connection with all others. At the close a few feeling remarks were made at the loss sustained by this quarterly meeting, in the recent death of one of our valued members. Well advanced in years, we feel that he was like "a shock of corn fully ripe, now gathered to the heavenly garner."

The business of the quarterly meeting was then concluded in a spirit of unity and good feeling.

M. J. H.

BUCKS QUARTERLY MEETING.

This was held at Wrightstown, on the 23d of Second month, and was smaller than it frequently is. Although the weather was pleasant, the roads (off of the turnpike) were exceedingly bad, and very few strangers were present from other quarters, Watson Tomlinson, of Byberry, being the only visiting minister. As is too often the case at this meeting, members and others were late in gathering, and a considerable time was spent by those who were seated at the appointed time before a comfortable degree of silence obtained. Elizabeth H. Plummer then appeared in vocal supplication, after which Watson Tomlinson, Simon Gillam, and E. H. Plummer spoke. Their communications were short, and very satisfactory, after which time was permitted for silent worship, where the stillness was so profound that it could be felt and enjoyed in the Divine presence.

In the business meeting reports were received from all the monthly meetings; but there were no representatives or other members present from Bristol. It would be much more convenient for Bristol to be made a constituent branch of Philadelphia Quarter; and as there are but five monthly meetings in that quarter, whilst there are eight in Bucks, it would seem that the change might with advantage be made, and I suppose it would have been done before this time, if it were not that the title to Bristol meeting property is in Bucks Quarterly Meeting.

All the queries were read and the summary answers directed to be forwarded to the Yearly Meeting, and as no new business claimed attention, the meeting closed earlier than usual, with the feeling prevailing that it had been a profitable occasion. The absence of a number of aged Friends who were formerly in attendance was very sensibly felt, as their labors had to devolve on those in the younger walks of life.

I. E.

THE QUESTION OF FRIENDS' SCHOOLS.

Editors Intelligencer and Journal:

The communication upon the above subject, from Mariana B. Truman, prompted, as it undoubtedly is, by an earnest desire to perform an important duty, that of encouraging and strengthening the *home schools* of Friends throughout the country, is well deserving of especial notice. Any system of education that would encourage colleges and large boarding schools, at the expense of the home schools, would certainly be a most grievous mistake. No class in the community understands better than Friends the great importance of keeping their children, as much as possible, under the home influence while they are receiving their education. Hence, Friends are very properly averse to sending their children away from their homes to be educated, at an early age.

In the first years of Swarthmore College, when the proportion of the Preparatory School was larger than at present, a considerable majority of our students were those not members of our Religious Society. Of latter years, as the College has increased, and the lower classes of the Preparatory School have been omitted, this proportion has greatly changed, and, at present, about two-thirds of our students are children of Friends. Now, we are educating a class of young men and young women who are to go out and do their part toward making the home schools what they should be, and thus extending the influence of Swarthmore through all parts of our Society. A number of our former students, even thus early, before the College is 20 years old, are doing an excellent work in this respect, as teachers and trustees of the schools of the lower grades. The same amount of money that has been expended thus far upon Swarthmore College, if divided into smaller sums, and used to aid our Friends' schools throughout the entire country, could not have been so productive of good, even to those schools themselves, as it is at present; and it would have been by no means so far-reaching in its influence as it is devoted to the establishment of a college which not only operates directly upon a large number who seek its halls, but indirectly upon all the schools within the limits of our Religious Society.

Without the expenditure of large means in one

place it would be impossible to furnish the facilities for scientific research and investigation that become possible, and are brought within reach of a vast number, directly and indirectly, in such an institution as Swarthmore College. Then, too, the influence of the professors in the various departments, men and women of large ability and experience, and thoroughly and conscientiously devoted to their high calling, is felt for good long after the students leave their Alma Mater, and continues, indeed, a stimulus and an inspiration to them in their chosen lines of work or study throughout all their lives. As a result, even those who come here for a short course, and are not able to remain and graduate, have carried away with them a degree of culture and an incentive to higher work that have amply compensated them for the time and money spent. Then, too, as the college increases, and takes the place of the Preparatory School, the number of those who take the shorter courses constantly decreases, while a greater number each year are looking toward graduation, the number of the coming graduating class being 30, while the greatest number ever before graduated in one year was 18. Now, to keep up the ever advancing standard of our College, of course it must be managed on an entirely different basis from a school, as a large number of well qualified professors in the various departments must be secured and retained. The salaries of these must not fall too far short of what their services will command elsewhere, or we could not reasonably expect them to remain with us. *All* of the colleges that are really worthy of the name must depend upon endowments, that the higher education may be so cheapened as to be brought within the reach of all. Such endowment as Swarthmore has already received is all used in thus cheapening education to those who need it, and a very large number are thus assisted every year. Such students are often among the best, and are by no means considered in the light of charity students, in any sense, and usually their names are known only to the members of the small Endowment Committee. In this matter Friends do not forget the injunction—"Let not thy left hand know what thy right hand doeth." Now we wish to make still more of this most valuable aid possible, by endowing some of the professorships. The "Appeal" on this subject does not seem to have been fully understood by all. The amount named ($40,000) seems a large sum for Friends of humble means to attempt to raise; but do these Friends consider that if the *average* contribution of all appealed to were $20 it would give at least $10,000 more than enough to endow one Professorship!

That it may be seen how Friends generally, who know Swarthmore well, feel about these subscriptions, let me give a few quotations from their letters. One sends a small subscription, and says: "I have added my mite, and would gladly make it more if I could. I wish thee success in thy work." Another says: "I contribute my mite to the Endowment Fund. I am glad that thee asked for a suspension of judgment. I feel that thy 'Appeal' will do the work. I wish I could help thee more. Maybe I can yet." Another writes: "Thy circular is received, and I approve of the object, and would freely subscribe a thousand dollars if I were able. But as I am not, I send thee $25. If the effort for endowment fails, please apply it where it will be of use to the institution." Two others write: "We are *very* sorry not to make our amount more, but this is all we can now do. But as thee says every little helps, we send our names." Another says: "My means are too limited to do much toward the end desired, but I subscribe the sum opposite my name in a feeling of gratefulness toward the college, and am only sorry I am not able to do more." Another, with a moderate subscription, adds: "Sincerely wishing that it were more, and trusting that the announcement of an Endowment may be made at the coming Commencement, I am the friend," etc.

A graduate sends five names, with subscriptions of $400, and says: "I should be glad to give this subject much more attention than I do; my time is so fully taken up by business that I have but little time for other duties." A Western Friend, a minister, with two moder subscriptions, says: "I have made all the effort that way opened for in our small meeting." A friend, who knows Swarthmore well from long personal observation, and a minister in our Religious Society, writes: "Ever since hearing of thy project to endow a Professorship for Swarthmore, I have desired to add my mite, and though not able to do so now, I hope to be so against the needful time, and I greatly desire that the amount may be obtained. We feel a deep interest in the welfare of the college.

I might add many pages of such expressions of interest in the work, but space forbids.

Let me say, then, that I most heartily sympathize with what M. B. T. says of "That good which is extended to its utmost limits of good, shedding the fullest and broadest light upon the most;" *i. e.*, "that it is the nearest approach to the One High, All Good." I should not, therefore, for one moment, urge the claims of Swarthmore College, if I believed that its advantages were destined to be shared only by the exclusive few; but it is that it may do still more of the excellent work in which it has been engaged for nearly nineteen years, and that it may continue to increasingly "shed its fullest and broadest light upon the most," that I have sent forth and am sending forth to Friends everywhere in this land my earnest "Appeal." May our friends in the far West, and throughout the country, come yet to see and realize that to respond to this "Appeal" according to their ability, is not by any means, "taking, as it were, the food which belongs to their children, and giving it to strangers."

In conclusion let me repeat what has in substance been clearly implied, that the interests of Swarthmore College and of Friends' home schools throughout the country, are not opposed to each other, but are identical. To aid either or any is to aid the others, as they are all necessary component parts of one great educational system, and they must constantly, more and more, act and react upon each other. Let us, therefore, see to it that we use every

proper effort to bring the advantages of them all within the reach of every member of our Religious Society.

EDWARD H. MAGILL.

Swarthmore, Pa.

COMMUNICATIONS.

MID-WEEK MEETINGS.

Editors INTELLIGENCER AND JOURNAL:

WOULD it not add much to the interests of our Society if all our members' children would attend our business meetings? If the members would remain in and hear the Discipline, etc., read, they would (I think) eventually feel a growth in the interests of the Society, and our meetings, (which are often small in number), would be strengthened and increased by their youthful and helpful faces.

I would ask parents generally to consider the importance of this subject; for let us bear in mind that the children of to-day are to be the men and women of to-morrow. Then how important that we older Friends should have the young to help us.

I can say from experience that the attendance of our mid-week meetings from childhood has afforded me more real comfort in life, than any other act I ever did; to feel that I was willing to lay aside all work and go in all sincerity of heart, and wait upon the Lord; for "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run and not be weary; they shall walk and not faint."

KEZIAH R. WILKINS.

Medford, N. J.

HOW ALAN CORSON BECAME A FRIEND.

[The following communication appeared in the Norristown, Pa., *Herald*, of the 18th of last month. In reprinting it, we may add that Alan W. Corson, referred to, died within a few years, at the advanced age of 94, continuing throughout his life one of the most steadfast and valuable members of our Society. —EDS.]

THE year 1812 was one of much unsettlement. England had put one of her men-of-war up the Chesapeake, burned the Capitol at Washington, the library of Congress and came near capturing the President. The government called for the militia of the country. Alan W. Corson raised a company, procured himself a uniform, and was prepared to march his men.

At the same time there came in to the neighborhood of Plymouth a minister of the gospel of the Society of Friends, and put up at the house of Jacob Albertson, Sr., a hospitable mansion, near the meeting-house, where Friends of like errands were very apt to go. The hostess kept her larder ready for such visitors, and a standing rib of cold roast beef was always in readiness; the best bed in the house and the best seat at the table, made them feel they were welcome. He was a tall, thin man, much absorbed in his own thoughts, and no disposition to converse; after breakfast on the following morning he walked out to the brick porch back of the house, and paced it back and forth with his hands behind his back, until he left for meeting.

As notice had been given beforehand the farmers left their farms; the quarrymen, the blacksmith, the wheelwright and the storekeepers were all there, and the large house and its galleries were full.

The stranger took his seat at the head of the gallery, and after a reasonable time of silence, rose with this text: "Whence come wars and fightings among you. Come they not hence even of your lusts that war in your members. Ye lust and have not, ye kill and desire to have, and cannot obtain. Ye fight and war, yet ye have not because ye ask not; ye ask and receive not because ye ask amiss."

And as he looked into the earnest faces that met his own and that seemed to challenge his text, he said, "Give me time and I'll prove it to your satisfaction."

Boldness in a speaker is popular with the young.

After he took his seat, at the end of a long discourse, the meeting felt that he had made good his promise.

In that meeting sat Alan W. Corson, a young man of about twenty-six years, and after the meeting he did not start for the war, his uniform was not needed; he appeared in another and wholly different one, a plain coat, a plain hat, such as we knew him in, as long as he lived, such as any one now living saw him in, who ever saw him at all; and it was followed by an application to be received into membership of the Society of Friends.

His life from that time on we all remember. During its later part he kept a school for advanced scholars, he ran his surveyor's compass and his scrivener's pen diligently. There is hardly a landowner in Montgomery county but will find among his old titles one or more in his writing; he was executor, administrator, trustee, assignee, the drawer of wills and settler of estates, commissioner under appointment of the Governor to lay out the streets of Norristown, and engineer in locating the Plymouth railroad.

He was extensively read in books, and a botanist of advanced knowledge.

On one occasion he was called into court to prove a signature to a paper, in which his name appeared as a witness. He had forgotten the circumstances connected with his name to the paper and the defendant's counsel sought to have him say that he might have written his name without seeing the signature he witnessed.

Such a thing seemed to be plausible, but, hesitating for a moment and straightening himself up, he said he did not think, in his whole life, he had ever witnessed a signature that was not written before him, or acknowledged to have been done by the person who did it.

'Tis said the one who furnishes a sinful thought to another, starts it on a journey through this world which, multiplying as it goes, causes many to sin. By a parity of reasoning when Elias Hicks, (the speaker above referred to), made a convert of Alan W. Corson he sowed the seeds of morality and usefulness that took root on good ground and brought forth fruit an hundred fold. J. M. A.

Norristown, Second month 18, 1888.

SWARTHMORE NOTES.

—The First-day afternoon class, organized by Prof. Smith for the study of Friends' principles and testimonies, has been much interested for some weeks in a careful reading of the Disciplines of the different yearly meetings. The encouragement of a free interchange of views upon all subjects considered adds much to the interest. The attendance is voluntary, but the number present is quite large, and consists mostly of those who are members of our Religious Society. Other instructors sometimes come in and listen, or take part in the exercises, and visitors are occasionally present. The meeting is held from 5 to 6 p. m.

—See elsewhere in this paper, a reply from Swarthmore to the letter entitled "The Question of Friends Schools" in our last issue.

A STATEMENT OF VIEWS.

A CONVERSATION BETWEEN A MINISTER OF THE SOCIETY OF FRIENDS AND ONE OF ANOTHER DENOMINATION.

[We publish by request the following taken from FRIENDS' INTELLIGENCER of Seventh month 10th, 1880.—EDS.]

A SHORT time since, a Friend traveling in truth's service had an appointed meeting, which was attended by four ministers of other denominations. The Friend preached from these words: "If any man have not the spirit of Christ he is none of His." This text was enlarged upon very clearly.

The next day this Friend was called upon by one of the four ministers, who said: "Sir, I am here to know if you preached the true doctrines of your Society last night. I have been informed you do not believe in the Bible, nor in the divinity of Christ, nor in the atonement; but if you preached your sentiments last night you have been misrepresented. Tell me the difference between that portion of Friends called 'Hicksites' and the 'Orthodox,' or orthodox Christendom generally. You seem to differ from them all, and yet last night you held up the Scriptures and the divinity of Christ more fully and beautifully than I ever heard it done before."

Our Friend replied: "I will endeavor to satisfy thee." He asked, "Dost thou believe that God is allwise, that he is unchangeably the same, that his laws are perfect?" He answered, "I do." "Then thou canst not believe a stream can rise higher than its fountain?" He said, "No." "Well, then, we are told in Scripture, 'In the beginning was the Word, and the Word was with God, and the Word was God; the Word was made flesh and dwelt among us, and we beheld his glory, as of the only begotten of the Father, full of grace and truth.' This is what we recognize as the Word of God, even the power of God, uncreated, and the Scriptures are the fruit of this power. They are the words of God; they were created by this Word that was in the beginning, hence we cannot recognize them as the word of God, for they were created, and the Word of God *never was created*, but was in the beginning with God, and was God." To this the response was, "You are right."

On the next question our Friend said, "We believe in the divinity of Christ, as well as the humanity of Jesus. It was not the manhood alone that constituted the Son of God, but Christ in Jesus, or the Spirit in flesh, or God in man; thus was God manifest in the flesh of Jesus (and we beheld his glory, the glory as of the only begotten of the Father, full of grace and truth.") To this he assented, saying, "That is true."

Our Friend then proceeded: "The atonement means the same thing. It is simply reconciliation. It is said in Scripture, 'God was in Christ, reconciling the world unto himself,' as he said, 'This is my beloved son in whom I am well pleased.' Now, what was it that pleased the Father? Was it not his full submission to the workings or influence of the Divine Spirit, which was given to him without measure?

"Now, it is simply the life of Christ *we* recognize as being able to save us from sin or reconcile us to the Father. Here, then, is the difference between us; *we* say it is the *life* of Christ that reconciles the Father, or atones for the sins of the world. You say it is his death, and that death was brought about by the Great Omnipotent Being calling upon his enemies to help him accomplish the work of man's salvation. But, according to the Scripture record, the devil put it into the heart of Judas to betray him into the hands of sinful men, and a wicked, unbelieving people put him to death.

"Now, if God designed to save the world by a sacrifice, why did he not have that sacrifice prepared by the hands of good men, as he had done under the Levitical priesthood? Can we suppose or believe the all-wise and all-powerful Father needed to employ evil agencies in the work of man's salvation?"

The visitor, who had been an attentive listener, here exclaimed, "Is that the difference? *You* are right, and I will never more preach such doctrine. It certainly was the life of Jesus Christ that satisfied and reconciled the *Father*, and not the cruel *death* inflicted on him by his enemies. I thank you kindly for this interview."

THE CHERUBIC PILGRIM.

The following extracts are from a book of the above title, by Johannes Scheffer, born at Breslau, in 1624, died in 1677. Scheffer was at first a Lutheran, then became a Roman Catholic. The translation is by Ebilatis Scherb.

"GOD'S Spirit falls on me as dewdrops on a rose,
If I but like a rose my heart to him unclose."

"The soul wherein God dwells—what church can holier be?—
Becomes a walking tent of heavenly majesty."

"Lo! in the silent night a child to God is born,
And all is brought again that ere was lost or lorn."

"Could but thy soul, O Man, become a silent night,
God would be born in thee, and set all things aright.

"Ye know God but as Lord, hence Lord his name with ye.
I feel him but as love, and Love his name with me."

"How far from here to heaven? Not very far, my friend;
A single hearty step will all thy journey end."

"Though Christ a thousand times in Bethlehem be born,
If he's not born in thee, thy soul is all forlorn."

"The Cross on Golgotha will never save thy soul,
The Cross in thine own heart alone can make thee whole."

"Christ rose not from the dead, Christ still is in the grave,
If thou for whom he died art still of sin the slave."

"Hold there! Where runnest thou? Know heaven is in *thee*;
Seekest thou for God elsewhere, his face thou'lt never see."

"In all eternity no tone can be so sweet
As where man's heart with God in unison doth beat."

"Whate'er thou lovest, man, that, too, become thou must.
God, if thou lovest God; dust, if thou lovest dust."

"Ah, would the heart but be a manger for the birth,
God would once more become a Child on earth."

"Immeasurable is the Highest; who but knows it?
And yet a human heart can perfectly inclose it."

—*Parish Visitor.*

MY OLD HOUSE.

[Written by an aged woman on the eighty-fifth anniversary of her birthday.]

I HAIL once more my natal day,
Still in my tenement of clay,
With many favors blest;
And He who placed the structure here
Can prop it up another year
If He should think it best.

Long has it stood through snows and rains,
And braved life's fearful hurricanes
While many stronger fell.
The reason why, we cannot see,
But what to us seems mystery
The Builder knows full well.

But now 'tis weather-worn and old;
The summer's heat and winter's cold
Pierce through the walls and roof;
'Tis like a garment, so worn out
To mend there is no whereabout,
So gone is warp and woof.

The tottering pillars are so weak
The poor old rusty hinges creak,
The windows, too, are dim;
Those slight discomforts we'll let pass,
For, looking darkly through a glass,
We catch a hopeful gleam.

Nature and reason tell us all
This shattered frame ere long must fall—
When, where, or how is all unknown.
We'll leave that to the Architect,
And trust His wisdom to direct
The taking of it down.

And when you see it prostrate lie,
Let not a tear bedim the eye—
The tenant is not here.
But just beyond time's little space,
She finds some quiet resting-place,
No more to date her year.

And though she walks with you no more,
The world will move just as before—
'Tis meet it should be so.
Let each his house in order set,
That they may leave without regret
Whenever called to go.

—*Philadelphia Ledger.*

"HARD WORK AND NO HOLIDAY."

IT does not take any supernatural gift of prophecy to foresee that some courses of conduct which are now tolerated or only mildly rebuked, will in the future be regarded as such wrong-doing that every conscientious person will shun them as they now do any openly recognized iniquity. Among these is that suicidal overwork, which at present seems to be generally regarded rather as an amiable and innocent self-sacrifice. It is lamented, of course, when, too late, the direful results of failure of power, illness, and premature death, with their far-reaching afflictions, manifest themselves; but even then it is held to be more a misfortune than a misdeed, and not infrequently warm praises are showered upon the unremitting energy, zeal, and labor which have worked so much woe in the world.

It is true that as yet most of those who injure themselves by overwork and over-anxiety, are not consciously and deliberately doing wrong. Many of them are, indeed, among the best and noblest men of the community—living the most valuable lives, and therefore the men of all others whom society can least afford to lose. It might seem as if the same intelligence that enabled them to render the world such good service would also lead them to make that service permanent, by preserving their powers unimpaired for as long a period as possible. Often, however, this hardly seems to occur to them. With all their sagacity in other things, they fail to perceive that the brain which is ever kept on the alert and the nerves which are never relaxed will surely give way, either gradually or suddenly, and fail to perform their office. Or, if at times they see this theoretically, they hope that their strong constitutions may make them exceptions, or they fancy that circumstances compel them to make the sacrifice, or they become so immersed in the present as to lose all sight of the future.

Whatever be the cause, certain it is that this folly and sin of overwork is one of which some of our most useful and estimable men and women are guilty. Occasionally we meet with a case more than usually aggravated, as the one mentioned in a late paper of a physician, who, but a little over 40 years of age, and in the full tide of practice, admitted to a brother physician that he had won his present position by "sheer perseverance, hard work, and *no holiday.*" "But," he added, "I am to-day a wreck. I have fatal disease of the heart, the result of anxiety and hard work. I know that I cannot live many months, and my parting words of advice to you are these: Never mind at what loss, take your six weeks' holiday. It may delay your success, but will insure its development. Otherwise you will find yourself at my age a prosperous practitioner and a dying old man." Six months after this conversation he died. Sad comment this, on the practical effect upon conduct of superior knowledge, when not made a source of superior obligation!

It is indeed a serious question, how such unnecessary tragedies may be made impossible. There is far too little attention paid to health by those *who are* in good health. Instead of studying how to keep

well, they live on, thoughtlessly and ignorantly, until sickness comes; and then, if through the skill of the physician and the struggles of Nature they recover, they resume their former mode of life until the next attack. If the wise physician could be the hygienic instructor also in the families for whom he prescribes,—if they would crave his advice, respect his judgment, and follow his council, in *health* as well as in sickness, there would soon be a marked improvement in the well-being of our community. We should certainly have fewer cases of breaking down from over-work, for it would come to be regarded as not only unnecessary and unwise, but as a sinful waste of powers, of happiness, and of life.—*Philadelphia Ledger.*

CHANGES IN PALESTINE.

[The following letter appears in a Western newspaper, it having been received in Chicago, from a person, a woman, who left that city for Jerusalem, some years ago, to await there "the second coming of Christ,"—expecting that to occur in the flesh. Many of its details may be of interest, though the faith of the writer evidently includes many particulars which must be regarded as outward, rather than spiritual.—EDS.]

"JERUSALEM, Nov. 23, 1887.—My dear friend: Your letter, which was duly received a week or two ago, brought your face very clearly before me, and I remembered how you used to come to see Mother Gould from time to time, and how you always spoke to me of my own mother. It is a long time since I met you there, and many things have taken place since then. I was glad to hear that you were well, and interested in this land and this city. And I am very glad to tell you a few of the glorious things that we have been witnesses of during the six years we have lived here. When we arrived here, six years ago the 26th of September, we numbered fourteen adults and five children. As we drove up from Jaffa we were deeply impressed with the desolation of the land. Not a spear of green could be seen anywhere; the olive trees and vines were so covered with the gray dust of a hot, dry summer, that you never could imagine there could be any green underneath, and the whole earth seemed dried to its foundations. We realized to the full that it was a land under the curse of God still, for sin. But we have never seen it look like that since that time. Every year it looks greener and greener, and now, so many of those barren hillsides are covered with vineyards and olive yards, quite changing the appearance of everything.

"You will ask what is the cause of this great change? God has promised that like as he brought all this evil upon this land, so he will bring great blessings unto it, and it has evidently begun by God sending more rain than for many thousand years. He sends beautiful showers and heavy dews where there used not to be any, and He sends clouds in summer, which were never known even twenty years ago. This tempers the heat, so that it does not dry up the ground so. Five years ago He sent, in July and August (months in which it never used to rain), three hours of rain in Jaffa, and sixteen hours in Damascus, and much all around, so that the American papers remarked upon it as a proof that the climate of Palestine was changing. Also when we came here there were very few Jews coming back to this land, but the persecutions in Russia and Germany and other places began to drive them out, and, in spite of the edicts of the Sultan, they began returning to this land, buying land, planting and building, and getting possession of the trade of the city; and so to-day there are many thousands more than when we came.

"Jerusalem is in reality now in the hands of the Jews, so far as trade is concerned, and the Jew is no longer under the heel of the Mohammedan as he once was. They are also rapidly building up a new city, exactly on the line of the description in Jeremiah xxxi.: 38–40, and Jeremiah xxxii., 43–44, so that even the Turks, who are in power, are taking notice of it, and are saying one to the other, 'It is God, and what can we do?' And, dear friend, what can we say to all this but that God is rapidly fulfilling his word and the covenant he made with Abraham in our day, and we are witnesses of these things. God told us to come to Jerusalem and sit down and be instructed by him, and also witness what he was about to do in the earth that we might tell it to the generations following. Had we listened to our friends and not obeyed God we could not have seen the land just as it was, with the curse on it, and so been able to contrast it with what it would be when God began to restore. For no one has eyes for these things in Jerusalem but ourselves; nevertheless they are facts.

"There is no mission work in this land that is doing any real good. The lives of the Christians are so contrary to the word of God that they are only false witnesses for him, and we are not looking for any good results to come from that part of work for Christ. But we are looking for John xvii. to be fulfilled—where Christ says that 'when he had a body made perfect in one, even as he and the Father are one,' then the world will believe that he was sent of the Father. For this we are pressing as a great prize set before us, and we are looking for such mighty things as the world never saw before. These are glorious days, and our hearts are full of joy at what is coming upon the earth.

"With kind regards to your family, I am your loving friend, AMELIA GOULD."

THE theory is held by Prof. Mendeleef that petroleum is produced by water which penetrates the earth's crust, and comes in contact with glowing carbides of metals, especially of iron. The water is decomposed into its constituent gases; the oxygen uniting with the iron, while the hydrogen takes up the carbon, and ascends to a higher region, where part of it is condensed into mineral oil, and part remains as natural gas, to escape wherever and whenever it can find an outlet. If this assumption is correct, and a sufficient store of metallic carbides is contained in the earth's interior, petroleum may continue to be formed almost indefinitely, and yield a supply of fuel long after the coal has become exhausted. Prof. Mendeleef supports his views by producing artificial petroleum in a manner similar to that by which he believes the natural product is made.—*Exchange.*

THE PLEASURE AND PROFIT OF ACHIEVEMENT.

The most certain and most precious of all the rewards which come to faithful work in the very doing of it, is the discipline of mind and enlargement of soul which the work secures. The student who pursues knowledge diligently, gets in the pursuit what is far more important than knowledge, that is, training, discipline. This is doubtless the reason why God has so arranged the universe that we must work for what we get. It would be a misfortune to be put into easy possession of truth. "It is the glory of God to conceal a thing." It is better that we should acquire truth than that we should possess it without effort. Achievement is the condition of all real growth and greatness. The mere possession of knowledge could never make a fully developed man. The end of life is discipline and character. The pursuit of knowledge, therefore, is quite as necessary as knowledge itself. The pursuit is as essential to the discipline as the knowledge. "The intellect," said Aristotle, "is perfected, not by knowledge, but by activity." The same thought is put by Malebranche more strikingly still: "If I held truth captive in my hand, I should open my hand and let it fly, that I might again pursue and capture it."

This is one of the benefits which is reaped in the way to the goal of all search after truth, and of which nothing can rob the seeker. Effort, exertion, achievement, are the divinely appointed conditions for the development of character. Working is like eating; he who does it gets the benefit of it. In this view, encouragement is not cut off even by apparent failure. The child may fail a hundred times to perform some feat for which his size and strength are yet inadequate. But the effort is exercising his limbs and developing his strength, and at length he will accomplish it. The student may fail to solve his problem to-day and to-morrow, but his study and thinking are strengthening his mind and training his perceptions and reasoning powers, and he will probably find some morning, to his surprise, that he has solved it almost without effort. Thus we grow into the ability to do things. We cannot grow thus by any spasmodic effort. We grow by patient attention and application, and are surprised, when we look back upon our earlier stages of progress, to find that the impossible of an earlier stage of discipline and culture, has grown easy and natural.—*S. S. Times.*

Piety practised in solitude, like the flower that blooms in the desert, may give its fragrance to the winds of heaven and delight the unbodied spirits that survey the works of God and the actions of men; but it bestows no assistance upon earthly beings, and, however free from taints of impurity, yet wants the sacred splendors of beneficency.—*Dr. Johnson.*

The soul which sees the will of God in the smallest things, and in things the most trying and overwhelming, receives them all with joy and reverence. And so that which others fear and shrink from, the faithful soul opens all its doors, so to speak, to receive with honor.—*Selected.*

SIMPLE WORK THE GREAT WORK.

I marvel when I think how simple are the powers by which the great work is done in the world. I marvel when I look around and see the few men here and there using the simplest powers of our human nature,—using their courage, purity, truthfulness, kindliness,—and lifting their little bit of the world by their exercise. It seems to me to open the vast prospect of the future: that the world is to be developed, not by the attainment of great effects by individuals, not by striking or singular and star-like natures that are to shine forth and take possession of the world, but by the consecration of the smallest powers everywhere; by the men who are fishing with a little skill, and exercising their power upon poor material, simply taking the finer material with the finer impulses, and doing the best that they can do with the powers that God has given them. This is the encouragement of the weakest among us, while it is the glory of those upon whom God may have bestowed any larger powers.

Are we not like great musicians playing little ditties upon wonderful instruments? Are we not like artisans spending their time and tools upon poor little accomplishments, and holding them up for the admiration of other men only because those other men are not doing anything greater? We need not to have any new faculty put into us, but just purely and simply to give fulfillment to the faculties we have, to make ourselves capable of what God meant when he sent us into the world.

That is the contribution which each one may make to the salvation of the world. And there shall never be given to us, in any celestial glory which we may attain, anything that is not implied in us now. The humanity of heaven shall be nothing but the humanity of earth lifted to its full activity, filled with the divinest impulses, made cognizant of its greatest powers, and made ambitious for its completest work. God grant us the beginning of that heaven now!—*From an address to Harvard students by Phillips Brooks.*

Not a seed on the face of the earth could be made to grow by what is popularly known as force or power. But by influences so gentle that they are hardly appreciable the acorn swells into the storm-defying oak, and a continent presents its annual burden of golden grain and luscious fruit. Many a flinty rock, on which the chisel could make but little impression, has been disintegrated and decomposed by atmospheric and climatic influences, and now mingles with the dust of the earth. Many a wayward son, whom authority and harshness were hurrying to ruin, has been saved by the gentle tones or the pleading tears of his mother. Many a culprit, unmoved by the severest punishment, and by the agents of muscular morals given over as incorrigible, has been brought to penitence and reformation as a sister of charity or an angel of mercy touched the divine chord in his soul, and recalled the associations of his childhood and the prayers his mother taught him. The Beatitudes of Christ have blessed and saved more storm-tossed and suffering souls than all the anathemas of the world.—*Eli Fay.*

HONESTY IN BUSINESS.

A CLOTHING dealer in an interior town had occasion to visit the city to purchase goods. While he was gone, a young man entered the store to buy a coat. A salesman waited upon the customer, and showed him a coat plainly marked $7. The customer tried it on, and said in a pleasant, confiding way, "I want a good article, and I can afford to pay a little more." The salesman showed him many coats, and finally, having removed the tag, again offered him the seven-dollar coat which had fitted him at first, and said, "Here is a coat, a fine article, just your fit, which I can sell you for $12." The coat was again tried on, the young man seemed pleased, paid his money, and went away. On the merchant's return, the salesman, with a smile of triumph all over his countenance, rushed up to him, and boasted of what he had done. The merchant looked grave. He only said, "Does any one know who the customer was?" A little boy had recognized him as a workman in a neighboring factory, and remembered his name. The merchant sent for the young man, told him of his mortification, gave him back $5, and the privilege of returning the coat if he chose, and then said to the salesman: "Now, sir, I will pay your week's salary, and I wish you to go. If you cheat my customers, you have not principle enough not to cheat me. If I can't have my people sell goods honestly, I will go out of business. Good day, sir."—*Dry Goods Chronicle.*

ALCOHOL, like its twin brother, tobacco, produces a disease that craves and demands of its victim a constant supply of that which has produced it, and in an increased quantity. It is almost impossible for a person to reform permanently who continues to use tobacco, the effect of which on the stomach and the nervous system is such as to excite and continue the craving for stimulants; and not more than one in ten does permanently reform who continues its use. Numerous cases might be cited to prove this. The evil effects which the use of tobacco produces in our young men,—deranging the nervous system, producing thirst, and creating a desire for stimulants,—and the effect it produces in those that are endeavoring to reform from the use of alcohol, are not properly appreciated.—*New Church.*

NEWS AND OTHER GLEANINGS.

—W. W. Corcoran, the venerable philanthropist, died at his residence, in Washington, D. C., on the morning of the 24th ult., in his ninetieth year.

—There are now six papers devoted entirely to the news and progress of woman suffrage in the United States.

—The rapidity with which Anglo-Saxon literature is pouring into Japan is illustrated by the statement that 85,000 English and 119,000 American books were imported by the subjects of the Mikado last year.

—Mme. Floquet, wife of the French statesman, is an active promoter of technical schools for girls, which she aids both with money and social influence. She is also interested in homes for servants, and offices and homes where Alsatian girls can obtain shelter and places. It was she who thought of celebrating the opening of the new Hotel de Ville by a lunch to the children of the communal schools of Paris.

—Hester Morris, of Wyoming Territory, was the first woman in the United States ever appointed Justice of the Peace. While she was in office she was a terror to a certain class of evil-doers. "Yes," the half-inebriated rough would plead on his arrest, "I been a beatin' my wife again. I know it; but don't send me up 'fore Mis' Morris. I rather go 'fore ten men than that woman. I rather be tried by a man."

—Near the town of Soleure, in Switzerland, a bird's nest was recently found which was constructed entirely of the imperfect watch springs thrown out from the workshops. It has been deposited in the local museum.

—The latest gift to Harvard is a large and completely equipped addition to the Museum of Comparative Zoölogy, funds for which have been raised through the efforts of Professor Goodale.

CURRENT EVENTS.

PRESIDENT CLEVELAND and his party returned from their trip to Florida, on the 26th instant, having been absent since the beginning of the week.

AN "interview" with James G. Blaine, at Florence, Italy, has been published in the (American) newspapers, in which he emphatically reiterates his purpose not to permit the use of his name as a candidate for President.

HEAVY rains and the breaking up of ice caused some floods at the close of last week along the Susquehanna and other rivers, but the damage done was less than sometimes. At Port Deposit there was no "gorge" of the ice.

THE Alumni of Cornell University gave a banquet in New York on the evening of the 24th ult. In speaking of co-education President Charles Kendall Adams said: "The experiment, we think, is a success. The girls have been sedate, studious, and circumspect in their conduct. There has been no scandal in the College, and nothing has occurred to make any one regret co-education or make a change in our views regarding it."

THERE has been a very general resumption of labor in the coal mines of the Schuylkill region, and no trouble is now anticipated there.

A DISPATCH from San Remo says that the German physicians in attendance on the Crown Prince of Germany have discovered with the microscope cancerous matter in the phlegm coughed up by the patient. It appears to be generally understood that his situation is increasingly unsatisfactory.

A DISPATCH from Mount Vernon, Illinois, on the 27th inst., says the weather had continued extremely cold, and the homeless had suffered greatly during the preceding forty-eight hours. The Finance Committee has issued a card to the general public stating that all subscriptions received will be devoted to the purchase of building material, household furniture, and other articles necessary to provide the destitute and needy with shelter.

NOTICES.

*** Henry T. Child expects to attend Abington Friends' meeting on First-day morning, Third month 11th, and give an illustrated lecture on Temperance at the same place at 2.30 p. m. (to which all are invited.)

*** Joseph B. Livezey expects to attend Friends' meeting at Green street, Philadelphia, on next First-day morning, (4th instant), and to be at Germantown in the afternoon, and Girard Avenue in the evening.

*** A circular meeting will be held in Washington, D. C., at Friends' meeting-house, near Eighteenth and I streets, on First-day, the 4th of Third month, at the time of their

regular meeting, at 11 o'clock. Friends at a distance, feeling an interest are desired to attend.

*** The Burlington First-day School Union will meet at Mt. Holly, Seventh-day, Third month 10th, at 10.30 a. m. All interested in the work are cordially invited.

WILLIAM WALTON, MAGGIE D. ROGERS, } Clerks.

*** Friends' Charity Fuel Association will meet Seventh-day evening, Third month 3d, at 8 o'clock, in Parlor 1520 Race street.

WILLIAM HEACOCK, Clerk,

*** Philadelphia First-day School Union will meet at Race street meeting-house, Sixth-day evening, Third month 9th, at 8 o'clock. Reports from the schools are expected, and the objects and advantages of the children's annual meeting considered.

JOSEPH M. TRUMAN JR., SARAH M. HOLCOMB, } Clerks.

*** Joseph B. Livezey, an approved minister from Upper Greenwich, N. J., with a minute from his meeting, setting him at liberty to attend and appoint meetings within the limits of Philadelphia Quarterly Meeting, expects to attend on First-day next, (4th inst.), Green street meeting, at 10.30, a. m.; Germantown, at 3, p. m.; Girard avenue, at 7.30, p. m.

*** There will be a Circular Meeting held at Chester, in Friends' meeting-house, on Market street below 3d, on First-day next, the 4th inst., at 3 p. m., to which Friends are cordially invited.

*** Quarterly meetings in Third month will occur as follows:

2. Nottingham, Little Britain, Pa.
3. Whitewater, Milten, Ind.
5. Prairie Grove, West Liberty, Io.
8. Salem, Woodstown, N. J.
12. Baltimore, Aisquith St., Md.
15. Haddonfield, Moorestown, N. J.

This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.*

FRIENDS' CALENDAR FOR 1888
NOW READY.

A handsome lithographed card bearing a tablet, giving a carefully selected quotation from Friends' writings for each day of the year. Price, 50 cents. By mail, 55 cents.

FRIENDS' ALMANAC FOR 1888.

Containing an account of the times and places of holding the meetings of Friends on the continent of America. Price, 10 cents each. $1.00 per dozen.

FRIENDS' POCKET ALMANAC FOR 1888.

Price, 10 cents each. $1.00 per dozen.

FOR SALE BY

FRIENDS' BOOK ASSOCIATION,

S. W. Cor. 15th and Race Sts., Philadelphia.

FRIENDS' INTELLIGENCER and JOURNAL

Memoranda for those who will aid in Sending in Subscriptions.

1. Rates for the Year 1888.
   Single subscriptions, $2.50 per year.
   8 copies, $2.25 each, a year.
   15 copies, $2.00 each, a year.
   ☞Note the change in last item from previous years.
2. "No Agents."
   We recognize no one as our "Agent" with the single exception of Friends' Book Association, 15th and Race Sts., Philadelphia. Those Friends who get up Clubs for the paper must be regarded as the agents of those subscribing through them. When money reaches our hands we receipt for it ourselves, and no one, (except F. B. A., as above), is authorized to receipt for us.
3. Concerning Clubs.
   a. It is, of course, our desire to get new subscribers, and retain old ones. Unless Clubs help to do one or both of these things, they do not aid the paper. We therefore hope to have in them (in the $2.00 Clubs, especially) *some new ones.* This is difficult, of course, in some localities, and in such we will not *exact*, though we *desire* it.
   b. Names and money, for clubs, should be sent to us in *one, two, or at most three,* instalments We can wait till the person getting up the club is ready with the money, but we cannot accept single names and money, (unless for *new subscribers*), at intervals through the year, on Club account.
4. Subscribers' Names.
   When sending clubs, please carefully designate all "new" names; and in renewals, please use the same name as the paper has been coming to;—if for any reason the name is changed, please call our attention to this fact.
5. Discontinuances.
   We do not discontinue a paper, (unless for continued delinquency in payment), without the order of the subscriber. Persons wishing to "stop" *must so notify us.*

For 1888 is better than ever, and should be in the hands of every person contemplating buying SEEDS, PLANTS or BULBS. It contains 3 Colored plates, thousands of Illustrations, and nearly 150 pages, telling what to buy, and where to get it, and naming lowest prices for honest goods. Price of GUIDE only 10 cents, including a Certificate good for 10 cents worth of Seeds.

JAMES VICK, SEEDSMAN,
Rochester, N. Y.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly *to raise funds*. These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

HISTORY OF THE SCHOOLS.

Both these schools have been in existence since the early years of the work of colored education in the South, soon after the close of the war. The Aiken School was begun in 1868, with the support of the Germantown, (Philadelphia) Branch of the Freedmen's Union Commission (of which Sarah F. Corlies was Secretary, and Elizabeth Dorsey, Treasurer.) In later years it was sustained almost entirely by the exertions of Martha Schofield. In 1886, however, finding the burden of its support too great, she made an appeal to the Yearly Meetings of Friends, in Philadelphia and New York, for aid, and as part of the response to this appeal, this Association was organized at Philadelphia, in Sixth month, 1886.

The Aiken School has a valuable property (largely accumulated by Martha Schofield), which has been placed in the hands of a Board of Trustees. A beginning has been made in the formation of an endowment fund.

The school at Mt. Pleasant was established in the First month, 1866, in charge of Cornelia Hancock, under the supervision and with the support of the "Friends' Association of Philadelphia, for the Aid and Elevation of the Freedmen," and was maintained for a number of years by that excellent organization. In late years, however, its funds have been raised, from year to year, almost entirely by Henry M. Laing, Treasurer of the Association, who like M. Schofield, found this tax upon him too great.

CHARACTER OF THE SCHOOLS.

The Aiken School had last year 270 pupils, divided into nine classes, with eight instructors. This year, the attendance is larger, and an additional teacher is employed. There are, this year, about 300, of whom 40 are boarding students. Members of the highest class are prepared to become teachers. All are taught industries,—the girls being taught to cut, make, and mend garments, etc.; the boys instructed in printing, carpentry, and many details of labor about the school property.

The Mt. Pleasant School had last year about 100 pupils, with three teachers. They average somewhat younger than those at Aiken. The instruction of this school has been carried on for two years in a church, granted free of charge for the purpose, the school building having been demolished by a storm in the summer of 1885. (A special fund for rebuilding has been partly raised.)

THE NEED FOR CONTINUED AID.

Those engaged in the work of instructing the colored people appeal to us to continue a measure of aid. While some progress has been made in establishing public schools in the South, they are yet very insufficient. The school term in South Carolina averages not over three months in the year, and the schools themselves are too few, and seldom well provided in any particular. To withdraw from the field yet, seems like abandoning the colored people, in the very midst of the work for their elevation. Moreover, it is evident that for years to come there will be great need of schools which will do more than provide mere book instruction,—will, in addition to this, give practical training in habits of honest and orderly industry. Such work as this is done by these schools, and they are fully entitled to the confidence and help of all who are interested in the welfare of the hitherto unfortunate colored people. Money sent them is used with the utmost economy, and is made to yield the best possible maximum of results. The funds supplied by the Association go only to the compensation of teachers, and so far have not been sufficient for that purpose. The students either support themselves, or are otherwise aided.

*** THE ASSOCIATION EARNESTLY APPEALS TO THOSE INTERESTED FOR AID TO ITS FUNDS.

Statement of Henry M. Laing, Treasurer, to Seventh month 1, 1887.

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.

FRIENDS' PRINTING HOUSE S. W. COR. 6th and ARCH

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER Vol. XLV. No. 10. | PHILADELPHIA, THIRD MONTH 10, 1888. | JOURNAL. Vol. XVI. No. 789.

EXTRACT FROM WHITTIER.

RICHEST gifts are those we make,
Dearer than the love we take
That we give for love's own sake.

Hands that ope but to receive
Empty close; they only live
Richly who can richly give.

He who, giving, does not crave,
Likest is to Him who gave
Life itself the loved to save.

Love that self-forgetful gives,—
Shows surprise of ripened sheaves,
Late or soon its own receives.

DOUBT.[1]

(*Concluded from last week.*)

DOUBT is none the less dangerous because it needs must be experienced sooner or later. Every child, passing on into manhood, goes through his physical crises, but with risk always. Needful as it is to question, it is fatal to become habitually questioning. This age of doubt may become an age "which blots out life with question marks." The crises of the soul may rejuvenate the constitution, or they may undermine it.

The arraignment of the highest authorities before the judgment seat of an ordinary mind naturally tends to puff the man up with conceit. It is easy to criticise imperfections. The penny-a-liner can pick the noblest poet to pieces, and detect long ears protruding from the prince of philosophers. Little learning will serve to stock a man with doubts, on the strength of which he will set up for a mind above the common superstitions. So that the very doubting which should free a man from prejudices may fill him with a pride which shall close his soul against the highest truth. The instincts of the lower nature are interested in the judgment of divine truth. If only it were not, there would be freedom to riot in sin. If there were no God over us; if our conscience was not the voice of a Holy Ghost; if our convictions of duty were only secretions of the brain, how the flesh would exult! A man's doubt may, then, be reluctance to believe. The jury may be suborned. By cherished sin a man may have incapacitated himself from believing. How can the beast believe that there is an angel? If a man fouls his own nature, need he wonder why he does not see heaven mirror its glories in his soul? In the calm, pure mountain lake one may behold the reflections of the skies; but do you look for this vision in a street gutter?

No wonder, then, that the church puts in her warning against doubt. It may be either the beneficent guide into truth, or the false pilot who runs the ship ashore. It may beget faith, or it may strangle it. The doubter's face may shine with the reflection of the angel faces forever gazing into the countenance of God; or it may be livid with the shadows upward cast from the outer darkness. Doubt may come as the mountain wind, to invigorate; or as the simoon, to blast and wither.

A man, then, needs to try even his doubt. Has it the signs of the true and healthful spirit which is inquiry, or of the false and fatal spirit which is skepticism? Much of the doubt which is current to-day fails to disclose the marks of true inquiry. There is a dilettante doubt, much in vogue among a certain class, which is never enough in earnest to push on into faith; smiling under its questionings of the eternal verities in which all man's hopes are centered; picking up crumbs of criticism and scraps of science, reading a little, talking a good deal—a shallow-brained, glib-tongued skepticism, which, having dipped into Tyndall and Huxley, Darwin and Spencer, forgetful or ignorant of the ancient philosophical controversy now waged over again on the old fields with new implements, dilates upon the absurdity of prayer, the impossibility of miracles, the unreality of the supernatural, and looks with pitying smile upon the illusions of credulous Christian folk! There is an intolerant doubt, which, having questioned so successfully in the realm of physics, ignores the possibility of there being any realm not capable of ultimate analysis by its scalpel and microscope; which sweeps out of the sphere of knowledge all that yields not to the same processes which have conquered rocks and seaweed, and coolly remands to the rubbish loft of antiquated superstitions the faiths which inspired men, the hopes which have cheered men.

There is an irrational doubt which refuses, as illusions, the very bases on which the doubt itself stands, declaiming against the unreality of religious faith while building up its own positive knowledge upon the same foundations with religion; laying the whole superstructure of the magnificent systems in which it believes upon ideas which rest themselves on no other ground than the veracity of consciousness; constructing the entire fabric of thought which it offers as a substitute for the faith out of notions accepted on trust, incapable of proof, baffling resolu-

[1] A Sermon at Appleton Chapel, Harvard College, Mass., 4th month, 12, 1885, by R. Heber Newton, of New York.

tion; on notions which even refuse to be shaped into thinkable—*i. e.*, non-contradictory—forms; a doubt which doubts religion only by doubting its own doubt!

There is an uncandid, dishonest doubt, which, wanting to escape from God and conscience, turns its eyes away from the light and then says it cannot see the sun; hearkening only to an *ex parte* statement of the case, and yielding a hasty verdict.

There are, however, doubts abroad to-day which have no kinship with such unworthy representatives of this honorable name.

There is a doubt before which we must stand in awe; as we watch the young man, who has hitherto lived upon the surface of life, wakening to a realization of the solemn mysteries amid which he has been walking; as we note him hearing the cry of sorrow and suffering wrung from earth, and facing the fearful question whether God is good; as we follow him into the appalling struggle between the spirit and the flesh, in which the clouds of the battle-field gather over the visions of the soul; as, through the darkness of earth, the Infinite Power draws nigh to him and wrestles with him through the night of some great horror.

There is a doubt which we must pity without any condemnation: the sorely perplexed questioning which arises within the minds of those who have been brought up in the traditional forms of thought, and who, on going out into the world, discover, to their surprise, that the mental outlook of our age is not that of the age Calvin or of the age Augustine; who find all clear thought blurring in this maladjustment of the eye of faith to the eye of knowledge, and who, in this dimness of vision, stumble along, not knowing what to trust; earnestly bent on proving loyal to the old faith, yet as determined on fidelity to the new knowledge, and, therefore, halting between two opinions, to their own utter wretchedness, as they sit tongue-tied in our creed, chilled in our worship, mocked by our prayers. There is a brave and admirable doubt: the strong, manly reason of an intelligent age, to which is given a knowledge beyond that possessed by any other generation, and which, detecting that much, very much, of our popular theology will not square with nature's laws or with the facts of history while contradicting reason and conscience, sets itself vigorously to question dogmas in order to reach truth, and, if so it may be, in gaining it, free the nobler faith of the future.

If the diagnosis of doubt has been at all accurate, its treatment is plain. If the symptoms of a man's doubt betray the false questioning which is skepticism, if it is light and careless, morbid or immoral, there is but one method to pursue. It must be exorcised. The soul must be purged. A man must seek the One who can cast out even this evil spirit. If the doubt is genuine and honest it will be in earnest, seeking for light, following that which it gains. Its prayer will be, "Strengthen me," "Enlighten me," but, crying, it is to "work out its own salvation with fear and trembling." This, however, is not to be done by stamping down the torturing questions that spring up on every hand. The doubt comes from ignorance and half-knowledge, from not seeing far enough. It needs eyes wider open. Its cure is larger, deeper knowledge. A calmer mood will not fear the discovery of aught which can invalidate any essential faith. Already, when we come face to face with the specters which our age has raised, they begin to show their ghostliness. The spirit of knowledge is not the "spirit which denieth," but rather that which affirmeth. We shall be silent where we were once too glib-tongued, but we shall find a lowlier voice of adoration and praise, of hope and faith. Unless every sign fails, we are on the eve of a great reaction from the extreme of materialistic philosophy upward into faith in the unseen, the spiritual God.

So I say to every doubt-benighted young man, follow your doubts resolutely, insistently, fearlessly, patiently, follow them hard until you drive them out of the shadows which they haunt, into the light where they vanish. But this may not be soon or easily wrought. In the meantime, what are you to do: you who feel out at sea, drifting whither you know not, compass at fault, pole-star even clouded over, fearing to take your reckoning, if that were possible, lest it should tell you the length of your drift, and notify you of the coming region of the noon midnight. It is not by mere speculation that doubt is to be resolved. It was the evil spirits who were thus described by Milton:

> "Others apart sat on a hill retired,
> In thoughts more elevate, and reason'd high
> Of Providence, fore-knowledge, will, and fate,
> Fixed-fate, free-will, fore-knowledge absolute,
> And found no end in wandering mazes lost."

Carlyle has told us the secret which he learned from his great master, Goethe. Action is the cure for doubting. Doing dispels doubt. The heart may throb fuller life into the brain. Humors of the head may be thus cleansed. And this because life is an education of the whole being of soul as well as of mind. The Master's principle of education is: "If any man will do my will, he shall know of the doctrine, whether it be of God." First the will, then the doctrine. Do the will, and know the doctrine. We mount, in the divine curriculum, from the class of conduct to the class of knowledge. We can read the classics only by mastering the grammar. You try to clear your mind about the great mysteries, and are baffled. You are plainly not yet up to the task. May you not need to go back upon the rudiments of faith? You must know duty. You can spell out Rightousness, Purity, Goodness, Justice, and Truth. You can translate these terms of the soul into life. They are intelligible and do-able. They form the first readings in the tongue of the Spirit. If you cannot master more than these rudiments, work them over more carefully.

Faith is an expression of soul-quality, not of head-quantity. Its life is obedience to the authority which Reason owns, however far beyond our comprehension. Faith may find as brief a creed as that of the Ethiopean eunuch; it may be as elemental as that of Abraham; but even such a faith is germinal—it will grow. You may not be able to credit all

that you want to believe. You must then live the truth that you do see.

You cannot honestly acknowledge the Bible as the Word of God in any such sense as you think the church claims. Yet you cannot but own the voice of the eternal, sounding in upon your soul through Prophet and Apostle, waking echoes of aspiration. Hearken and obey! You will hear more of that voice as you follow, till the oracle shall grow sacred and divine, and you own, "Lo! God was here, and I knew it not."

You are not sure of the Hereafter. Live then in the spirit of Matthew Arnold's noble sonnet:

"Hath man no second life?
Pitch this one high:"

and out of that high life there will rise the conviction that there is a higher. You cannot say, "I believe in Jesus Christ, His only begotten Son." You can, however, surely say:

"Thou seemest human and divine,
The highest, holiest manhood Thou."

You must go on then to say:

"Our wills are ours, we know not how;
Our wills are ours, to make them Thine."

Follow that will which breathes in the Spirit of Christ: it will lead you to know all that you need to know about Jesus.

Let the modern doubter be like his ancient prototype—loyal to Christ as the Master of Life—saying with Thomas, when Jesus was in danger, "Let us also go with him, that we may die with him." Then, like Thomas, he, too, shall find his doubt blossom into faith, and our last vision of him shall be upon his knees in worship.

You are insecure even in the foundation belief of God. You feel it slipping away from beneath you. Press your soul down, through the mind's belief in God, to the soul's belief in goodness, and plant yourself there. There is where God is. That is the solid ground. That can never dissolve. It must be right to do right. Of that no doubts dare be felt. Hold that fast. Root your faith therein, and you will find a one-articled creed—"Righteousness"—will grow into Religion's Confession of Faith, and will spread out into the beautiful fruitage of the knowledge of God. Over you rise these visions of a holy, beneficent life; upon you descend the impulses to a life above the average level; you own a "Power not ourselves making for Righteousness." If God is, must not the one thing indisputable of him be that he is imaged essentially in the noblest faculty of the noblest life; that this overbrooding Presence is mirrored in the vision of Goodness which rises up within the spirit of man?

Obey, then, the motions of this awful Power working within you, and its form will outline itself in the life which it molds, and consciousness of a Righteous Law will be compelled to own that "Conscious Law is king of kings." If, through the darkness, no other light is discernible, the light of the headland of Duty pierces the clouds. Steer by it. You shall weather the fiercest storm, and shall lay a straight course through the thickest gloom, if you keep your eye upon the Right, and never slip its bearings. Through the fog, from out of the darkness, will loom at length into clearness the Truth supporting the Right, and in the light you will recognize—God. Crown your "I ought," and do it worship: it will enfranchise you with a glad "I know."

"You tell me, Doubt is Devil-born.

I know not: one indeed I knew
In many a subtile question versed,
Who touch'd a jarring lyre at first,
But ever strove to make it true.

Perplex'd in faith, but pure in deeds,
At last he beat his music out.
There lives more faith in honest doubt,
Believe me, than in half the creeds.

He fought his doubts and gather'd strength;
He would not make his judgment blind,
He faced the specters of the mind,
And laid them: thus he came at length

To find a stronger faith his own;
And Power was with him in the night,
Which makes the darkness and the light,
And dwells not in the light alone."

From Friends' Quarterly Examiner, (London)

LINDLEY MURRAY.

The dwelling-place of a man who, from infirmity, spent forty years of his life on the sofa, and yet served his generation well and is lovingly remembered by the few who recall his person to their memory, deserves at least some notice even in a slight sketch of his life. Holgate, or as it was then written, Holdgate, about a mile from the City of York, lies in a slight hollow,[1] to the west of the main road leading to the south. "The soft, quiet hamlet where he dwelt" is such no longer. The railway giant and the more insidious modern builder are doing, we cannot say have done, their ruthless work; the house however stands. Not so the old "Fox;" that picturesque specimen of a wayside inn, which has supplied, it may be, to more than one youthful student of Murray, an ideal of the "whitewashed wall and nicely sanded floor," of Goldsmith's "Deserted Village," has been succeeded by a pretentious modern hotel, too small to merit the name, but large enough to suggest the evils, not the necessity, of the building. The road through the hamlet—for when Lindley Murray lived and wrote it was truly such rather than a village, or as now, a mere suburb—was formerly crossed by a "beck" (which stream is now conducted underneath the road), a raised causeway serving for the use of foot-passengers; just beyond this point to the left stands the house in which *he dwelt*. The plain of York is here relieved by gently rising ground, so that "Holgate Lane," as the road is now called, is partly formed by a cutting on one side, leaving a high bank, surmounted by trees and hedgerows, skirting the meadows or pastures beyond.

[1]Probably named from this fact; we find the analogy in Holland, Holloway, Holderness, etc. The reader may hardly need to be reminded that in the north, and noticeably in York, the word *gate* often means a street or road, and *bar* is used for the gate of a city. Thus, "Micklegate Bar" denotes the entrance-gate of the city from the south, and Micklegate the street on which it opens. Doubtless in ignorance of this, an engraving in the "Pictorial History of England," of this fine specimen of English civic architecture, is inscribed Micklebar Gate.

The authoress of a sketch of the history of York Friends' Girls' School,[1] informs us that "a house which is still standing in Trinity Lane was opened on New Year's Day, 1785, under the care of Esther Tuke, who had offered to take the gratuitous charge of the school, her husband, William Tuke, uniting therein." Further, that Lindley Murray "took a great interest in the school, and was often consulted as a literary oracle by his friends there. The teachers, Ann and Mabel Tuke and Jane Taylor, who were intimate friends as well as colleagues, feeling their inability to teach grammar, applied to him for aid. . . . The walks to Holdgate, as well as the lessons, were noteworthy, for the road was dark and rough; but the young pedestrians, shod in pattens and escorted by a man carrying a lantern, bravely and cheerily wended their way to their preceptor's home, where their presence was both welcome and enlivening." From these circumstances arose the idea of the composition and publication of the well-known "Murray's Grammar."

Lindley Murray, the eldest of a family of twelve children, was born at Swatara, near Lancaster, Pennsylvania, in the year 1745. His father was an enterprising and successful man of business, who, becoming engaged in extensive shipping and mercantile concerns, was known as one of the most respectable merchants in America. Lindley Murray speaks also of his excellent mother with emotions of affection and gratitude; indeed both his parents, who belonged to the Society of Friends, appear to have been earnest in relation to the moral and religious interests of their children. Their eldest, "till he was about half a year old, was almost perpetually crying; his countenance gave no indication of intelligence." It appears, however, that when he was only nine months old, the future grammarian made his way, unnoticed by his care-takers, from the house to his father's mill, a distance of about a hundred yards. Afterwards he became both lively and mischievous; indeed he was remarkable for activity of body during his youth and early manhood, and possibly over-exertion may have caused that peculiar weakness of the muscles which afterwards set in and continued during his life. The writer has heard a story of his leap across the entrance lock of a dock, no doubt at New York, which, on the most moderate estimate, must have been a fearful effort.

He was only about eight years of age when his father settled with his family at New York; here he was sent to a good school, and we may conclude that he made fair progress in the elements of learning, though his love of play led him into more or less infringement of school discipline. A pleasing incident of his life at this time is worthy of notice. He had to produce a specimen of his best handwriting, and for this purpose was furnished with a sheet of paper ornamented with a tastefully illuminated border. The subject of his transcript was the salutation of the angels to the shepherds at Bethlehem, and the impression made on his youthful mind was so sweet and attractive as to be remembered with pleasure and emotion even in his later years. As he well says: "A veneration for the Holy Scriptures and a pleasure in perusing them may be excited by agreeable and interesting association, and the impressions thus early made accompany the mind through life, a consideration of the utmost importance to those who have the care of young persons."

On leaving school he was placed in his father's counting-house, and he also spent some time in another business-house at Philadelphia; but the occupation and the restraints which it imposed became irksome to him, though he had sufficient mercantile ability to enjoy and profit by a small venture, which his father kindly placed in his hands to that intent; but he had now acquired a taste for reading, and a desire for study and literary pursuits.

About this time a too severe act on the part of his father, the consequences of which, happily overruled as they were in this case, might have ruined a mind of less even temper, may be noted as the probable turning-point of his life. His father had given him "general directions not to leave the house in the evening, without previously obtaining his approbation." On one occasion, being asked in his father's absence to spend the evening with an uncle, an act which he was sure would not be in itself disapproved, he yielded, on the natural, if not perfectly sound, principle of transgressing the letter not the spirit of the command. The next morning he was taken into a private room and remonstrated with; his plea in defense was urged in vain, and he received a severe chastisement with a threat of its repetition for any similar offense. Keenly feeling this degradation he resolved to leave his home, and having health, strength, and spirit of his own, to make his way in the world. Taking his books and all his "property" with him, he decamped to a distant town where there was a good seminary, his first design being to learn the French language. He had previously changed his clothes, and having settled himself as a boarder and commenced his studies, the prospects of this youth of fourteen appeared to himself "luminous and cheering." The loss of the society of his affectionate mother would seem, however, to have still been the occasion of a transient cloud; but being persuaded that he could not be happy at home, his resolution for the time was fixed. To shorten the story, an accidental event providentially led to the healing of the breach. An acquainatnce of the family met him in the street, and, all unknowing of his peculiar position, begged him to take charge of a letter, and deliver it himself at New York, to the person to whom it was addressed. Embarrassed by the need of secrecy as to his circumstances, he could not well shirk the charge entrusted to him, and thought, at last, that the only honorable course would be to comply with the instruction, and run the risk of being recognized. He accordingly went to New York and delivered the letter; but the packet-boat not sailing till the following morning, he was obliged to spend the night at an inn, where, in the evening, his uncle, who had been told of his having been seen in the city, called upon him, kindly and wisely advising him to go home. He agreed to spend a short time with his moth-

[1] "Historical Sketch of the Friends' Girls' Schools York," 1784 to 1814; 1831 to 1881. By L. Rous. Pp. 1, 6. (Jubilee Papers.)

er and then return; but on his arrival at the house, his mother's tenderness, and then his father's affectionate welcome as soon as he entered, completely dissipated his former feelings. He says: "We spent the evening together in love and harmony; and I abandoned entirely, without a moment's hesitation, the idea of leaving a house and family which were now dearer to me than ever." Both father and son no doubt profited by the happy issue of this painful affair; it was never afterwards made a subject of reproach, and indeed the harmony of the family circle seems henceforth to have continued unbroken.

Young Murray now solicited of his father, and was allowed, the privilege of a private tutor, and studied early and late, till the close attention threatened to impair his health, and he found it needful to relax in favor of that bodily exertion, which possibly the *instinct* of a delicate child had prompted, when as an infant, with nine months' experience of life, he took his first independent journey from the house to the mill.

It might be thought that laxity of religious principle would have been connected with a mind of this ardent character, but happily for him his principles were never disturbed by infidelity or scepticism; though he had associates of this style of thought, his intelligence had been fortified by some early acquaintance with Butler's "Analogy," Leland's "Deistical Writers," and other works.

When seventeen or eighteen years of age he wished to study the law; this meeting with his father's disapproval, he put his arguments in favor of his own view on paper, which was shown also to some friends of the family, and in particular to a legal gentleman who was his father's counsellor: this person became his advocate in the case, and shortly he was placed under his care and tuition. The celebrated John Jay was his fellow-student for about two years, and after four years' study he was called to the Bar. When about the age of twenty-four he formed the happy marriage connection which was the signal domestic blessing of his future life.

(*Concluded next week.*)

A STATEMENT OF ISLAMISM.

[We do not desire to encourage that class who are seeking (and occasionally supposing themselves finding) improvements upon Christianity, and we have no doubt of the great inferiority, judged even by merely external standards, of Islamism. Yet there is a great deal of instruction in seeing how nearly it concedes the truth of Christianity. The following letter, which has been recently published in the New York *Independent*, was sent to that journal by President Washburn, of Robert College, (the American missionary institution at Constantinople), and is the translation of one sent by the "Sheik-ul-Islam," the head of all Mohammedans, to a German who had embraced their views. President Washburn says it is the first official statement of Mohammedan doctrine he has seen in a thirty years' residence in Constantinople. It was published by request in the papers of that city—"probably in view of the fact that there have been quite a number of converts to Islam within the past year, and it is supposed that more may be expected." It strikes Dr. Washburn as evidently intended to make as favorable an impression on Christians as possible, and he is quite right in thinking it a document of exceptional interest and well worth any intelligent man's reading.—Eds. Intelligencer and Journal.]

Dear Sir.—The letter by which you ask to be received into the heart of the Mussulman religion has been received and has caused us a lively satisfaction. The reflections which you make on this occasion appear to us worthy of the highest praise.

At the same time we ought to call your attention to the fact that your conversion to Islamism is not subordinated to our consent, for Islam does not admit of any intermediary, like the clergy, between God and his servants. Our duty consists only in teaching the people religious truths. Consequently, conversion to Islamism demands no religious formality and depends upon the authorization of no one. It is sufficient to believe and to proclaim one's belief.

In fact, Islamism has for its base faith in the unity of God and in the mission of his dearest servant Mohammed (may God cover him with blessings and grant him salvation) *i. e.*, to accept conscientiously this faith and to avow it in words, as expressed by the phrase: "There is only one God, and Mohammed is his prophet." He who makes this profession of faith becomes a Mussulman, without having need of the consent or approbation of any one. If, as you promise in your letter, you make this profession of faith, that is to say, you declare that there is only one God and that Mohammed is his prophet, you become a Mussulman without having need of our acceptance; and we, for our part, felicitate you with pride and joy for having been touched by divine grace, and we shall testify in this world and in the other that you are our brother. Believers are all brothers.

Such is a summary definition of faith. Let us enter now upon some developments of it. Man, who is superior to the other animals by his intelligence, was created out of nothing to adore his Creator. This adoration may be summed up in two words—to honor the commands of God and to sympathize with his creatures. This double adoration exists in all religions. As to its practice—religions differ as to their rules, forms, times, places, the greater or less number of their rites, etc. But the human intelligence does not suffice to assure us of the manner of praying which is most worthy of the divine glory; so God in his mercy, in according to certain human beings the gift of prophecy, in sending to them, by angels, inspiration, writings, and books, and in so revealing the true religion, has overwhelmed his servants with blessings.

The book of God which descended last from Heaven is the sacred Koran, the unchangeable teachings of which, carefully preserved from the first day in written volumes and in the memory of thousands of reciters, will last even to the day of the last Judgment.

The first of the prophets was Adam and the last Mohammed (may God give him salvation.) Between these two many others have lived; their number is known only to God. The greatest of all is Mohammed. After him come Jesus, Moses, Abraham, Noah and Adam (may God grant them salvation.)

All the prophets have threatened their followers with the day of the last Judgment. So it is necessary to believe that the dead will rise again, that they will appear before the tribunal of God to render their accounts, and that the elect will be sent to Paradise, and those condemned to Hell. All the actions of every one in this world will be examined on that day one by one; and although all the acts of soldiers of holy war, even their sleep, are considered as a prayer, they also will be obliged at the Judgment Day to render an account. The only exception is for those who die as martyrs, who will go to Paradise without examination.

Also it is necessary, as an article of faith, to attribute all good and all evil to the Providence of God. To say that the creator of good is the angel, and the creator of evil the demon, is one of those errors which it is necessary to avoid.

Consequently the believer ought to have faith in God, in his angels, in his books, in his prophets, in the last Judgment, and in his will as the source of all good and evil. He who accepts these truths is a true believer. But to be a *perfect* believer it is necessary to perform certain duties, to pray to God and to avoid falling into such sins as murder, robbery, adultery, etc.

Beside the profession of faith of which we have spoken above, a good Mussulman ought to pray five times a day, distribute to the poor a fortieth part of his goods every year, fast during the month of Ramazan, and make once in his life a pilgrimage to Mecca.

If a believer does not conform to the laws of God and does not avoid what he forbids he does not become an infidel, but he is considered as a sinner; that is, as a wandering believer, and he will merit a temporary punishment in the other world. He is in the hands of God. God pardons him or condemns him to pass a certain time in hell, proportioned to his guilt.

Faith annuls all sin. He who is converted to Islamism becomes as innocent as if just born, and he is responsible only for the sins committed after his conversion.

A sinner who repents and in person asks God's forgiveness, obtains pardon. Only the rights of his neighbor are an exception to this rule; for the servant of God who cannot obtain justice in this world, reclaims his rights at the Day of Judgment, and God, who is just, will then compel the oppressor to make restitution to the oppressed. Even the martyrs are no exception to this rule. To avoid this responsibility the only means is to get a quittance from your neighbor whom you have wronged. In all cases, however, there is no need of the intercession of a spiritual director.

All this, no doubt, seems strange to people accustomed to a sacerdotal régime. When a Christian child is born, to make part of society he must be baptized by a priest; when he grows up he needs a priest to marry him; if he would pray he must go to a church and find a priest; to obtain forgiveness of his sins he must confess them to a priest; and he must have a priest to bury him.

In the Mussulman religion, where there is no clergy, such obligations have no place. The infant is born a Mussulman, and his father, or the chief of the family, gives him a name. When they wish to contract a marriage, the man and the woman or their agents make the contract in presence of two witnesses: the contracting parties are the only ones interested and others cannot intervene or take part.

A Mussulman prays all alone in any place which suits his convenience, and to merit the remission of his sins he goes directly to God. He does not confess them to others, nor ought he to do so. At his death the Mussulman inhabitants of the town are obliged to put him in a coffin and bury him. Any Mussulman can do this: the presence of a religious chief is not necessary.

In a word, in all religious acts there is no intermediary between God and his servants. It is necessary to learn the will of God, revealed by the prophet, and to act in conformity with it.

Only the accomplishment of certain religious ceremonies, such as the prayers on Friday and at Beiram, is subordinated to the will of the Caliph of the prophet and the sultan of Mussulmans, since the arrangement of ceremonies for Islamism is one of his sacred attributes. Obedience to his orders is one of the most important religious duties. As to our mission, it consists in administering, in his name, the religious affairs which he deigns to confide to us.

One of the things to which every Mussulman ought to be very attentive is righteousness in character; vices such as pride, presumption, egotism, and obstinacy do not become a Mussulman. To revere the great and to compassionate the insignificant are precepts of Islamism.

My God give success and salvation to him who is touched by divine grace.

The Sheik-ul-Islam,

AHMED ESAAD.

Constantinople, Rebi-ul-akhir, 1305.

SCRIPTURE LESSON, No. 12.

THIRD MONTH 18TH, 1888.

TOPIC: THE SON REJECTED.

GOLDEN TEXT: "He came unto his own, and they that were his own received him not."—John 1:11.

READ Matt. 21:33-46.

THIS parable of the householder, which is the text of our lesson for to-day, strikingly illustrates the dealings of our Heavenly Father with the Jewish nation, and their want of appreciation of his fatherly care. The parable is recorded both in Mark and Luke.

A *Householder*, a master of a family, one at the head of family affairs. *Planted a vineyard*, a garden or field for the cultivation of grapes. A large part of Judea was devoted to grape culture for the manufacture of wine, which was one of the principal articles of commerce. The grape formed also a part of the food of the people, both in its fresh state (Deut. 23:24) and dried, as we now have raisins (1st Samuel 30:12). The vineyard was a most valuable possession; but to have it in its best condition there was needed a hedge to keep out the foxes and other

wild animals, that so abounded in Judea and made such havoc among the grapes that were left unprotected. The hedge was made of thorny bushes planted thickly together. *Digged a wine press.* This was made in two parts: a receptacle for the ripe clusters, into which they were thrown, and trodden by men, the juice running into the larger cistern below. The press or vat was usually made by digging into the side of a hill. *And built a tower.* This was circular or square, from fifteen to twenty feet high, and built of stone. Those who kept watch over the vineyard occupied these towers. *Let it out to husbandmen.* A common practice among the princely landholders of Israel. When the crop was gathered, a steward or some servant in whom was reposed confidence was sent out to collect the rent, either in a portion of the crop, or in money, according to the bargain, just as is done in our own times when a farmer rents his land.

In all this Jesus saw a figure of his own nation, the Jews. The Heavenly Father had gathered them out from the nations round about them into a country at once productive and pleasant to dwell in. He had hedged them about with laws and regulations for their well-being—had set in the midst the tower of his own divine oversight as ruler and king, and from time to time had sent them prophets and teachers, whose words of exhortation and encouragement were to draw the people closer to their tower of strength and safety, and preserve them from the demoralizing influences of the idolatrous nations around them. Last of all, he sent his beloved, his only Son, represented by Jesus, to whom the Christ, the only begotten of the Father—the Holy Spirit—was given in that fullness which made him the representative of the Father among the sons of men. These favored people, as a people, rejected this beloved Son, and nailed the Holy One to the cross, not that the Christ was crucified, for that spiritual manifestation must live and abide while God, by whom it was begotten, exists. It was the human Jesus—bone of our bone, and flesh of our flesh—who could feel pain—could be hurt by the thorns that pierced his forehead, could writhe with agony as the nails were driven into his living flesh, could endure all the agony of being rejected by his brethren, the people whom he had been born into the world to teach and lead into the Truth to which he came to bear witness. It was this loving Son of Man that endured the cross and became an example of faithfulness unto death to all.

The heart of Jesus was dipped in sorrow as he contemplated the bigotry of the Jews and their consequent stubborn resistance to the Gospel of truth that he longed to bring unto them. The Scripture record bears unmistakable evidence that He had hoped to find his own people, especially, ready to receive the glad tidings, and that it was a most grievous disappointment to him when He found them scoffing at his teaching and misrepresenting his work. He had thought to expend his mission among the people of his own nation, to open their minds and souls to a recognition of the Divine life therein, but, alas, in the words of the Golden Text, "He came unto his own, and they that were his own received him not."

Thus the experience of Jesus with his fellow-men was, for the most part, one of inexpressible sadness. Perhaps there is nothing more sad in human expression, if we realize their full import, than the exclamation of Jesus at the close of an address to the multitude, when, after describing their blindness to the truth and their persecution of the righteous, he said, "O, Jerusalem, Jerusalem, thou that killest the prophets, and stonest them which are sent unto thee, how often would I have gathered thy children together, even as a hen gathereth her chickens under her wing, and ye would not."

What, then, is the lesson for us in this connection? Jesus has passed from the sight of men, his voice never more will break upon human ears, his sad countenance never more be seen by mortal eyes. What application shall the record of the rejection of his teaching among the Jews have upon our characters? Is it not this? It is plain that Jesus strove to turn the minds of his people inward to a recognition of the Divine Presence in their own souls, and to the realization that the only true and acceptable worship of the Father consists in obedience to and trust in the Infinite Spirit and Divine Will, as they found it manifested there. The Jews were not willing to receive his message of Divine love, as, alas, so many are not yet ready to receive it. They rejected Christ as men do now; not by refusing to deify the meek and lowly Jesus, but by refusing to open their hearts to the Christ Spirit that so entirely ruled his life, and that to-day so earnestly strives for the over-ruling of all that is contrary to the will of the Divine Father in the lives of all mankind.

For Friends' Intelligencer and Journal.

LOOKING BACKWARD.

In this day of active religious thought and investigation, we are frequently called to consider the utterances of the founders of our Religious Society; and when the purpose of this inquiry is to establish opinion the search is not unfruitful, for it will be seen that for all our shades of doctrine there may be found authority in these ancient writings. A reasonable amount of such investigation is time well spent; but if our strength and religious purpose are mainly turned in this direction, and we fail to see the lesson of to-day and to receive the revelation which the present has for us, we are certainly tithing our mint and anise and cumin and neglecting the weightier matters.

While it is most interesting and valuable to us to know what the fathers of our church believed, and essential to us, as Friends, that we should recognize and accept the grand moving principle which brought them out from among the people of their day and made them a distinct body of religious believers, still it is not of vital importance that we should in every particular coincide with their thoughts, or be bound by their convictions.

In the early day, men and women, and even children, were so filled with the spirit that they poured forth their thoughts without stint, little guessing, we may judge, that the words thus spoken were to be, in future generations, the guage of faith and the test

of sound belief. Powerful were their utterances, grand their devotion to principle, and noble their lives, yet if we stand gazing at *their* revelation and see not the present, our spiritual life will not prosper and our religion will become merely a name.

Jesus rebuked the Jews for looking back to Abraham and placing their dependence upon his righteousness.

Does he who is our God even as he was the God of Fox, Penn, and Barclay, weigh our opinions in a balance to judge them whether they agree with the views of those faithful servants?

Let us all who call ourselves Friends unite in the all important belief that God teaches his people himself, not understanding it to mean that he did in times past teach men, but that now in this commonplace present, he reveals his will to those who are prepared to receive it. H.

THE WASTE HABIT.

IT comes to us sometimes to feel like the Psalmist of old when he exclaimed, "My heart overfloweth with a goodly matter," yet with this difference, the "matter" of our present concern is not "goodly," nor are we so sure as David when he immediately said, "my tongue is the pen of a ready writer," or else there might be more hope of producing some good result by utterance. Nevertheless, the mood is upon us to remind our readers of the growing habit of wastefulness that is apparent amongst all classes of people.

First, as it is the first need of our humanity, is the waste in food. Every year, with a bountiful supply from an almost exhaustless and noble scope of country, the struggle for the means of living, and the struggle for the opportunity to obtain the means, becomes greater and greater. And every year the waste habit goes on. In the olden time when "wilful waste" was one of the sins in the calendar of a Franklin, as well as many an early Friend, children were taught to be provident of food, and their early training generally went with them through life. How is it now with the majority of the same class of children? Those of well-to-do families? Are lessons in the economy of food taught by precept and enforced in the practice? Let observations of the daily habits of school children, without entering into the sacred precincts of the home, make answer. Nor does it stop with the children. Growing to maturity, the complaining cry continues of high prices for board, high prices for food, and we again query, why is it, amid such seeming abundance? We have but to glance at the refuse after a meal at any hotel or boarding-house table, for we will not venture into private life, and the sequel is given. Prices must cover what is wasted as well as what is consumed. It is a homely subject, but life must deal with such subjects, and we should make a study of them to our own profit, and the beginning is in the home with the training of the little ones to an economy that is not born of meanness, but that which will lead to habits of thrift that can some day afford a wise and many-sided expenditure.

Now let us enter the domain of dress, and here again we bemoan the simplicity of former times without an effort to restore it. Nor would we restore it to offend the eye, but apply to it a cultivated taste which need not be at all wasteful, but modest and pretty, instead carelessly adopting the fashionable and expensive. The waste habit here often begins with the child when we plead small amount of material as an excuse for much of expense and ornament. But this lavish waste grows with the age, till the price of a full grown outfit is something appalling to the hard working wage-earner, who does not dream that a remedy might come by the adoption of a simpler style.

Other appliances of child-life at school and elsewhere could be named as promoting expensive habits, but to the observant eye when once opened to see, these will soon become apparent.

Later on the expenditures for books, for papers, for entertainments, excursions, and all things that go to make up modern living, calls loudly for wisdom to discriminate lest worse evils than wasteful habits creep in to mar the happiness. A wise economy fostered from the beginning will bear good fruit even here.

The whole subject covers so broad a field, we can but call attention to it, that each one, especially any one who lays claim to the name of Friend, may pause and consider am I guilty of this habit? By example or by precept am I doing my duty here?

Individual self examination is valuable so far as it inspires one with courage to do better; and when this inspiration comes to individuals with force sufficient to create action, it will sooner or later make itself felt in the masses, and cannot fail of good results.

A CORRESPONDENT in Kansas has sent us a postal card, asking, in a very kind manner, if we will not announce more definitely our views on the Temperance question. We hardly see how there can be any doubt as to our attitude on this subject, and apprehend that our correspondent must have in mind some especial

phase of the question which may be under discussion in her State. We stand with the Society of Friends on this as on every question of morals and uprightness. The Society has from its first utterances been an advocate of temperance and moderation in all things; and since these words have failed to completely cover the ground, in practical application, total abstinence from the use of liquors as a beverage has been made the rule of Discipline of all the Yearly Meetings representing our body. To encourage this abstinence is a work at all times commendable, and one that always receives absolute support in our columns. As our readers are aware, we print, from time to time, articles, communications, extracts, etc., bearing on the subject, and whenever anything is sent us which presents a fresh thought, or makes an effective appeal, it is welcomed, as is other valuable matter.

Last week we published the quite extended essay of our friend Jesse H. Griffen, in which the writer elaborately considered the political aspects of the question. We gave t place because it was clearly and forcibly written, and sets forth a view to which many of our readers are devoted, and also because it was part of the proceedings of a Conference held under the sanction of Friends. We do not, editorially, enter the political field, in any way whatever, and therefore have no suggestion to make as to this phase of the Temperance agitation. So far as our friend devoted himself to it, the essay rested upon his authority alone, as in the case of many other articles which are signed by their authors, and which express views concerning which our readers may differ.

EDITORIAL NOTES.

On Second-day evening next, (12th instant), Guy Maine, a Christian Chinaman, will deliver a lecture at Association Hall, this city, on the topic, "What shall be done with the Chinese?" This has been projected to help raise a fund for the sufferers by the great overflow of the Hoang-Ho, or Yellow River, of China, some account of which calamity has been given in this paper. The lecturer is described as a cultivated man, and an interesting speaker.

* * *

The statement elsewhere made by President Magill, that the higher institutions of education all need the support of an endowment fund, will be recognized as the truth, of course, by every one acquainted with colleges and college work. It is the common experience of many of them, even where they have large endowments, to find themselves with a deficit at the end of the year, to meet which there is nothing to do but "pass 'round the hat." Probably the public would be surprised, if it were known how much is given, year after year, to some of our colleges, by the boards of trustees and other near friends, to make up such deficiencies. As a matter of fact, Swarthmore has been so carefully managed, and has so far escaped the unpleasant experience of not making both ends meet, that the conductors of other institutions have in some notable instances made a study of its methods, in order to see whether they could not do as well.

* * *

The reasons why colleges cannot be run to "pay," in a money sense, without endowment, are numerous, but one very good one is that the endowed institutions offer superior attractions. Swarthmore could not pretend to keep pace with colleges of its class throughout the country, if they are provided with libraries, laboratories, etc., and a fund to cheapen the cost of tuition, while it was left to do without these, or try to squeeze their cost out of a profit on the students. There has been in most of these respects a recognition by liberal-minded people of Swarthmore's needs, but new needs will arise continually. A college to educate men and women is never completed,—any more than the men and women themselves are completed.

* * *

A Correspondent has written to us to know if we can name a school, under the care of Friends, where a young woman can be fitted and trained for teaching, at a cost compared with that at the State Normal School, at West Chester. We were obliged to reply that we did not. The State of Pennsylvania gives its "aid" to those graduates of the Normal Schools who will pledge themselves to teach at least two years in the public schools, and by using this the expense per term (half a school year), for board and tuition is reduced to about $58, in the school at West Chester. This, of course, is very low, for thorough instruction in all the branches which are to be taught in the ordinary (public) schools, and it is only because the State endows the institution that such a rate is possible.

MARRIAGES.

EVANS—RULON.—On Fifth-day, Twelfth month 8th, 1887, at the residence of the bride's uncle, under the care of Haddonfield Monthly Meeting, Thomas B., son of the late George M., and Elizabeth N. Evans, and Mary T., daughter of Clayton and Elizabeth T. Rulon, both deceased.

DEATHS.

BORTON.—At her late residence, in Woodstown, N. J., Second month 5th, 1888, Mary E. Borton, widow of Samuel Borton, in her 69th year; a valued member and elder of Pilesgrove Monthly Meeting. Surrounded by her devoted children and grandchildren she entered peacefully into rest.

BORTON.—Near West Unity, Ohio, Second month 10th, 1888, Benjamin Borton, aged nearly 79 years; he was an esteemed elder of Battle Creek Monthly Meeting.

A local paper gives the following notice of this friend: Benjamin Borton, son of Bethuel and Rebecca Borton, was born near Philadelphia, March 16th, 1809. In that city he married, in 1835, Abigail Borton. He came to this part of the State in 1838, but went back and moved his family out in 1839, and purchased and moved on the Packard farm, then in Brady, but now in Franklin township, where he lived until his death. His wife died in 1860, and in 1863 he married Elizabeth Wright, of New Jersey, who survives him. In 1840 Mr. Borton started the first store near the Corners, in his old log house, and he also started the first

nursery, which he ran for some years. He has filled many of the township offices and although he was bountifully blessed with this world's goods, he was plain and unassuming. He leaves a wife, two daughters, ten grandchildren, four brothers, many other relatives, and a very large circle of friends, both in Ohio and Michigan, to mourn his loss, as his kindness and consideration for others, and especially for the poor, made friends of all who knew him.

BROWN.—In Delta, York county, Pa., Third month 3d, 1888, James Marion, son of Richard W. and D. Lizzie Brown, in the 8th year of his age; a recorded member of Fawn Particular, and Deer Creek Monthly Meeting.

CHANDLER.—Suddenly, of heart disease, in London Grove, Chester county, Pa., on the evening of Second month 18th, 1888, William B. Chandler, son of Joseph and Ann Chandler, deceased, in the 68th year of his age.

COMMONS.—Second month 29th, 1888, at the residence of her son-in-law, Isaac D. Philips, Green Bank, Del., Ann P. Commons, in her 91st year.

GREGG.—At her home, near Philomont, Loudoun county, Va., on the 19th of Second month, 1888, Emma W., daughter of William and Elizabeth Gregg, in the 25th year of her age.

In the death of this dear young friend, not only has the home circle sustained a great bereavement, but Goose Creek Meeting, of which she was a member and an interested worker in the First-day school, will sadly miss her helpful presence.

With her gentle, loving nature was combined unusual strength of character, which endeared her to a large circle of friends.

Her hopeful death coming after a long illness which she bore with cheerfulness, was as a fitting close to so young and beautiful a life. Though the ties that bound her here were of the strongest, yet such was her faith that she expressed her willingness to "go and rest with God," and with words of "trust in Him who stilled the waters" that he would bear her safely "to a home more beautiful than her much loved earthly home," she passed triumphantly through death, which with her was transition into life eternal. *

HOOPES.—In Wilmington, Del., Second month 29th, 1888, Rachel Bassett, widow of Joshua Hoopes, late of West Chester, Pa., aged 80 years.

JONES.—At his residence, Darby, Pa., Third month 1st, 1888, Isaac T. Jones, formerly of Philadelphia, in his 82d year.

MASON.—In East Nottingham, Chester county, Pa., Second month 25th, 1888, Benjamin Mason, an esteemed member of Nottingham Monthly Meeting, in the 78th year of his age. His life verified the truth of the proverb, "An honest man is the noblest work of God," and that "A good name is more to be desired than riches." His expressed desire was to die the death of the righteous, that his last end might be peace.

PARRY.—Second month 28th, 1888, at his home, Parry, N. J., after a lingering illness of several weeks, William Parry, in the 71st year of his age; a member of Chester Monthly Meeting, N. J. Interment at Westfield, Third month 3d, at 1 o'clock.

ROWAN.—Second month 24th, 1888, at her residence, near Vincenttown, N. J., Sabella F. Rowan.

SMITH.—At his residence, Drumore Township, Lancaster county, Pa., Second month 24th, 1888, Howard Smith, aged 70 years; a member of Drumore Meeting.

TUPMAN.—In Philadelphia, Third month 2d, 1888, William Tupman, in his 70th year.

DANIEL FOULKE.

By the death of Daniel Foulke, which occurred at his home at Gwynedd, Pennsylvania, on the 18th of Second month, the Society of Friends is deprived of one of its most faithful and useful members. He was born at Gwynedd, on the 21st of Second month, 1814, (and therefore lacked, at his decease but three days of completing his 74th year), the son of Joseph and Elizabeth Foulke, the former well known in his day as a minister and teacher. From his youth up, Daniel had been a Friend, cherishing the birthright which he received, and devoting to the Society with diligence, punctuality, and fidelity the ability which he possessed. At his death, he was a member of the Representative Committee of Philadelphia Yearly Meeting, in which station he had served for many years, and he was an Elder of Gwynedd Monthly Meeting. For a number of years, also, he was Assistant Clerk of the men's branch of the Yearly Meeting. He gave, on many occasions, his time to the various concerns in which Friends have been engaged, especially that of helping and elevating the Indians.

At his funeral, at Gwynedd, on the 22d ultimo, Robert Hatton alluded to the fact that Daniel was of the sixth generation that had been members of the Society worshipping in that meeting. Edward Foulke, his ancestor, was one of the company of Welsh pioneers who settled there in 1698, and the line from him to Daniel,—Thomas, Edward, Hugh, Joseph,—was one in which there was no declension from the standard of earnestness in the faith. Daniel himself was one who especially valued the good order of the Society, and was concerned for its preservation. He perceived the need of respecting its provisions, and the danger which attends a want of care and dignity in maintaining them. This was, indeed, a marked characteristic,—a love of good order, an anxiety to conform to the standards which had been by right authority declared needful. In his association with his neighbors, and in the business world, where he was well known and much esteemed, the like traits were observable, and added to the confidence felt in him as one careful, orderly, and trustworthy.

His last illness was brief. He had attended on the 8th of the month, the meeting of Ministers and Elders of Abington Quarterly Meeting, at Abington, and on the following day, the general Quarterly Meeting. Of the former especially he spoke with much feeling, upon his return home, as an occasion markedly favored by the Divine presence, and though he was suffering from weakness of body, he rejoiced that he had been able to be present. On the 11th, he was found to be very seriously ill, and just a week later he passed away. His funeral, already mentioned, was attended by many friends, some of them coming long distances to mark their respect and regard for him. Robert Hatton, (a kinsman), Allen Flitcraft, Samuel B. Haines, of New York, Samuel S. Ash, Catharine Foulke, and David Newport, were called forth in the ministry, before the large gathering in the meeting-house, after which his remains were laid with those of his fathers in the ground adjoining.

WOULDST thou fashion for thyself a seemly life?
Then fret not over what is past and gone;
And, spite of all thou mayst have lost behind,
Yet act as if thy life were just begun;
What each day wills, enough for thee to know,
What each day wills, the day itself will tell:
Do thine own task, and be therewith content;
What others do, that shalt thou fairly judge;
Be sure that thou no brother mortal hate,
Then all besides leave to the Master Power.

—*John Morley.*

NEWS OF FRIENDS.

BLUE RIVER QUARTERLY MEETING.

This was held at Benjaminville, Ill., Second [illegible] 5. At the select meeting, on the 24th, at two o'clock, but few persons were present, partly owing to a heavy rain which continued late in the afternoon, and partly to the delicate health of some of our aged friends; but the few found it a season of instruction not soon to be forgotten. On Seventh-day at ten o'clock the quarterly meeting convened with the opposite temperature of weather making the roads very laborious for both man and beast. And while we realized the smallness of our assembly, yet we felt the verification of the promise that where two or three are met in the true spirit of worship the Living Presence of the Father is poured out in unmistakable blessings. The general feeling expressed was that we had a good meeting.

In the business session there were the usual queries and answers. A young man referred to the time when he thought they were stereotyped, but now he saw and felt there was a spirit in them and that we might all endeavor to arrive at this point so as to be able to perform a part of the Master's work. While the answers did not mark a high standard of Christian excellence, they called forth some exhortation and a deep concern was apparent that we examine more carefully into our individual duty and thus be able to advance the cause in the way becoming our profession.

First-day morning was very cold and the roads excessively rough, so that frail persons could not venture out; consequently several aged Friends were absent. Still there was an increased number compared with the day previous though a falling off from former times. It was a deep and solemn opportunity wherein we were baptised with the Spirit and we felt the holy unction flow from vessel to vessel, giving us an assurance that we were with one accord in one place. In the afternoon a meeting was held at a house where a Friend had been confined at home all winter or nearly so. The holy quiet of the forepart of the time was comparable to the Prophets command, to "Be silent, O, all flesh, before the Lord," and it was felt to be the experience of all present that the touches of his Spirit kept all quiet before him. Thus closed another of those seasons of mutual strength, and the corroborative testimony was that there was an efficiency in waiting before the Lord and that we had received a renewal of strength. May we oftener than these recurring assemblings turn inward and then query with ourselves as to our condition before the Most High, realizing the promise that, "they who seek shall find;" then truly we shall go on from strength to strength, every one thus offering before the Lord of our life, light, and knowledge.

Mary G. Smith.

Hoopeston, Ill.

COMMITTEE ON ISOLATED MEMBERSHIP.

A meeting of Philadelphia Yearly Meeting's Committee on Isolated Members was held on the 25th ultimo. It appeared that reports had been received from 33 out of the 49 monthly meetings, leaving 16 that had not yet responded. The names of members sent by the 33 meetings numbered 345, as nearly as they could be counted, there being some duplication of names, and uncertainty as to children, etc. These Friends are found to be situated at no less than 159 different post-offices, in different States and Territories. At each of 15 post-offices there are 4 or more members reported. Among the largest of these are the following: Beatrice, Neb., 12; Denver, Col., 10; Omaha, Neb. 10; Lincoln, Neb., 9; Sedgwick, Kansas, 9; San Francisco, Colorado Springs, and Minneapolis, each 8.

It was apparent, however, that these numbers were only complete so far as the Committee's work had extended. The monthly meetings not heard from may add more names, and other yearly meetings than Philadelphia no doubt have members at the places mentioned. It was the feeling of the Committee that in order to make a complete survey of the field it would be absolutely necessary to have the co-operation of the other yearly meetings, and this will probably be mentioned in the Committee's report to Philadelphia Yearly Meeting.

A letter, (the substance of which has been printed in the Intelligencer and Journal), referring to the situation of Friends at Lincoln, Neb., was read, indicating the desire for the establishment of a meeting at that place.

It was decided to again address the monthly meetings that have not sent their lists of names. The Committee adjourned to meet at 9 a. m., on the Third-day of Yearly Meeting week.

LECTURE BY T. W. HIGGINSON.

At Swarthmore College, on the evening of the 1st instant, Thos. W. Higginson delivered a lecture to the students and invited friends, on the subject of "Literature as a Profession." The lecture was delivered without notes, in a conversational manner, abounded in anecdote, and cannot be easily reported. After some introductory remarks relative to his military life, he said: "I see before me some future authors. There are many things that young people know better than their elders, but what is to be their "career," or calling in life, they know nothing about. A gentleman said to Prof. Agassiz, "What does your son care for most? Biology?" "No; Mathematics." "Very curious that should come up in *his* blood." "Not at all," said Prof. A., "at his age I cared only for mathematics; my taste for biology developed later in life." A complete interchange took place between the two brothers Prof. W. D. and Josiah Whitney, the one who had preferred Geology becoming the professor of Languages; the latter, who said in early life, "Language and nothing else for me," being now the professor of Geology. The Delphic Oracle advised Cicero "to do the thing he liked best to do." Niebuhr remarks that this was sufficient to establish the reputation of the oracle. Literature only very recently has become a profession in the United States. In spite of all obstacles it is assuming and has assumed a place as a profession.

The founders of the Republic felt no prophecy of

the arts and sciences that should be added to the stern necessities which then absorbed their thoughts. Jefferson had faint glimpses of it, but the elder Adams said, "We have no artists and I pray there never may be." He looked upon art as an indication of decay.

Heretofore the developing of the material resources of the country has absorbed the energies of the ablest men of the country. Building locomotives and writing poetry cannot be combined. The literary profession has now arisen as one of the things that the young can think of, as something that can be done. Any young man or woman has the right to ask "Will it pay?" You must not make this the main consideration, but write just as the successful chemist, or preacher, or lawyer enters on his career, with a love for it, a marked *vocation* for it.

Any young man or young woman of good abilities and good training can risk the probabilities of literature as a profession, with as much safety as any other learned professions. In all occupations there is an immense number in the intermediate class; but in England, a century ago, all poets were poor. Dr. Johnson expressed the fact in two lines—

> "Go mark what ills the Poet's path assail,
> Toil, envy, rant; the Patron and the Jail."

Do not compare the rewards of literature with the extremes of those of mercantile life. If it is essential to your happiness to have an income of a hundred thousand dollars a year, when forty years of age, do not be an author, nor any professional man at all. Commerce only for you. The most easily earned income, on a considerable scale, I ever knew, was thirty thousand dollars a year paid by a man to his brother, for *not* engaging in a certain kind of business. This was fairly enough earned, too, when we consider that the man made seven hundred thousand dollars a year,—year in and year out.

In a financial point of view the advantages are on the commercial side: the maximum of possibilities and the maximum of dangers. We look at the successes, and we don't look at the disasters. When a man fails in business, he may be not only without income but be under water with debt; and the remainder of his life may be spent in feeble efforts to lift himself out. In a literary career the chances of success may be less but the chances of failure are also less.

The literary profession is safer, for while there are physicians without patients, lawyers without clients, and preachers, not only without a pulpit but without even an occasional "call" to preach; it is rare to find a literary man without the ability to earn a dollar.

So much for the material side.

In its relations to life it stands behind none of the pursuits mentioned; so touching is the flattery, so tender the relation between the author and reader, that the letters from an admiring public form the burden brought by his literary fame!

If you wish to pursue literature with success you must have thoughts that you feel bound to express, you must have a knowledge of books, be a good speller and a fairly good penman. You must have faith in the dignity of the vocation, faith in yourself, and a determination to follow it.

Many people fancy that editors have a prejudice in favor of their old contributors; but they also have a yearning toward the new. It is to find the bright new contributor that they open their wearisome pile of letters; and they are never better pleased than when they receive a card from a "Chas. Egbert Craddock" and discover it is a little Miss Murfree.

Editors and publishers are generally honest men, and in his relations with them, an author can retain a feeling of self-respect, a feeling of social position, and this is of foremost importance in the nation at large—at least in *this* nation.

What is there in the community more enticing than the paths of literature? to know that the thoughts that come to you at night, like an electric thrill, may be put into such a setting that thousands whose names you may never know, and whose faces you may never see, shall feel those thoughts anew!

There are but two avenues to fame in this country—literature and politics. Political eminence is the more fascinating at the time, but almost surely dies with the life.

Literary distinction may be enjoyed during life, and the *fame* of it only really begins with death. There is a charm in the literary profession to be found nowhere else and *this* is the country where I would elect to pursue it. S. M. G.

Swarthmore, Pa.

WHY ENDOWMENTS ARE NEEDED.

Editors INTELLIGENCER AND JOURNAL:

I RECENTLY received a letter in answer to my "Appeal" for Endowed Professorships for Swarthmore College, which makes me feel that a few words of explanation upon this subject are needed. The writer, who is a warm personal friend, as well as a friend of the College, says: "I have always felt an interest in the College from the beginning, and encouraged my father to subscribe what he did toward its erection. But now, after it has been finished for years, and been well patronized, we are informed it will fail to be a success, unless a fund is established to maintain some of the professorships." The tone of disappointment obvious in this remark has been observed in a number of other cases; hence, the necessity for this explanation. Let Friends, therefore, especially, note that it is not because Swarthmore has been, or is a failure, that this aid is sought, but because it has been a marked success, having become, in less than twenty years, a college which compares favorably with the other colleges of the country. If it had fallen short of this, and reached only the grade of an ordinary "Boarding School," it could easily have been so managed as to pay expenses, and secure a surplus every year. But that was not the aim of its founders. In the memorable language of Benjamin Hallowell, it was desired to make of Swarthmore "a college where our children could obtain, under guarded, religious care, as good an education as could be obtained in any of the colleges of the land."

Now, a *school*, well conducted, may always be made to pay expenses; a college, of high grade, if properly conducted, *never can*. This is simply because the expenses necessary to maintain such a col-

lege, with its well equipped class rooms, its laboratories, work-shops, and museums, its extensive library and reading room, its fine apparatus for illustration in the various departments, and its corps of able and experienced Professors, (without whom all the other expenses would be of no avail) are too great to be met by money received from students, unless the charges be placed so high as to put its advantages entirely beyond the reach of any except the most wealthy. This would deprive of these great advantages many who are best qualified to profit by them. To prevent this, and keep the cost of a college education within the reach of the masses, the accumulated wealth of generous benefactors has been applied in the form of Endowments. This has been the universal experience of all colleges that deserve the name. They cannot be made to pay, for the simple reason that they must give to the public far more than they receive from the public in return, while with schools the reverse is true. If we would bring and keep the higher education within the reach of all, which Friends will certainly admit to be very desirable, endowments are an absolute necessity.

I repeat, then, in conclusion, that Swarthmore calls for these endowments now, not because she is a failure, but because she is, for a college less than twenty years old, a marked success. Let Friends see to it that that success is not short lived, but that the institution—which is now taking honorable rank among the colleges of the country, is placed upon a permanent foundation.

EDWARD H. MAGILL.

SWARTHMORE NOTES.

—Prof. W. H. Appleton gave a reading to the upper classes and some invited guests, on Fourth-day evening, the 20th ult.

—The lecture by T. Wentworth Higginson on the 1st inst., on "Literature as a Profession" was of much interest, and enjoyed by all.

—The Seniors have handed in their theses, which they are required to do by the 1st of Third month. They are already beginning to look forward to the preparation for the Commencement exercises in the Sixth month. It will be the largest class ever graduated at Swarthmore College. Four-fifths are children of Friends. One of the members of this class has been admitted to the Senior class of Harvard University for next year, without conditions.

ENGLISH LITERATURE LECTURES.

I HAVE been very much interested in two of the lectures of Esther J. Trimble-Lippincott;—one on Shakespeare, the other on Cowper and Burns. She has been delivering a series, and I mention the above two as those I have heard. She is nearly completing this course; there remaining one on Wordsworth, etc., this week, and one on Tennyson and Dickens on Third-day of next week. They are given at the Century Guild, 1132 Girard Street, and are certainly instructive and valuable.

P. E. G.

OH friend, never strike sail to a fear! Come into port greatly, or sail with God the seas.—*Emerson.*

ORTHODOX FRIENDS.

THE articles published in the INTELLIGENCER AND JOURNAL, discussing the possibility of "Reunion," have attracted the attention of the *Western Friend*, (Wilburite), which in its issue for Second month publishes J. G. Whittier's letter to the Philadelphia Birthday meeting, and portions of the articles of Edward Ryder and Franklin T. Haines. The *Western Friend* regards all these with satisfaction, but takes the view that our branch of the Society has "left the original ground on the Atonement, as Barclay states it," while the evangelical "Larger Bodies" of Orthodox have "gone so widely astray with reference to the Inward Light, as Barclay states *it*." [A reasonable comment upon this view, we think, would contain these points: (1.) The Inward Light is the vital principle of Quakerism; variations of view concerning the Atonement are not vital. (2.) The view of the Atonement taken in "A Reasonable Faith," written by three approved ministers of the English body, and cordially endorsed by J. G. Whittier, would probably be accepted by a majority of our body of Friends. We therefore dissent emphatically from the idea that the variations of view which may exist amongst us concerning the minor subject are for one moment to be considered a set-off to the absolute departure from Quaker ground of those who disown and even contemn belief in the major one—Immediate Revelation.—EDS. INTELLIGENCER AND JOURNAL.]

* * *

IT may be added here that no notice whatever, so far as we have observed, has been taken of the articles referred to in any other of the "Orthodox" newspapers. The *Western Friend* is the only one, however, which at any time freely alludes to this journal, and we trust that it does not suffer thereby, in the estimation of its readers. Apparently, it is not altogether a disbeliever in the declaration of William Penn that "Truth never lost ground by conscientious inquiry."

DR. ARNOLD, of Rugby, wrote this prayer for his own use before he went into the school every day: "O Lord, I have a busy world around me: eye, ear, and thought will be needed for all my work to be done in that busy world. Now, ere I enter upon it, I would commit eye, ear, and thought to thee. Do thou bless them and keep their work thine; that as, through thy natural laws, my heart beats and my blood flows without any thought of mine for them, so my spiritual life may hold on its course at these times, when my mind cannot consciously turn to thee to commit each particular thought to thy service."

CHRISTIAN, let the fact that the birds of the air have food, and the grass and flowers beneath your feet are clothed with loveliness, be an argument and token to you of the love of God, who will supply you with food and cover you with raiment.—*Stevenson.*

Do to-day's duty, fight to-day's temptation; do not weaken and distract yourself by looking forward to things you cannot see, and could not understand if you saw.—*Charles Kingsley.*

A PRAYER FOR CONTENT WITH SIMPLE STORE.

DEAR Lord, to Thee my knee is bent;
Give me content—
Full-pleasured with what comes to me,
Whate'er it be;
A humble roof, a frugal board,
And simple hoard;
The wintry faggot piled beside
The chimney wide,
While the enwreathing flames upsprout
And twine about
The brazen dogs that guard my hearth
And household worth;
Tinge with the embers' ruddy glow
The rafters low;
And let the sparks snap with delight,
As fingers might
That mark deft measures of some tune
The children croon;
Then, with good friends, the rarest few,
Thou holdest true,
Ranged round about the blaze, to share
My comfort there;
Give me to claim the service meet
That makes each seat
A place of honor, and each guest
Loved as the rest.

—*James Whitcomb Riley.*

HEART'S-EASE.

"How kind it was," she said, "to lay
Knots of fresh heart's-ease on her breast—
The flower of flowers she loved the best—
Now that her life has passed away
Into the life of perfect rest.

"The story of her brief, bright years
Seems written in the blossom's face;
Persistent sunshine, buoyant grace,
Where not a fleck of gloom or tears
Could leave the slightest shadow trace.

"So, through her springtime, dewy glad
The velvet leaves of character
Unfolded with no marring blurr;
She doubled every joy I had,
Because the joy was shared with her.

"Whatever gust of trial came,
My soul would rouse itself and take
New courage on, intent to make
Smooth passage for the fragile frame,
Courting the sunshine for her sake.

"I could not bear that she should link
Sad memories with this life of ours;
And while I watched her waning powers
I led her smiling to the brink
Of heaven along a path of flowers.

"My heart's-ease! (and the quiet flow
Of tears came faster than before)—
Gone henceward to the farther shore!
And yet it breaks my heart to know
She needs my love and care no more."

—*Margaret J. Preston.*

WATCH—for idleness of the soul approaches death.
—*Demophilus, B. C.* 450.

TRUTH AND POLITENESS.

IT is a very common notion, though not often openly expressed, that truth and politeness are frequently at variance with each other. Some who espouse truth with their whole hearts, and despise every form of insincerity, think that this loyalty calls upon them to be at times rude and uncivil; while others, who esteem good manners and a gracious behavior to be binding upon them, imagine themselves occasionally forced to sacrifice a portion of their truthfulness and simplicity. A still larger number, wishing to be faithful to both virtues, yet supposing that they are not always compatible with each other, are continually making compromises between them, sometimes being a little rude so as to be true, and sometimes a little insincere so as to be polite.

It would be a great gain to both character and conduct if the delusion of this supposed discord could be thoroughly dispelled. There is no *real* conflict between truth and politeness; what is imagined to be such is only the crude mistake of those who fail to discover their harmony. Politeness, taken in its best sense, is the graceful expression of respect, kind feeling, and good-will. These dispositions are dependent on a truthful character for whatever value they may have. Indeed they cannot exist in the insincere or deceitful man. He may pretend to have them, and imitate their expression, and such imitation may for awhile pass under the name of politeness, but, like all false things, it will soon be found out and cast aside as worthless. To respect another one must respect himself, and no one can do this who is conscious of untruthfulness or deception.

The presence of kindly feeling and good-will never of itself suggests prevarication or insincerity. The golden rule would forbid this. *We* do not wish to be deceived, to have a show of interest or friendliness that does not exist, to receive unmeaning compliments or insincere professions. Why, then, should we imagine that others will be pleased by the same things? The very wish to delude them implies the absense of that true kindliness to which we pretend. On the other hand, how can rudeness, bluntness, or incivility serve the cause of truth? They only damage it by making it unacceptable. Some appear to think that if they differ from their neighbor on any subject they must either be disloyal to their convictions by hiding them or prevaricating about them, or else give offense by opposition and antagonism. Neither is necessary. It is not declaring a conviction that hurts the feelings or wounds the pride of those who do not share it; it is the tone of superiority and dogmatism that is so often assumed, the lack of sympathy, appreciation, and respect that is conveyed, the ill-concealed contempt felt for those who think differently. Truth demands none of all this. Expressed at proper seasons, firmly and clearly, yet modestly and kindly, its claims are fulfilled, while none of the claims of politeness need be infringed.

There are, however, other occasions where truth and politeness may *seem* to clash, though it is only seeming. The desire to be agreeable and to say pleasant things sometimes leads the thoughtless to exaggeration, to carelessness of facts, or to absolute

misstatement. On the other hand, a mistaken idea that the truth must be spoken at all times and at all hazards may lead to needlessly disagreeable utterances, which are always harmful. Is then accuracy the only consideration? It is certainly the first, but not the only one. No word, however pleasing it may be, should escape anyone's lips, unless honestly believed to be true. This would banish flattery, untruthful excuses, misleading statements. The transient gratification they may afford would be more than compensated by the trust that would be engendered. As it is at present, how often is the charm of such utterances broken by the secret whisper of doubt as to how far they are really meant.

Yet very many things which are known to be true require no utterance in the cause of truth, while they demand absolute silence in the interests of sympathy and kindness. To allude to people's deficiencies, mistakes, weaknesses, and faults, when no good result is likely to follow, is no tribute to truth, but a great breach of good-will and politeness. On the other hand, to emphasize their good points, to give honest praise, to express freely the sympathy and pleasure that are really felt, is both kind and truthful. A little thoughtful consideration in each case will show that they are intrinsically in harmony—that a truthful spirit need never be an unkindly one—that the utmost courtesy and kindness need never infringe upon truth, honesty, and sincerity. Where both are fully and harmoniously developed there we find the true gentleman and the true lady, whether in humble garb or costly apparel, whether sheltered by the cottage roof or the luxurious mansion. And the more thoroughly we unite them in our intercourse with others, the more true respect do we accord and the more solid and enduring happiness do we confer.—*Philadelphia Ledger.*

THE STRIP OF "NO MAN'S LAND."

Public attention has been called to the fact that north of Texas and west of the Indian Territory there is a strip of land 200 miles long and 50 wide, which is sometimes designated on the maps as "public lands" and sometimes as "No Man's Land," as it belongs to no state or territory, has never been surveyed, and is not open to entry. Though several thousand people reside on this land it is without laws. They are said to get along in a patriarchal style, and without any other title to their lands than squatter rights, trusting that eventually it will be confirmed to them by the general government, and living in hopes that in due course of time the present unrecognized section will form a portion of the new territory proposed to be formed from the Indian Territory or attached to the adjoining territory of New Mexico.

This, however, is not the only stray piece of territory belonging to the United States. Dakota formerly embraced within its boundaries what is now the territory of Wyoming, which was formed from its south-western portion.

When the territory of Wyoming was formed its boundaries were parallel lines, and were run, of course, irrespective of mountain ranges or the courses of rivers. The south-western portion of Dakota had abutted on Idaho, which territory in its boundaries followed the mountain ranges. The peculiar formation of Wyoming and Idaho left between them a considerable area of land, and this, from oversight, still belongs to Dakota, though separated from it by an organized territory, and is so designated on the maps of the United States land office of the interior department. It is, however, without laws, as it is not embraced within the jurisdiction of the district or county courts of Dakota, and is outside those of Idaho, to which it is more properly assignable. It is, like "No Man's Land," virtually a neutral ground for criminals. Many of its residents are mormons and polygamists, but they cannot be tried for polygamy or any other crime they may commit, because in the present state of affairs there is no tribunal before which they could be legally brought. This leaving a piece of territory out of jurisdiction is significant of the careless manner in which Congress at times performs the work of legislation. An act should be passed at the earliest opportunity attaching this orphan section to Idaho, to which it properly belongs. It would seem but proper also that "No Man's Land," on the Indian Territory border, should in some way have extended over it the laws of the United States.—*San Francisco Bulletin.*

IN TIME.

One of the prominent "Advices" to be found in all of the Books of Discipline issued by Friends, and directed to be frequently read, is the one relating to persons inspecting the state of their finances at least once a year, making their wills while in health, etc. This is advice that does not grow obsolete, but remains good to every generation. Our readers will be interested in the following extract from an exchange paper on that subject:

"There is many a father of a family who, while doing his utmost for his children while he is in health, and making the best provision he can for them in anticipation of his own death, wholly neglects to put such provision in a tangible shape, where it can be readily understood and manipulated by the mother or other guardian in case of his death coming suddenly. A case recently came to our notice where property of considerable value was so tied up with legal restrictions, owing entirely to lack of a few formalities which could have been attended to in a day's work, that the widow and children were kept for more than a year dependent upon the good-will of friends before money could be made available. Death is not ordinarily hastened by making preparations for it, and the subject should not be avoided on account of its unpleasant character. Many a model husband and father, whose business methods are of the most methodical and strictly honorable kind, would find ample occasion to blame himself for neglect if he would consider for a moment in what confusion his family would be placed if this day should prove his last. A good plan is to make at least once a year, a written statement of all one's affairs at that time, and file it in an envelope with the wife's name upon it, in a particular place which she and perhaps one other person shall know of, if not in her own custody. Such a memorandum should

contain description of life-insurance policies or similar documents, and state where a will, if any, is to be found; incumbrances of any kind should be noted; unfinished transactions should be briefly described, that their status may be fully understood; and even if there exists no property whatever, a written statement to that effect would relieve doubt and avoid needless inquiry and suspense, in case one's business affairs were of a fluctuating nature which could not always be closely followed by the wife or fully explained to her. In cases of protracted and dangerous sickness, questions relating to the circumstances of members of a family who may soon be left alone cannot be readily asked or answered, and much of distress and dread of the future would be relieved at such a time if the wife could feel that whatever earthly possessions existed were to be immediately available, or at least that a full account of them was at hand under a comparatively recent date, so that she need not bring the subject into the sick-room."

SAMUEL MORLEY.

In a recently published life of Samuel Morley, the following facts are given: "He was a very liberal philanthropist as well as a very rich hosiery manufacturer. Their business has been hosiery. On the retirement of Samuel's father in 1840, Samuel and a brother of his named John became the heads of the firm. To them have been due the gigantic proportions to which the business in after years attained, but due more to Samuel than to John; for John in 1855 retired definitely from the firm. The whole of the series of great Morley factories one now sees at and near Nottingham were erected under the sole management of Samuel Morley; and in 1870 he could say that he gave employment to 7,000 people, not one of whom was a foreigner. The correspondence of this house reached great proportions. At one time, the first morning delivery brought them an average of 2,000 letters each day; and from 60 to 100 came by each succeeding mail. It was the largest letter mail received by any private firm in London. Mr. Morley himself, in spite of the best kind of organization, had a good mass of letters that he alone could dispose of. When he came on a visit to this country, in 1881, he gave orders that nothing should be kept for him except the very important; and yet, on his return, a pile of 2,000 letters had accumulated. No private London firm has had a better credit. Time and again have Englishmen quoted the saying of M. Taine, that 'nothing could shake the house of Morley.' A curious fact about the Morley goods has been their uniformity of grade and continuance in stock, or the possibilities of production of each kind of goods, so that articles made fifty years ago could be duplicated to-day. For instance, it was the Morleys who made the stockings worn by the Queen at her coronation; and, for her jubilee, they were able to produce for her another pair of the same description. What is oddest about this is that the same workman made both pairs. For old servants the firm has a system of pensions; and for some years amounts thus paid out have been in excess of $10,000."—*Exchange.*

A NEEDED REFORM.

One of the evils of our present Indian system, or no-system, of education is, that there is no sort of guarantee of good teachers. The principles of Civil Service Reform have not been applied to the Indian service, and persons utterly incompetent have been sent out, not to teach the Indians, but to draw the teachers' salaries. This incompetence has been perhaps most severely felt in the departments of industrial education. Men who do not know how to blow a bellows have been sent out to teach blacksmithing, men who hardly know the difference between a hoe and spade to teach agriculture. In the name of the friends of the Indians, in the name of justice, common sense, and common honesty, we demand that the whole educational work of the Indians be taken out of politics. We do not believe it can be gotten out of politics so long as the appointment of teachers is in the hands of the Bureau. It ought not to be left in the hands of the Bureau. The Indians emerging from the reservation system ought not to be left under a machinery which was organized in connection with and as part of the reservation system. We believe that the President's suggestion made some time ago is far wiser, because it is more comprehensive and radical than that of Commissioner Riley's, though both look somewhat in the same direction. Congress should give the President power to appoint a Commission who should take in charge the whole matter of conducting the Indians from the reservations, as they are broken, into civilized life and into individual citizenship. And it should appropriate in a lump the necessary amounts for their education, including industrial education, leaving the Commission itself free to organize the system, non-political, non-partisan, for the Indians' education. This we understand to be in accord with the President's recommendation. It ought to be pressed on the present Congress.

If not, why not?—*Christian Union.*

It is often said, "It is no matter what a man believes, if his conduct is right." By parity of reason, "It is no matter on what foundation the house rests, if it only stands." There are houses on the sand, which make as fair a show as those on the solid rock, till the floods come and the winds blow; but only those on the rock will weather the storm. It is of the utmost importance to the right doing man why he is doing right; for his reasons may be such as opportunity, temptation, evil example, will silence and sweep away. And I know of no reasons that may not be thus disposed of except those which are embodied in the therefores of the Christian faith. Loose views as to the worth of religious truth and of fixed religious beliefs are already having their inevitable result in a correspondingly loose, vacillating, and low moral standard. Morality never has subsisted and never will subsist, without religion. As well might you attempt to raise grapes from a rootless vine.—A. P. Peabody.

The Sermon on the Mount is the Magna Charta of the kingdom of God.—*Neander.*

A GOOD USE FOR MONEY.

THE new sense of the social obligation of the rich toward the poor has received a signal exemplification in the disposition that is to be made of the Woman's Jubilee Offering to Queen Victoria. Only a comparatively small part of the sum—about $350,000—is to be used for the erection of the equestrian statue of the Prince Consort, and the remainder is to be applied to providing nurses for the sick poor in their own homes. Central institutions for the training of the nurses are to be established in London, Edinburgh, and Dublin. The nurses are to be well educated, as well as well trained, and before engaging in their work in the homes of the poor are to receive special training in district nursing and maternity hospitals. Certainly no charity could have been projected which could do more toward bringing the higher and lower ranks of life into the knowledge of and sympathy with each other and accomplish that higher personal work which the giving of alms not only fails to accomplish,but often absolutely prevents. There is certainly no part of the work of the Catholic Church which has enabled it so much to retain its hold upon the affections of the poor as the ministrations of its sisterhoods; and in this work of trained nurses which now arouses the enthusiasm of young women of the upper classes, they will in a measure become a Protestant sisterhood, and will carry to the poor not only material comforts, but the sweeter manners and the refining influences which are a part of themselves. This gift will certainly quicken, among the working people, the languishing sense of personal loyalty to the Queen.—*Exchange.*

DURING a long storm, persons who are well versed in weather-lore are often heard to console themselves with the prediction that there will be a change of weather when the moon changes. Nasmyth and Carpenter characterize as a popular error, in its most absurd form, this belief that the gradual turning of the moon's face toward and away from the sun could, at certain points, upset the existing condition of our atmosphere, generate clouds, and pour down rains. In England (and the same may be said of much of America), the weather changes about every three days and there is a change of the moon every seven days, so that many coincidences must occur. Those who believe that "the moon rules the weather" always credit such coincidences to lunar influence. But the theory is untenable, unless the same effect is always produced by the same cause. To suppose that a change of the moon will turn dry weather to wet, or wet to dry, indiscriminately, is the merest childishness, and contrary to all meteorological records.—*Popular Science News.*

PRAYER strengthens the spirit for its conflict with the temptations of the world, helps in keeping the eyes of the soul open to the spiritual ventures that we are in danger of forgetting in the midst of the toil and turmoil of this life, and sharpens the spiritual and moral instincts that often get rusty for want of use.—*Indian Messenger.*

HATEFUL to me as are the gates of hell is he, who, hiding one thing in his heart, utters another.—*Homer, B. C.* 900.

NEWS AND OTHER GLEANINGS.

—Edison's home at Llewellyn Park, N. J., is illuminated by 500 incandescent lights.

—Seven varieties of fishes examined by naturalists of the "Challenger" expedition, are found totally blind in the deep sea, but have eyes when inhabiting shallow water.

—In Boston an electric lamp has recently been used to search for a body drowned in the harbor. The United States steamship *Albatross* is furnished with a full complement of lamps for fishing. The glow-lamp is encased in a wire netting, which acts as a trap. The fish, being attracted by the light, swarm into the net, which is then closed and pulled in.

—A Washington correspondent states: "The Secretary of the Treasury has been informed of an organized movement for the emigration of German convicts to the United States, and has taken steps to guard against the landing of such persons. Two of this class are now in custody at New York, and will be sent back to Germany at the expense of the steamship which brought them over."

—A cablegram has been received at Dudley Observatory, Albany, from Cape Town, Africa, announcing the result of the calculations by Finlay, of the Royal Observatory at the Cape, relative to the comet discovered there recently. When seen the comet was already apparent to the naked eye and had a tail two degrees long. It was moving north at the rate of about a degree and a quarter daily and it is predicted that it will be visible in the northern part of the United States about the 20th inst., when it must be looked for at dawn near the south-eastern horizon.—*Public Ledger.*

—A correspondent writes to the *Frankfurter Zeitung* that the discoveries lately made in a cave at Rübeland, in the Harz, are of an interesting character. The quantity of bears' bones is estimated at nearly ten hundred weight, among them being seven very well preserved skulls. A set of stag's antlers, fragments of skeletons of hyenas, and some fine slender bones which experts assign to the ptarmigan and the lemming. These remains are regarded as relics of the Arctic fauna of the ice period in the Harz. It is proposed to keep them in the cave, which will be lighted by electricity for the benefit of scientific visitors.—*N. Y. Times.*

CURRENT EVENTS.

THE condition of the Crown Prince of Germany, (who remains at San Remo, Italy,) has grown appreciably worse, and it is now no longer denied that his throat trouble must soon prove fatal. His father, the Emperor, who is now 91 years old, is in delicate health, and greatly distressed over the Prince's condition; it is apprehended that the death of both may occur at any time. In this emergency William, the son of the Crown Prince, who is now 29 years old, has been declared Regent, to act in case of the disability of both his father and grandfather.

THE strike of engineers and firemen upon the Chicago, Burlington and Quincy Railroad continues, and there are apprehensions that it may extend to other roads. The strike of the coal miners in the Schuylkill region is entirely quieted, and some of the collieries in the Lehigh region have resumed operations, after a suspension for several months.

A. BRONSON ALCOTT, the author and Concord School philosopher, died in Boston on the 4th inst., aged 88 years. His daughter, Louisa M. Alcott, well known by her works for children, died also, on the 6th.

A SNOW storm in Michigan, on the 1st and 2d insts., was one of the most severe ever known. The snow fall was accompanied by a heavy gale. The storm extended over the entire length of Lake Superior and well down into the Southern peninsula, where the railroads were reported to be badly crippled.

THE fire losses in the United States and Canada during February reach the enormous aggregate of $11,213,500, or over $4,000,000 above the average February loss for thirteen years; there were twenty-one fires of over $100,000 loss each.

AFTER hearing the report as to the newly-discovered testimony in the case, and argument for and against clemency, the Pennsylvania Board of Pardons has declined to interfere in behalf of Johnson, who is now in jail at Media, Pa., sentenced to death upon conviction of the murder of John Sharpless.

NOTICES.

*** The Third Conference of Parents, School Committees and others interested, under the care of The Committee on Education of Philadelphia Yearly Meeting of Friends, will be held on Seventh-day, Third month 17th, 1888, at Fifteenth and Race streets, Philadelphia, commencing at 10 o'clock a. m. Punctual attendance is desired. The subjects for consideration are:

1. How can we raise the standard of honor among our pupils, and how manage those who are refractory?
2. How should writing be taught?

All interested are invited to attend.

WM. WADE GRISCOM, Clerk.

*** The Temperance Committee of Concord Quarterly Meeting will hold a Temperance Meeting at West Chester Friends' meeting-house on First-day afternoon, Third month 18th, at 2 o'clock.

J. BYRON THOMAS, Clerk.

*** Henry T. Child expects to attend Abington Friends' meeting on First-day morning, Third month 11th, and give an illustrated lecture on Temperance at the same place at 2.30 p. m. (to which all are invited.)

*** Friends' Home for Children, 4011 Aspen St., (near 40th and Brown, West Phila.) There will be religious services at the Home next First-day, (Third month 11th). Lydia H. Price, of Germantown, Louisa J. Roberts, and others are expected to be present. All are cordially invited. Encourage us by your presence.

Summary of the work done by the Home for the two months of this year:

Supported at the Home,	26
Admissions,	8
Indentured and placed in permanent homes,	6
Adopted,	1
Returned to their parents,	4
Now in the Home,	27
Out on trial,	3

*** Quarterly meetings in Third month will occur as follows:

12. Baltimore, Aisquith St., Md.
15. Haddonfield, Moorestown, N. J.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans.* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞ *When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.* ☜

FRIENDS' CALENDAR FOR 1888
NOW READY.

A handsome lithographed card bearing a tablet, giving a carefully selected quotation from Friends' writings for each day of the year. Price, 50 cents. By mail, 55 cents.

FRIENDS' ALMANAC FOR 1888.

Containing an account of the times and places of holding the meetings of Friends on the continent of America. Price, 10 cents each. $1.00 per dozen.

FRIENDS' POCKET ALMANAC FOR 1888.

Price, 10 cents each. $1.00 per dozen.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly *to raise funds.* These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

HISTORY OF THE SCHOOLS.

Both these schools have been in existence since the early years of the work of colored education in the South, soon after the close of the war. The Aiken School was begun in 1868, with the support of the Germantown, (Philadelphia) Branch of the Freedmen's Union Commission (of which Sarah F. Corlies was Secretary, and Elizabeth Dorsey, Treasurer.) In later years it was sustained almost entirely by the exertions of Martha Schofield. In 1886, however, finding the burden of its support too great, she made an appeal to the Yearly Meetings of Friends, in Philadelphia and New York, for aid, and as part of the response to this appeal, this Association was organized at Philadelphia, in Sixth month, 1886.

The Aiken School has a valuable property (largely accumulated by Martha Schofield), which has been placed in the hands of a Board of Trustees. A beginning has been made in the formation of an endowment fund.

The school at Mt. Pleasant was established in the First month, 1866, in charge of Cornelia Hancock, under the supervision and with the support of the "Friends' Association of Philadelphia, for the Aid and Elevation of the Freedmen," and was maintained for a number of years by that excellent organization. In late years, however, its funds have been raised, from year to year, almost entirely by Henry M. Laing, Treasurer of the Association, who like M. Schofield, found this tax upon him too great.

CHARACTER OF THE SCHOOLS.

The Aiken School had last year 270 pupils, divided into nine classes, with eight instructors. This year, the attendance is larger, and an additional teacher is employed. There are, this year, about 300, of whom 40 are boarding students. Members of the highest class are prepared to become teachers. All are taught industries,—the girls being taught to cut, make, and mend garments, etc.; the boys instructed in printing, carpentry, and many details of labor about the school property.

The Mt. Pleasant School had last year about 100 pupils, with three teachers. They average somewhat younger than those at Aiken. The instruction of this school has been carried on for two years in a church, granted free o charge for the purpose, the school building having been demolished by a storm in the summer of 1885. (A special fund for rebuilding has been partly raised.)

THE NEED FOR CONTINUED AID.

Those engaged in the work of instructing the colored people appeal to us to continue a measure of aid. While some progress has been made in establishing public schools in the South, they are yet very insufficient. The school term in South Carolina averages not over three months in the year, and the schools themselves are too few, and seldom well provided in any particular. To withdraw from the field yet, seems like abandoning the colored people, in the very midst of the work for their elevation. Moreover, it is evident that for years to come there will be great need of schools which will do more than provide mere book instruction,—will, in addition to this, give practical training in habits of honest and orderly industry. Such work as this is done by these schools, and they are fully entitled to the confidence and help of all who are interested in the welfare of the hitherto unfortunate colored people. Money sent them is used with the utmost economy, and is made to yield the best possible maximum of results. The funds supplied by the Association go only to the compensation of teachers, and so far have not been sufficient for that purpose. The students either support themselves, or are otherwise aided.

*** THE ASSOCIATION EARNESTLY APPEALS TO THOSE INTERESTED FOR AID TO ITS FUNDS.

Statement of Henry M. Laing, Treasurer, to Seventh month 1, 1887.

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.

FRIENDS' PRINTING HOUSE S. W. COR. 6th and ARCH

FRIENDS' INTELLIGENCER AND JOURNAL.

INTELLIGENCER Vol. XLV. No. 12. | PHILADELPHIA, THIRD MONTH 24, 1888. | JOURNAL. Vol. XVI. No. 791.

THE WORK OF TO-DAY.

To shun the world's allurements,
To bear my cross therein;
To turn from all temptation,
To conquer every sin;
To linger, calm and patient,
Where Duty bids me stay;
To go where God may lead me,—
This is my *work to-day.*

I think not of to-morrow,
Its trial or its task,
But still, with childlike spirit,
For present mercies ask.
With each returning morning,
I cast old things away:
Life's journey lies before me,—
My *prayer* is for *to-day.*

THE NEWEST ORTHODOXY.

THE controversy which is dividing the children and successors of the Puritans in New England as to the salvation of the heathen world is not without its interest for members of the Society of Friends. At first view it might seem as if the interest of Friends would be enlisted especially on the side of the minority who deny the finality of death, and contend that those who have been debarred from hearing the Good News in this world would be given an opportunity in the next. And in so far as the Andover theologians stand for the rights of independent conviction against the weight of numbers, the sympathy of Friends naturally must go out to them. And if their opponents took the ground that their fathers held, when they held that everyone who had not attained to a knowledge of the historical facts contained in the four Gospels were to be given over to eternal death, the sympathy would be still more intense. It would be felt that Andover stood on Puritan ground alone in defense of a truer and more humane conception of the divine dealings with mankind, and represented in modern shape the principle which underlies Abraham's words: "Shall not the Judge of all the earth do right?"

But the ability and force with which the Andover men have pleaded their case against the old Puritan notion of the final damnation of the whole heathen world has forced their Orthodox opponents to take up an entirely new position. No doubt, some of them still hold that every heathen at his death goes away into everlasting darkness and torment. That was the ground on which they all stood at the beginning of this century. That was the motive which was alleged as the foremost for the establishment of missionary societies, and for sending out preachers and teachers of Christianity to non-Christian countries. It was not the only reason, but it was the main one, and it still is charged on the Andover teachers that they would "cut the sinews of missionary effort" by their doctrine of a probation for the heathen after death.

But the leaders in the opposition to this Andover doctrine, and seemingly most of those who follow them, have been driven to take new ground on the whole question,—and ground which lies very near to the position occupied by Friends, if it be not the very same. So far as I can learn it was Joseph Cook, the Boston preacher and lecturer, who first brought forward the idea that "the essential Christ" is present in every man's conscience, be he Christian or pagan, and that the moral present and future of every human being is determined by his acceptance or rejection of this inward Christ. In this view, while a knowledge of the outward, historical Christ is of much advantage to those who possess it, it is not "the one thing needful." A man may be saved who has none of it. Just as the mere possession of this outward and historical knowledge of Christ brings no salvation, so that the utter want of it does not debar any from salvation. But for those who "finally reject" the essential, inward Christ in this life, they declare they have no hope. With this life, probation ends.

Dr. Hurd, for instance, writes in *The Advance*, (the Chicago Congregational newspaper), that the probation of the heathen in this life "is essentially though not fully a Christian probation," and finds the solution of the difficulty in "the world-wide presence and power of the Holy Spirit, the last, best gift of a risen Christ." Dr. Taylor, of the Broadway Tabernacle Church, New York, said at the Springfield meeting of the American Board of Foreign Missions last fall: "Light is the measure of responsibility, and wherever there is light, from the beginning until now, there is Christ." The statement was greeted with applause. Dr. Behrend, of Brooklyn, said at the same meeting: "We can hold fast to the decisiveness of the present mortal life, without surrendering a conviction that God by his grace is reaching thousands and millions of men, who never in this life heard of the gospel of God's love." He also "concurred very heartily" in what is above quoted from Dr. Taylor, admitting that it was "not Calvinism." Prof. E. Y.

Hincks, of the Chicago Theological Seminary, has since written: "Christianity, as conceived and taught by Paul, includes all men, both within God's saving wish and the expression of that wish in the presentation of Christ."

All these are among the opponents of Andover and its "New Orthodoxy." But what is their relation to the Old Orthodoxy from the days of the Westminster Assembly down to those of the founders of Andover Seminary and of the American Board? How did their theological forefathers take this doctrine, or substantially the same doctrine, when it was preached by George Fox and the early Friends? "I saw," says George Fox, "that Christ died for all men, and was a propitiation for all, and enlightened all men and women by his divine and saving light, and that none could be a true believer but who believed in it." Puritanism met this central doctrine of primitive Christianity with a flat denial. It asserted that the Scriptures were the only channel of enlightenment through the revelation of God to the soul. Rev. John Higginson, of Salem, ancestor of our friend T. W. Higginson, called "the Inner Light" taught by the Friends "a stinking vapor from Hell." This teaching as to the inward light of the spirit of Christ in the soul was in fact made the catch or test by which to detect a Quaker in New England. As soon as a man showed a scruple about putting off his hat, or taking an oath, or used "thou" when others said "you," they set upon him about "the inward light" and the sufficiency of the Scriptures. Men and women were hanged on Boston Common for making such statements as were applauded at the last meeting, at Springfield, of the American Board of Commissioners for Foreign Missions.

All the great names among the Puritans are arrayed against the doctrine of the inward or essential Christ as availing for salvation. John Bunyan said it was "a delusion," when "Quakers own Jesus Christ revealed to them by the Spirit." He says: "It is a delusion of the devil to bid people follow the light within them," and he stigmatizes it as "a filthy error." He denied any such light in men but "the natural light of conscience." Richard Baxter says: "All that are come into the world are lighted with the light of nature," and no other; and that "the gospel or word is the eternal light flowing out unto us from the Son." John Owen asserted that "all truth concerning God and ourselves is to be learned from Holy Scripture, the Word of God." The Westminster Confession of Faith, after denying that those who are "not elected" can be saved, whatever their opportunities of knowing the Gospel, proceeds: "Much less can men, not professing the Christian religion, be saved in any other way whatsoever, be they ever so diligent to frame their lives according to the light of nature, and the law of that religion they do profess; and to assert or maintain that they may [as Zwingli, Fr. Pucci, and C. S. Curio had done], is very pernicious and to be detested."

The Andover Review for February points out that the position taken by the new champions of Orthodoxy against Andover is that put forward in Robert Barclay's "Theses," which deny on the one hand the sufficiency of "the light of nature," asserted by the Socinians or Pelagians, and assert on the other, the sufficiency of the Inward Light, which is the Son of God, and is given to every human being, and that without a knowledge of the outward history of Jesus Christ. (See Theses II. to VI., in Barclay's "Apology.") "The reässertion of Barclay's theory," says *The Andover Review*, "is an interesting fact as showing the pressure of the problem it attempts to solve. Evidently it will not permit itself to be ignored. No less note-worthy is the inferential character of the solution. Barclay's Biblical references are few, and will not bear the light of modern exegesis." We infer from this last statement that the editor of the *Review* knows Barclay's statement only from the separate quotation of his "Theses" in Dr. Schaff's "Creeds of Christendom." If he will take the "Apology for the True Christian Divinity," which Barclay has based on them, he will discover that Barclay has more than a few Biblical passages to sustain his position. As for modern exegesis, there is no writer of our century who has written better on the Old and New Testament than Frederick D. Maurice. In his commentaries on "The Gospel of St. John" (2d ed. 1867), and on "The Epistles of St. John," (1857), he is entirely in harmony with the doctrine of the universal, inward, saving Light, which is the Son of God. J. D.

RETAINING THE YOUNG MEMBERS.

[Several articles, with the general title, "How Shall We Best Retain Our Younger Members in the Society?" have been appearing in *Young Friends' Review*. The following two papers, from the issue for Third month, will no doubt interest our readers.—EDS.]

THIS seems a difficult question to answer in a concise manner, and yet one of vital importance if we wish to continue the existence of our religious organization.

In all seasons of growth in our own or any other religious denomination, there has been a general feeling of aggressiveness among the adult members, a sense of personal responsibility for the life of the body, and desire that those outside the limits should be impressed with the truth or truths the denomination represents.

Assuming that whatever would attract and convince those outside our membership would be valuable in attracting and convincing the younger members who are within our fold by birthright instead of convincement, may we not say in partial answer to our query, that we lack a sufficiency of this spirit of agressiveness and personal zeal? Our principles should mean more to us, who are supposed to be convinced and representative members. Until we really feel our hearts stirred by a continuing consciousness that our Society represents vital truths that accepted and acted upon will truly benefit us and all who live in their light, we will do little towards the spread of this light even among our children. We may ask them to attend Meetings and First-day schools, but if our advocacy is in the line of habit and our lives lack consistency and that zeal which attests our faith, it will be of but little force either with our children

or with ourselves. As genuine conviction and consequent regeneration of heart and purposes, lies at the foundation of all successful religious labor, it appears to me the first and most important step for us to take in the effort to retain our younger members, is to endeavor to reach this foundation ourselves. We who are desirous that the children shall remain with us in religious faith must have dwelt so carefully and earnestly upon the principle or principles which constitute us a denomination, that we have become professors of the faith by sight and conviction of its truth and not as is so frequently the case, by inheritance of the traditions, habits, and places of our predecessors. When the power that makes for righteousness or rightness is more truly the object of our earnest thought than the impulses and cravings that spring from our selfish nature, we shall not lack for either power or opportunity to influence those around us and especially those associated with us by the bonds of family or society ties.

As the principles upon which right conduct and spiritual life are based become increasingly clear and dear to us, our ability to draw our children within the reach of their convicting power will increase, as the children are generally impressed with whatever deeply impresses their parents or friends. Without this conviction, growth, and earnest labor upon the part of a goodly proportion of our active members, all other expedients and efforts will have but transient power for the purpose queried after; but having this foundation we can use outward helps as legitimate aids placed at our disposal and blessed freely with the desired fruitage when used under genuine spiritual concern for the spread of religious truth.

Among these helps the First-day school comes, perhaps, first in importance, as it gives us direct entrance to the minds and hearts of the children with the message of divine love. If we touch lightly upon dogmas of faith that we at best dimly see the truth of, and dwell largely upon the fundamental truths of the existence of good and evil, a spiritual Father, with a witness or Son in our hearts seeking to lead us into all good, and a fleshly and selfish nature that prompts us to evil. That the one leads to the greatest happiness of mankind, the other always and with greater or less speed, to unhappiness. That whatever our name may be for either of these powers each exists in every heart, and strives for government over it until, by yielding steadily to the influence of the one or the other, we have risen to a nobility of life and feeling that no longer leaves room for the evil desire, or have sunk to such degradation or blindness, that we can hardly feel or see the raising or resurrecting power that would lead us back into the light and into peace. If these be our teachings emphasized with the child's experiences and brought to bear upon the daily lives of the children, so that they can realize the purposes of our profession and organization, will not many become acquainted with the "Christ within" that saves us from sinning and its consequences, and instead of resisting our appeals to stay with us, will they not only feel our organization as their religious home, but also their duty to strengthen its influence and spread its testimonies for the good of their fellow-men? In these teachings, while touching briefly upon dogmas, let us also forbear the role of destroyer of these dogmas as held by others, lest we destroy wheat with the tares, let us build up the good by inviting into the light, rather than by going into the darkness to drive away the darkness with its own spirit.

Another source of power in our effort to retain our children and bring them on the plane where they may be taught directly by the divine spirit, is found in social gatherings of members of their nearest associates for some literary or philanthropic object, wherein the desire for cheery life and genial companionship in sport or play, may be gratified in connection with some unselfish labor for the improvement of our own minds or for the comfort of others.

These occasions controlled only in their joy by the limits of right conduct, and the enjoyment tendered and deepened by the wiser ones, with a purpose of helpfulness added to the craving for pleasure, will do much to create Society fellowship and keep the young within reach of still higher influences.

As the young reach years and ability for it, their attachment to the Society and sense of personal duty in it, can be increased by appointment on committees suited to their capacity, or with older members, where they can have the benefit of their experience. We do not make our business serious enough nor use our younger members enough in our little home meetings. Still another and most valuable aid to religious growth, is to be found in a series of house meetings, when a sufficient number (the two or three) are impressed with the need of them, and can draw around them the body of the membership, to feel with them the promised Presence, to yield to the occasional cravings of their highest nature and where expression will not be checked by the force of habit which expects some to speak and as much expects others to keep silent. These meetings have been greatly blessed to many in our western neighborhoods. Added to these instrumentalities open for the use of the Society, there should be the home influence strengthened by Bible reading, together and at stated times, not so frequently as to become dead in the formality, yet often and regularly enough to impress all with the purpose in view. Silence, brief but reverent, before meals, and the habit with parents of treating the honest religious convictions of all with tenderness, will prove helps; and with all these used with a fair degree of faithfulness by even a few in each of our meetings, we may cease much of our inquiry for means of denominational preservation and seek instead for extended fields of labor.

J. W. P.

Chicago, Ill.

For me, who have attended Friends' Meetings from my earliest childhood it seems impossible to realize that any one truly educated and ingrafted in the principles of Friends can ever be anything else, and the fact that so many young members are joining other denominations I think is largely due to the lack of right influence at home. The First-day schools are doing a great work in the right direction, but few

children are induced to attend if there is a lack of interest on the part of parents. Friends are also too negligent in looking after their absent members; there is where the churches have the advantage of us. While we sit quietly waiting for them to come to us, the salaried minister is going into the highways and byways and gathering them in. Are we doing all we can in a social way for our young members?

Look at the church fairs and church sociables. Young people must be kept busy. It was once my privilege to belong to a First-day school where once a month the adult class had a sociable, thus the young people became naturally interested in the same things, and in attending meetings where they would see each other, for I believe we often derive as much benefit from the social mingling together as from the sermon. A kindly shake of the hand, and an interest in each others' welfare often has more influence than we are aware.

What the world needs to-day is practical Christianity, and the First-day schools and the Society for Philanthropic Labor are opening such wide fields of usefulness that all young and earnest workers can easily find as much employment as the churches offer in any of their good works.

I think Friends have been apt to lay too much stress on plainness of speech and apparel, and have lived too much wrapt up in the times of George Fox and William Penn. Now the whole civilized world is beginning to realize that it is the present we are living for.

For my part, I am thankful that I am living just now, in the close of the nineteenth century, in this age of progression and reform, and I hope my life may be spared to see the opening of the twentieth, that I may see more of its good accomplished.

Perhaps I am one referred to in your article of second month, that the Society of Friends has done its work. I believe it has done a great and good work, that the Friends of olden times in their belief were far in advance of their age, and the reason it has done a great work is because its principles are so rational. But do not let me be understood that I do not appreciate the beauties of Friends' meeting, and right here I would like to urge our members to more regular attendance. On First-days there are few but what have the opportunity to attend if they choose, and if they would attend in the middle of the week, I think they would find it time well spent,—on returning home the every-day cares and burdens of life would seem so much lighter:

"There is many a rest on the road of life
If the weary heart would make it."

ANNA WASHBURN.

Chappaqua, New York.

SOME things you may have without seeking, some you may seek and not find; but there are things, and those you most need, that you will never find without seeking.—*Mark Hopkins.*

IF we wish to be just judges of all things, let us first persuade ourselves of this, that there is not one of us without fault.—*Seneca.*

LESSONS OF LIFE.

IN all ages human life has been a pregnant and debatable theme of discourse. Why were we born? What do we live for? Whither are we drifting? What is pleasure? What is gain? What is the value of self-sacrifice? Do we live for the gratification of the hour, or do we live for the future? Am I, an entity, to pass after death into an inorganic nonentity? Is man a puppet, time a scene-shifter, and life and the world a stage-illusion? or is there an indestructible principle in the human soul, a practical purpose and utility in life, and a reality beyond? Such problems are ever presenting themselves to the human consciousness for solution; and it is only by a rigid self-examination that we are enabled to appreciate their value,—as antecedent to all of the ordinary intellectual problems of the race,—in evolving a true philosophy of life.

We all want to be happy. A pessimist writes that "life is not to be enjoyed, but to be endured." The falsity of this proposition is as obvious as that of his final conclusion, that to a sensitive soul "life never appears otherwise than an immense and terrible affliction." What a cowardly arraignment of the Giver of life! Because sorrows afflict us, friends are taken away, health fails, and the way seems dark and dreary, is there nothing left for us to do but to stumble despairingly into the pit of self-forgetfulness, after blowing out the torch that lights our path? No; life is not a useless possession, in spite of its heartaches and shadows and pains. What cannot be cured must be endured, it is true; but then human endurance in the light of duty is not martyrdom, and the mind that lives to its best intent is not without compensation in contemplating its own supreme triumphs.

Sir John Lubbock has written a book on the "Pleasures of Life." In it he discourses on the pleasure of duty. Duty is the germ of happiness. When considered as a pleasure, life gains a new significance. Duty is in no wise related to a snarling and sniveling pessimism, or to the postulates of science. It is a sense of obligation to a Power not in us,—a realization that one's sphere of action extends beyond a selfish ministration to one's personal wants. It is obedience to moral law. The majority of world-haters and life-annihilators have been supremely selfish men. The recognition of duty as an animating principle is the first lesson of life. It is the lever of our social activities, the law of the universe. There is a duty we owe to others, a duty we owe to ourselves. Duty is paramount. In the words of Ruskin, the sense of duty is "a solemn purpose that fills the heart." As related to happiness, its uses and significance are unique. "I cannot but well think," says Sir John Lubbock, "that the world would be better and brighter if our teachers would dwell on the duty of happiness as well as on the happiness of duty; for we ought to be as cheerful as we can, if only because to be happy ourselves is a most effectual contribution to the happiness of others." As men differ in character and disposition, so they differ in their ideas of duty; and yet the essential principle involved in the

universal law of duty is an eternal fact of conscience, while its dictates are an unwritten law of the human heart. Count Tolstoï writes in his "Confessions": "To understand life is to do good." "The world is full of judgment days. . . . Never was a sincere word utterly lost," says Emerson. Duty is the mysterious ladder by which we reach the pinnacle of earthly happiness and success. One has not learned how to live without first considering the pleasure of duty and the suggestiveness of the word as an incentive to action. A high and realizing sense of duty is the peace and elixir of life.

Multitudes have a keen "relish" for enjoyment, but are not eager to know how to live. The worth of a dollar is easily determined, and the eye readily detects counterfeits. Not so the worth of an act, the worth of a high example, the worth of a life. Pecuniary gain is not the highest recompense for honest and faithful labor. As the fairest rose is set in thorns, so the richest lives have been hedged with poverty. The revolving year has its Saturnian days as well as its days of gladness. The wise man does not lay down life's burdens and skulk out of the world because the fairy godmother is deaf to her call; but he utilizes the gifts that lie at hand, and realizes present blessings. The shoemaker, carrying home a pitcher of milk he had bought for supper, sat down by the roadside, and dreamed of churning the milk into butter and selling the butter and buying a cow; the cow was to have a calf, the calf was to be exchanged for a colt, and the happy owner, thus provided for by a master-stroke of policy, was to take his ease and live like a nabob forever afterward; but in the midst of his reverie he broke the pitcher, and spilt his milk. And so the foolish shoemaker went supperless to bed.

Perhaps the hardest thing in life is to become reconciled to its dispensations. A great deal of our sorrow is real. In passing through the sun-lit meadows, burs and thistles stick to us persistently, while the flowers fade in our hands; and trifles worry us more than great calamities. A scratch may give more pain than a sabre-cut; the loss of a brooch, or a lap-dog, often causes hours of anguish. But many sorrows are self-inflicted, and men and women of a morbid cast are discovered furtively lighting the fires of their own martyrdom. As boys pick off the burs that cling to their clothes, and hurl them away, let the mind learn to dispossess itself of trifling annoyances. It should put on the strength of Hercules, who, assailed by pigmies, rolled up a whole army of them in lion's skin. The duty of the hour is all that need concern us. Are we superstitious? Do we we believe in destiny?

"A man is his own star;
Our acts our angels are
For good or ill."

One of the chief dangers lies in trusting to luck or chance. Life is not a game played for stakes. We are possessed of a gambler's greed of gain if we thus lower its dignity. We reap no advantages by pausing each day to take an inventory of our effects. The soul's possessions are incalculable when we consider the nobility of life. Its riches can no more be computed than the veins of gold that lie in the rock-ribbed earth. While alive to the possibilities of life, we should never mortgage our future estate for the bauble of a moment. The desire for wealth, the craving for power and distinction, the longing for fame, are never wholly gratified. We are pursuing a *fata morgana* in the desert. What a strange infatuation, as Bacon says, "to gain power over others and lose power over one's self!" D'Alembert said of the temple of fame: "Its interior is inhabited only by the dead who were not there in their life-time, and by certain aspirants who are shown the door as soon as they die." Let us learn to love life for what it affords. We have no time to rail at the world, or to pose as sentimentalists and impale sympathy. In her disgust of a life of ease and opulence, Armida set fire to her palace while the peasant slept serene in his humble cot. Every man has an appointed place in the vast social system, as the planets have their place in the solar system; or, just as in a complicated piece of machinery, each pivot, wheel, and band has its proper function and use.

In the figurative language we employ to express our thoughts, a man may sometimes be beside himself, but he cannot get outside of himself. His individuality cannot be shuffled off; he carries his birth-mark to the grave. The divine institution of life is not an illusion, but a reality; it is so ordained of God that no man need go astray in the world who trusts in his providence and believes in the triumph of principles. Immortal glory is secured by self-conquest alone. The so-called "golden verses," ascribed by some to Pythagoras, are worth repeating:

"Ne'er suffer sleep thine eyes to close
Before thy mind hath run
O'er every act, and thought, and word,
From dawn to set of sun:
For wrong take shame, but grateful feel
If just thy course hath been;
Such effort, day by day renewed,
Will ward thy soul from sin."

H. Van Santvoord.

The world hath many dreamers,
But, alas! how few are they
Who do the things of which they dream
And talk from day to day.

There are many who rear grand castles
High up in the empty air,
But they who build on a solid base
Are few, indeed, and rare.

'Tis well, perchance, sometime to dream
And plan for the coming time;
But better still is it to do
Each day some deed sublime.

For while men stand and idly muse
On the shore of life's restless sea
The tide comes in and the sands wash out,
And the dreamer—where is he?

A genuine and real belief in the presence and agency of God in the minor events and details of life is necessary to change them from secular cares into spiritual blessings.—*H. B. Stowe.*

For Friends' Intelligencer and Journal.

LETTERS FROM EUROPE.—XVIII. CONDITION OF VARIOUS PEOPLES.

BRUSSELS, February, 1888.

AND now I propose to give a brief sketch of the condition of the masses of the populations of the countries which are about to embark in a conflict which will greatly influence their future.

The Czar's dominions embrace more than half of Europe, and somewhat less than a third of Asia. In this vast territory is a wheat country equal in quality to and in extent larger than that of the United States, and in its coal measures and petrolum deposits, it exceeds our country and every other; and, finally, the mines of Siberia are supposed to be unequalled in the world. The population amounts to about 110 millions. These have a species of organization of their own, some in tribes and clans and more in communities, but for which their condition would be anarchy. For the Czar is really the only governing power, and what he cannot do in legislation and administration is not done at all, or is done in the worst possible way. Every class has a grievance. The peasant is crushed by taxation, the tradesman and mechanic are hampered by minute and restrictive regulations; the leisure classes chafe against the blind tyranny of the new educational system. Corruption reigns in every branch of the administration, and were not the Russians the most docile of all peoples and the Czar a species of deity with them, disruption must long ago have rent the unwieldy fabric in pieces. The debt of Russia has increased thirty-fold since the Crimean war; her securities are discredited all over Europe, her paper money is greatly depreciated, and for some time the Czar has been vainly endeavoring to raise a small loan to help pay the interest of former loans and maintain the enormous army with which he threatens civilized Europe.

In Russia, as the government regulates everything, and as the results of this regulation are evil, the particular phase which the spirit of reformation, now at work throughout the world, has assumed there, is Anarchism. If there were no government, say its apostles, there would be no crime; if no law, then no transgression; if every one were allowed to do as he pleases, there would be no contention. And if there should be wrong done sometimes, why average it? If a man steals it is useless to shut him in prison or idleness. If a man slays his neighbor we will not bring the dead to life by hanging his slayer. The widow of Tekoah argued in this way three thousand years ago. Such I understand to be the ground work of Anarchism, as set forth by its amiable prophet Prince Krapotkine, in his latest publication. Anarchy, it must be said, means with him and the Russian school, simply absence of all government. It is with us understood to mean violence and strife, because we regard these as the necessary consequences of anarchy,—but anarchists do not so understand it.

The average annual income in Russia is stated by political economists at $45 per head, of U. S. money.

Germany is a very poor country, thickly populated, with a prolific race. The consequence is that the population overflows into the surrounding country on all sides,—into Russia, France, Belgium, England. Russia expels them; England contemplates keeping them out, and the French people actually do so to some extent by expressions of personal dislike. But they persist, and whenever allowed to hold on are admirable workers. The public school system and compulsory attendance originated in Prussia and is now bearing its fruits, in the wonderful efficiency of all whose business it is to do anything,—in the increase of the efficient intelligence of the people. German mechanics underwork Belgians and French. German commercial clerks and agents push the English from their stools. They do not enter the bank, or the counting-house, the factory or even the shop, "to learn the business," but come fully equipped with all the knowledge that can be taught in words with the aid of models and specimens. And those intended for general commerce understand the three or four great languages of the commercial world and know the products of the great countries. In manufactures wherever scientific processes are involved they excel all others. They make all the alcohol from which the French manufacture their "fine old brandies," and their sugars now vie with those of the tropics.

The condition of the German masses at home is wretched in the extreme. Peasant proprietorship was extensively introduced by government as the best means of maintaining a large population on a small area. It answers the purpose, and has moreover produced a vigorous and hardy race. Out of every eight families, seven make less than $125 a year, or say $30 a head. Then, too, they are deep in debt. Their small properties give them credit and their necessities compel them to use it. To end this evil in Prussia farms may be rendered by registry, exempt from mortgage or sale, and it is contemplated to extend this exemption by law to all such properties. The peasants live in almost savage rudeness. Their principal food is black bread and potatoes, and they have not the skill or perhaps the heart to make the best use of the few means of comfort they possess.

In Germany, says Professor Bunsen of Heidelberg, in a recent magazine article, "the blood, liberty, and money of the subject are held rather cheap." But, he continues, on the other hand, "there is no rack renting, and no absenticism." No idle class of landlords living in luxury on the rents of estates they have never seen, or playing the prince in foreign countries, squandering there the hard earnings of laborers starving at home. Nor is there any beggary. Men are provided for at least as well as horses and cattle, and are not suffered to perish by the wayside or wander beyond reach of their owners. A man who can't otherwise make a living is sent to a "labor colony," where he has a hut and a piece of ground to cultivate. William Tallack, of London, whom you know, has recently visited these colonies in Germany, and given some account of them in a daily paper. This arrangement is equivalent to sending a child in school to the foot of his class, whence he may work up if he can.

German mechanics and tradespeople are reasonably prosperous, but live very inexpensively and ac-

cording to our notions coarsely; but the compulsory system of education gives the mass of the people a degree of refinement, (small indeed), which could not be derived from their surroundings. Any one who has mingled with Germans of the lower class must be struck with the incongruity of their good education and bad manners.

The spirit of reform in Germany, as everywhere else, takes its shape from the nature of the evils which in the particular locality force themselves on the attention. The chief and pressing evil is poverty, and a reform grappling with it assumes the form of Socialism. Government in Germany has been a beneficent agency: give government, therefore, more powers. It has done much, let it do every thing. Let it take the railroads, telegraphs, mines, and lands, and administer all for the general good, and so as to best employ most people. Government has gone far in this direction, but unfortunately governments are composed of men and men have human passions and human failings; and just now the men who govern Germany are intent upon forming a powerful army and using it for conquest. This was not in the Socialists' programme. They want peace, because only in peace can they find the material prosperity they seek. They are strong enough to make themselves felt in politics, and at late elections have polled nearly a million votes out of less than nine millions. They have three deputies in the Reichstag who have steadily opposed large armaments. And when, two years ago, Bismarck by a stirring address carried the whole Reichstag in a whirlwind to vote seventy million dollars (U. S.) extra to arm and equip an additional force of 700,000 men recently added to the army, the three Socialist deputies voted alone steadily against it. Stringent laws have been enacted against the Socialists. They may think as they please but must not act or teach as they think.

The average annual income of the Germans is stated at $88.00 U. S. currency. These figures may not be correct, but they will serve in some degree for comparison.

In France the condition of the masses is perhaps better than elsewhere in Europe except Holland. Their soil is good and climate mild, and they have an extensive seacoast and all necessary means of internal communication. The sub-division of lands and the peasant proprietorship have existed long enough to produce their expected benefits in the great increase of the wealth of the country and in its distribution. And then, too, the people have learned how to take care of themselves. They prepare their food well, and dress with a view to comfort, and seem devoid of any desire for show. So far as I can learn, there is no distress among them, arising from privation. They have sufficient food, clothing, fuel, and shelter. The peasant works hard and his skill and unintermitting industry make him independent, but no small industry can compete with large operations. It is strikingly said in a recent work on the subject, that the cotton factories of England whitened the plains of India with the bones of Hindoo hand-loom weavers. And so the seeders and harvesters and threshers and the vast flocks and herds of America are ruining the peasant proprietors of Europe. The French peasant and family make about $150 a year. There are about as many peasant proprietors in France as in Germany, and of these three millions are below the line of personal taxation—next door to paupers, but as I have said have enough to support a healthy physical existence. But the subdivision of the land, while it has fulfilled the expectation of its authors in producing a large class of independent and hardy peasants, has produced evils which were not at all foreseen. It has made the peasant intensely miserly. He lives only to save and to get more land. Every parcel of ground that may come into market is watched with greedy eyes by various competitors, and thus in time every neighborhood has become filled with rivalries, hates, and jealousies. In agricultural France crimes against property are strikingly predominant. No peasant trusts another on money matters. Half a dozen women will walk to a distant market each carrying a few eggs or a chicken, when one could easily carry all. The French peasant's *bête noire* is "*le voisin*,"—his neighbor,—against whom he is always on his guard. The prevalent parsimony leads to late marriages or celibacy, and the population of France is almost stationary, while Italian and German laborers are stealing into the country,—to such an extent indeed that recently several thousand Italians were driven away from Marseilles and shipped back home. The German immigrants have not attracted public attention. They keep very quiet and do not gather in masses; and in fact being cheap and efficient workers I fancy they are permitted tacitly when no one would dare utter a word openly in their favor. There are great numbers in Paris. French manufacturers and tradespeople are prosperous. They have been for ages remarkable for taste, and as the world grows richer the equality is in increasing demand, and the government has taken immense pains to educate them.

The income of the French people averages about $120 per head of our money.

In Italy the condition of the peasantry would be worse than anywhere in Europe except Russia, were it not for their climate, which enables them to live in the open air, and renders food almost the only thing necessary for comfort. The debt of Italy is two thousand million dollars, and a third of the produce of the land is absorbed in taxes. There are no great industries as in other countries. The people are a prolific and active race. Many leave their country to seek employment elsewhere in Europe, and several hundred thousand emigrate beyond the ocean every year, principally to the Argentine Republic where they are said to be engaging to a vast extent in the production of wheat and cattle. Those who remain at home undergo every species of privation. They live on the most sparing diet and very much upon unsalable refuse, which produces *pellagra* and other diseases. In the north of Italy, where their toil is unremitting, it is said they are sinking into stolidity. In the south, where they refuse to be made beasts of burden, they become lazzaroni, beggars, or robbers. In central Italy a man and his wife may

earn twenty-four cents a day when they can get work. Land, as in Germany and France, is very high. The uninhabited and uninhabitable pasture lands around Rome rent for about $8 an acre per year. I have elsewhere spoken of the general good temper and kindly disposition of the Italian peasantry. They have, however, one great vice. They are prone to jealousy and quick to anger, and as capital punishment has been practically abolished, it is sad to say that murders or at least homicides are fourteen times as numerous as in Great Britain—where they are numerous enough.

The annual income of the Italian people averages a little less than $60 per head per annum.

Of Austria I can give no account in a condensed form. No general terms will apply to the thirteen distinct races which inhabit the dominions of the house of Hapsburg. A little more than a fourth of them are Germans, and to them I may apply what I have already said of their race. Most of them are peasant proprietors. The rest are Magyars, Slavs, Czechs; a degraded peasantry dominated by a fierce and warlike nobility.

The national income is said to average $82 a head.

JOHN D. MCPHERSON.

THE LIBRARY.

—Roberts Brothers, Boston, announce the early issue of a Life of Dr. Anandibai Joshee, by Caroline H. Dall. It contains a number of original letters, and is embellished by a full-length portrait of Dr. Joshee. The author designs that the profits of the sale shall go to the Ramabai school fund.

—A monthly magazine, illustrated, with the title *Woman*, has reached its fourth number with the issue for Third month. The contents include articles upon every subject presumed to be of interest to women, of varied tastes and positions in life, including dress, housekeeping, etc., with poetry, short stories, and other literature. A considerable part of its contents would no doubt interest many of our readers: in which connection we suggest a series of papers by Helen Campbell, describing the condition of the working women of London,—a very sad but deeply interesting subject. "The Woman's Colleges in America" are to be described in a series of papers by different writers. The price of the magazine is $2.75 a year. (Office 122 Nassau street, New York.)

THE idea that education is dangerous to religion and morals is the fear of a timorous and sceptical person, who secretly suspects that religion and morality have no solid basis, and that if too much light is let in, people will find it out. It is half-education that is dangerous. It was a wise man who said that a little learning tends to make people sceptical, but profounder knowledge inclines them to faith—*Woman's Journal.*

LIFE hath no blessing like an earnest friend; than treasured wealth more precious, than the power of monarchs, and the people's loud applause.—*Euripides, B. C.* 460.

FRIENDS' SCHOOLS IN THE WEST.

THE earnest letter from a correspondent at Genoa, Nebraska, will no doubt attract attention among our readers. We venture to make some remarks upon it, in order to aid, as we hope, a profitable discussion of the subject. In the first place, we assure our correspondent and those who may feel with her, that there is no disposition here, either among the immediate workers for Swarthmore, or the body of the Society, to sacrifice any part of the field in order to unduly help any other. We believe it entirely true that the whole work of education amongst us needed the uplifting which Swarthmore has given and can give, and that without this there would have been a much more serious declension of the Society. This was the conviction which animated Benjamin Hallowell and the other earnest Friends and practical educators who labored so earnestly to establish the College, and we have no doubt of the soundness of their judgment. It has had an influence which is felt in all directions and in many ways, among our membership. And, at the same time, local schools have not been neglected in the East. Many of these have been materially improved, several established, and some reopened. There are many Friends who feel a special interest in this work, and,—we especially refer to Philadelphia Yearly Meeting,—the time and means of Friends have been freely given to it, for several years past.

What is possible in the West? This is a question not easily to be answered. It must be remembered that, so far, most of the Friends' schools are in localities where Friends are numerous. After counting some three or four within the limits of New York Yearly Meeting, there are few others except in Philadelphia and Baltimore Yearly Meetings. There has not been much experience of efforts to establish such schools where Friends are few. Perhaps Washington City may be the most marked example of success, under such conditions, but it will be remembered, of course, that we have there a class of patrons to draw upon who are of exceptional character and are able to pay a good charge for tuition.

We hope for some early results, now, from the George School, in the way of a practical education,

at moderate cost, for those who do not want to take a college course. We hope there will not be undue delay in beginning the work. We sympathise with the words of our Genoa correspondent when she reminds us that for the children who are now to be educated time is passing, and that they cannot wait. But the George School will be located in this part of the country, (by the direction of the testator), and it can help supply the Western needs only in cases where young people can come to it as boarding scholars.

We believe that there *are* places,—Genoa may be one; we do not know,—in the West, where, though Friends are not numerous, a school under their care would be sustained. But we must remember that education in the Western States is largely sustained by public funds, and that even the higher work in colleges and universities,—as, for example, that at Ann Arbor,—is quite inexpensive. Schools that should live in competition with these must have some good reason for being.

If it *be* possible to establish and sustain such schools in the West, there will be, we hope, an earnest desire to aid them in every proper way. Swarthmore may have graduates who will help forward the work, in the true missionary spirit. Attention has so far been but little directed to the Western field, and the problem there is a new one.

TAKING A STRONGER POSITION.

It is probable that not very many of our readers follow closely the progress of the "Andover Controversy." It has, however, been mentioned, from time to time, in our columns, and has lately taken so interesting a turn as to demand further attention. Under the caption "The Newest Orthodoxy," a friend contributes elsewhere a paper giving some recent developments. It will be recalled that the professors at Andover, when confronted with the difficulties of the missionaries, developed the theory that for those heathen who had not "heard of Christ" there might be a probationary state after death. But in the meeting of the Missions Board, at Springfield, sometime ago, some of those who oppose this idea of the professors took up a new ground,—new to them,—and reverted to the very principles of Quakerism, finding in the abundant and grand doctrine of Immediate Revelation a conclusive and adequate relief for the missionary dilemma. The article elsewhere cites some of these expressions by speakers and writers prominent in the "Orthodox" churches, and makes plain to the reader what is the ground they have now taken.

The consequence of this has been that the Andover professors now find themselves obliged to controvert the Friends' doctrine, and their organ, the *Andover Review*,—a very able periodical in most respects,—takes up for criticism the views of Robert Barclay, in one of its latest issues. As the matter now stands, therefore, the two parties to the "Controversy" are both alike abandoning the doctrine of eternal damnation for those who are ignorant of the Christian Gospel, and while one has evolved the theory of a future probation, the other is inclined to fall back upon the ground where Quakerism securely rests.

EDITORIAL NOTES.

The great storm of last week was, by common consent, decided to be the worst ever known in this latitude. Its centre seems to have been in the region of Philadelphia and New York, and it extended along the coast south to Washington, and north to Boston. Beyond those cities, in either direction, it was not so serious. Inland, it did not go very far, and ships that were well out at sea reported only the average weather of the season. The worst feature about it was the violent wind, which began, (we are speaking of the neighborhood of Philadelphia), early in the morning of the 12th, and had hardly calmed at all at noon of the 13th, nor ceased entirely by the following morning. It was this that did so much to block railroads and country roads, and prevent the usual work to keep them clear.

* * *

The storm and its effects, including the detention of travelers, the interruption of telegraphic communication, etc., furnished the one theme of conversation during the whole of last week, and is still scarcely laid aside, at this writing. The editors of the Intelligencer and Journal, like other people, had their operations interfered with, and the issue of the paper was nearly a day late, to which delay no doubt the interruption of mails added a further one. We may mention here that it is our endeavor to get the paper as far West as Chicago, and as far North as Rochester, by the mails of Seventh-day, so that it may be in the hands of subscribers by First-day. As it leaves here, (except in cases of accidental detention, such as that of the storm), on Fifth-day evening, there should be no difficulty about this.

* * *

The death and funeral of the aged Emperor of Germany have drawn attention to that country and its affairs. The funeral was a great pageant, with much military display, all based upon that governmental idea and social situation which our correspondent in Brussels alluded to in his letter published last week,—that the "profession" of the soldier must be the foundation of every one's claim to importance. The Emperor himself thoroughly embodied this idea. He was a soldier all his life, and though not a great general, was an extreme type of the military school. From 1848, when he was prominent in putting down the efforts of the German people to obtain a more free and constitutional system of government, to his campaigns in France, in 1870, he was always a man of the sword and the cannon. His burial hardly belongs to the age in which we live. It was a mediæval scene, or such as might be referred to the day

of the warlike Goths, when they buried Alaric, their fierce king, beneath the bed of the Italian river.

* * *

This military despotism of Europe is a sad and discouraging spectacle. The question forces itself upon us, How could the kings and princes, the potentates and personages, who were gathered at Berlin meet around the tomb for the purpose of manifesting the respect of the several nations which they represent, and join in the anthem to Him who liveth and abideth forever, with professions of good will upon their lips, and yet nourish in their hearts schemes and intrigues against one another, that in the near future may break out into strife and war?

* * *

It should not be thus. The investigations of science,—the great marine and geographical surveys,—the explorations into the vast fields of nature,—the progress of the world's industries, the development of the wonders of the heavens, and the immense resources that wait to be made the handmaids of peace and plenty in the abodes of men, offer to the race better and far more ennobling returns than war with the horrid cruelties perpetrated upon one another by nations whose common origin and common hopes should bind them together. The time is past when it should be the interest of any people that war should prevail. Ours is the industrial age, and, more than that, the age when the Christian precepts should at last be accepted in their fullness.

MARRIAGES.

HOLLINSHEAD—HILLMAN.—By Friends' ceremony, in the presence of Jesse Pratt, Mayor of Camden, N. J., Second month 29th, 1888, Nathan Hollinshead and Elizabeth V. Hillman, both of Moorestown, N. J.

PYLE—YEATMAN.—At the residence of the bride's parents, Third month 8th, 1888, under the care of Centre Monthly Meeting of Friends, Joseph Pennock Pyle, M. D., of Wilmington, Delaware, son of John and Mary E. Pyle, and Gheretein, daughter of John M. and Lavinia P. Yeatman, of Norway, Chester Co., Pa.

DEATHS.

HALLOCK.—On Seventh-day, Second month 25th, 1888, at his residence in Plainfield, N. J., after a short illness, George Hallock, in his 82d year; an elder of Rahway and Plainfield Monthly Meeting. Interment at Chappaqua, New York.

HALLOWELL.—In Germantown, on the morning of Third month 13th, 1888, Elizabeth L., widow of Thomas Hallowell, in her 75th year.

MARIS.—In Willistown, Chester county, Pa., on Sixth-day, 16th of Third month, 1888, Caleb J. Maris, in his 82d year; a member of Goshen Monthly Meeting. Interment at Willistown burial ground.

MARSHALL.—At Lima, Delaware county, Pa., Third month 16th, 1888, Rachel E., wife of Humphrey Marshall, in her 41st year.

PASSMORE.—In West Chester, Pa., Third month 15th, 1888, Sarah L. Passmore, in her 91st year.

STUCKEY.—Third month 8th, 1888, Thomas William Stuckey, of Philadelphia, in his 59th year.

Although not a member of our Religious Society, the removal of this friend deserves more than a passing notice. He was an Englishman and possessed of those characteristics which make us look back with admiration at our English ancestors who were firm in what they believed to be right and in the resistance of what they regarded wrong. Had he lived in an earlier day doubtless his name would have figured prominently in Sewel's "History" and Besse's "Sufferings."

In earlier life he mingled with literary and dramatic celebrities and afterwards was a minister of the Baptist persuasion. This experience, as well as his imprisonment through ecclesiastical influence, made him a severe speaker on the "hireling ministry." He was a thoroughly convinced Friend, and could present our position with much clearness and force.

A man with such positive characteristics could not do otherwise than ofttimes make mistakes, which he had to atone for, and although he ardently desired a membership in our religious body, antipathies created by his plain speaking and ardent denunciation would naturally be in the way. J. M. T., Jr.

WORTHINGTON.—At their residence, in Byberry, Phila., Third month 13th, 1888, Elmira K., wife of Spencer Worthington, in her 64th year.

Rebecca N. Webster.

At a stated meeting of the Joint Committee of Friends' Central School, held Third month 13th, 1888, the following minute was adopted and entered upon the Records:

"A feeling of sadness spread over the Committee during the session held this day, upon allusion being made to the death of our friend, Rebecca N. Webster, which occurred on the 10th inst. We are sensible, in her departure, that we have sustained a loss that will be long and deeply felt. She was attentive, faithful, and earnest in the performance of her various duties as a member of this Committee, and unfailing in her interest in the welfare of the schools under its care, which service was rendered with a simplicity and modesty that commended her to our love, respect, and grateful remembrance."

The Clerk is directed to furnish a copy of this minute to the husband and family of our valued departed friend, with the assurance of a sincere sympathy with them in the bereavement they have sustained.

Extract from the Minutes of the Committee on Temperance of Philadelphia Yearly Meeting, First month 21st, 1888:

"Ezer Lamborn, a valued member of our Committee, has been removed by death since our last meeting,—a noble example of earnestness and faithfulness to manifest duty which continued into advanced years. His punctual attendance at our meetings and devotion to duty is worthy of imitation. Sympathy with his wife, who has been a partner through long years, was expressed."

James H. Atkinson,
Annie C. Dorland, } Clerks.

Plain, straightforward morality, and every-day righteousness are better than all emotion, and dogmatism, and all churchism, says the world, and Christianity says much the same; but plain, straightforward righteousness, and every-day morality come most surely when a man is keeping close to Christ.—*Maclaren.*

Around the hearthstone should be nobleness, honor, purity—the very spirit of the love, the very expression of good-will.

SCRIPTURE LESSON, NO. 13.

FOURTH MONTH 1st, 1888.

TOPIC: NEGLECTED OPPORTUNITIES.

GOLDEN TEXT:—"How often would I have gathered thy children together, even as a hen gathered her chickens under her wings, and ye would not!"—Matt. 23: 37.

READ Matt. 22: 1—14.

THIS parable refers to the Hebrew nation, and was intended to illustrate the kindness and love of the Heavenly Father, as manifested in their history and the want of reverence for him and for his laws, shown in the treatment of the prophets and teachers whom he sent from time to time among them, to instruct them in the Divine will.

The kingdom of Heaven. That condition of peace and spiritual enjoyment that is attained through obedience to the will of our Heavenly Father.

A certain king. Our Heavenly Father is here represented as a king who provides a feast in honor of the marriage of his son. This is to illustrate how bountifully all that is needed for the sustenance of the spiritual life has been provided for us, and that he has given to each one the ability to know what he requires of us, and will enable us to perform his will.

Sent forth his servants. These are the good men and women whom he has qualified and appointed to teach and to lead the ignorant, and those who for any cause have failed to hear the Divine Voice in their own souls, and to show them how they may keep in the right way of life.

Go ye into the partings of the highways, implies a general invitation to all people everywhere, without regard to the outward condition, to come into the enjoyment of the kingdom of heaven.

The wedding garment. The garments worn on festival occasions were chiefly long white robes, and it was the custom for the person who made the feast to furnish these robes to his guests. The man who did not avail himself of this usage manifested a spirit unworthy of a guest and was with propriety cast out of the guest chamber. Here we see that though our Heavenly Father has done so much to make it easy for us to be his guests, there is still something left for us to do,—we must put ourselves in a condition of spirit that is comparable to having on the wedding garment, before we can come into this blessed kingdom.

All along in the history of the human family there have been prophets and teachers sent to call the disobedient and the unhappy, and all who have no love for goodness, to come into this better condition represented by the marriage feast; and those who would not come have continued to disregard the invitation of the king, and so lost the good enjoyment which he had provided for them, choosing rather to find their happiness in the pursuit of earthly gains. Others have shown their unwillingness to hear the divine message by cruelly putting to death those who were sent to instruct them. Jesus, the beloved Son, and nearly all of the Apostles, besides multitudes of ministers and teachers since their time, suffered unspeakable agony and torture at the hands of those whom they were sent to teach the better way of life.

Thus we see how opportunities are neglected which would be of never ending value. It is that we may gather such lessons as these that the records of the past are so important to us. The experiences of others are opportunities for us, if we but read them aright. We are not to depend solely upon them, for each soul must tread its own path through life, but to neglect or undervalue them is as if a student should ignore all books, all observations made by other scholars in his chosen field, relying solely on himself. He might reach the desired end, but all which others had attained and garnered for his use as well as their own, would be lost to him. Let us prize, then, as we should, this Bible study. We can learn much from the far past and all along the lines to aid us in the pr t, which is indeed a time of golden opportunities.

NEWS OF FRIENDS.

PELHAM HALF-YEARLY MEETING.

From *Young Friends' Review*, for 3rd month.

FRIENDS composing Pelham Half-Yearly Meeting are widely separated. It is composed of the three Monthly Meetings of Pelham and Norwich in Canada and Battle Creek in Michigan. Some Friends belonging to the last named are living in Ohio. The meeting is held in the Township of Pelham, in the Niagara District (about 12 miles from the Falls), once in two years in the winter season. At other times it is held in Yarmouth and Lobo. This winter it was Pelham's turn, and on the morning of the 9th inst. we, of Lobo, were up betimes and preparing to reach Pelham that day, 150 miles away. The morning was severely cold, the thermometer indicating 12° below zero, and the day proved to be the coldest of the winter, scarcely rising four degrees all day. But one does not feel the cold much in the cars, and we were conveyed on excellent sleighing to and from the stations. What to us is now but a few hours' ride was to our fathers days of travel, for it was formerly accomplished by private conveyance. Lobo's complement on this occasion was 15, more than half of whom were young people. We were quite shut in by the frosted car windows, but could not refrain from melting peep-holes through occasionally, to get a view of some of the towns and cities through which we were passing, also the tempting scenery, especially about Dundas, away down in the valley, and Hamilton and Burlington Bay—but the bay was frozen over, but to our left at many times between the cities of Hamilton and St. Catharines we could see the blue waters of Lake Ontario. At St. Catharines we were met by our friends with two large sleighs, and they were needed, for our company was augmented by two cousins from Western New York. An hour's drive brought us to comfortable quarters and a hospitable home.

This section is noted for fruit raising. Peaches and grapes of excellent quality are grown in abundance, as well as the hardier fruits.

Select Meeting was held on Sixth-day, and on Seventh-day the regular business meeting. But few outside of our H.-Y. Meeting were in attendance. Elisha A. Griffiths and wife from Boston, Erie Co., N. Y., were there, and we also met our friends John

and Serena Minard from Yarmouth. Acceptable communications were offered by E. A. Griffiths and Serena Minard. The meeting was about its usual size, and the business transacted was the appointment of Clerks,—S. P. Zavitz for Clerk, and Amelia R. Page for Assistant,—the reading of the reports from the different monthly meetings, the reading of the queries and advices, and answers to the queries as received from monthly meetings, a summary of which was taken to forward to the coming yearly meeting, and the appointment of representatives to attend said meeting.

In the evening an interesting and satisfactory parlor meeting was held at the home of Josiah Ward. It was participated in by both old and young. Next day was public meeting day. The house was well filled by a thoughtful and attentive audience. Testimonials were borne by Samuel P. Zavitz, E. A. Griffiths, and Serena Minard, and prayer was offered by S. P. Zavitz. Although the thought might have occurred as it did to the disciples of old, that the multitude would have to be sent away hungry, yet we came away feeling that a measure of that same divine power which with the few loaves and fishes had fed the multitudes, had been with us, and that all had departed filled and satisfied. The weather throughout had been most propitious. Sleighing was excellent. The days were bright and sunshiny, and the cold had moderated. On Second-day we departed for our several homes. The meeting in Pelham is one of the oldest in Canada—is not large—but for a number of years has been about holding its own. There is a necessity, though, for the younger members to be willing to take up the work with earnestness and unfaltering fidelity—the work which one by one their parents are leaving to them as they are called from this stage of action. S. P. Z.

Coldstream, Second Mo. 20.

SOUTHERN QUARTERLY MEETING.

This meeting convened at Camden, Delaware, on the 29th of Second month. Owing to the changeable weather of this season and sickness in some families, the attendance was not so large as desirable. The meeting, however, was interesting, and we hope profitable. Elizabeth Lloyd and Joel Borton, Jr., members of the Visiting Committee were with us, and their labors highly appreciated by all those who were favored to be present. In the silent waiting, our eyes and thoughts turned towards the graves of the dear departed friends who lie so close to the meeting-house, and whose voices we have so often heard calling us to the truth of the Light within and the peace and joy which would follow those who were obedient to this Divine guide. We thought of the zeal of the early Friends who through inclement weather, with no public conveyances, rode hundreds of miles, surmounting almost every obstacle in order to be present at their quarterly meetings. Was the obligation greater then than now? We think not; for to-day a feeling of gratitude goes out to them, that by their faithfulness, religious principles were established which can never die, and though the Society of Friends may not increase in numbers, yet the truths which they have taught, (the same which Jesus himself both taught and lived), will yet be acknowledged as the only true and living way by which the world can be redeemed from sin.

M. J .B.

—We are informed that Isaac Wilson is safely home again after his visit to a number of the meetings within New York Yearly Meeting. He had, in the four weeks' absence from home, traveled by rail 1,700 miles, had attended thirty-five meetings, and had a very pleasant and satisfactory time. He leaves home again soon for Central and Western Ontario, and may reach Yarmouth by the 11th of the month. —*Young Friends' Review.*

—Our friend Thomas Foulke, of New York, whose health has been less good than usual, during the past winter, has gone to Jacksonville, Florida, to join the members of his own family, to remain for some weeks to come. Lydia H. Hall, one of the editors of the Intelligencer and Journal who has lately suffered much from an asthmatic trouble, has also gone South, accompanied by her husband, Thomas H. Hall, of West Chester. They left on the evening of the 15th instant, for Norfolk, Va.

EDUCATIONAL.

CONFERENCE IN CHARGE OF PHILADELPHIA Y. M. COMMITTEE.

The third and last Educational Conference for the school year 1887–88, was held on the 17th inst., at 15th and Race streets meeting-house, the Clerk of the Yearly Meeting Committee, Wm. Wade Griscom, presiding. The attendance was good and much life and interest was manifested in the proceedings.

The first question "How shall we raise the standard of honor among our pupils and how shall we manage those who are refractory?" was opened by Mary E. Speakman, Principal of the West Chester Friends' School, with a short but thoughtful and comprehensive paper upon Discipline, in which she set forth the general principles under which well-disciplined and cheerful teachers would proceed by precept and example to lead their pupils into the daily practice of those virtues that are the basis of honor, and this being done wisely and well would lead to self-discipline, the end to be desired; and she believed "the bond of personal affection the most reliable factor in school government."

This was followed by a longer and more elaborate, but a lively paper by William W. Birdsall of the Boys' Department of Friends' Central School. He took no less high ground in regard to the character and personal influence of the teacher.

Perhaps the keynote of the writer in regard to government, is that "it is absolutely essential not only to the comfort of the teacher but to the success of his work, that he should be able to enforce prompt, cheerful, uniform obedience to regulations."

The best that is in our pupils should be appealed to, and they should be led, if possible, to respect themselves; but one should not be retained in the fold if he is leading nine or ninety and nine astray. All temptations should, as far as possible, be removed,

for even then enough will be left; and in this connection he presented some very thoughtful words in regard to "the causes of a low standard of honor among pupils." He thinks "one of the most prominent causes among us is an excessive spirit of emulation," and he would try to remove as far as possible the "excessive feeling of the importance of marks, ranking, and promotion." It is impossible in a short report to do more than indicate the spirit of these excellent papers; but it is hoped that the readers of the INTELLIGENCER AND JOURNAL may have the opportunity of perusing them for themselves.

The reading of these essays was followed by a very animated discussion on the marking system, corporal punishment, the duties of committees, and other subjects brought out by the essayists, participated in by Evan T. Swayne, Arthur H. Tomlinson, Geo. L. Maris, Wm. W. Birdsall, Wm. Wade Griscom, Edward H. Magill, Isaac T. Johnson, Allen Flitcraft, Clement M. Biddle, Thomas Worrell and others.

One essayist said "the days of the ferule are gone." One speaker asked if it is to be understood that there must be no corporal punishment. Are there not cases where it would be better to use the rod rather than the scalpel? Is there not loss in giving up all the *old ways?* One speaker knew a case where as a last resort the rod was the means of reformation. But the general sentiment was very strongly but mildly voiced against the rod. One speaker in reference to discipline thought that if the views of the first essayist were practically enforced in the primary grades, there would be little trouble in the higher. Reference was made to Thomas Foulke, late Superintendent at Swarthmore, who in matters relating to discipline found it well for all concerned to get into the quiet. The same might have been said of Benjamin Hallowell.

The "marking system" is frequently brought into notice and a good deal was said on the subject at this conference. Happily there is an intelligent growth against it as generally used, and our best teachers are letting go a little and a little more. It is generally felt that some record should be kept so that proper reports may be made to those who have a right to know the standing and progress of any pupil. Why not discard all *per cents?* Let the words *excellent* and *failure* be omitted; the former because it means "excelling or surpassing others," and the latter because it is generally improperly used. A scale of quality denoted by the terms *Very satisfactory, Good, Passable,* and *Poor,* or words of some such import, indicated by the number 10, 8, 6, and 4, could be used; and a status intermediate between these and below the lowest would be shown by the numbers 9, 7, 5, and 3. Or the scale might be used the other way; but as the percentage scale has been used so long where the highest numbers indicates the best, the first plan might be the most satisfactory; but if it is desired to get as far as possible from the old system let No. 1 be the best. Every teacher should be able to make a record of each pupil's place, at least once a week, in each subject under consideration.

In discussing the duties of committees in relation to the discipline of schools, there seemed to be a very general agreement that in all cases where matters were referred to them they should exercise great care and caution. In cases of difficulties between teachers and pupils they should always hear the teachers before giving any decision to pupils or their parents; and when a case is decided by them their decision should be given to the parties through the teacher who is the recognized disciplinarian of the school. It was regarded as important to "stand by" the teachers. "Get good teachers and stand by them," said one. If such could always be had, committees would have little trouble, there would be little difficulty in raising the standard of honor, and there would be few refractory pupils.

After a short recess, which was enjoyed in social mingling, "How should writing be taught?" was taken up by Wm. R. Glenn, formerly teacher of writing and accounts in the College of Commerce, Philadelphia. He spoke of the necessity of correct position at the desks on physiological grounds, and of the importance of holding the pen properly as a habit from the first. The pupil should face the desk so both arms may be on it, keeping both shoulders the same height. The pen should never be tightly grasped, as this gives the hand a cramped and painful position, but it should be held in such manner that free movements of the fingers may be secured. Teach the movement of the forearm on the muscular portion while the hand rests on the nails of the third and fourth fingers, the wrist not touching the desk. Take great pains to get the right forms into the children's minds, at the start, and aim to make good plain writers. Quite a number of questions were asked and answered; but as the meeting had been in session a long time no general discussion was had on the subject. According to the good order of Friends, the meeting settled into the quiet and then adjourned. H. R. R.

THE WESTERN NEED OF FRIENDS' SCHOOLS.

Editors INTELLIGENCER AND JOURNAL:

My heart is too truly awake to the importance of the subject before us, for me to let it rest just where it is, without further effort to bring about some practical result. I have no desire for it even to seem as an attack upon Swarthmore, for I only wish well to it, and that the light therefrom may broaden to its fullest limit. But just now we must look at the present and its needs, while the years are stealing away the seedtime of the children's lives, and the world is approaching nearer and nearer to them, ever ready to lure them away from our loving hold.

The reception of a letter from a Friend in Ohio, —a stranger to me,—thanking me for writing on the subject, and also saying that my sentiments were truly hers, and those of the majority of the members of the meeting to which she belonged, somewhat surprised me, coming from so far east as Ohio. There was a portion of the letter which seemed to be a cry from many hearts, and which I feel it my duty to pass on, that it may reach ears prepared to hear, and that minds qualified to cope with the subject may not pass it lightly by. The letter says:

"We receive the Appeals from Swarthmore, their reports of donations and of success, and of their joyful meetings and lectures which would be a feast to my soul. And numbers of our young people are hungering for *a taste only* of that which they are enjoying to the full. But alas! we are not able to secure such advantages for our children, and our Society is sadly showing the effects of a few having the advantages that justice and right demand should have been scattered broadcast to the whole of the Society. I have mourned over it ever since I was a school girl, and hungered for a chance to attend a Friends' school. I am now fifty-four years of age, and have always belonged to the same meeting, have done all in my power for the good of the Society, but still there is no Friends' school in our reach. The wealthy Friends could send their children away, but others had to go where their surroundings were calculated to draw them from Friends, and the result is a dwindling of the Society.

"I do feel so anxious that Friends look into this matter. Swarthmore does not send any of her graduates out to try to start schools in these remote places to perpetuate the principles they have been taught; or to encourage Friends in any way who live far from the popular places."

Now, Friends, it appears that a proving time is fast approaching, when it will be proven whether there is vital force sufficient left in the Society to insure an onward, upward growth, or whether the time of withering is upon us. The result will depend much upon the solving of the problem before us, for truly unless the youth be shielded, directed, and guided, we cannot expect vigor and life to remain.

Now those of us who would like to have schools started among us, would like to know what to expect, and if there are those to whom we may look for support, and what is the first and proper move to make.

MARIANA B. TRUMAN.

Genoa, Nebraska.

WESTERN FARM MORTGAGES.

[We print below further extracts from communications received from parties engaged in negotiating loans on mortgages in the West.—EDS.]

PHILADELPHIA, 3d month 3d, 1888.

Editors INTELLIGENCER AND JOURNAL:

YOUR favor of the 2nd. inst. is duly received, and we take pleasure in complying with your request for information on the subject of "Western Mortgages." I am well aware that there are some good people who are under the impression that the Western farmer is greatly oppressed by excessive rates of interest and commissions exacted from him. To correct this impression I will state facts that are patent to all. It is well known that many years ago 10 per cent. and 12 per cent, and even much higher than that were common rates of interest in the West, whereas now the larger and more conservative Loan Companies loan directly to the farmer for 6 per cent. and a small commission that will enable them to handle the business at a living profit. Were it not for the large Loan Companies that are organized for the safe and systematic conduct of the business of loaning Eastern money to the Western farmer, this condition of affairs would have been impossible and the Western farmer would still have been paying the very high rates prevailing a few years ago. The Western mortgage companies have done much for the development of the West and the prosperity of its people, for they are the means of sending a large amount of money to those parts of our country which can make profitable use of it. Through the medium of these companies, farmers are enabled to borrow money and improve their farms much faster than could be done under the feeble stimulus of the money of local savings only. Their comfort and prosperity have been materally increased; the grain-fields and stock farms of the West have been opened and developed; happy homes and fields of waving grain are now to be found where not long since the buffalo roamed at will; the settlement of the great West has been greatly advanced so that it is now one of the most prosperous sections of our country. Besides this, it has opened a wide field of investment for the money-savers of the East and has added materially to their prosperity by giving them a better income than they could get at home. Thus the prosperity of the East has been bound up in the rapid advance of the West and the gain of one has been the gain of both. To show that the farmer is not unduly oppressed and that he knows what he is about when he borrows this money at current rates, to aid him in developing the resources of nature, let us take the State of Illinois for an example. It is not many years since her farmers were paying 10 per cent. and 12 per cent. interest and even higher rates, and now she has not only discharged the indebtedness incurred at these high rates but she has accumulated, besides, a sinking fund in the hands of her own citizens sufficient to provide for all local wants, and indeed many of her communities are now lenders to the more distant sections of the West. Let us look for a moment at the State of Kansas, a State which has felt the stimulus of Eastern capital in its development more largely than any other in the West, and note that the Kansas farmer has not only felt no oppression but has grown constantly richer. The total assessed value of property real and personal in the State of Kansas in 1861 was $24,737,000, in 1870 it was $91,645,000, in 1880 it had increased to $160,000,000, and in 1886 it had reached the enormous total of $277,000,000. These figures represent only the assessed value of the property—the real value for the year 1886 being over $600,000,000. The assessed value of personal property for the same year was $55,000,000, or a real value of $110,000,000. Thus the farmer has reclaimed the prairies which before were valueless, and by his energy, thrift, and intelligence, aided and stimulated with Eastern capital, has rendered them thus valuable. The annual products of the farms in the State of Kansas now reach the enormous total of $250,000,000. How much of this result would have been attained without the aid of Eastern capital? Suppose the farmer had been obliged to depend entirely upon local savings, would the wild prairies have been reclaimed and rendered as valuable as they are now? Would the farmers of Kansas have owned as much personal property as they now possess? Would the products of his labor have been so large every year as they are now? Are we not bound to answer

in the negative? Indeed is it not safe to say that the development of the West has been set forward fifty years at least, by the use of the capital furnished from the East? Very respectfully,

CHAS. BENJ. WILKINSON,
(Equitable Mortgage Company.)

PHILADELPHIA, March, 5th, 1888.

Editors INTELLIGENCER AND JOURNAL:

After an experience of several years, during which I have located a large number of mortgages in the West, aggregating I believe over two millions of dollars, I am led to believe that the flow of Eastern capital to the West has added greatly in the development of that section of our country. From a personal examination made in the field, I am convinced that the farmers who exercise due care in the pursuit of their calling are greatly benefited by the capital which is sent from the older and more thickly settled States. In many cases, the first settler, who obtains his land by homestead or purchase from the Government, has little or nothing except his own hands, and possibly an inferior team of horses, with which to carve out his fortune from the land upon which he resides. After securing his title from the Government, if he can borrow a few hundred dollars, it enables him to bring his farm into cultivation more rapidly, and improve it with comfortable buildings for the shelter of his family and live stock, and each year as the improvements on his farm increase, he is enabled to enlarge the productions of his tract, until in the end he attains the position of independence for which he has been striving.

It is true that the rate of interest is higher than in the East, but I am convinced the difference is more apparent than real, from the fact that while the rate of interest is greater in the West, the amount of money borrowed in proportion to the productiveness of the property is much greater in the East, so that the farmer who has borrowed $1,000 upon his farm of 160 acres, located in the West, at an interest which, including commission, rarely exceeds 8 per cent. per annum, is in more comfortable circumstances than the farmer in the Eastern States, who has borrowed from $2,000 to$2,500 upon his farm, at the rate of 5 per cent., it being the rule that the Eastern farmer is obliged to fertilize to the extent of from $2 to $3 per acre in addition to the interest, which he is obliged to pay upon borrowed capital, and is thus handicapped to this extent in competition with the Western producer.

In some of the States of the West, notably Indiana and Illinois, farmers were obliged to pay, in the earlier periods, from 12 per cent. to 18 per cent. for money, the investment of which has in the end made them the most prosperous agricultural portions of our country; whereas, at the present time, owing to the facility with which loans are made in the West, and mortgages placed in the hands of Eastern investors, it is comparatively rare indeed for the Western borrower to pay more than 8 per cent. for his money, and, in fact, it rarely reaches so high a figure as this, except in the more recently settled parts of the newer States.

The ability to secure assistance from Eastern capitalists by procuring small mortgages, secured upon their farms, has enabled the farmers of the West to turn the prairies covered with rank grass, into the most fertile grain fields of the world, and, while it is true that the rapid increase and production of grain has so lowered its price that the Eastern farmer cannot compete in the production of the smaller grains, yet it has been of the greatest advantage to the Western farmers, by enabling them to enter the markets of the world with their products.

I can understand why sympathizers with the farmers in the East may object to the ease with which money is procured for Western borrowers, but I do not see that those who sympathize with the Western farmer have any reason to raise an objection to the facility offered him for the rapid improvement and development of his farm.

It has been the history of the great portion of the West, within the last ten years, that where the land has been acquired direct from the Government, either under the Homestead Law or by Preëmption, that a tract of 160 acres, which may be said to have cost at a maximum $200, has so increased in value that the land, without taking into consideration the buildings or fences, is worth from $2000 to $3000 within five years from its occupation by the farmer, and this in addition to affording the farmer a living for his family in the meantime.

It is thus easily seen that a farmer can afford to carry a mortgage of from $500 to $1,000, or even more upon his well-improved tract of 160 acres, rather than to work on year after year with his single pair of hands, and one team, and laboriously break and plant from 10 to 20 acres per annum, when by the assistance of the money borrowed, he has been able to bring from one-half to three-quarters of his tract into cultivation, besides improving his farm with buildings and fences. Very truly,

B. MILLER, Vice-President,
(Philadelphia Mortgage and Trust Co.)

Editors INTELLIGENCER AND JOURNAL:

. . . . . We place, I think, too much stress on what is known as the "legal rate of interest." Every attempt to fix by legislation a rate to which all must conform has failed. In some way or other, the true value of money, as well as all other commodities, is obtained. A legal rate seems necessary, to provide for contracts where the parties agree on no rate, or where there are judicial settlements. In Pennsylvania, the legal rate is 6 per cent.; the actual rate does not now much exceed 4 per cent. A capitalist who should insist on six for first-class loans would, at this time, be saved from "oppressing the borrower" by the fact that he could find no one to take his money. The shrewd, hard-working people who are building up the West, may be safely trusted to see to their own interest in this matter, as well as others.

In this connection it is interesting to see what the people of some of the borrowing States think of the rate of interest, as expressed in their laws on the subject. The legal rate in Colorado is 10 per cent., and there are no penalties for "usury,"—which

means liberty to contract at any rate. In Dakota the legal rate is 7 per cent., but contracts are allowed to 12 per cent. In Illinois the legal rate 6 per cent.; contracts may be made to 8 per cent. Iowa, legal rate 6 per cent.; contracts may be made to 10 per cent.; Kansas, legal rate 7 per cent.; contracts allowed to 12 per cent. Michigan, Minnesota, and Nebraska, legal rate 7 per cent.; contracts allowed to 10 per cent. In all these States there are penalties for taking over the highest contract rate.

I remember the astonishment of a staid New England banker, in Lawrence, Kansas, some years ago, when solicited to loan money on good real estate security at 2 per cent. a month. He thought it was ruin, and could hardly believe the borrower when he told him that as the property would more than double in value in a year he would consider it a great favor if he would let him have the money.

It is true there are unprincipled men in all kinds of business. They will take advantage of the needy. But the number of these is small. "Oppression" is not a profitable business in the long run, and I believe the Western mortgage business may be safely left in the hands, on one side of the large number of honorable men who are engaged in loaning money, and on the other of the owners of land who find in the help thus afforded them a means of advancement to comfort and wealth. If either of these parties need sympathy it is the former. That the bulk of the risk is on their side is shown by the fact that large numbers of investors prefer the low rate Eastern securities to these investments in the West.

Respectfully,

RICHARD CADBURY.

Philadelphia, 3d mo. 2.

IN regard to the rate of interest now paid by Western borrowers, Henry Dickinson, of New York, representing the J. B. Watkins Co., says: "Whatever the rate of interest and commission may have been in former times, the best authority informs us now that on undoubted security plenty of capital is offering at 6½ to 7½ per cent., and no commission. Where we hear of higher rates, they are cases where the security is not first-class, or the loan is too large, or an exaggerated appraisement is permitted; then the rate of interest advances, because of the risk taken. Any mortgage paying the Eastern lender over 6 per cent. should be regarded as having some element of risk. I think it can be clearly shown that the industrious Western farmer has had no helper equal to the prudent lender of small sums of money to supplement his personal efforts."

CHILDREN need checks, directions, and good influences. A well-governed child is in the grand majority of cases sure to grow into a respectable man or woman; but the noblest nature may be blighted unless the weeds of unrestrained propensity are kept down.—*Boston Post.*

CALAMITY is the touchstone of a brave mind. The winter leaves must fall that the summer leaves may grow.

NOBILITY.

TRUE worth is in being, not seeming;
In doing each day that goes by
Some little good thing—not in dreaming
Of great things to do by and by.
For whatever men say in their blindness,
And spite of the fancies of youth,
There's nothing so kindly as kindness,
And nothing so royal as truth.

We get back our mete as we measure—
We cannot do wrong and feel right,
Nor can we give pain and feel pleasure,
For justice avenges each slight.
The air for the wing of the sparrow,
The bush for the robin or wren,
But always the path that is narrow
And straight for the children of men.

'Tis not in the pages of story
The heart of its ills to beguile,
Though he who makes courtship to glory
Gives all that he hath for a smile,
For when from her heights he has won her,
Alas! it is only to prove
There's nothing so royal as honor,
And nothing so loyal as love!

We cannot make bargains for blisses
Nor catch them like fishes in nets;
And sometimes the thing our life misses,
Helps more than the thing which it gets;
For good lieth not in pursuing,
Nor gaining of great or of small,
But just in the doing, and doing
As we would be done by, is all.

—*Alice Carey.*

THREE HELPS.

IF the world seems cold to you,
Kindle fires to warm it!
Let their comfort hide from view
Winters that deform it.
Hearts as frozen as your own
To that radiance gather;
You will soon forget to moan
"Ah! the cheerless weather."

If the world's a wilderness,
Go build houses in it!
Will it help your loneliness
On the winds to din it?
Raise a hut, however slight,
Weeds and brambles smother,
And to roof and meal invite
Some forlorner brother.

If the world's a vale of tears,
Smile till rainbows span it;
Breathe the love that life endears,
Clear of clouds to fan it.
Of your gladness lend a gleam
Unto souls that shiver;
Show them how dark Sorrow's stream
Blends with Hope's bright river.

—*Lucy Larcom.*

TRUTH lies in character. Christ did not simply speak truth; he was truth; truth through and through; for truth is a thing not of words, but of life and being.—*Robertson.*

FRIENDS' LIBRARY LECTURES: PROF. THOMPSON'S "IRELAND."

THE next and closing lecture of the course under direction of Friends' Library (15th and Race streets), will be given on Fourth-day evening of next week, the 28th inst., by Professor James MacAlister, on "The Art of Etching." The lecture on the 8th inst., by Prof. Robert Ellis Thompson, on "Ireland," was a very interesting and able statement of the facts of that theme. A friend has furnished us the following synopsis:

Professor Thompson said such questions as these were continually asked: "Why don't the Irish leave Ireland at home? Why are they perpetually bothering us about Ireland? The Germans leave Germany and become American citizens; the Scandinavians leave Norway and Sweden, and become identified in our nation, and we hear nothing from them about their native land; but the Irish are always and perpetually bringing up their home troubles and trying to mix us up in them!" Prof. T. answered these thus: The Germans leave Germany to avoid military duty, the Scandinavian leaves his home to find better soil and greater proceeds for his labor. The government under which he has lived is free, and he loves his native cliffs, whose barrenness only drives him to seek more fertile fields. Not so with the Irish; he is an *exile* from his native land. He leaves it not because he does not love it, or because of his desire to seek better fortune, but because he simply cannot exist there. Ireland is a country under alien rule, and no country on the face of the globe is fit to make laws for another country, no matter how wise or good they may be; but least of all should the Irish be governed by the English. A natural hatred exists between them, because of this innate difference of temperament; one the hot-headed, imaginative, poetical, the other pugnacious, self-important, prosaic, domineering. One the Celt, the other the Saxon.

And not only this: Ireland suffers under a condition of things that inevitably brings disaster,—that of a monotony of industry. It is an anomalous truth that the countries which are only food producing are the only countries visited by famine. They have "all their eggs in one basket," and when that falls they are ruined. Examples of this are China, India, Asia Minor, and England.

On the night of August 5th, 1845, a blight fell upon Ireland. When they went to bed that night all was bright and flourishing, with the prospect of a good crop, but when they looked out the next morning the fields were black and gave a horrible stench. The death was upon them and those who could exist themselves, were afraid to open their doors, lest the beggar should fall in a corpse! There were not enough living to bury the dead, and in many places the hovels were torn down and allowed to fall over the dead inmates. And yet that same year seven hundred thousand bushels of potatoes were exported from Ireland! Ireland is proportionally the largest food exporting country in Europe, and yet it takes the proceeds of it all to pay the landlords. It raises food enough to feed twenty-four millions of people, and it now has a population of but five millions, against eight millions at the beginning of the century.

England has been trying various remedies; she has been fertile in schemes of relief for Ireland; with new landlords and land laws and emigration she has tried to improve the situation. She has done everything but allow Ireland to have her own Parliament to regulate her own affairs aud protect her home industries.

Ireland abounds in mineral wealth,—in coal beds and iron mines, all undeveloped and unused. She is surrounded by some of the safest and most beautiful harbors in the world, and is traversed by rivers that would afford ample water power for mills. The iron of Antrim is even now being exported to America to make Bessemer steel, and in Tyrone there are important coal beds. The landlords themselves have seen that mechanical and manufacturing industries ought to exist, and many of them have done nobly, and labored heroically to establish cotton, woolen, and iron mills. But they have all inevitably, after a short existence, been obliged to close; they could not in their infancy, compete with the old-established manufactures of England, whose home-protected products could be made to undersell their own.

Land Leagues are of no avail. Mr. Parnell's plan cannot reach the difficulty, for even if they owned the land they cannot earn enough to assure a competency under the existing state of things. The lecturer's father was a land-holder under the Crown, and had to pay but a penny an acre "quit-rent," and yet he and his brother emigrated to America, with their families, because they saw no prospect of getting "ahead in the world." The only and sovereign remedy, in the estimation of the lecturer, is a Home Rule Parliament in Dublin, which would enact laws protecting home industries.

S. M. G.

MIDDLE STATES COLLEGE ASSOCIATION.

A NOTE from President Magill, of Swarthmore, dated the 15th instant, says that the following circular has been sent to the faculties of the Colleges of the Middle States and Maryland:

"For some years the question of forming a College Association, to take into consideration the many and important questions which affect the interests of the colleges of our country, and to bring to bear upon them the advantages of organized, coöperative action, has claimed the attention of some of the officers of the colleges of Pennsylvania. This resulted in the formation, last summer, of 'The College Association of Pennsylvania,' which met in the city of Lancaster, and adopted a plan of permanent organization, a constitution, and by-laws. Fourteen of the colleges of the State were represented at this meeting. We now invite the colleges of the Middle States and Maryland to meet with us at our coming Annual Meeting, which is to be held at the University of Pennsylvania, in Philadelphia, on the 5th and 6th of July, with a view toward such modification of our organization as may be necessary to make to include the colleges of these five States. We trust that these colleges will send as many representatives as possible to this meeting which promises to be one of great in-

terest and importance to the various colleges of these States. We desire to know what colleges will be represented, and the probable number of representatives sent. A programme of the exercises of the different sessions of the meeting will be forwarded, early in June, to all from whom responses are received.

"T. L. SEIP, D. D., Pres. Muhlenberg College,
Chairman of Exec. Committee.
"E. H. MAGILL, LL. D., Pres. Swarthmore College.
Secretary of Exec. Committee.

"Address acceptances and replies to the Secretary, Swarthmore College, Delaware Co., Pa."

ANNIE CALEY DORLAND has been giving familiar talks on the Life and Poems of Henry W. Longfellow, to the pupils and friends of Moorestown High School. She has just commenced a like interesting course on John G. Whittier.

NEWS AND OTHER GLEANINGS.

—The first electric street railway in Wilmington, Delaware, has been opened to public travel. The line is 1¾ miles in length, extending from Tenth and Market streets to Riverview Cemetery, and the cars are run at intervals of 20 minutes.

—The annual report of the Pennsylvania Railroad Company for 1887 shows the gross earnings of all its lines to have been $115,515,506; operating expenses, $77,238,082, and net earnings, $38,277,424. In all $106,128,215 tons of freight were moved and 63,153,705 passengers carried.

—A successful exhibition has been given in New Orleans of the new machine for cleaning cottonseed. Its chief feature is that it cleans the seed perfectly by steel brushes, leaving the lint as clean as that from the gin. Experts are of the opinion that it will revolutionize the present system and largely increase the quantity of lint cotton.

—A recent contribution to telephonic literature is an anecdote which tells how a Manchester (England) young lady "phoned" to her father's office to know if her dog was there. Such being the case, she asked to have the animal held up to the transmitter, and when this was done she whistled to him and ordered him to come to her. The dog pricked up his ears, and as soon as he was placed on the floor started for home.

—The London *Times*, March 2d, says: "An interesting discovery has just been made on the seacoast between Whitstable and Herne Bay. Mr. R. Goldfinch, a resident of the latter town, was walking along the beach when, in the neighborhood of Swalecliffe his attention was attracted by a projection out of the clay in the Piocene strata. Further examination showed the object to be the fossilized remains of some animal, and with assistance the specimen was dug out. The encrusted clay having been removed, it was found to be the tusk of a hairy northern elephant (*Elephas primigenius*). In length the fossil is 57 inches along the curve, and its circumference at the thicker end is about 17 inches, from which it tapers down to about seven inches. The fossil is in very good state of preservation, with the exception of the tip, a small portion of which has been broken off."

—The Litchfield, Conn., *Enquirer*, describing the storm's effects in that town, says: "But the most remarkable drifts are at Dr. Buel's at the head of the street. One, a little west of the house, rises about 20 feet, to a level with the eaves, nearly covering a large apple tree. There is an addition on the west of Dr. Buel's house reaching about to the eaves, which is almost completely covered by the snow, so that our reporter, walking along the top of the drift, passed completely over the roof of this part of the house, and down on the northern side. There is a drift on the east which is even higher, shutting up one of the library windows completely, and reaching nearly to the top of one of the large firs which form a hedge on that side of the house."

CURRENT EVENTS.

THE effects of the great storm had generally been overcome, in this neighborhood, by the close of last week, the railroads being in regular operation (with the exception of some much drifted branch lines), and telegraphic communication reëstablished. Many country roads, however, remained to be opened.

THE prostration of the telegraph lines between New York and Philadelphia, and New York and Boston caused some very roundabout telegraphing. A cable dispatch from Philadelphia to London was sent thither thus: Philadelphia to Chicago, Chicago to Montreal, Montreal to Sydney, (Cape Breton), and Sydney to London by cable. Communication by telephone was maintained between New York and Philadelphia, the wires being more securely put up than those of the ordinary telegraph.

MUCH damage was done to vessels lying at the Breakwater, at the mouth of Delaware Bay, several being wrecked and a number of lives lost. The disasters to shipping generally were not so serious as had been feared, as the storm did not extend far out to sea.

ON the 14th instant, Governor Beaver gave another respite, (to Fifth month 2d), to Samuel Johnson, the colored man under sentence of death at Media, Pa.

THE funeral of the Emperor of Germany took place at Berlin, on the 16th instant, and was made the occasion of much display. His son has assumed the dignity of Emperor, having come from San Remo to Berlin, immediately after his father's death. His health is uncertain, but he has been discharging the duties of his position. His messages and addresses have a peaceful character.

A FRIGHTFUL railroad accident occurred at Blacksbear, Georgia, on the Atlantic and Gulf Railroad, 75 miles south of Savannah, on the 17th inst. More than twenty persons were killed, and a number injured. The train fell through a trestle work, immediately after crossing a bridge, the accident being caused, in the first place, by a broken rail, which threw one car off the track. When the derailed car struck the trestle work it gave way, and the entire train, with the exception of the engine, dropped through, and with the exception of one car, was completely wrecked.

NOTICES.

*** Haddonfield First-day School Union will be held at Moorestown, N. J., Seventh-day, Third month 31st, commencing at 10 a. m.

All interested are cordially invited.

MARTHA C. DECOU, }
MARY R. WILSON, } Clerks.

PUBLISHERS' NOTICES.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

FRIENDS' CALENDAR.

A daily Calendar makes a most fitting and appropriate gift. It is a daily reminder of the giver, throughout the entire year. Moreover, while elegant and useful, it is inexpensive. The Friends' Calendar for 1888, is a handsome design 9x12 inches, with a portrait of George Fox, a picture of his home, and a tablet containing a slip for each day in the year, with helpful quotations from Friends' writings. Price 50 cents; 12 for $5.00. Sent postpaid on receipt of price.
FRIENDS' PRINTING HOUSE S. W. COR. 6th and ARCH

SWARTHMORE COLLEGE
OPENS NINTH MONTH THIRTEENTH.

Thirty minutes from Broad Street Station, Philadelphia.
Under the care of Friends, but all others admitted.
Full college course for both sexes; Classical, Scientific, and Literary.
Also a Manual Training and a Preparatory School.
Healthful location, large grounds, new and extensive buildings and apparatus.
For Catalogue and full particulars, address
EDWARD H. MAGILL, A. M., President,
Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.
NEWTOWN SQUARE, PA.

Terms, $150 to $175 per year.

WORK OF THE ASSOCIATION.

The work of the Association is chiefly *to raise funds.* These are sent to the support of two schools for colored youth in South Carolina,—the Schofield Normal and Industrial School, at Aikin, and the Mt. Pleasant School, near Charleston, in charge of Abby D. Munro.

HISTORY OF THE SCHOOLS.

Both these schools have been in existence since the arly years of the work of colored education in the South, soon after the close of the war. The Aiken School was begun in 1868, with the support of the Germantown, (Philadelphia) Branch of the Freedmen's Union Commission (of which Sarah F. Corlies was Secretary, and Elizabeth Dorsey, Treasurer.) In later years it was sustained almost entirely by the exertions of Martha Schofield. In 1886. however, finding the burden of its support too great, she made an appeal to the Yearly Meetings of Friends, in Philadelphia and New York, for aid, and as part of the response to this appeal, this Association was organized at Philadelphia, in Sixth month, 1886.

The Aiken School has a valuable property (largely accumulated by Martha Schofield), which has been placed in the hands of a Board of Trustees. A beginning has been made in the formation of an endowment fund.

The school at Mt. Pleasant was established in the First month, 1866, in charge of Cornelia Hancock, under the supervision and with the support of the "Friends' Association of Philadelphia, for the Aid and Elevation of the Freedmen," and was maintained for a number of years by that excellent organization. In late years, however, its funds have been raised, from year to year, almost entirely by Henry M. Laing, Treasurer of the Association, who like M. Schofield, found this tax upon him too great.

CHARACTER OF THE SCHOOLS.

The Aiken School had last year 270 pupils, divided into nine classes, with eight instructors. This year, the attendance is larger, and an additional teacher is employed. There are, this year, about 300, of whom 40 are boarding students. Members of the highest class are prepared to become teachers. All are taught industries,—the girls being taught to cut, make, and mend garments, etc.; the boys instructed in printing, carpentry, and many details of labor about the school property.

The Mt. Pleasant School had last year about 100 pupils, with three teachers. They average somewhat younger than those at Aiken. The instruction of this school has been carried on for two years in a church, granted free of charge for the purpose, the school building having been demolished by a storm in the summer of 1885. (A special fund for rebuilding has been partly raised.)

THE NEED FOR CONTINUED AID.

Those engaged in the work of instructing the colored people appeal to us to continue a measure of aid. While some progress has been made in establishing public schools in the South, they are yet very insufficient. The school term in South Carolina averages not over three months in the year, and the schools themselves are too few, and seldom well provided in any particular. To withdraw from the field yet, seems like abandoning the colored people, in the very midst of the work for their elevation. Moreover, it is evident that for years to come there will be great need of schools which will do more than provide mere book instruction,—will, in addition to this, give practical training in habits of honest and orderly industry. Such work as this is done by these schools, and they are fully entitled to the confidence and help of all who are interested in the welfare of the hitherto unfortunate colored people. Money sent them is used with the utmost economy, and is made to yield the best possible maximum of results. The funds supplied by the Association go only to the compensation of teachers, and so far have not been sufficient for that purpose. The students either support themselves, or are otherwise aided.

*** THE ASSOCIATION EARNESTLY APPEALS TO THOSE INTERESTED FOR AID TO ITS FUNDS.

Statement of Henry M. Laing, Treasurer, to Seventh month 1, 1887.

TRUE NOBLENESS.

"FOR this true nobleness I seek in vain,
In woman and in man I find it not;
I almost weary of my earthly lot,
My life-springs are dried up with burning pain."
Thou find'st it not? I pray thee look again,
Look *inward* through the depths of thine own soul.
How is it with thee? Art thou sound and whole?
Doth narrow search show thee no earthly stain?
BE NOBLE! and the nobleness that lies
In other men, sleeping, but never dead,
Will rise in majesty to meet thine own;
Then wilt thou see it gleam in many eyes,
Then will pure light around thy path be shed,
And thou wilt nevermore be sad and lone.

—*James Russell Lowell.*

From *The British Friend*, (Glasgow and London).

REMINISCENCES OF MARY HOWITT.

ON the 31st of 1st Mo., the solemn tidings reached us, through her son-in-law, Alfred Alaric Watts, that at three o'clock on the previous morning, Mary Howitt "passed away" to the higher life—one more removed of the few remaining amongst us whose birth dates back beyond the commencement of the present century.

An outline of her literary career has appeared in various daily and weekly papers, and a brief allusion to her more private and domestic life will not be without interest to the readers of *The British Friend*. Both William and Mary Howitt were by birth members of the Society of Friends, but neither of them adopted, as a whole, either their distinguishing views or practices. William Howitt's uncompromising advocacy of peace principles was, however, well known, and as a family the Howitts conspicuously exemplified in their daily lives a practical belief in the teaching and guiding of God's Holy Spirit. The restraining influence of Mary Howitt's early training had doubtless a valuable place in the development of her singularly harmonious character; whilst the surroundings of her childhood strengthened that innate love of nature and all that was beautiful, so conspicuous in her writings, and which largely contributed to their influence for good. In a letter to a dear aged friend, a member of our Society, written within the last two years, she says: "I think we both of us have to give thanks, and to bless the good Providence of God, for having given us birth of parents whose lives were simple and pure. Sound health, a love of nature, and simplicity of taste were our birthright, and have descended to our children; and this I am very thankful for, although other advantages may have been wanting. But I trust that the capacity for the cultivation and enjoyment of all other gifts may be granted to us in that great coming state towards which we are all advancing."

Her "literary industry" is well known, but let us venture to lift the curtain that veiled the home-life from public view, and we shall find that as the evening closes in the literary work is laid aside, and that the remaining hours are devoted to fireside and social enjoyment and recuperation. In later life Mary Howitt's ready fingers were busy knitting for the little grandchildren, far away in Australia. To the beauty of that home-life all can bear ample testimony who had the high privilege to any extent of sharing its genial warmth. Never have I known a family in which husband and wife were more fully of one mind and heart. As the mother of a numerous family, to say that literary avocations were not allowed to interfere with maternal claims would by no means convey the truth. Not only did she reap a full measure of that reward for which every parent instinctively hopes, in the exemplary life and devoted love of each child who survived the years of infancy, but the bond of entire confidence, which united her and her daughters to one another, was a seal to the rectitude of her views on early influence and training beyond the experience of more than a very few.

It has often been a matter of surprise that Mary Howitt did not feel an irresistible impulse to devote a larger share of her time and talents to the subject of education, considering how full of loving wisdom and practical helpfulness were her sentiments on early training, when she gave expression to them either in writing or conversation, and how remarkably she was blessed in her own family. Some of your readers may find on their book-shelves that charming little volume "The Childhood of Mary Leeson," in which is portrayed the early life of her own daughter Annie, the accomplished authoress of "The Art Student in Munich," and who subsequently married Alfred A. Watts. . . . This little book evidences to a very unusual degree, an appreciation of and sympathy with, *child*-nature. In "A Pleasant Life," the preface to which bears the date of "Rome, 1871," the history of Mary Leeson is concluded.

I often recur to a familiar conversation with dear Mary Howitt many years ago, in which she remarked that if ever she had the conducting of a school, she should make *truth, obedience, love,* her daily motto. No written or spoken words have been more helpful to myself in the training of children.

Those who mourned the loss of an intimate friend, in the unexpected removal of A. M. Howitt Watts, a few years since, whilst on a visit to her venerable mother, do in a special manner know how that loving early training was blessed and made a blessing; that their own lives were indeed enriched by the influence Anna Mary Watts exerted, through the force of a nature simple, true, and sympathetic, to a degree rarely met with. A contemporary and intimate friend of her mother, before alluded to, not given to flattery, used to say that "truly Anna Mary's were like angel-visits." Though she developed in eary life literary and artistic tastes of no mean order, by which she became well known both through her pen and her pencil, her life was devoted to giving sympathy and help to others; to comfort those who mourned, to brighten their lives by her own bright spirit, and the heavenly atmosphere that surrounded her seemed to be her mission upon earth. Of her only surviving sister, the close companion of their mother, of her literary talent combined with unusual practical ability, and her unselfish and deeply religious character, a life-long personal friendship forbids further mention here.

To few can the description of Solomon be more appropriately applied than to Mary Howitt; emphatically "in her tongue was the law of kindness." Nor was the spirit of love, which so remarkably beamed in her countenance, causing little children involuntarily to look up into her face as they passed her in the street, limited to them or their elders. William Howitt's exertions on behalf of *animals* were well known; in this, as in so many interests, husband and wife were one, whilst their elder daughter specially inherited her parents' sympathetic appreciation of animals. Many will remember how their childhood was enriched by Mary Howitt's "Sketches from Natural History," whilst our "Four-footed Friends" is more familiar to those in younger life. Within a year or two of her decease, her private correspondence bears evidence of her continued interest and energetic exertions on behalf of animals.

To the various phases of Mary Howitt's religious views, the friendship existing between our families precludes more than an allusion. That throughout these changes "her life was hid with Christ in God" not a shadow of doubt arises, and that that peace was her portion which this world can neither give nor take away. Her faculties were unclouded to the last. Within a few hours of the close she conversed with her beloved daughter and intimate friends on various religious and social topics. The following afternoon the remains were quietly laid in the Protestant cemetery. Thus was fulfilled her great desire to die in Rome, and that the earthly tenement might lie beside that of her husband.

In 1870 William and Mary Howitt finally left England, with their only unmarried daughter, to reside on the Continent. A pension was granted them from the Civil List, in consideration of their services to literature, which was continued to Mary Howitt during the eight years of her widowhood, and materially contributed to the ease and comfort of her declining years.

In concluding these brief allusions to the recollections of a lifetime, the two last stanzas of "The Beautiful Flowers" may not inappropriately find a place. They strikingly exemplify one of the characteristics of true poetry, that whilst appreciable by the undeveloped mind, it at the same time ministers to our maturer and our deepest needs.

"Then wherefore, wherefore were they made,
All dyed in rainbow light;
All fashioned with supremest grace,
Up-springing day and night?

"To comfort man and whisper hope,
Whene'er his faith is dim;
For God, who careth for the flowers,
Will much more care for him."

The lines portray that love for the beauties of nature which characterized their gifted authoress, and that reverent, abiding, yet child-like faith in the love and goodness of her Heavenly Father, which was her guiding star, and the anchor of her soul amidst all the joys and the sorrows of her chequered life. . . .

London, Second month, 1888. M. B.

For Friends' Intelligencer and Journal.

THE FRIENDS AND "THE WORLD."

An isolated Friend, in the West, writing a private letter to one in the East, refers to changes in the Society, and then proceeds to say:

"In order to influence the world, the moving power ought of necessity to be in the world, and it has always seemed to me that the Friends, as a people, have too long lived to themselves and for themselves, and have been too contented in remaining exclusive, pluming themselves on their own purity of life and morals, and resting in that purity apart from the common mass of impurity that so much needs their influence. Pardon me if I appear to attack their system; I am still a Friend, and so in a position to see our own narrowness. It has always seemed to me that the peculiar ideas of our Society, good and sacred and pure as they are, could never be successfully promulgated unless they would assume a more aggressive attitude towards ignorance and prejudice and vice; and that the constant diminishing going on in their ranks is owing to their too great restriction of the young people among them, and their lack of the power of adaptation to the changing spirit of the times. I do not mean that they ought to abandon their peculiar tenets,—on the contrary hold the faster to them, for they are of the Life,—but is there not possible a nice adaptation of these to the circumstances, without at all conforming thereto or losing their own individuality?

"A friend of mine, some years ago, speaking of this decline of Friends,—to him a palpable truth,—said his idea was that the world was not transforming the Friends to its image so much as that Friends were transforming the world to their image,—that the Quaker ideas of spiritual religion and of aversion to war, and of temperance reform, and all that, were becoming assimilated by the whole civilized world, and that when this should be complete then the Quaker church would have fulfilled its mission and become absorbed. His idea was very pretty as far as

it went, but when one considers how pathetically small the proportion of Friends is and always has been to the rest of humanity, the lump of leaven appears utterly lost, and the healthful ferment so circumscribed as to be almost invisible. I trust I have not inflicted thee too much with my random writing, but it is so great a pleasure to be actually talking to a regular Quaker, that I have run on without stopping. I haven't seen or talked to a genuine one for five years—there are none nearer than 60 miles, so if thee has any sympathy for a wandering, lost and lonesome sheep of the fold, thee will surely send me a line."

The questions raised in this communication are often discussed, no doubt, by Friends and by others interested in them. Should there be a withdrawal from the world? Must Friends, in order to preserve their forces, be a "peculiar" and set-apart people? Must they endeavor to dismiss from their view all outside things, and contemplate only their own horizon? The replies to these questions, given by different Friends at different periods in the Society's history, would vary widely, for there has never been a seeing "eye to eye" on the subject among all its members. In his early career, George Fox was an example of one withdrawing from all ordinary affairs. But this was natural to the condition in which he then was,—the rapt and intense religious state which had come upon him. And in his later days, his practical character concerning outward things showed itself in the organization of the Society, and the wise judgment by which he began the creation of what we now know as the "good order" maintained amongst us. In this, as in other things, he recognized that no one can live to himself alone,—that he *must* come in practical contact with exterior conditions, and must conscientiously and justly deal with them. William Penn's career and example illustrated this fact in a fuller degree, at the same time that it afforded an instructive lesson of the difficulties and dangers which surround the administration of very great outward affairs. The fact that none of his descendants were Friends, and that they devoted themselves to the accumulation and care of property, and the maintenance of a distinguished social position, showed that there was danger of declension under such circumstances.

As between examples drawn from England, and others from the United States, there is a considerable contrast. In this country every person is part of the government, and his responsibility for its character it does not seem possible to lay aside. He cannot say: "I will dwell in seclusion. Let the laws be made by others"—for thus he may help to bring evil conditions upon the whole community. In England, until in recent years, the rise of more democratic conditions has made a change, the mass of the people had not such responsibilities of citizenship, and might more readily seclude and separate themselves.

But undoubtedly Quakerism has no strength or force, except as it keeps itself "unspotted" by worldly contact. In its ethics it endeavors to promote a higher condition of things than that which "the world" habitually creates for itself. In fact, the chief value of the Society of Friends, in addition to its testimony in favor of spiritual truth, is its protest against *Worldliness*. Examples like that of John Woolman, extreme as he now seems to us to have occasionally been, are those that emphasize and prove the strengh and the merit of unworldliness. A life like Woolman's is felt by every one to be near to the simple truths of Christ's teachings, and to be in heroic contrast to the vain and shallow and selfish,—not to speak of the baser and more shameful,—defects of the Babylonian existence. Experience seems to show that Quakerism is not well adapted,—as was proved in the case of Penn's children and grandchildren,—to conditions of wealth and prosperity. Its tone is serious, its color modest, its disposition gentle, its methods mild. When it finds itself in the midst of wealth and luxury, of gaiety and brilliancy, where the "scheme of color" is bright, and the movement of life rapid, it begins to dwindle and disappear.

And, indeed, this is natural enough. For Quakerism has its own place. It represents a different school of thought, and conviction, from that which is in love with the pomp and circumstance of life. Without saying at this point that these are wrong, *per se*, without charging that "the world" is always sinful in its vanities, it is simply true that Quakerism is a system counter to them. It stands over against worldliness. It keeps the banner of the purer and quieter life raised. Its fire goes out when it attempts to burn in the great flood of the world's way. And it is the knowledge and appreciation of this fact which has restrained Friends from mingling in many ways with outward things that in themselves might not be harmful, but that were liable to allure and draw them away from their simpler life into others that would be. The Quaker flower must grow in its own soil or it will not grow at all.

As a matter of fact, there has been, in our body of Friends, in recent time, very little seclusion from the world. Few of our members, even in middle life, can be called a "peculiar" people. Few of them, using the words of our correspondent, "live to themselves for themselves," or endeavor to "remain exclusive." There has been a general movement of assimilation with the mass of the community in all things that do not involve an essential departure from Friends' ground. And it surely cannot be said that there has been "too great restriction of the young people,"—any greater liberty than is generally given would be, in the judgment of the present writer, at the risk of exceeding safe limits, and of scattering upon the winds the qualities which, to be utilised at all, must be cared for within bounds.

And a word upon one other point. Precisely how much influence the Society of Friends has exerted, it would be hard to say. But undoubtedly its leavening power continues. Penn's life and work are still studied; Pennsylvania offers her history; Philadelphia is "the Quaker city"; the benign spirit of the Friends' laws has continued and spread; the remembrance of those put to death on Boston Common, and the subject of their wrongs, rise up to be discussed again and again; the songs of a poet like Whittier claim the attention of mankind. Quakerism

continues a force. It presses against the spirit of the world, and at many points offers its protest,—not so strongly as it should, but yet with visible effect.

H. M. J.

CORRUPT LITERATURE.[1]

Some writer has very truly said that "Blindness to moral evils often invites calamity," and I believe this is invariably true where blindness is permitted to the lasting injury of corrupt literature. And it certainly is high time that parents and educators everywhere, laying aside all false delicacy, should look these secret dangers squarely in the face, and fight them to the death. What we read, in the silence and seclusion of our leisure hours, completely absorbs us, and, taking a strong hold upon the imagination, soon becomes a part of us. How important then, that all our reading should have a perfectly pure and elevating tone; and how pernicious is the light, trashy reading of our sensational story papers, and dime novels,—even when they are not obscene. Fed upon such mental food as this, the mind becomes unduly excited and overwrought, so that the plain, sensible, matter-of-fact duties and self-denials of life become irksome, while the ideal, exaggerated pictures of romance are longed for and sought after, until a restless, unsatisfied condition is the result; making the young, undisciplined mind peculiarly receptive of the impure when it is presented. And it *is* presented daily, persistently, and continually. Deny it who will, close their eyes to it whoever may, the terrible truth remains, as another has stated, that "printing presses, cheap picture-making processes, and every human ingenuity in secrecy, and evasion of the law, are being made use of, by unprincipled men, maliciously and purposely to deprave the young. Into our public and private schools, our homes, colleges, and seminaries, these emissaries of satan are sent." "A vile picture, a lewd story, or a base suggestion, does its work with the little ones fatally well." The little innocent mind full of curiosity concerning all around it, and with no moral strength as yet to sustain it, cannot if it would banish these evil impressions from its memory. Obscene pictures and cards, found in the hands of six-year old children, have been sent to me. Letters have been also received, describing pocket knives with revolving microscopic pictures basely obscene, in the end of the handles. Beautiful advertising cards are thrown into our houses and yards, which when held between the observer and the light reveal the same shocking impurity. Do not all these things open our eyes to the alarming extent of this depravity? Oh how my very soul yearns for an overflowing baptism of Divine love and purity, that shall arouse us from our apparent lethargy, and thrill us with a deep and true insight of the depth and magnitude of these terrible evils! Voters, upon whom rests the responsibility of our laws upon the subject of corrupt literature, pictures, and statuary, I have a word to you.

A saloon-keeper in Philadelphia was arrested upon complaint of Josiah W. Leeds, not long since, for hanging in his saloon, in sight of all his customers, a picture, nearly life-size, called "The Temptation of St. Anthony." When brought before the magistrate on trial, Deborah C. Leeds, National Superintendent of Impure Literature, W. C. T. U., testified that she had seen this picture, and with tear-filled eyes, and voice choking with emotion, expressed her sorrow and astonishment that any man, having a mother or wife, *could* exhibit such a shameless picture. The saloon-keeper's attorney rudely interrupted her, and abused her husband for dragging his client into court for merely exhibiting a picture of "high art," when the law exempted such. The magistrate agreeing with the attorney, the saloon-keeper was discharged, to go his way unmolested, to ply his licensed business of physical ruin and moral degradation. Voters, why have we such a loop-hole for impurity as this high art clause in our statute books? Will you not see to this at once, and vote it out? Show your manhood and purity and honor, by enacting stringent laws against such indecencies, backed up by a public sentiment that will see them enforced.[1] Mothers, hurried with your household cares and with clothing the bodies of your little darlings, fathers, rushed with your merchandise, your manufactories, and your money-getting, do not let these earthly occupations, necessary though they be, cause you to neglect the proper oversight of what your children read, and see, and hear, for these are the subtle influences that are molding their characters for weal or woe, for time, and for eternity. "Pre-empt the ground early" with the good and the pure. Guard watchfully from evil books and associations.

And now, dear young men and women who may chance to read this article, a word to you. I trust that some of you have the moral courage to wish to have the hidden dangers that lie in your pathway pointed out, agitated, and discussed, so that something of benefit to you may be imparted. The vigor and intelligence of your young manhood, and the beauty and bloom of your young womanhood is charming to us who are passing off the stage of action, and must soon leave our work in your hands. Let me entreat you to shun impure reading as you would a poisonous viper. Its deadly moral contagion is far more dangerous to you than the venom of the serpent. Our Heavenly Father has given us all a natural instinctive delicacy that shrinks from the impure. Let us ever heed its warnings, and turn instantly away from all that would defile.

Dear young people, in the language of one of our finest writers, "Keep your conscience clear, if you lose everything else; keep your hearts pure, and God will keep you in the dark hour of temptation" that comes alike at some time to us all. "Never let down your high standard of honor," as some do to please their dissolute companions, who only scorn them for so doing. Have the courage to say, "I love the truth;

[1] An Essay read at a Temperance Meeting at Richmond, Indiana

[1] There is not, in the Pennsylvania statute, any such reservation (in favor of "high art"), as the essayist would seem to have supposed, by the preceding sentences. But it is a question, in each case, whether or not a picture is "obscene," and it is very difficult at times to draw the line. The decisions of different judges in Philadelphia, in such cases, vary materially.—Eds. Intelligencer and Journal.]

and I love purity, and will never dishonor my parents, nor disgrace myself by conduct that will ruin my earthly happiness, and close the way to eternal life;" and finally remember that "the way of the transgressor is *always* hard," and "the wages of sin is death." Let the grace of God ever be your shield and buckler; and his approving smile your exceeding great reward. ANNA M. STARR.

DEBORAH EVANS.

DEBORAH EVANS departed this life on the 27th of sixth month, 1815, in the 28th year of her age. She was the daughter of Aaron and Abigail Musgrave, and the wife of William Evans, who was the son of Jonathan Evans. Her memorial, issued by the Monthly Meeting of Philadelphia for the Southern District, is printed in the Collection of 1821, and is understood to have been written by her father-in-law, Jonathan Evans, in 1818,—he being the Elder who so strongly opposed Elias Hicks, a few years later. The memorial is excellent in itself, but has a speial interest in the character of the matter which it does not contain,—giving no sign of the doctrinal controversy that sprang up afterward.

DAVID NEWPORT.

Testimony of the Monthly Meeting of Philadelphia for the Southern District concerning Deborah Evans, wife of William Evans.

With a view to excite in the minds of survivors, and particularly the youth, a close adherence to the intimations of divine grace, we are engaged to preserve some account of this our beloved friend. In the early part of life, through the influence of company, she was drawn to partake of the vain amusements which with insidious plausibility are presented to ensnare the minds of unwary youth. But through the tender mercy of a gracious Creator, being brought to see the sinfulness of thus wasting the precious time allotted for a purpose unspeakably interesting to every rational being, she was induced to yield to those visitations of Divine love; and as she kept close to the gentle operation thereof upon her mind, was strengthened to bear the cross, and became exemplary in plainness and simplicity. In this humble state, she was received into membership amongst Friends, about the nineteenth year of her age. A few years after her marriage, her constitution becoming very delicate, she gradually declined in health; and during her illness was often favored with an unshaken confidence that the Lord, who had been pleased to draw her mind to the teaching of his blessed Spirit, would, as she kept thereto, be her never-failing helper in every trying season, and support through all the conflict of disease and death.

During the time of her sickness she uttered many weighty expressions, some of which are as follows:—

Fifth month, 1815.—A few friends being present in her chamber, after a time of silence, she uttered some expressions of thankgiving for Divine support, and then added, "Oh that I had the opportunity to testify to the greatness of the Almighty; and that it was in my power to impress on the minds of the young people the very great importance of giving up in early life,—that the mind might have a foundation to rest upon in the time of trial, when the world is as nothing."

At another season she said, that some time back, upon hearing some parts of the New Testament read respecting our Saviour, the query occurred, "What do I know of a Saviour?" and it was presently followed by the evidence that she had felt a principle in her own mind, which had shown her what was right and what was wrong; and that as she attended to it, it would prove a Saviour to her—and then said, these expressions were brought to her remembrance, "To know thee, the only true God, and Jesus Christ, whom thou has sent, is life eternal."

In the evening of the 19th of Sixth month, she broke forth in supplication thus, "Oh great and glorious Lord, grant me patience that will carry even through the gates of death. Thou knowest that I have endeavored to serve thee according to my measure; prepare for me, according to thy eternal goodness, a mansion of rest; and shorten the time, if consistent with thy holy will." After a few minutes, said, "In all my trials and deep afflictions I have refreshing seasons."

On Third-day, the 20th, in a time of great bodily suffering, she said, "I should consider it a favor to be removed in one of these spells, but I am resigned: it is my meat and drink to do his will"—and sometime after expressed, "Well it is for me, that part of the work was done before such a time as this"—then after a solemn pause, she spoke in commemoration of the Lord's goodness, and in intercession,—"Almighty God! my soul doth magnify thee, and my spirit rejoices in thy salvation. Oh grant that I may receive daily a portion of thy holy, everlasting patience. I have known a principle within from early life which condemned for doing wrong, and led to do that which was right; and have been induced at eleven years of age, to leave my pillow with my cheeks bathed with tears, and on my little knees, pray that I might be a good child."

On the morning of the 23d, "Oh great and holy Being, be pleased to grant fresh supplies of thy patience. Oh hear the voice of my supplication; be near and uphold me, for I have none in heaven to look unto but thee, nor in all the earth in comparison with thee."

Next day being in great pain, she said, "Oh Lord, be near. Oh, grant me patience—let resignation be my constant theme. Thou art great; thou art merciful; thou knowest all my deep afflictions; thou wilt not try me beyond what I am able to bear; therefore let me bless and praise thee." A little while after—"Oh Lord, take me to thyself. Oh Lord, how good art thou to me; my heart is filled with praises to the high God, who reigneth above with the Lamb forever—Oh the sweet peace." In the afternoon she said, "That glorious presence is not withdrawn, but I believe is near to support my poor, tried, weary, tossed mind; not tossed with tempest, but weakness; and when it shall be his will to take me hence, I go rejoicingly. If I love and serve him, will he not keep his covenant? Yea, most surely."

On the 25th, she said, "Praise the Lord, O my soul, bless his holy name; glorify him whilst thou art here; sing of his mercy and goodness, for they are very great." In the course of the night, a friend who was watching with her, observing that she had indeed need of patience under her great suffering, and that it appeared she was remarkably supplied with it, she replied, "I am sensible of it, and it is a great mercy;" and continued nearly in these words: "I have much to be thankful for; I was visited in very early life, and was enabled to yield to the heavenly visitation. He has been with me all my life long, and does not forsake me in this closing period; but is graciously pleased, at times, to qualify me under all my bodily sufferings, to commemorate his marvellous goodness, and to sing praise, high praises to his ever-excellent name."

In the afternoon of the 27th, a few hours before her death, she said, "Praise the Lord; praise the Lord, O my soul; praise his great and glorious name. Lean upon him, that thou mayest know him to be thy support in the hour of deep conflict, and to receive thee into the kingdom of everlasting rest." After a little time, her close being near, she took leave of her near connections present, and said, "Lord Almighty, receive my spirit. Now I am going; don't hold me," and departed between eleven and twelve o'clock at night, the 27th of the Sixth month, 1815, in the 28th year of her age.

For Friends' Intelligencer and Journal.

ANNOUNCEMENTS IN MEETINGS.

In other religious denominations much thought has been given to the subject of finding the proper *time* for "giving out the notices." Among our neighbors this matter has been one of weighty concern to the serious-minded, as these notices are likely to distract the attention and divert the thoughts from the true object of worship.

But how is it with Friends? The case is so different from that of the "churches" as scarcely to admit of any comparison. With us the silent part of the meeting is considered quite as important as the vocal part; and those who do not so regard it, cannot claim to be Friends. Such being the case, we cannot fail to see how essential it is to keep a strict guard against every innovation, every introduction that would be likely to detract from the weight, the solemnity, the dignity of a Friends' meeting for worship. This solemnity is often spoken of as a "covering," and the figure is a very expressive one, as it conveys the idea of something over us, that protects us from the assaults of worldliness. When such a covering has been spread over a meeting—and no human power can command it—the effect is observable in the quietness of the individuals after the dispersion of the assembly. Much talking is not desired; but the love for the brethren is manifested by indications which are entirely sincere, and as far above *mere courtesy*, as Quakerism itself is above worldliness. A feeling of combined solemnity and serenity is carried home, which lasts throughout the day, and sometimes for many days.

If, however, at the close of the meeting, which may have been a good one, some announcement of a secular kind is made, the good which has been gathered with much labor, is likely to be dissipated, and our attention to be occupied with the announcement. Then there will be something to think about, and to talk about, as soon as the meeting breaks up; and we go to our respective homes with our minds filled with *that something*.

Unless we are careful to preserve our meetings for worship from all kinds of secular innovation; from everything that disturbs the quiet which Friends profess to regard as essential to the performance of the solemn act; we are in danger of losing sight of the purpose for which these meetings were instituted, and of lowering them to the level of the lyceum or philanthropic convention.

There are *only two* kinds of notices that seem, to me, to be legitimate for publishing in a Friends' meeting for worship: funerals and religious meetings; the phrase "religious meetings" being limited strictly to those that are appointed for *worship*.

Is it not within the province of the duties for the performance of which elders are appointed, to guard the Society against the introduction of anything that is unseemly into our meetings; and to use the power of their discernment to discover the weight of their position, to overcome all unruly spirits whose offerings or whose activities would be likely to detract from the dignity of our profession, and from the solemnity that should pertain to a meeting for worship?

Third month 24th. H. *

SCRIPTURE LESSON, NO. 14.

Fourth Month 8th, 1888.

JESUS' LAST WARNING.

Topic: Empty Profession.

Golden Text.—"Create in me a clean heart, O God: and renew a right spirit within me."—Ps. 51:10.

Read Matthew 23:23-31.

It is important to keep before us the fact that Jesus, in all his instructions to the multitudes who gathered about him, never said anything that conflicted with the order established for the government and well-being of the nation. The scribes and Pharisees who sat "on Moses' Seat," the lawgivers of the land and the interpreters of the law, were to be listened to and their commands observed. He did not absolve the people from the requirements of the laws instituted for the regulation of their social and religious life, but he did warn them against following these teachers in their performance of the duties the laws imposed.

Ye tithe mint, anise, and cummin, etc. The tithe was the tenth part of all the increase of the cattle, sheep, and all other live stock of whatever kind kept by the Hebrews, and of all the products of the fields, vineyards, and olive gardens. This was a tax paid for the support of their religious institutions, and for the maintenance of the national government. Those who lived too remote from Jerusalem could sell these products, and give the money instead. Besides this tax or tithe it seems that every third year a tithe for the benefit of the poor was collected: Deut. 14:28-29. This, with the votive and free-will offerings, so

often mentioned, would make nearly one-third of the property of the Hebrews going into the common treasury.—*Barnes.*

Jesus did not condemn the tithing of even such small things as the aromatic herbs used for flavoring and for perfumery. They were among the least products of the fields, and of little comparative worth. He did condemn, with unqualified distinctness, the spirit that actuated this exactness, because it made it of greater account to gather up the little gains from these sources, than to observe in their transactions, the judgment, mercy, and faith that should ever characterize their dealings with one another.

Strain out a gnat, etc. This was a proverb in common use among Eastern nations, and is here used to illustrate still further the tendency in the human mind to magnify small and unimportant things, to the disregard of duties that are essential to the best life of the individual, and a means of helpfulness to others.

In this lesson, "Jesus' Last Warning" to the assembled people of Israel, he clearly sets forth the necessity of a practical religion. It is not rigidly conforming to the ceremonies of this church or that, not revealing a lengthy countenance to our fellowmen, or living a life of austerity, not sitting and sighing over the evil that is in the world, that constitutes *true profession.*

"Pure religion and undefiled before our God and Father is this—to visit the fatherless and widows in their affliction, and to keep himself unspotted from the world." So the apostle James told the people of his day, and the text is just as applicable to-day. The record of the life and precepts of Jesus teach that we should engage in good works not to be seen of men, but because of our desire to do right in willing obedience to the will of our Father made known to us by the still small voice within our own souls.

Tombs in ancient Israel were not located within the inhabited places, the Mosaic law concerning defilement by dead bodies prescribing, as it were, their situation outside the cities and villages. Thus they were found in groves and gardens of the wealthy, or near the highways on common ground, or even in out-of-the-way locations for better protection to both the graves and the passers-by. Kings only and very distinguished men were permitted to have their tombs within the walls of a city. Ezekiel (Ezek. 39: 15) makes mention of the passengers passing through the land, "when they see a man's bone, they were to build a sign by it," that others passing the same way should know that they had to keep away from that spot, in order not to be defiled by a possible touch of that bone, which was to be buried by those set apart for this kind of religious work. In some way or other the tombs were distinguishable as such. Art and wealth produced handsome structures, which are still shown to travelers, as "the tomb of Zachariah," "tombs of the judges" (Sanhedrin), "tombs of the kings," etc. Then decorations with ornamental appendages marked the burial-places, especially those of prophets or other great men. In general, however, they were whitewashed, according to law, on the fifteenth day of the month of Addar (February), when the winter was over, and no effacing of the distinguishing color by rain was to be feared any more before the feast of passover in the month of Nisan (March), at the time of the pilgrimage of all Israelitish males to Jerusalem. Not only the graves as places in which the corpses reposed were contaminating, but also stones that covered and were set up on both sides of the grave; hence the necessity of whitening, to make them distinguishable both at night and day time. The exterior of the graves then shone in purity, and still their touch polluted.

THE WESTERN FRIENDS AND SCHOOLS.

Editors Intelligencer and Journal:

The review of the labors of the Committee on Isolated Membership in your last paper is a matter of much interest, and the conclusion at which they have arrived that "in order to make a complete survey of the field it will be necessary to have the coöperation of other yearly meetings," is, in my opinion, the only feasible method to attain the desired end. But there is another matter to which I desire to call their attention as being a legitimate branch of the same subject, *viz.*: the large number of minors represented. This is not stated by the Committee, but I think from some data in my possession that this class is nearly one-fifth of the whole number. There are without doubt, upwards of 200 children of Friends living west of the Mississippi, and 700 west of the Alleghanies. The proportion of these of school age, I am unable to determine, but in all this space of country there is not, so far as I have been able to find, any schools for the guarded education of Friends' children as queried for by Discipline. I would not have it supposed that our children are brought up in ignorance, for in proportion to their ability the people of the West are doing more for the cause of education than their Eastern brethren. Taking the state of Nebraska as an example, we have the State University and Normal and High schools contributing to it, all supported by taxation and nonsectarian in their character, in addition to colleges under the care of most of the principal religious denominations. The Methodists, I believe, have one in nearly every circuit, subservient to a central University. The object of course of these is to educate their children in their respective faiths, and at the same time to make proselytes of others who may be placed under their care. Need we marvel that our children are scattered when we are not hedging them in with that religious training so frequently queried after in our meetings of Discipline. The transporting of our children to the East where there are enlarged and enlarging facilities for the carrying out of this concern of Society, when distance and expense are taken into consideration, shows that this is not feasible to any great extent, but on the other hand, where a deficiency exists there should the remedy be applied to be efficacious.

There is one other suggestion that I wish to make, *viz.*: that there are individuals in every neighborhood where Friends are located who would gladly give any information to intending emigrants as to the character and resources of the same, which would be more reliable and truthful than most of the so called "boom" advertisements scattered broadcast over the land.

PHILADELPHIA, THIRD MONTH 31, 1888.

"STAND STILL AND SEE THE SALVATION OF GOD."

THE condition of the Israelites, when this command went forth, was one of great peril, from which there appeared to be no possible way of escape,—one of those extreme occasions that occur but seldom in the life of a people, or of an individual, and which ever after remain the precious memorials of divine favor, handed down to succeeding generations.

The "chosen people" were often in great jeopardy and occasions of signal deliverance are recorded in their national history, but at no other juncture could it be said "The sea was before them, the mountains on either side, and an opposing host in their rear."

Man's extremity has always been God's opportunity, but man has not come to this extremity until every effort of his own has been exhausted; only when all resources at his command have failed and he finds himself powerless for further action, will he hear the command "Stand still and see the salvation of God." The deliverance may be from some outward danger, some business entanglement, or from the enemies of his spiritual life, "the sins that so easily beset." All these conditions lie along the pathway of human progress, and at any time the true disciple earnestly desiring to do the Father's will, may find himself confronted by one or the other.

It is important that we understand the true meaning of this, standing still, and its effects upon those to whom it is addressed. It does not imply simply a cessation from effort, a hopeless yielding to the force of circumstances which we cannot control, but it does mean a condition of quiet trust and confidence in God, and the silencing of all contending emotions that fret and worry the soul and unfit it for that calm and deliberate reflection which leads us to an intelligent apprehension of the Divine will and purpose in our behalf.

God's salvation is always signal and complete.

The way he opens may be as "through the sea" with the threatening waves piled up on either hand.

It may be rugged and thorny and to our finite understanding beset with dangers yet, as we follow closely the Divine pointings, we shall find it is a safe path that will bring us, in the fullness of time, to the Canaan of our aspiration. And when, through causes of our own or of another's making, hope seems almost to forsake us and leave us a prey to doubt and despair, and we are ready to cry out "Lord save, or I perish," there comes a sense of nearness to the Divine, and we feel that the touch, as it were, of his hand is upon us, then what a change is at once wrought! The soul, almost despairing of the Eternal Fatherhood, sees in clear vision the "new heaven and the new earth wherein dwelleth righteousness," and with a peace that passeth human understanding, takes up again its portion of the world's labor, knowing from blessed experience that he who made stillness to cover the soul will make known his purposes concerning us.

MARRIAGES.

WAY—JONES.—On Fifth-day, Third month 22d, 1888, at the residence of the bride's uncle, Daniel S. Lukens, under the care of New Garden Monthly Meeting, J. Allen Way, son of William H. and the late Sarah M. Way, of East Nottingham, Chester county, Pa., and Rachel S. Jones, daughter of Edwin and the late Mary Ann Jones, of Conshohocken, Montgomery county, Pa.

WILSON—WOOD.—At the residence of the bride's parents, 2041 Carlisle street, Philadelphia, by Friends' ceremony, Third month 21st, 1888, Frank Wilson and S. Ellie Wood, both of Philadelphia.

YERKES—HEYSHAM.—At the residence of J. Penrose Dunwoody, Newtown township, Third month 22d, 1888, by Friends' ceremony, Walter H. Yerkes, of East Bradford, Chester county, Pa., son of Job R. and Elizabeth P. Yerkes, and Grace, daughter of Fanny P. and the late Charles S. Heysham, of Newtown.

DEATHS.

BELLATTI.—On Fourth-day, Third month 21st, 1888, at Jacksonville, Illinois, Naomi R., wife of John A. Bellatti, and daughter of the late Dr. Joshua Rhoads, formerly of Philadelphia, in her 40th year; a member of the Monthly Meeting of Friends of Philadelphia.

HOOPES.—In Harford county, Md., on the 23d of Third month, 1888, (after six months' confinement in one position, on her back, from fracture of the thigh-bone), Rachel Trimble Hoopes, wife of Darlington Hoopes, in her 64th year.

MOREY.—At her residence, in Oak Park, Cook Co., Ill., Third month 16th, 1888, Sarah Morey, in the 91st year of her age. She was much attached to the Society of Friends and its principles, and although of latter years unable to attend its meetings, she loved to have members as such to call upon her, and to hear through the INTELLIGENCER of the interests of the Society. The following is taken from the Chicago *Inter-Ocean* of Third month 18th: "Deceased, whose maiden name was Rathbun, was born at Westerly, R. I., November 11, 1797. When she was quite young her father removed to Verona, Oneida county, N. Y., where she was married, November 9, 1820, to Daniel Morey. Mr. and Mrs. Morey came West, and settled in the vicinity of Chicago in 1847, and removed to Oak Park in 1865. Since the death of her husband, which occurred in 1869, she had resided with one of her daughters. All of her daughters were with her in her last hours. She was a member of the Society of Friends. Her memory

was very retentive, and she delighted to converse of the incidents of her long life. She retained her mental faculties until her dying hour; was conscious that the end was approaching, and was prepared for it. Her death was, as her life had been, quiet and peaceful—a gentle sinking into a long slumber. Many people in Oak Park will long remember the good old lady, and all will sympathize with the relatives and friends in the loss they have sustained."

PAXSON.—In Solebury, Bucks county Pa., Third month 20th, Amos C. Paxson, in his 83d year.

POWELL.—At Baltimore, Md., on Third month 19th, 1888, Henry J. Powell, formerly of Chatham, N. Y., aged 85 years, lacking one day.

POWELL.—At Cambridge, Mass., on Twelfth month 10th, 1887, Henry J. Powell, son of Wilson M. and Sarah H. Powell, of New York City, and grandson of Henry J. Powell, formerly of Chatham, N. Y., in the 20th year of his age.

TAYLOR. In Kennett Square, Chester county, Pa., on Fourth day, 16th of Second month, 1888, Mary W., widow of the late Thomas W. Taylor; a member of Kennett Monthly Meeting.

TOMLINSON.—On First-day afternoon, the 11th of Third month, 1888, in Southampton, Bucks county, Pa., after several months' suffering with cancer in the breast, Emily Anna, wife of Francis Tomlinson, in the 47th year of her age.

WILSON.—After a short illness, at her home, near Lewisville, Henry county, Ind., Second month 9th, 1888, Mary (Brock) Wilson, in her 81st year, widow of the late Mark L. Wilson, formerly of Quakertown, Penn. She was a member of Milford Monthly Meeting of Friends, a branch of White Water Quarterly Meeting. She was a kind, sympathizing friend, ever ready to assist in relieving the wants of the poor and sick in her neighborhood, faithful in the discharge of home duties in her family, and no doubt received the salutation of "well done" and now enjoys a peaceful reward. M. W. S.

WORTHINGTON.—At her residence, in Byberry, 23d Ward, Phila., on Third-day morning, the 13th of Third month, 1888, after a lingering illness, Elmina K., wife of Spencer Worthington, in the 64th year of her age.

REBECCA N. WEBSTER: IN MEMORIAM.

COME unto Me! Responsive to this call passed away the loving spirit of our dear friend, Rebecca N. Webster, on the evening of Third month 10th, 1888.

When a life has closed its earthly pilgrimage, and in its departure given the beautiful evidence of its completeness, it is but fitting to offer some tribute to its memory.

Over the home the shadows have deepened and the sunlight is dim, the kindly voice is no longer heard with its words of cheering, loving counsel, yet there lingers still the sweet influence of the Christian wife and mother.

Our hearts are sad but we mourn not as those without hope, for the Comforter whispers again and again, "All is well!"

As we turn memory's pages there deeply engraven are the many unselfish acts of kindness and the little deeds of love that so largely characterized the life of this dear friend.

Hers was a gentle, retiring nature, but those whose privilege it was to mingle in close companionship with her ever recognized her earnest, faithful endeavors to conscientiously perform all life's varied duties. The retirement of home with its pleasant surroundings was particularly congenial to her feelings, but duty called her to various fields of labor; and not the least of these was that which led her to seek the poor and afflicted who always found the sympathizing heart with generous hand extended ready to feed and clothe. For many years she was one of the active members of the committee of Friends' Central School and was seldom absent from its meetings when health permitted.

Her firm adherence to convictions of duty and deliberate judgment added much to the strength of that body. Thus has this meek and quiet spirit left its impress.

"God calls our loved ones but we lose not wholly
What he hath given;
They live on earth, in thought and deed, as truly
As in His Heaven."

C.

The sudden illness and death of our estimable friend, Rebecca N. Webster has cast a shadow o'er the hearts of many loving friends, giving us to feel the extreme uncertainty of all earthly enjoyments. From amongst the ready efficient workers not only in the concerns and interests of our Religious Society, but also in many benevolent efforts outside its immediate sphere of action, she will be greatly missed. Her sympathizing, cheerful spirit oft brought gleams of sunshine into many a home where all seemed dark and dreary. But the amiable attributes with which she was graced shone most beautifully in her own beneficent home, where truly centered her chiefest earthly joys. Unselfish, unostentatious, she moved in a circle of loving appreciative associates—where her generous and helpful spirit rendered her ever a welcome guest—and deeply will be felt the loss of one so constant, so capable of receiving and dispensing the blessings of a Christian life and the pleasures and comforts of its enduring friendships. Whilst we mourn that we shall see her no more, may her bright example stimulate to an increased dedication of heart, and a greater devotion to the duty of the home. "Blessed are the meek." "Blessed are the pure in heart." S.

For Friends' Intelligencer and Journal.

SUSAN ROBERTS.

THE death of Susan Roberts comes as a personal loss to many readers of this journal, some of whom may perhaps have known her only through her contributions to its pages. Those who have been privileged with a close acquaintance, and who have learned to value the rare qualities of her heart as well as of her mind, will retain a grateful memory of a character marked by strong individuality.

This dear friend was endowed with a clear and comprehensive intellect which she had enriched by extensive reading and research, and so eager was she for information that she grasped it from every source within reach, storing her mind with the truths of science and philosophy, as well as with the gems of literature.

She gave a prominent place in her reading to the works of early Friends, and was thoroughly familiar with the literature of our Religious Society, whose principles she loved and honored.

During her prolonged visit in Europe and the East, where she was separated from Friends and surrounded by ceremonious church observances, she was strongly impressed with the beauty and excellence of the truths professed by the Society of Friends, and, returning home strengthened in her convictions of the value of its testimonies, she re-

solved to do what she could towards advancing its best interests.

She already belonged to the editorial staff of FRIENDS' INTELLIGENCER, and in this labor she found most congenial occupation. In later years she loved to recall her early association with the noble women who for a long time conducted the paper, and the quiet hours spent with them in the weekly preparation of its contents afforded her peculiar enjoyment.

The deliberations with these women of superior mental and spiritual endowments she regarded as having been of great value in helping her to form a correct literary taste, and they no doubt had an influence in moulding her broad and liberal views on religious subjects.

Gifted with much ease and fluency in writing, she devoted her recent labor to the preparation of a series of essays for the Conferences in connection with Race St. Meeting, in which she reviewed the principles and testimonies of Friends. To these essays she gave much study and research, and she delighted to corroborate the truth of the principles so dear to her, by reference to the Scriptures, and to the writings of the eminent of all religious denominations.

She was very solicitous that our young people should appreciate the beauty of our simple faith, and that they should not lightly esteem the spiritual freedom which our fathers suffered so bravely to obtain.

Strong in her convictions of right, and careful to perform the duties which were manifested to her, our friend was true to her sentiments, and was most fearless in the expression of them.

Generous, joyous, and loving, she handed out freely the treasures of her noble intellect, and in the social circle, of which she was ever the centre, she delighted her friends with her racy humor and her apt quotations, which gave her conversation a peculiar sparkle and zest.

She possessed a remarkable kindliness of disposition united with an habitual good-humor almost contagious in its character; while her hearty sympathy and the charitable constructions which she was accustomed to put upon the motives of others rendered her a most agreeable companinion.

Notwithstanding her intellectual powers, and the varied charms of her conversation, our fondest recollections must yet be of her tender and enduring friendship. Strong in her affections, overlooking and forgiving much, she remained true and steadfast to a friend once gained, and the changes of time and circumstances did not weaken her devotion.

Looking back upon her life, now that she has left us, we are impressed with the independence and simplicity of her character; with the humility with which she employed her unusual talents; with her loyalty to her sentiments; with her unvarying cheerfulness, and her capacity for large-hearted friendship; —a rare combination of qualities, which gave her a large place in our affections.

A LOVING FRIEND.

Editors INTELLIGENCER AND JOURNAL.

I AM prompted irresistibly to pay a tribute of respect, of admiration, and of earnest affection to the memory of my old friend and schoolmate, Susan Roberts. Large-brained, large-souled, and great-hearted,—her death is, in our finite view a bitter loss, not only to her family and friends, and to the Society she so fondly loved and served, but to the entire community,—indeed, I may say, to the world. In our limited view this is the case, but I would fain hope, now more fervently than ever, that the passing away of our beloved and cherished, from this mortal scene does *not* end their influence for good. Possibly it enhances it, for the great Father of the Universe cannot err, and when the conditions that bind to life are no longer tenable, and the pure, true spirit is released from the body, it may be and doubtless is consistent with his providence that the work of such is still carried on, even upon earth, though in a higher and less material sense. We who have been stricken may at least hold to this hope.

I have at times been almost jealous on behalf of my friend, Susan Roberts, thinking that if her admirable style as a writer had been duly appreciated, it would have been more frequently or more publicly commended. Her clear and forcible English, her poetical imagery, her full and rich quotations, her historical and literary information, her exquisite rendering of those rare old Bible stories, (as an instance "The Sweet Singer of Israel," FRIENDS' INTELLIGENCER, Third month 28, 1885), the timely indications here and there through her letters of the moral consequences likely to follow upon specified causes then existing, or further back in the past, the fine touches of spiritual beauty and fervent aspiration, made hers a style that in my opinion has few equals and no superiors.

EDUCATIONAL.

ORDER IN THE SCHOOL ROOM.[1]

"ORDER is Heaven's first law," consequently it should be ours, especially in the school room.

What do we understand this order to be? Is it the hushed silence, or the noise of busy workers? Should not all the methods used to secure good order in school be considered only as means to develop those powers of each pupil which will keep the unruly desires and passions in their proper sphere, and that good conduct be the result of this development rather than from any fear of enforcement on the part of the teacher?

But the question is, how to maintain this ground. In the first place, the teacher should be very certain that he is in order. Never enter the room in a nervous manner, as it will be most likely to produce a corresponding amount of excitement amongst the students. A person of a quiet and dignified character will sometimes terminate a commotion of this kind, merely by his presence, without speaking a word. "As is the teacher, so is the school," is an old adage. Children are imitative beings, and consciously or un-

[1]Prepared for and read at a meeting of Teachers at Friends' Elementary and High School, Baltimore, Third month 5, 1888.

consciously they copy the manner of those with whom they are associated.

However, let us not keep order for order's sake alone, but always consider whether it will be conducive to the moral, physical, or intellectual welfare of those concerned. Endeavor to keep the children constantly employed, so that they may not find time for wrong-doing. Evil conduct, of course, must not be permitted, but the teacher should carefully judge with regard to its enormity, and give to each case its proper treatment, as no one discerns injustice more quickly than a child. An error in this may cause not only the participant but his playmates also to exhibit the worst side of their character. Turbulence or an open disregard of common decorum must be restrained by suitable punishment, if milder means fail to produce the desired result. Much of the disorder arises from a spirit of recklessness or thoughtlessness on the part of the children. With this kind of offenses may be mentioned loud talking, calling to the teacher, walking heavily over the floor, making a noise with the desk-lids, throwing books upon the desks, etc., any one of which must not be tolerated. Those pupils most addicted to talking should be separated from the others; those who call to the teacher may, by a quiet signal, be made to come to him, and make their requests quietly; those who walk heavily may be sent back to the starting point to practice light walking,—thus adapting the punishment in each case to the nature of the offense. Frequently, a request that the noise be discontinued will be sufficient.

Use quiet signals as much as possible, and speak in a low tone when it is necessary to use the voice.

Aim to have the children feel an individual responsibility concerning the neatness, cleanliness, and order of the room. Also that by neglecting these things they may be making some of their fellow-workers very unhappy and uncomfortable, and are cultivating in themselves an extremely selfish disposition.

Have as few rules as possible, but lead the pupils to act from a higher motive,—that of honor. Unnecessary rules, lack of charity, display of favoritism, scoldings, sarcastic remarks calculated to wound the finer sensibilities, and all forms of harshness upon the part of the teacher, are conducive to disorder.

Be ever ready to recognize good conduct, which may be done by a look of the eye, a modulation of tone, or a word of praise. Praise is one of the great forces which control the action of a child, but it should be bestowed with care and discrimination, frequently considering the motive instead of the result. In cases of bad results from pure motives, the faults should be pointed out, without evincing any feeling of censure. The scholar should feel that the teacher takes a personal interest in his success to such an extent that uniting it with other necessary qualities the teacher thereby secures the confidence and esteem of those under his guidance.

Do not try to find disorder, but be prompt in terminating it when the evidence is entirely satisfactoy. It has been said that, "Silence and vigilance should be the teacher's watchwords." By following this rule, the guilt almost invariably makes itself apparent. In all of our disciplining, aim to cultivate a taste for the True, the Beautiful, the Good.

> "Beauty endows the soul with wings
> To pierce Earth's coarser ether through,
> To find the finer soul of things
> The spirit mates the Good and True."

S. R. Matthews.

Abington Friends' School at Jenkintown is passing through a very successful year, this being its first as a Boarding and Day school combined. Many new inquiries have already been made for next year. There is every prospect that not all applicants can be accommodated. It will be well for those who wish to send their children to apply soon, or even to send them during the spring term in order that they may be sure of a place. In the fall there were more applications from day pupils than could be accommodated. Spring changes cause some vacancies. Applications to fill such vacancies will be received for either Boarding or Day pupils to enter after the spring recess. Regular work will be resumed on Second-day, Fourth month, 9th. Plans are already being made which promise further progress in the second year.

For Friends' Intelligencer and Journal.

LETTERS FROM EUROPE.—XIX. CONDITION OF THE ENGLISH PEOPLE.

Brussels, February, 1888.

Of all the nations of the world Great Britain has the greatest amount of accumulative wealth, and the largest annual income in gross and per head of population. The increase of its wealth during the last thirty years is stated by Professor Leoné Levi at the enormous amount of eighteen thousand million dollars, and its annual gross income is upwards of six thousand million dollars, or $200 per head of population. Others writing on the same subject,—for it is being discussed extensively in magazines and newspapers,—say that thirty years ago one would have been considered wealthy with ten thousand pounds ($50,000) a year, but now he must have twice or three times that income; and that while on the Continent $7,500 is "a princely fortune," $25,000 a year in England is but a moderate competence.

It might be supposed from these statements that the mass of the people, and the lowest and more numerous stratum, (with which only I am concerned), were proportionally better off than the same class on the continent. Even Mr. Gladstone, when as Chancellor of the Exchequer he made to Parliament the customary annual statement of the financial condition of the nation, and stated that while wealth was increasing with "intoxicating" rapidity it was "entirely confined to certain classes of property," added that the poorer classes must be indirectly benefited. These are inferences, and not statements of fact as to the actual condition of the poor. And as well might it be argued that because the archbishop of Canterbury received $150,000 a year the poor curates of his church must have sufficient food and proper clothing for their families. Equally erroneous is the assertion of John Bright and others of his school, that the la-

boring class must be better off now than ever before, because never before were wages so high or the necessaries of life so cheap. But wages are high and necessaries cheap because, as D. A. Wells has in a recent essay pointed out, one person with the aid of machinery does now the work which not long since employed half a dozen, and by dispensing with five hands the employer is enabled to pay the sixth better wages. But even this improvement is temporary, and the lucky one must submit before long to the rates which competition will impose.

That is the ultimate regulator of wages. When the starving shirt-makers of London were encouraged to stand out against the "sweaters" for wages enough to keep soul and body together, the work was sent to Italy and gladly undertaken there. But unfortunately we are not left to inferences to form our opinions as to the condition of the workers in England. Evidence as to the fact itself is abundant. Only day before yesterday a debate took place in the House of Commons as to the condition of agriculture—and there was no disagreement as to the facts between the two sides of the house. Indeed the declarations of the members of the Government were the more decided. On that side it was said that "the condition of the agricultural districts was terrific;" that farmers, (which means renters by whom all cultivation is done), had made nothing for several years; that the capital employed by them had diminished greatly, and nearly half had been lost; that great numbers of farms were not rented and a great deal of land had gone out of cultivation, much of it said to be in pasture was, in fact, in weeds. The wages of laborers had fallen to 7, 8, and 9 shillings ($1.75, $2, and $2.25) per week, and were wholly insufficient for the support of their families; great numbers had gone into the cities, where there was no work for them. Trade had been depressed for a considerable time and the number of unemployed was very large. And the debate then turning on the condition of India, a member of the Government said there was among the inhabitants of India "less grinding poverty than among the British working classes." That, if we have correct ideas of the condition of India, is really a shocking statement. Certainly at this moment there is more destitution in London than ever before. The papers this winter have been full of appeals to private charity. The poor are perishing, their sufferings terrible; multitudes without fire; food, or clothing; and as for shelter, a newspaper reporter found fifty-five gathered in a single room in the casual ward of a workhouse, who were to sleep on the stone floor, without covering or fire, which indicates either that there was an uncommon amount of destitution, or that there was great indifference to it. But for many years the miserable condition of the workers has been a stock subject of denunciation among the philanthropists, especially the immorality consequent upon the want of housing. Great numbers of families have but a single room each, in which parents and children, the latter of both sexes and some full grown, are huddled together. The lodging houses are worse, from five to twenty persons sleeping in a single room, sick and well, drunk and sober, noisy, violent, obscene, and with no possible opportunities of observing the most urgent rules of decency. No wonder that the sanitary officers pronounced this condition of things as "simply infernal," and such associations as "a baptism of infamy;" or that W. S. Libby in a recent magazine article says: "Our great cities swarm with veritable Yahoos in whom it is difficult to trace even the rudiments of the ethical sense," such as "we cannot fail to discern . . . in many a well bred dog;" or that still another in this month's magazine, speaks of the streets being "infested with miserable creatures from whose faces every thing purely human has been erased; filthy in body, foul in speech, vile in spirit; human vermin, but of our own manufacture; society has made them what they are." No doubt examples of similar destitution and wickedness might be found in every country, and the material question is, are such wretches found in dozens only or in thousands. I have not the figures at hand, nor if I had, could I burden your columnes with them. As to over-crowding, my recollection is that a majority of the families in Glasgow have but a single room each, and that Liverpool and Bristol are about as bad. In London the number of rooms occupied each by one family is stated now at 60,000, besides the lodging houses. In London, too, the Registering Committee on the 6th of January, stated 100,000 men (?) to be "plunged into the direst destitution" and "on the point of starvation," and these with their families must represent 400,000 persons—say a twelfth of the whole population. Our examination of the public schools in East London, disclosed the fact that a considerable portion of the children were insufficiently fed—in one school 32 per cent., and in all, 5 to 9 per cent. Some had no food at all, and the means adopted, in ignorance of their condition, to enforce attention to lessons, is said to have given rise to scenes inexpressibly painful. Means have been taken extensively to give the school children one meal a day—it costs but a penny a piece—and the result has been a great improvement, plainly discernible in their bodies and minds. These last remarks apply specially to London. In other cities, commercial and manufacturing, the condition of the poor is worse.

It could hardly be expected that in this class religious influences should be discernible; but, (says W. Rossiter) the fact is that the artisan class are bitterly hostile to the church and the clergy. They are secularists and free thinkers, and consider theology as about on a level with astrology. Despair produces doubt. "Don't talk to me about goddlemighty," said a poor woman, "there ain't any. If there was he would not let me suffer as I do." This is a natural sentiment.

The wretchedness of the English poor is due to defective institutions. Tens of thousand of acres of good land lie uncultivated, and millions are kept for deer forests, and hundreds of thousands of workers are idle. England imports $120,000,000 worth of eggs, butter, cheese, and cabbage, just what small cultivators could best produce. And so far as my reading extends, I have seen no intimation of such a condition of things in any other country in Europe. In fact,

in every other country, the human animal has a value which he has not in England, where the unemployed are regarded as a nuisance, and are helped out of the country if they will but go. On the Continent men are wanted for soldiers. Militarism has at least that advantage. And they are taken care of so that they may not leave the country. I have diligently inquired as to the condition of the laboring class in Belgium, where they have much the same occupations as in England, where they have a worse soil, where there are many more to an acre, and where, finally, their income per head is about half, averaging only $106. And I am assured that not only is there no unemployed class, but that every man, woman, or child, who is in need can by application to the proper authorities, have all needful food, clothing, shelter, and fuel. My informant, who is a member of the Board of Charities of his commune and a physician, tells me his requisitions for special nourishment for sick paupers may include every necessary, furnished at public expense. Certainly such could not be the case if paupers were at all numerous.

The past history and future prospects of the laboring class in England have been the subject of much controversy, some, like John Bright, contending that their condition is improving, some, like Professor Fawcett, maintaining that it is worse than in the Middle Ages; while W. H. Mallock, in a magazine article of this month, argues that it is getting worse, and never will be any better.

I have dwelt the more at large on the case of England, because I wished to show that great national wealth does not ensure the prosperity of the people, but, on the other hand, may permit, if it does not cause, great evils, which poorer states may avoid. And, I wish, also, to give emphasis to the remark that our people are of the English race and we share their characteristics and live under institutions inherited from them; and if it be true, as I have recently seen it stated in a New York paper, that there are in the streets of that city every day a hundred thousand people who know not where they shall pass the next night or get the next meal, we must be following perilously closely in the footsteps of our kinsmen, and profiting nothing by the example of those people who make the unfortunate among their countrymen their first care.

J. D. McPherson.

It is as difficult to pray well as to live well. For prayer, rightly uttered, must reflect with perfect faithfulness the life of the pleading soul; and God can only judge when either the life or the prayer is such as to find acceptance in his sight.—*Peter S. Menzies.*

To be worthy of our gifts is one thing, and to be thankful for them quite another; but to be in the mood of thankfulness is to be in the way of becoming worthy.

Men are won, not so much by being blamed as by being encompassed with love.—*Channing.*

THE CONDITION OF IRELAND: CORRESPONDENCE.

[Our friend, S. M. G., of Swarthmore, sends us the following correspondences relating to the recent lecture of Prof. R. E. Thompson, in the Library Course, at 15th and Race Sts., a synopsis of which we printed last week.—Eds.]

Letter from S. M. G. to R. E. Thompson.

Esteemed Friend: In reviewing thy lecture on the state of Ireland, the thought seems to me that thou made no reference to the habits of the people in regard to intoxicating drinks. Temperance economists view with amazement the conversion of such large quantities of food material into a substance that yields no return in vigor or true helpfulness. What, then, must be the ultimate effect but a reduced revenue and an increased dependent, or at least "deficient" class?

And, again, while a protective tariff would help the manufacturers, why do we not also protect the farmers, who not only in Ireland, but in this country as well, are often so helplessly poor? Prices for food ought to be higher, (alas we think them high enough already), when we consider that droughts and blights are liable to thwart even the best directed efforts of this "bone and sinew of the nation."

By answering these questions, particularly the first, thou will interest others beside myself.

Very respectfully, Thy friend,

* * *

Dear Friend: I am very glad you sent me the queries on the Irish question. Had I touched on the matter of Irish intemperance, I would have said (1) that it is very much exaggerated. The average consumption of whiskey in Ireland is half as much a head as in Scotland. But the Irishman gets his whiskey irregularly, and is of mercurial temperament, so that it "goes to his head," and he gets credit for being much more of a drunkard than he really is. (2) The observation of many who have labored among the poor is that misery is a fruitful source of drunkenness, while they generally are regarded in a reverse order. Alcohol is the easiest door into the fool's paradise, where the wretched drown their sorrow in an artificial excitement. Make Ireland more prosperous, and you at least take away this excuse for drunkenness, and probably much of the cause of it.

As to protection of the farmer, the farmer's first need is a good market for his produce. He can get that only by bringing into his neighborhood those classes who consume food but do not produce it; or by diverting a large part of labor and capital from food-producing to other industries. And the market thus created should be secured him by restrictions on imports from countries in which his competitors get their labor cheaper or are more lightly taxed than he is. Both these things our Tariff seeks to secure to the farmer and does secure him. We have heavy duties on Canadian farm produce, in his interest.

It is true that he has not prospered as he ought. * * * As a rule our farmers have too much land. Their farms are as big as when population was sparse and taxes low, and the cost of land trifling. A more

intensive farming on smaller farms is one need in the East.

Very truly yours,
R. E. THOMPSON.

[NOTE on Prof. T's letter.—Canon Wilberforce says that Ireland's annual drink-bill is two million pounds in excess of her rent-bill; or about £13,000,000 against £11,000,000. Scotland is notoriously rum-ridden in certain localities,—such as Greenock, where the people themselves say they are "God-forsaken." In an economic view this comparison argues for but little. But I entertain a very high regard for Prof. Thompson's sentiments on the temperance question, in a humanitarian point of view. He looks upon the indulgence in "spirits," as in many instances, a reaction from the dreariness of existence, the monotony of toil, the want of that which interests and elevates the moral and intellectual life, particularly among the poor. The saloon or tavern furnishes companionship, light, and warmth; these in themselves are often more than the poor man's meagre home affords. Take away the attractiveness of drink and substitute cheap refreshment, cheap amusement, frequent drinking fountains, and reduce the number of saloons to the smallest proportion to the population possible, and drunkenness will proportionally decrease. Such are my recollections of a discourse of his, which it was my privilege to hear some two years ago.—S. M. G.]

For Friends' Intelligencer and Journal.

WILLIAM MASSEY'S GIFT TO THE HOUSE OF REFUGE.

FOR more than eight years the Board of Managers of the House of Refuge have been striving for means to remove that institution to the country, through the assistance of the State legislature, but have failed in their repeated efforts. In 1887 an act was passed by a nearly unanimous vote in both houses, for purchasing the ground and buildings now occupied by the white boys and colored department, for the purpose of an intermediate Reformatory for boys over 16 years of age, for the sum of $550,000, much less than their worth, but sufficient for the purpose of the managers of purchasing a larger farm within 12 or 15 miles of the city and constructing thereon buildings for the accommodation of any desirable number of children. But the Governor vetoed the bill, and thus disappointed for a time their most cherished hopes. The greatly crowded condition of the house and grounds, as at present situated, and the impossibility of providing further accommodation within their limited space, makes a change of some kind necessary, and this only can be made, and provide for the future increase of population by removing to the country, where sufficient room can be had at reasonable cost, for present and future needs. The managers having sought in vain for help from the State, have been hoping that relief might come through private means, from some of our benevolent wealthy citizens, who have given so much to the many noble charities which abound in our city. Nor have they been disappointed, for during the last week the long looked for relief has come.

God breathed into the heart of one of our wealthy and benevolent citizens the desire to help the Managers in the great work in which they are engaged, that of saving from ruin the thousands of neglected, delinquent children of this city and the eastern country districts. William Massey, a gentleman long known for his kindly acts and generous impulses, and a good, kind friend of the children who are cared for in the House of Refuge, knowing of the continued efforts of its Managers in their behalf to build for them a country home, wherein they may be given the best possible training and instruction, has given the sum of $100,000 for the purpose of buying the land and building suitable buildings in a country district adjacent to the city, for the boys' department of the House of Refuge. This noble and magnificent gift,—coming as it does so soon after the great disappointment of the Managers occasioned by the defeat of their bill,—has inspired them with a renewed hope that they may receive from other generous givers sufficient means, with the sum which can be realized by the sale of the ground upon which the present houses stand, for the complete removal of all of the boys, white and colored, to such a country home as will give them the advantages of the most approved methods of reformation and instruction now practiced in this country and in Europe.

The congregate system, which until recent years has been in use in all the reformatories for children, has been practically abandoned in all recently established institutions, and some of the older ones have been changed, with the best results. The Board of Managers of the Philadelphia House of Refuge, whose work has been measurably successful under the old system, feel that far better results must come from the change, and that duty requires them to abandon the old, and establish the new methods of reformation, upon a large and productive farm, within a reasonable distance from the city, upon which may be erected buildings of sufficient capacity for the accommodation of 50 children in each, making homes placed apart from each other, under the care of a man and his wife, with a teacher, all these to be residents with them, and who will give their whole time and care to their particular family. This plan insures a better classification, and brings the children directly under the motherly care and influence of women suited for their work. Experience has shown that children grouped in this way are more easily and effectually controlled, and instructed better morally, physically, and intellectually, than is possible under our present method.

Those only whose work has been directed particularly to the care and help of delinquent and incorrigible children, can know the great importance of the change the Managers of the House of Refuge are now desiring to make. They alone know the good that will result from it, because they have not only investigated both here and abroad, the results of the family or cottage system, but they know of the defects and hindrances of the old or congregate system. They, too, only know the extent of good which results from efforts in behalf of this class of children,

who, bred in misery, ignorance, and crime, thrown at a tender age upon the streets and by-ways, to shift for themselves or to beg and steal for their vicious parents, come constantly to the Refuge in the most deplorable condition, and but for its care would inevitably go to ruin, and swell the fearful tide of crime and misery in which their parents in too many cases are engulfed.

It was the knowledge of these facts, obtained after careful investigation, which induced William Massey to give so liberally, *in his life-time*, the large sum of $100,000 to aid in the great work of saving the children of unfortunate parents that exist in our populous community. The present gift of itself will not do the work, but the Managers hope and trust that our Heavenly Father will impress other minds to follow his noble example, and give of their abundant means to a cause so fraught with blessings to the community, and to a class of which 18,000 have already received from the House of Refuge its fostering care and beneficent training, and in which, if this great change can be accomplished, it will be enabled to perform a better work in the future years.

J. V. W.

Philadelphia, Third mo. 26.

FROM MARTHA SCHOFIELD.

[We make the following extract from recent private letters, and from reports to the Association for Promoting Colored Education.—EDS.]

ENCLOSED find reports by which you will see that the work is going on steadily. Every week, now, some students leave us, and we always send home with them books, papers, pin-cushions, something from the numerous barrels,—sometimes a Bible for a sister who is going to be married. For our boarding students come from away back in the country, where they have had no contact with Northern people, or their ways and habits of life. [After explaining the various duties falling upon Samuel J. Entriken, who is in charge of the Industrial Department, she says] My work is quite as complex, and there is no use to plan, even for a day, as the unexpected is always presenting itself. Parents come about their children, teachers wish to consult scholars, students want "a talk," and parties of visitors come for hours, almost every day, who like to be taken all through the buildings, many asking questions that no one else can so well answer as myself.

On the evenings of the 9th and 10th inst., Frederick Douglass was to speak in Augusta. On the morning of the latter day, I went to that city, and learning that he was at the Ware High School, drove there. Professor Wright, the Principal, (a colored man), invited me to the platform, and soon F. D. came in, and although I had not seen him for ten years he greeted me cordially. There was singing and extracts from his writings read by the students, and then he made an excellent speech to them. He had been moved to tears, and began: "I do not know that I can trust myself to speak. Yesterday, the reception, with its bouquet and parade, [etc.] touched my pride and ambition, but this touches my heart. To remember that when I was young the terrible punishment held up before me was to be 'sold to Georgia,' and now realize the immense contrast, with all these children actually *in school.*" He then went on speaking eloquently and practically. I was the only white person present, and as Prof. Wright held up Mr. Ware's picture, saying he was "one of the faithful ones," he turned to me and asked me to say a few words,—which I did. After it was over, they took Frederick in a carriage to show him the city. Owing to the arrangement of the trains he could not visit Aiken, (and keep other engagements), though I wanted him to see our school, and he wanted to come.

For the month ending March 15th the total number in attendance was 210,—boys 90, girls 120. This is a diminution due to the opening of spring work, and the need of many of the larger pupils to help at home.

TEMPERANCE CONFERENCE AT WEST CHESTER.

THE Temperance Conference under the care of the Committee of Concord Quarterly Meeting, at West Chester, Pa., on the afternoon of the 18th instant, was largely attended, many present being of other religious connections. The *Daily Local News* has the following report:

The principal address was delivered by Aaron M. Powell, of New York. His address was forcible and earnest, and showed much careful thought. In the course of his remarks he said in substance: "I feel like congratulating you temperance workers on the present encouraging outlook for the temperance cause in America. I think there never was a time before when so much interest was taken in the educational work of this movement. The National W. C. T. U. and its net-work of organizations, the Good Templars, the Catholic Total Abstinence Society, and the various temperance organizations fostered by the religious societies, are all zealously laboring in this department of the work. Turning from the educational to the political view of the question we find that throughout the length and breadth of our land the question is forcing itself to the front. Public opinion is becoming intensified; nothing shows this more than the attitude of politicians. 'God makes the wrath of man to praise him,' and he will work out his praise in this. It is only a few months ago that the Supreme Court, the highest tribunal in the land, delivered an opinion in which it was decided that a State by the exercise of its police power has the right to suppress absolutely the manufacture and sale of intoxicating drinks. The liquor men themselves forced the issue and from this time forth the liquor traffic has absolutely no legal status whatever. The stir and clamor that the Liquor League and Brewers' Association are making is having the effect of bringing to our side the great mass of indifferent people whom we could not reach. Some obstacles stand in the way of progress. We are receiving an immense number of foreigners annually, who come here to escape the military oppression of the European governments. They are wrongly educated on this question. They are given the ballot in a few years after their arrival, while it

is withheld from the intelligent women of America. We cannot afford to overlook this fact. The masses of the colored people need educating on this question. A distinguished gentleman in Washington said to me: 'The negroes are an uncertain quantity in this question. During the recent canvass of the question in Atlanta, Georgia, a placard of Lincoln was carried through the town, and on this placard with Lincoln was the picture of a slave with his shackles stricken off, and on the banner were printed words ascribing to Lincoln the sentiment that he was opposed to prohibition because it took away their liberties. Thousands of the colored people were deceived, and hundreds more were brought to take sides against prohibition by the distribution of liquors'. The intelligent colored people are on our side, and the others must be brought to see the truth of the matter. Then there are so many local questions that influence one place or another. There are some things that complicate the question here in Pennsylvania and others that complicate it elsewhere. One of these questions is the revenue received from the traffic. I am glad that the W. C. T. U. is struggling to have the internal revenue tax removed. During several successive Congresses since 1873 we have tried to secure the appointment of a commission to take testimony upon the relation of the liquor traffic to society and to the public ill or good, also its relation to crime and poverty. But they have not yet granted this request. The liquor men are opposed to it and it is evident they do not want the electric light of impartial investigation turned upon their doings.

"I was told by a man of prominence recently, that he believed the next Legislature in this State will approve of submitting a constitutional amendment to a vote of the people as the last Legislature did. Whatever differences there are of political opinion let all stand shoulder to shoulder in this work and improve the opportunity to place Pennsylvania beside Kansas and Iowa for prohibition."

When Friend Powell had concluded his remarks several other speakers occupied a few minutes each. Lewis Palmer said in substance:

"I am almost ready to say I would rather be in the coffin of a drunkard than that of the man who made it possible for him to get drunk. I do not believe that God will hold the drunkard alone responsible, as the speaker has said it is important to come to a right way of thinking. If we did, it is possible some people in the community would be held in less esteem and others more than they are at present."

Allen Flitcraft expressed his pleasure in listening to the earnest address of the first speaker, and urged upon those present the necessity of united and determined action to suppress the traffic.

Isaac Lewis and Lydia H. Price also spoke briefly, after which Friend Flitcraft appeared in supplication and the meeting was brought to a close.

He who, from zone to zone,
Guides through the boundless sky thy certain flight
In the long way that I must tread alone,
Will lead my steps aright.

—*From "To a Waterfowl."*

SWARTHMORE NOTES.

—*The Halcyon*, an annual published by the Junior Class, has just been issued for '88.

—The illustrated lecture by Dr. C. S. Dolley, upon "A Summer among the Bahamas," was attended by a number of friends of the College, from Philadelphia and the vicinity, and was much enjoyed by all.

—The students go home for the Spring Recess on Fourth-day, the 28th inst., and return on Fourth-day, the 4th of Fourth month.

—At the joint meeting of the Somerville and Delphic Literary Societies, on Seventh-day evening, the 24th inst., the literary exercises were of an unusually interesting character. The recitations were well given, and the discussion was conducted with much life and spirit. These joint meetings are productive of good results, offering to both societies an additional incentive to excellence.

—Ex-President, Andrew D. White, of Cornell University, will speak at the college on Seventh-day evening, the 7th of Fourth month,—subject, "Cathedral Builders and Mediæval Sculptors." The friends of the College are invited to attend.

INCOMPLETENESS.

Not he who first beholds the aloe grow
May think to gaze upon its perfect flower.
He tends, he hopes; but ere the blossom blow
There needs a century of sun and shower.

He shall not see the product of his toil;
Yet were his work neglected or ill-done,
Did he not prune the boughs and dig the soil,
That perfect blossom ne'er might meet the sun.

Perhaps he has no prescience of its hue,
Naught of its form and fragrance can foretell;
Yet in each sun-shaft, in each head of dew,
Faith, passing knowledge, tells him he does well.

Our lives, O fellow-men! pass even so.
We watch and toil, and with no seeming gain;
The future, which no mortal may foreknow,
May prove our labor was not all in vain.

But what we sow we may not hope to reap,
Perfect fruition may not seek to win;
Not till, work-weary, we have fallen asleep,
Shall blossom blow, or fruit be gathered in.

Let it be so. Upon our darkened eyes
A light more pure than noontide rays shall shine
If pain of ours have helped our race to rise,
By just one hair's-breadth, nearer the divine.

Upward and outward, plant-like, life extends;
Grows fairer as it doth the more aspire;
Never completed, evermore it sends
A branch out, striving higher still and higher.

Because so great, it must be incomplete,
Have endless possibilities of growth,
Strength to grow stronger, sweetness still more sweet,
Yearnings toward God, who is the source of both.

—*Chambers's Journal.*

"Love God and man,—this great command
Doth on eternal pillars stand;
This did thine ancient prophets teach,
And this thy well beloved preach."

HENRY BERGH AND HIS WORK.

HENRY BERGH, well known for his work in Prevention of Cruelty to Animals, died in New York City on the 12th inst. From a sketch of his life in the *Evening Telegraph* of this city, we take the following details. He was born in New York City, in 1823, his father being a successful ship builder. He entered Columbia College but did not graduate. In 1862 he became Secretary of the U. S. Legation at St. Petersburg. For years he had taken note of the cruelties practised on dumb animals in European countries, and the brutal sports in which animal life was sacrificed. His strong sense of justice and human obligation led him to regard such cruelty as one of the greatest blemishes on human character. In Russia the common people have, or had, a profound respect for official position. Mr. Bergh's footman wore the gold lace that served to distinguish members of the Diplomatic Corps. One day he interfered in behalf of a donkey that was being cruelly beaten, and made the happy discovery that the owner of the beast, as well as the crowd, stood in awe of the gold lace of his equipage. "At last," he said, "I've found a way to utilize my gold lace, and about the best use that can be made of it." So he formed a society of two for the protection of dumb animals, his coachman, an executive officer, sympathizing in the work to the extent of the wages paid him.

Before leaving Russia he determined to devote the remainder of his life to the interests of dumb animals, and on his way home stopped in London to confer with Lord Harrowby, President of the English Society that was afterwards Mr. Bergh's model. He landed at New York in the autumn of 1864, and spent a year in maturing his plans. First of all, he took himself aside, as it were, and scrupulously inquired if he had the strength to carry on such a work and the ability to make the necessary sacrifices. He concluded that he was equal to the task.

A paper now hangs on the walls of the office bearing the signatures of seventy citizens of New York and inspiring almost as much reverence of a kind as the Declaration of Independence. It proclaims the duty of protecting animals from cruelty, and among the signers are Horace Greeley, Peter Cooper, George Bancroft, John A. Dix, Henry W. Bellows, Mayor Hoffman, John Jacob Astor, and Alexander T. Stewart. After procuring this paper, Mr. Bergh next prepared a charter and laws, and successfully urged their passage at Albany. On the evening of February 8th, 1866, Mayor Hoffman, A. T. Stewart, and a few other gentlemen came through rain and six inches of slush to listen to Mr. Bergh at Clinton Hall, New York. In the following April the Society was legally organized, Henry Bergh being elected President and George Bancroft Vice-President.

Of the work of this Society it would be impossible to give here more than a very slight sketch. It must be remembered that up to 1865 no law for the protection of animals from cruelty could be found on the statute book of any State in the Union. The common law regarded animals simply as property, and their master, in wanton cruelty or anger (for which Rozan, the French moralist, says there is no better definition than "temporary insanity"), might torture his sentient chattels without legal hindrance or accountability. The Society soon spread new ideas, and induced more humane legislation. Many prosecutions were instituted, and the influence of the new movement was plainly seen. In November, 1866, was begun a controversy with the professors of the medical colleges on the subject of vivisection. It was kept up at intervals for several years, Mr. Bergh maintaining his position against vivisection, except with the use of anæsthetics, in several eloquent letters, saying, in one of the first, "I protest in the name of heaven, public morality, and of this Society, against these fearful cruelties inflicted on dumb, unresisting creatures confided to the merciful protection of mankind." In Mr. Bergh's office may be seen a lithograph portrait of Majendie, who appears to be as handsome and as finely organized a person as Washington Irving. Underneath the picture, in Mr. Bergh's bold handwriting, is this scathing commentary: "A French physiologist, otherwise known as the 'Prince of Brute Torturers,' who dissected, alive, 40,000 dumb animals, and ere he died confessed that vivisection was a failure!!"

During the three years following, Mr. Bergh had use for all his pluck and courage. In the trial of dealers who had been detected in mixing marble dust with horse-feed, Mr. Bergh, as usual, conducted the prosecution himself, and being called to task in Court for his personal interference, exclaimed: "I stand here as a humble defender of the much-injured brute creation. I am here as an advocate for the people."

At the outset, Mr. Bergh found it necessary to attend personally to the prosecution of cruelty cases in the Courts, for humane feeling and more courage were more useful than profound legal knowledge to secure legal penalties, without which his society and his laws, no less than himself would soon have become failures.

In Mr. Bergh's office hangs the portrait of a man of almost repulsive features, in whose countenance there is yet something peculiarly attractive and reassuring. It is Louis Bonard, next to Mr. Bergh the Society's chief benefactor. He was a Frenchman, who, leaving Rouen a poor man, came to this country, and made a fortune in trafficking with the Indians, which he greatly increased by judicious investments in New York real estate. When he was taken sick in 1871 and removed to St. Vincent's Hospital he sent for Mr. Bergh. Bonard, at his own request, had a will drawn bequeathing his entire property, $150,000, to the Society, believing, as he said, that he had no relative living.

Before the Bonard bequest the Society lived in a little up-stairs room at Broadway and Fourth street, plainly furnished with a manilla carpet and a few chairs. No room of its size on this continent, it was admitted, wielded the same power and moral influence. Mr. Bergh could look out of his window and note the condition of passing horses. During heavy snow storms, he would stand in the street protected by a heavy coat and top boots. Once, when the snow was ten inches deep, he turned back every stage,

compelled the passengers to walk, and in this work finally reached Union Square, where the crowd of people that had gathered gave him three rousing cheers. With the Bonard money available it was decided to seek more imposing quarters. The building at Fourth avenue and Twenty-second street was purchased and decorated according to Mr. Bergh's plan, so as to attract the attention of all passers-by and remind them of the Society and its work. In 1874 Mr. Bergh rescued two little girls from inhuman women, —most notably the shockingly treated little "Mary Ellen." This led to the founding of a Society for the Prevention of Cruelty to Children. The previous year he made a lecturing tour over the principal cities of the West, which resulted in the formation of several societies for the prevention of cruelty to animals.

Among the more recent of Mr. Bergh's efforts was his successful stopping of the proposed bull-fighting in this country. Mr. Bergh received no salary for his work, but freely gave his time and energies to it, and the public knew this to be the case and respected the man who made the sacrifice. The statute of 1866 constituted Mr. Bergh an Assistant District Attorney in New York City and assistant of the Attorney-General of the State, in the enforcement of laws against cruelty to animals. The New York Society has 325 workers in the State. Thirty-six States in the Union have founded similar organizations, and Mr. Bergh's correspondence contained many applications from foreign lands for information as to his methods and the laws under which he worked.

NEWS AND OTHER GLEANINGS.

—Rabbi Philo has offended the orthodox portion of his Jewish congregation in Cleveland by starting a Sunday-school and allowing men and women to sit together, instead of putting the women and children in the gallery by themselves.—*Exchange.*

—In the excavations at the southeast corner of the Parthenon, near the Acropolis Museum at Athens, have been found two archaic heads, smaller than nature, the one in marble, the other in terra-cotta, and a marble figure in form of a zoanan (a tree-like animal), within its right hand a cithera. This forms one of the most interesting discoveries yet made on the Acropolis.

—The total number of professors, lecturers, and instructors in the University of Pennsylvania at present is 152, and of students, 1187, which shows an increase of 99 over last year. The annual catalogue is everywhere suggestive of the increasing usefulness and the more sentient, nobler, broader spirit of the University, which, should it continue to grow proportionately, will, at no very distant tsme, be in the largest and best sense a teacher of universal knowledge.

—The Kansas *Tribune*, speaking of the gas wells recently discovered there, says: "There are now some twelve wells, from which uncounted millions of cubic feet are daily flowing. At night they glow like gigantic torches, with flames twenty feet or more in height, which illuminate the surrounding country. Pipes have been laid through the town, supplying light and fuel to everybody at a cost of almost nothing. Various manufacturing industries are beginning to locate at Fort Scott, and others are coming in. The future prosperity of the place seems to be well settled."

CURRENT EVENTS.

THE Chief Justice of the Supreme Court of the United States, Morrison R. Waite, died at Washington, on the 23d instant, His serious illness had been brief, and his death had not been apprehended. He was born in Connecticut, in 1816, and was graduated at Yale College, in the same class with Wm. M. Evarts and Prof. Silliman. He soon after went to Ohio, from which State he was appointed Chief Justice, by President Grant, in 1874.

A SEVERE storm of wind and snow raged on the 25th instant, throughout Northern Wisconsin, Minnesota, and Dakota. The wind blew at the rate of thirty miles an hour, and from three to five inches of snow fell. The tempesature being comparatively mild, the snow was heavy and packed. Out in the country the fall was deeper, and railroad travel was abandoned.

THE little town of Ninneschah, Kansas, was almost completely destroyed, on the evening of the 24th instant, by a tornado. It struck the town from the southwest and left only three houses standing. Two churches, five stores, and fifteen dwellings were torn to pieces, and the flying timbers killed three persons and maimed seventeen others.

A DISPATCH from Washington, on the 25th inst., says: The bulletin of the Signal Service says the weather has been generally unfavorable for growing crops during the week. The alternate thawing and freezing and great range of temperature in the winter wheat sections have probably affected that crop injuriously. The freezing weather in the Southern States has checked vegetation, which was already reported as late, and has doubtless injured small grains, fruits, and vegetables in the Northern portion of the Gulf States, Tennessee and North Carolina. Reports from Michigan indicate that the ground is generally covered with snow, affording protection for wheat and grass.

IN the U. S. Senate, on the 26th, Senator Cullom, from the Committee on Territories, reported (unanimously) resolutions declaring it the sense of the Senate that the Territory of Utah ought not to be admitted into the Union as a State until the practice of polygamy has been entirely abandoned by its inhabitants, and until it is likewise certain that the civil affairs of that Territory are not controlled by the priesthood of the Mormon Church.

NOTICES.

*** Concord First-day School Union will be held at West Chester, on Seventh-day, Fourth month 14th, commencing at 10 o'clock. All interested are invited to be present.

CLARA B. MILLER,

FOR DRY GOODS

—THE BEST PLACE IS—

STRAWBRIDGE & CLOTHIER'S,

MARKET
EIGHTH } STREETS.
FILBERT

One of the largest buildings in the city, and the largest Establishment in America devoted exclusively to

DRY GOODS.

The stock includes Silks, Dress Goods, Trimmings, Millinery, Hosiery, and Underwear, Gloves, House-Furnishing Goods, Carpets, Ready-Made Dresses and Wraps, and everything that may be needed either for dress or house-furnishing purposes. It is believed that unusual inducements are offered, as the stock is among the largest to be found in the American market, and the prices are guaranteed to be uniformly as low as elsewhere on similar qualities of goods.

SAFE INVESTMENTS

Capital, $750,000
Surplus, $355,016

In our Savings Department, in sums of

$5 to $200, paying

4 38/100 % annual interest. Savings Certificates are exchangeable for Securities mentioned below, and are also payable in cash on demand. In the **MORTGAGE DEPARTMENT** in amounts of **$300 and upwards,** at **5%** interest, payable half yearly. In the 16 years and 10 months we have been in business we have loaned $11,156,430, and $6,794,690 of interest and principal was **returned promptly to investors.** Principal and interest fully guaranteed by Capital and surplus of $1,105,016. In other departments up to **10%** is assured. More than a **Million Dollars** have thus been invested, returns on which average largely in excess of Ten per cent.

FRIENDS' CALENDAR FOR 1888

NOW READY.

A handsome lithographed card bearing a tablet, giving a carefully selected quotation from Friends' writings for each day of the year. Price, 50 cents. By mail, 55 cents.

FRIENDS' ALMANAC FOR 1888.

Containing an account of the times and places of holding the meetings of Friends on the continent of America. Price, 10 cents each. $1.00 per dozen.

FRIENDS' POCKET ALMANAC FOR 1888.

Price, 10 cents each. $1.00 per dozen.

FOR SALE BY

FRIENDS' BOOK ASSOCIATION,

S. W. Cor. 15th and Race Sts., Philadelphia.

WM. H. JONES,

The Dealer in **Agricultural Implements, Seeds and Fertilizers.** Removed to **2043** and **2045 Market St.,** Philadelphia, Pa. Cheapest and largest variety. Every conceivable implement of farm use, harness, seeds and fertilizers. It is a curiosity, and of great interest to every utilitarian to see the establishment. If you cannot get here, write for wants. I am in communication with all the Agricultural implement builders in the U. S.

ALWAYS A SPECIAL BARGAIN ROOM.

SWARTHMORE COLLEGE
OPENS NINTH MONTH THIRTEENTH.

Thirty minutes from Broad Street Station, Philadelphia.
Under the care of Friends, but all others admitted.
Full college course for both sexes; Classical, Scientific, and Literary.
Also a Manual Training and a Preparatory School.
Healthful location, large grounds, new and extensive buildings and apparatus.
For Catalogue and full particulars, address
EDWARD H. MAGILL, A. M., President, Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.
NEWTOWN SQUARE, PA.
Terms, $150 to $175 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.
Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,
A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,
FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—
A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,
SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

LITTLE THINGS.

WE call him strong who stands unmoved—
Calm as some tempest-beaten rock—
When some great trouble hurls its shock;
We say of him, his strength is proved;
But when the spent storm folds its wings,
How bears he then life's little things?

* * * * * * *

We call him great who does some deed
That echo bears from shore to shore—
Does that, and then does nothing more;
Yet would his work earn richer meed,
When brought before the King of Kings,
Were he but great in little things!

—*From Treasure Trove.*

THE DISCIPLINARY SYSTEM OF FRIENDS.

[In 1844, in consequence of some disturbances among Friends in a Western State, growing out of the agitation of the Slavery question, Samuel M. Janney, after a personal visit, addressed a very interesting epistle to those concerned. He dealt particularly with the Discipline, and the mode of its administration, and we take from the epistle, as it appears in his "Memoirs," some portions that are still of deep interest.—EDS.]

DEAR FRIENDS: Having been called, as I believe, to labor among you in the love of the gospel, I feel an engagement to lay before you, in the form of an epistle, some views that have been deeply impressed upon my mind, concerning the administration of our Discipline and the support of our testimonies. The objects of religious association are to strengthen the bonds of love, to encourage to good works, to support the weak, to comfort the mourners, to watch over one another for good, and to reclaim those who have gone out of the way. In order to attain these ends, some rules and regulations pointing out the order of proceeding are obviously necessary, and have been found conducive to the harmony and welfare of Society. It was evidently the intention of the Divine Master that discipline should be exercised in his church, which is clearly shown by the directions he has given in relation to dealing with offenders: "If thy brother shall trespass against thee, go and tell him his fault between thee and him alone: if he shall hear thee thou hast gained thy brother, but if he will not hear thee, take with thee one or two more, that in the mouth of two or three witnesses every word may be established: and if he shall neglect to hear them, tell it unto the church; but if he shall neglect to hear the church, let him be unto thee as a heathen man and a publican. Verily I say unto to you, whatsoever ye shall bind on earth, shall be bound in heaven, and whatsoever ye shall loose on earth shall be loosed in heaven." Matt. xviii. 15–18. In the Introduction to the Discipline of the Society of Friends, this passage has been justly laid down as the rule for dealing with offenders; and I conceive that in all cases whatsoever it is imperative upon members, concerned in the exercise of discipline, to extend *private labor*, before the case of an offender is taken up by any of our meetings for discipline. The first object of Christian care, in such cases, is to reclaim and restore. It is true that the reputation of Society is an important object, but the only effectual way to preserve this is to act under the influence of that meek and humble spirit which would induce us to stoop down and wash the feet of those who have gone out of the way. "If I, your Lord and Master," said the blessed Jesus, "have washed your feet, ye ought also to wash one another's feet." "Brethren, if a man be overtaken in a fault, ye which are spiritual restore such an one in the spirit of meekness, considering thyself, lest thou also be tempted. Bear ye one another's burdens, and so fullfil the law of Christ." Gal. vi. 1. If this private labor prove unavailing, the case must then be reported to the church, and the next question that arises is, how shall the judgment of the church be arrived at? There are cases frequently occurring in which members do not see "eye to eye," and therefore there will often be a diversity of sentiment; yet the church is represented as one body having many members of which Jesus Christ is the head; or as one temple composed of living stones built up "for an habitation of God through the spirit."

A church thus united cannot act upon the principle of political bodies, where a majority governs, and it is still more objectionable for a minority to assume the right to govern. The only way to preserve "the unity of the spirit in the bond of peace," is for every member in our meetings for discipline to draw nigh to the fountain of life and love in order to "ask wisdom of God, that giveth to all men liberally and upbraideth not." James i. 5. While waiting upon him in this frame of mind, each member is at liberty, as way opens, to express his views with meekness, and if they proceed from the pure openings of the spirit of truth, they will meet the witness for truth in other minds, and, being responded to, will prevail over the meeting.

Thus by abiding in patience, under a solemn covering of Divine life, the members will gradually come to see nearly alike, and those who have expressed different sentiments will submit until the clerk (who is the servant of the meeting) may be enabled to record the united judgment of the body. When dis-

cipline cannot be exercised in this manner, it is better to stand still; for if unity and love do not prevail it is an evidence that the Spirit of Christ does not sanction our proceedings, and like the Israelites of old we should be careful not to move forward so long as the cloud rests upon the tabernacle, "whether it be two days, or a month, or a year." Numb. ix. 22. We have in the Acts of the Apostles (chap. xv.) an instructive example, showing that discipline was formed and thus administered in the primitive church. It appears that some of the Jews wished to impose upon the Gentile converts the rite of circumcision, and the observance of the Mosaic law, which occasioned a controversy that was referred to the church at Jerusalem. In the meeting convened to consider this matter, although there was at first a diversity of sentiments and "much disputing," yet when James, through the influence of the Spirit of Christ, gave a true judgment, it reached the witness for truth in other minds, and being united with by all, they were enabled to say they were assembled "*with one accord*," and this commandment "seems good to the Holy Ghost and to us." It may be truly said, in relation to the judgment of the church *when thus arrived at*, "whatsoever ye shall bind on earth shall be bound in heaven, and whatsoever ye shall loose on earth shall be loosed in heaven."

Let us apply this to the case of dealing with offenders, which is one of the most important and responsible of all the concerns that claim the attention of the church. After private labor has been bestowed in the spirit of meekness, and the case is reported to a meeting of discipline, it becomes the duty of that body to bestow further labor by the appointment of a committee to visit the offender. Here a watchful care should be observed to appoint such as we believe are best calculated to reclaim the delinquent by going in the spirit of meekness and love. If we send such as are harsh and rigid, or who are known to be inimical to the offender, the labor of love is obstructed, and the main purpose of discipline frustrated.

But if after patient dealing, the transgressor of the Divine law cannot be reclaimed, it becomes the solemn duty of the church to testify that he is separated from our communion, as by transgression he has separated himself from the communion of Christ. The exercise of this power involves an awful responsibility; for if it should become a practice with us to issue testimonies of disownment against persons that we cannot conscientiously say have broken the Divine law, we shall introduce weakness into the body and may bring our testimonies into contempt.

The Discipline established in the Society of Friends is, in my estimation, far superior to any other that I am acquainted with, and when administered in a Christian spirit, is calculated to preserve the harmony of Society and promote the cause of truth. But I believe that it was the intention of the Divine mind that society should be progressive. We are not to sit down at ease, resting upon the labors of our fathers; for every generation has its own work to do in order that the testimonies of truth may be advanced in the world. The history of our Society proves this important truth. Although George Fox and his coadjutors saw far beyond most of their contemporaries, and were concerned to bear a faithful testimony against oaths, war, and a hireling ministry, as well as many other evils then prevailing in the world, it was reserved for another generation to advance a testimony against slavery, and the improper use of ardent spirits. When a few faithful Friends began to preach and write against these enormous evils, a considerable number of the members were in the practice of them, and there was nothing in the discipline to bring them under censure. The first laborers in this righteous cause stood almost alone with a host of prejudices arrayed against them, but they placed their confidence in the arm of Divine power, bearing their testimony with undaunted firmness, yet in meekness and patience, until other faithful minds were convinced of the justice of their cause, and the concern spread from heart to heart, and from meeting to meeting, until the main body of the Society was prepared to adopt their views and change the discipline. But this was a slow process, for it required nearly eighty years from the time concern on the subject of slavery was first introduced until it was finally accomplished. Behold the meekness and patience of these faithful laborers! They sowed the seed, but it was reserved for another generation to gather the fruit. Yet they received their reward, although the work was not accomplished in their day; for they had the return of peace in their own bosoms. We may here observe the beautiful adaptation of our discipline and church government to the progressive nature of man. Every member of the Society of Friends, male and female, has a right to be heard in our meetings for discipline; for in this respect we all stand upon one platform. If a member believes it his duty to propose an alteration of the discipline, he is at liberty to lay it before the monthly meeting, and if it receive the approbation of that meeting, it may be forwarded to the quarterly meeting, and from thence to the yearly meeting, where, if it be fully united with, it is entered on the records, and information of its adoption sent down to all the inferior meetings. It has seldom, if ever happened, that any change has been agreed to when first proposed; but if it be a right concern, it may be again and again brought forward until it takes hold upon other minds; for, "Truth is mighty and will prevail."

It is not to be expected that a large body of men and women should at once see the propriety of altering an instrument that has received the sanction of our venerated ancestors. Alterations are not always amendments, and even when a real improvement is proposed, there will be found, in every religious body, a considerable number of minds who act upon the conservative principle, and cannot see the necessity for any change, when first annouced, however salutary it may appear to the ardent tempers who are for pushing forward the work of reformation. It is difficult for these two classes of minds to have sufficient patience with each other; but we should always bear in mind that both of these are conducive to the welfare of Society, when kept under the re-

straining influence of Divine love. The ardor of the one, and the calm, deliberate prudence of the other, are both essential to the advancement and safety of the body. If we compare this feature of our church government with the discipline of other religious bodies, we shall perceive its vast superiority. In all others that I am acquainted with, the clergy have an undue share in the formation and administration of discipline. We know that the tendency of power in all governments, and especially in ecclesiastical bodies, is to concentrate itself in a few hands, and the consequence has been that almost every reform, being resisted by those who had the power in their hands, has failed in the attempt, or been accomplished by means of a revolution in society. The dissensions thus produced have greatly increased the number of religious sects, and in many cases have been as stumbling-blocks in the way of honest inquirers. The unity and harmony of Society may be equally impaired by a positve determination to stand still, or an eager desire to go forward. We should, like the patriarch Jacob, endeavor to move onward and yet be willing to wait for the hindmost of the flock.

(*Conclusion next week.*)

From the Sunday-School Times.

"WATCHERS" AND WATCHMEN IN PALESTINE.

By William Wright, D. D., F. R. G. S.,
Secretary of the British and Foreign Bible Society.

The common customs of the Holy Land formed the natural texture of our Lord's teaching, and the ordinary facts of the natural world were elevated by him into types of the spiritual. When he called his disciples to the duty of watching, he merely enjoined in the Christian life what all were familiar with in the common life of every day. Now, as the common customs and ordinary facts of modern life in Palestine are mirrors, as well as survivals of Bible times, I have taken the following sketches from actual experience, in the hope that they will serve to render more vivid the natural features of our Lord's teachings, as well as the divine significance of what he taught. The words have their roots in the earth, but the thoughts lift the soul to God. Through the nouns and verbs of the Bible we see the face of him who is the Alpha and the Omega; and in the land where he taught, we see pictures of divine things wherever we turn our eyes.

"Watchman, what of the night?" These words rang out into the silent darkness from an overhanging window of my house in "the street called Straight," of Damascus. From a bundle of rags at the other side of the street a coiled figure raising itself on its elbow, responded: "The night has passed, and the dawn cometh quickly." The voice that broke the silence was that of Simaan, my servant who, knowing that we had a long journey before us, wished to have everything ready for an early start. The responding figure was the watchman of the street, who, when the little shops are closed, guards them for the night, and when strangers pass announces their approach to the next watcher. Of such a watcher spake Isaiah (Isa. 56: 10): "His watchmen are blind, . . . sleeping, lying down, loving to slumber." Soon after the two voices had broken the silence, my court became babel. Muleteers and camel-drivers were screaming loudly, contending with each other as to who should have the lightest burdens. According to the Arab proverb, "Angry voices rend no garments;" and so the tumult subsided, and we passed out of the court and marched down the "street called Straight" in single file, with all our baggage neatly packed on the backs of our animals.

The great city was still as death. No street lamps flickered on our path, and we stumbled forward through the unpaved way, over heaps of rubbish, and sleeping dogs which yelped and snarled at us. The first voice that sounded on our ears after we left the house was "Hallo, watchman!" We had reached one of the city gates, which are closed and guarded at night. The watchman, a little old blind man, suddenly sprang up out of a dark corner, and with a simple utterance, "O Allah!" fumbled with his wooden key at the lock, and swinging back the door bade us go in peace. A few small coppers were dropped into the hand of the blind watchman, to which he responded, "We thank Allah." Each of the many city gates is so guarded. The office of watchman is given, generally, to the blind, as an endowment for life, and only those who have a reputation for sanctity as good Moslems are eligible for the office. At sunset they betake themselves to the gates. During the night they huddle in dusty corners, squatting on little mats, with a little pan of charcoal burning near them when the weather is cold. But during the nights, whether long or short, through heat, rain, or snow, they are never absent from the gates. They are survivals of times when danger was abroad, and when the watchmen at the gates occupied positions of enormous responsibility. The men who now guard the gates are living on the vested interests of other days.

We had still another gate to pass with the same formalities, and at last we found ourselves beyond the walls of the city. Here we were able to verify the closing words of the Apocalypse, "Without are dogs." Hundreds of these creatures were wrangling over the carcasses of animals that had been dragged forth from the city.

For the next hour or so our path lay through the gardens of Damascus, in which all the trees of the forest and the field commingled and blended their many shades as the sun touched into amethyst and gold the lofty summit of Hermon, and tinged with roseate hues the snowy shoulders of the great mountain. The sun, though glowing on the highest peaks, had not yet reached the plain, and dark shadows still continued to lie upon our path. Behind, from the city, we could hear the shrill muezzin cry as the watchers from the minarets of the mosques called the faithful to prayer, when they saw the first rays of the sun kiss the top of Hermon.

At such an hour there is something weird and almost uncanny in the sight of a long cavalcade passing swiftly and noiselessly as a shadow. The dusty unmetaled road does not ring to the iron hoof of the horse or the mule, and the soft-cushioned camel's feet fall perfectly noiseless on the roadway.

We were brought back suddenly to realities by a barking-like exclamation from a watcher perched almost overhead, on the outskirts of the gardens. Some of my Druse muleteers had strayed into a cultivated plot of ground, and were laying up stores for the day of grapes, cucumbers, and melons, and other such fruits and vegetables as they could find ripe and ready to hand. The watchman was elevated in a little booth, where a few poles had been laid across the branches of an olive-tree, so as to form a platform ten or twelve feet from the ground; and from this lofty perch he guarded his ripening fruit night and day. This was "the lodge in a garden of cucumbers."

Such booths, in the autumn and summer months, are pretty and airy enough, green boughs sheltering the inmate from the fierce heat of the sun by day and from the dews by night. But in the winter time, when it has served its purpose and is abandoned, the "lodge in the garden of cucumbers" becomes a very picture of desolation.

The Arabs seldom object to the passer plucking a little of their fruit and eating it as he proceeds; but my muleteers had exceeded all laws of hospitality, and the watchman was hurling forth fierce and burning words from his rich vocabulary. The Druses, who are courageous and hot-blooded, stung by some of the predicates that flew about their ears, turned on the watchman; but other watchers, in other gardens, awoke to the fray, and seeing "eye to eye" with the man who was giving voluble expression to his wrongs, prepared to aid him in any conflict that might ensue. The incident ended by my paying a small sum for the things that were stolen. Peace reigned, and the watchman, comforted and calm, bade us go in peace, and returned to his aerie among the leaves. Our path now lay through what is called the desert. The bare, barren, chocolate-colored ridges of "Lebanon towards the sun-rising" lay on our right. Behind, and on our left, stretched the green and well-watered plain of Damascus which, like a picture set in its rigid framework of desert, extended as far as the rivers extended, and held the desert at bay.

We passed many villages and towns and ruins during that and the following day. The villages were generally walled, and as we approached them we saw the watchers going up "to the roof over the gate" (2 Sam. 18: 24), and closely scanning us from a distance. "The plan of campaign" was in full force in all those townlets; and it was only when the people became assured that we were not Turkish tax-gatherers that we were admitted freely to the hospitality of the "guest-chambers" (Cant. 5: 7). Day by day we had abundant opportunity to observe the watchful care of shepherds,—care in the morning to lead the flock to safe pasturage; care during the heat of the day to conduct them to shade and water; care to bring back the wayward wanderers and the silly strayers, and gentle consideration and help for the weak and the weary; care at night to enfold them in enclosures of stone walls, or in the village folds; and care at all times to protect them from wild beasts and robbers. . . . . .

Late on the evening of the second day we pitched our tent on the eastern rim of the Lejah, in the town of Keubab. On the following morning I was out early to explore the place, and to secure a supply of partridge for the day. Looking out eastward over the great lava bed which forms the Lejah, there appeared to be before me in the dim twilight an ocean which in a violent state of agitation had stiffened into black cinder. As the sun rose, the scene was transformed into what seemed a living ocean. The light playing on the ridges of lava looked like the foam crests of great waves, and the parts still in shadow appeared as the sweltering furrows of the sea lashed into fury. I was struck by the appearance of dark round towers, which stood up high above the waves of the storm-swept sea. For where I stood, I was able to count fourteen. When the sun rose higher, the Lejah assumed its usual appearance; and then I was able to see more clearly that a great many towers and ruins of towers were scattered all around.

One of these towers, of which I took photographs and made plans, was about forty feet high and sixty-eight feet in circumference. The wall was four feet thick, and the entrance five and a half feet high. A spiral staircase, the stones of which projected from the wall, rose to a stone loft, about fourteen feet from the ground, which stood on a central column of cylindrical stones.

As I wandered up and down the Lejah I saw many such towers in different stages of preservation, and after a careful study I came to the conclusion which, I am happy to say, has been endorsed by Dr. Merrill, that the curious structures were watch-towers.

Just as in the plain of Damascus, wherever there is any crop to guard, four poles are placed in the ground, and support a watchman's booth twelve or fourteen feet from the ground; so in the timberless Lejah these stone towers were erected hard by wells to serve as watch-towers from which the owners might protect their growing crops. They could also, no doubt, be used as watch-towers in case of danger; and some of them were doubtless used as beacon towers from which to give the alarm of approaching danger.

EDUCATIONAL.

DISCIPLINE IN SCHOOLS.[1]

The first element of school discipline is a disciplined teacher. Almost all educators adopt the field of mental discipline, so I leave that to them, and consider the discipline of the teacher which is usually termed Disposition.

1. *A Cheerful Face.* No book in the school-room is conned with half the care and interest that is aroused by the teacher's face. Every smile sends out its radiance and is reflected by the little faces gathered around. Smiles are the most potent means of lighting a school-room and scientists make never an objection to them. And they are open to no criticisms as to coming badly from north or south or east or west, or other objectionable direction. Smiles might be called the *skylights* of the school-room.

Care should have no place in a teacher's expres-

[1] An Essay read at the Educational Conference at 15th and Race Sts., Philadelphia, Third month 17.

sion. Sour looks are intolerable! Father Time, it is true, displays his chirography in various sharp lines and angles on the teacher's as on all faces, but he always stamps the *standard expression*, and the standard expression is the outward manifestation of habitual mental state. Do not flatter yourself that you can entertain sarcasm, suspicion, dislike, pettishness, falsity, injustice, in the privacy of your own disposition. *You* only are deceived if you think so, for about the first thing done by these honored guests is to write in full, name and number on your face, usually adding thereto so that the children read what is the easiest way of arousing each of these cherished graces!

Care is a coward, and can be banished. Whatever private worriments a teacher may have, they should be conscientiously kept out of the school-room. The children are in no way responsible for them, and should be in no way afflicted by them. The bright, sunny spheres of child-life have a wonderful power over a person who is willing to be influenced thereby. So discipline yourselves, fellow-teachers, to maintain before your students a bright face and a cheerful demeanor.

2. *A Hasty Temper.* Who that has been subject to the annoyances of the school-room has not labored days to regain the respect lost by a few hasty words uttered impetuously and which were far more the result of physical indisposition, or personal irritation, than an orderly desire to correct the delinquency of pupils? Injustice on the part of a teacher always awaken resentment on the part of a pupil. A teacher must be careful that he always stands morally upon a higher plane than his students in a point of difference that may arise. A *hasty* outburst of temper lowers him at once. The best students in such a case cannot but see and acknowledge the teacher's weakness and so lose some respect, while the worst and lowest types of minds under his care rejoice in finding a salient point of attack. So defer judgment always, fellow-teacher, until you can judge coolly. Get your own temper under perfect control. Never correct a student on personal grounds, but always because of general law and order, giving the student's own advancement and improvement as the main cause of correction.

3. *Unselfishness.* This is such a broad Christian virtue that to say a teacher must be unselfish wholly and entirely, is almost the same as saying he must be wholly and entirely regenerate. But, however it may seem, it is true that the ideal teacher is wholly unselfish. His students' welfare, his students' happiness, and his students' advancement are always uppermost in his mind—he has no time to think of himself. And how soon the quick instincts of childhood perceive this, and the return is the rich reward of gratitude and love and confidence and conformity with his every wish. The feeling of antagonism gradually gives way to one of help and coöperation.

Soon creeps into the school-room the willingness to give the best places,—to offer to look after the comforts of the frail and the young. The teacher himself is astonished at the difference in the bearing of the children; parents notice it at home, visitors notice it in the school-room, strangers notice it on the street; and the spirit of unselfishness, commonly termed politeness, is recognized by all who know the teacher and the school. It is the reflection of one unselfish being on the young and impressible minds under his care.

4. *Courtesy.* Begin in the morning with the cheery "good morning" greeting, which if uttered with earnestness, seems to give strength and courage for the day's work. All the day the bearing toward the pupils should be courteous and dignified, and courtesy and dignity will be the invariable return.

5. *Sympathy.* A teacher's sympathy should pervade a child's whole life. It should not stop at the school-room door, it should shed light into many a humble home. In the school-room it should be constantly exerting a keen-eyed vigilance over the discomforts of the little ones, showing that the teacher has a warm heart ready to offer comfort and support to those whose home life is poor in sympathy and love.

6. *Truth.* Above all the qualifications of a disciplinarian is truth; he must himself not only be true in every deed, word, and thought, but he must show to his students that his whole nature revolts at the least departure from a strictly honest course.

I have known teachers to set aside a programme and require students to repeat an exercise perfectly familiar to them, and one which had been again and again reproduced with the design of making a good impression upon visitors, with no explanations as to their having had previous drill upon the same. The unsuspecting visitors may have been deceived, but alas! that teacher had set an example of untruth that pages of theory and moralizing could not undo. Here again is a case where the teacher allows himself to assume an attitude morally inferior to his students, and they pity and despise his weakness and falsehood. A teacher should be the very soul of truth.

Now let us review our teacher: Truthful; honorable, scrupulously so; reverent, rebuking by advice and example the tendency of the young people of today to scoff at religion and spirituality; sympathetic, extending help and love to all his students—advising, directing their decisions and offering a word of encouragement as to the great life work before them, giving encouragement as to ability which often a boy doubts through his modesty, and dares not follow from want of faith in his own powers, where his taste and talent would lead; courteous and affable so that society is proud to claim the few precious minutes unoccupied by his professional work; unselfish and considerate of all before himself, slow to anger and never hasty in judgment. And as an outward manifestation of his disposition let him bear a bright, cheerful countenance, and you have a teacher whose influence will be much broader that a mere instructor in book knowledge—a teacher whose example of truth and honesty will do much to elevate the standard of those growing up under his care.

What parent would stop for a moment to decide between this high moral development and the finest intellectual development devoid of these qualities?

Such a person is a disciplinarian; he disciplines in the true way, by example.

Let me repeat, then, that the first element of discipline is a disciplined teacher. There is an element which aids greatly in the discipline of young children that is often overlooked; it is a personal influence, a personal affection, that finds real pleasure in the caresses of little children. And we must remember these children of the primary schools come to us direct from the mother's arms. A teacher that is not drawn to them personally, fails to supply the motherly element in discipline, and the little one accustomed to it at home grows homesick and dislikes school; while on the other hand, the child who is abused and ill-treated at home is left alone in his starvation, while it is possible for the teacher, were she wise and affectionate, to in some measure make up for the dearth, developing in the little fellow the affectionate part of his nature. The love of the student is after all the only reliable element of discipline; of course it is aroused by the various qualities in a teacher which I have attempted to define, but if once your students hold for you an affectionate regard, there will be no flagrant offenses to correct, no willful disobedience to rebuke. Of course there will always be little matters of disorder, but these are so insignificant that a teacher of any tact can manage them without any prescribed rule or given recipe. True discipline has for its object the power of self-discipline. The awakening of a child's conscientious regard for his duty is the ultimatum of all discipline; that done, your student is safe. I think many of the close rules and regulations of our schoolrooms tend to weaken rather than to strengthen the child's power of self-discipline.

Many teachers are so stringent in their rules that they take away all possibility of free-will from the student, and the result is that when the restraint is removed riotous disorder follows. The school-room should be a miniature world, and should afford opportunities for culture and self-government, the same as in the great world which is waiting to receive each student as the doors of the school-room and college close upon him.

Have you ever thought what a difference there is between discipline and government? I can think of a school under military exactness in the matter of government, which affords but little aid to the students in the way of self-discipline. The students are not actuated by the highest moral principles—indeed they do not think at all—they merely conform with the iron regulations of the institution, and are simply machines of obedience and order and silence. There is no growth in their silence—it is the result of subjection on their part to the will-power exerted by the teacher.

They are not growing in the power of self-control; they come out of such a school-room weaklings and have the whole work of self-government to learn afterward. So I would say in conclusion to my fellow-workers in the field of education: be not discouraged at slight disorder in your rooms, at the bustle and hum of childish nervousness; if you can see in your pupils a growing sense of honor and respect and reverence, a growing regard for the feelings and happiness of others, a willingness to sacrifice comforts and pleasures for the good of others, these are indications of growing self-discipline, and are signs of the true growth. And remember that the bond of personal affection is the most reliable factor of School Government.

THE GREATEST OF PAST EVENTS.

I DO not know that any subject could be treated upon that would embrace so much of deep and abiding interest, as a glimpse at past ages that have rolled away since the words were penned: "And God created the heavens and the earth," and he said, "Let there be light and there was light." The glorious luminary of day shed forth a radiance dispelling all the darkness, and God's spirit moved upon the great deep. One thing after another has been developed, as successive demands appeared, and skill in the industrial arts was acquired. Perhaps in the many thousand years the world has numbered, none have equalled the last fifty in generous provisions beneficial to all. The broad domain of our beautiful fields stands out in bold relief, inviting the husbandman to toil for the rich treasures hidden away in ores unsought as yet, only waiting development to feed the hungry and clothe the naked for evermore. But the outward advent of Jesus Christ must stand first in establishing beyond doubt the one reality, that beyond this world is a blessed immortality for the soul to be ushered into, when done with time. This had but little place in the former ages. He said to the thief on the cross, "This day shalt thou be with me in Paradise." O, blessed rest, eternal inheritance!

SARAH HUNT.

For Friends' Intelligencer and Journal.

WORSHIP.

WE must receive a qualification for it before we are in a proper condition to worship or enjoy religious meetings, especially silent ones.

If we have yielded ourselves to the Lord there will be a desire begotten to wait on him. The promise is: "They that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run and not be weary, and they shall walk and not faint."

In this waiting condition we will be enabled to feed on the Heavenly manna which will give us spiritual strength, and we will grow in the knowledge of our Lord and Saviour, and rejoicing in spirit be so strengthened that we can ascend in thought and feeling at times to Heavenly regions, beyond the cares and anxieties of life; then shall we become willing to serve the Lord in running his errands in doing good to others; we will also become enabled to walk in his paths as obedient and faithful children, and others seeing our good works may be led to glorify our Father which is in Heaven.

A. F.

Chester, Pa.

SCRIPTURE LESSON, No. 15.

FOURTH MONTH 15TH, 1888.

TOPIC: WATCHFULNESS.

GOLDEN TEXT.—"What I say unto you I say unto all, Watch."—Mark 13: 37.

READ Matthew 24: 42-51.

WATCHING and watchfulness imply vigilance, heedfulness, care, and diligent observation, for the purpose of preventing or escaping danger, or of avoiding mistakes and misconduct.

The disciples were to watch during the sorrowful times that were soon to overtake the people of Jerusalem, for which Jesus had been preparing their minds as well as for his own removal from them. These were times that would try their faith and courage, and only as they kept near the Heavenly Father would they receive strength to endure to the end.

But know this, etc. Here Jesus cites them to the want of watchfulness of the man whose house is broken into and robbed. If he had known when the robber was coming, he would have been ready to defend his goods, but the uncertainty made him careless.

Watch of the night. Either of the four watches into which the night was divided.

Faithful and wise servant. This is he who is watchful and careful, and suffers no harm or injury to come to anything that has been entrusted to his keeping. While all are children of the Most High through the spiritual relation we sustain to him, he makes us his servants, by committing to our care and keeping, trusts and responsibilities for which he holds us accountable. In this way he tests our fidelity and the capacity for serving which each possesses. The uncertainty of his coming to claim his own calls for continued watchfulness, that we may be found at the post of duty. If in this condition of stewardship we forget that we hold all in trust—if we are idle, shiftless, and unwatchful, we will most surely be unprepared when the time of reckoning comes.

The great thought of our lesson is stewardship. Whatever qualifications for useful service in the world we may possess, be they small or great, our Heavenly Father will not permit us thoughtlessly or with indifference to leave unused; all must be utilized that the general good may be promoted, and the true welfare of the human family advanced.

Jesus, in speaking to his disciples, endeavored to impress upon them the importance of their being in a watchful and prayful state, lest at any time they might be led into temptation; and what was true as to the condition of the people in that early day is equally true to-day, for in the busy turmoil of every-day life there is great danger of our being led astray by the many false allurements that abound on every hand.

Our Heavenly Father has entrusted to our keeping a portion of his spirit which we call the soul, and for its safe preservation and development we must needs be ever on the watch, in order that we may understand the language which it speaks to us, which is comparable to the still, small voice so often referred to in the Scriptures.

To watch, then, is the duty of the hour. So may each one of us be ever mindful of its importance, and strive to dwell in that condition wherein we can best understand our duty to ourselves and to our fellow men.

WORK AMONG THE COLORED PEOPLE.

GEORGE W. CABLE, formerly of New Orleans, now of Northampton, Mass., in a recent able and elaborate article on "The Negro Question," occupying an entire page of the New York *Tribune*, refers to the great usefulness of the colleges, academies, and tributary schools established and maintained among the colored people of the South since the war era at the expense of societies and individuals in the Northern States. He says:

"For more than twenty years these establishments have flourished and been a boon to the African-American, as well as to the almost equally noted 'poor whites' of the Southern mountain regions, sandhills, and 'pauper counties,' and through both these classes to the ultra Southern white man of the towns and plantations—a boon, the national value of which neither he nor one in a thousand of its hundreds of thousands of Northern supporters has an adequate conception, else these establishments would receive seven times their present pecuniary support. These institutions have graduated some hundreds of colored students as physicians and lawyers. At one time lately they had more than eight hundred divinity students, nearly all of them colored. Their pupils of all grades aggregate over seventeen thousand, and the sixteen thousand colored teachers in the public schools of the South have come almost entirely from them."

It is through these schools among the colored people also that the remarkable temperance movement of the South received its earliest and strongest impulse. They have given a most cordial welcome to the National Temperance Society and its representatives, and have been the agencies through which millions of pages of its literature have been disseminated throughout the South. From many of these institutions large numbers of the students in vacation periods, when they go among the people, have been as so many temperance colporteurs for the distribution of the literature of this Society. From this temperance seed-sowing most important results in many instances have speedily followed, county after county having been rescued from the control and devastation of the saloons. These schools, as Mr. Cable affirms, have indeed been a boon to all classes.—*National Temperance Advocate.*

HE who lives exclusively for this world spends all his energy and time for things that have only a time value. He cannot, by any possibility, lift them above this level. Soon they will have no value to him. The time speedily comes when he will be dispossessed of all that he can gain on earth; and if this be all that he has lived for, then he will leave the world a bankrupt here and a bankrupt for eternity.

WE should deal with each other as God deals with us.—*Goethe.*

OPPORTUNITIES.

WHILE it may be truthfully said of mankind in general that a large proportion fail of finding their rightful place in the world, it is equally true that failure is not so much the result of want of opportunity, as it is a lack of that steadfastness of purpose, and determined effort, so essential to success in every undertaking.

It is in this class that we find those who are ever ready to arraign Providence as partial, bestowing favors on some, while withholding from others, themselves included, who according to their judgment are equally worthy of preferment. Few are willing to take the blame of their failure to themselves; the farther a man falls below the general level, the more ready is he to lay the charge of his downfall to the want of opportunity or to some cause outside himself which he was unable to overcome.

The individual who starts out in life fully determined to make the most of his opportunities rarely fails of his intention, the motive and aim are the first essentials; if these be pure and elevating, the success he achieves will be in proportion to the strength and force of his moral and mental stamina and these increase as they are drawn upon. The power of development has never yet been measured; the human engine seems limited only by the ability to endure, yet what it is capable of accomplishing is one of the miracles of modern times.

It cannot be denied that the present aspect of society, with its rapidly increasing pauperism and demoralization is, in an appalling degree, justly chargeable to the want of interest in the welfare of one another everywhere manifested and the tendency of the successful and energetic, to push to the wall their less enterprising competitors.

The old query, started at the very threshold of civilization, "Am I my brother's keeper?" forces itself upon us to-day in a manner that perhaps in no previous age of human history it could have done, and in the measures, that the condition of things as they now exist, make imperative that society may protect itself from the destruction which its own unwatchfulness has entailed, we find the answer, *Man is his brother's keeper.* His very brotherhood is a tie that claims help for the weak, from those who are strong; that says with the wise apostle, "whether one member suffereth, all the members suffer with it," that "the eye cannot say to the hand I have no need of thee" nor "the head to the feet I have no need of you."

The religion of Jesus emphasizes the claim of brotherhood, and in this one aspect, more perhaps than any other, it commends itself to the whole human family. Recognizing as a fundamental truth that God is the father of all mankind, he makes this common origin the basis of a common interest and sympathy that is best expressed in the one great lesson to all, "Whatsoever ye would that men should do unto you, even so do ye also to them." Making this our standard of right as children of our Father, it becomes more and more the duty of those who profess to conform their lives to the precepts of the gospel, to extend the helping hand to the discouraged and those who are weak and liable to fall; to remove out of their path the stumbling-blocks that hinder their progress, and to see to it that none fail of an opportunity to use even the *one* talent which has been placed in their charge, through any want of watchful interest in their welfare.

If our Christian profession is worth anything to us,—if it brings to our lives that fullness of peace and joy which its great Expounder promised, it must come in the measure of our interest in and labor for the welfare of the less fortunate of our common brotherhood. As this thought more and more takes possession of the world, there will be a gradual uplifting of the race. Already the signs are feebly manifesting themselves—the early dawning of the better age is even now upon us. May one and all fill up the measure of duty and opportunity which opens before us, that from no want of faithfulness on our part shall any fail of finding his rightful place, or of taking his full share of the world's work and of the responsibility that attaches thereto.

CORRECTION. In the article entitled "Announcements in Meetings," published on page 198 of the INTELLIGENCER AND JOURNAL, the word *and* should be inserted after "discover," in the fifth line from the last.

A FRIEND, at the close of a letter on other topics, says:

"The question has been referred to me by one interested in our Society, though not a member, whether there has ever been a colored person in membership with us; and the impression has been given that such would not be allowed the privilege."

We have no doubt that the question itself may be freely answered in the affirmative, and very probably some of our readers may know of cases where

colored people have been members. We recall at least one, at this writing, William Boen, of Mount Holly, of whom an interesting account, derived from an old pamphlet, was given in the INTELLIGENCER AND JOURNAL of 7th mo. 31, 1886. He was received as a member, in 1814, and died in 1824. Of course the principles of Friends are altogether too catholic to permit the idea of exclusion on account of color, though we are conscious how much of hesitation and prejudice there might be in applying them to particular cases.

DEATHS.

HAINES.—On First-day, Third month 25th, 1888, at Haddonfield, N. J., Hannah Ann, wife of George T. Haines, aged 62 years; a member of Haddonfield Monthly Meeting.

JOHNSON.—Of pneumonia, Third month 29th, 1888, at the residence of his daughter, Jennie J. Tidwell, West Chester, Pa., Benjamin D. Johnson.

JUSTICE.—Fourth month 1st, 1888, of pneumonia, Hulda, widow of Warner Justice, aged 77 years; a member of the Monthly Meeting of Friends held at Green street, Philadelphia.

LAMBORN.—At his residence, on East Main street, Salem, Ohio, Third month 13th, 1888, Job Lamborn, aged 88 years, 6 months, and 28 days. He was born at London Grove, Chester county, Pa., on the 16th of Eighth month, 1799, and resided in his native county till the spring of 1837, when he emigrated with his family to Columbiana county, in Eastern Ohio, and settled on a tract of land several miles west of the town of Salem, much of the country being at that time an almost unbroken forest. But with a spirit of enterprise which always characterized him, he, by industry, perserverance, and economy, in time brought his farm to a high state of cultivation and improvement. There he resided till the spring of 1857, when he moved to Salem, in the same county, since which time he has been a worthy and respected citizen of that place. He was a life-long member of the Society of Friends, and at the time of the division of that body he adhered to the branch entitled "The Hicksites," for which organization he manifested an abiding interest, and also great devotion for the principles on which it was founded; and was a constant attender of its meetings, until disabled by age and infirmities. And his house was always freely opened for the entertainment of all in attendance who needed his generous hospitality. He was always known to be a staunch friend of the poor, and of the working classes, and the deserving who stood in need of his assistance always found in him a warm advocate and a willing helper, as many could testify who have been recipients of his favors. His interest in the temperance cause was manifested by a life-long condemnation of the use of all hurtful stimulants, as well as by a strict abstinence from their use by himself and family. For many years he has been afflicted by a painful and distressing disease, during which time he always manifested great fortitude and patience, and even cheerfulness, as well as a thoughtful consideration for those whose duty it was to care for him. He leaves a devoted wife, three sons, and a daughter; and also a host of other near and dear friends to reverence his many sterling qualities, and cherish his memory.

His remains were interred in the burial ground at "West" meeting-house, near his former home, where his first wife and some others of his household were laid. *

REEDER.—At his residence, near New Hope, Bucks county, Third month 24th, 1888, David K. Reeder, in his 84th year. Interment from Solebury meeting-house.

RICHARDS.—Fifth-day, Third month 29th, 1888, Mordecai Dawson Richards, aged 58 years; a member of the Monthly Meeting of Friends of Philadelphia.

RIDGWAY.—Third month 31st, 1888, Sarah Pancoast, widow of Thomas Ridgway, in her 87th year; a member of the Monthly Meeting of Friends of Philadelphia.

SMITH.—At Newtown, Bucks county, Pa., on the 29th of Third month, 1888, after an illness of six hours, of paralysis, Josiah B. Smith, aged 78 years, 4 months and 16 days; a member of Makefield Monthly and Newtown Particular Meetings.

STRADLING.—In Newtown Township, Bucks county, Pa., on the 28th of Third month, 1888, William Stradling, aged 92 years; a member of Wrightstown Monthly Meeting.

THOMAS.—At his residence, Norristown, Pa., Third month 21st, 1888, Elwood Thomas, formerly of Upper Merion, in his 63d year; a valued member of the Valley Preparative and Radnor Monthly Meeting.

THE NEW BOARDING SCHOOL.

THE subject of the establishment of what is commonly known as the George School, by association with the name of its founder, was considerably discussed last year, up to the session of the Yearly Meeting, but was then dropped, and since has received little attention from Friends generally. As nearly a year has now passed, and the Yearly Meeting will again meet in a few weeks, it seems proper to revert to this interesting and very important matter.

The subject was laid aside, in the Yearly Meeting of 1887, upon the preponderance of feeling that any action at that time, beyond providing for the care of any funds that might be paid over during the year, would be premature. Up to this writing, (Third month 31), we believe no money has yet been transferred, but it is expected a considerable sum will be, very soon. The personal estate of J. M. George has been realized by the executors, and a sum approximating $150,000 will be now accounted for and paid over. It is probable that it will be in the hands of the Treasurer of the Yearly Meeting, when that body convenes.

The remainder of the estate is real property, and has not been sold. It consists chiefly, as probably our readers are aware, of the farm at Overbrook, where the George brothers resided, containing about 170 acres. How long it may be before this can be sold to advantage is not now certain. Possibly it may be disposed of within another year, but as the matter is left entirely to the discretion of the executors, they will, of course, proceed in the business according to their own judgment. The value of this farm is large, and it will make by far the greater part of the amount ultimately to be used for the school. It is thought by competent judges that $2,500 an acre, (making $425,000), is a reasonable estimate of what may be expected from it, though it is possible that if the opportunity of sale should be exceptionally good, a price somewhat higher might be had. But, as has already been said, this is a subject entirely within control of the executors of the will.

If, when the Yearly Meeting convenes, it should prove that the avails of the personal estate are in the Treasurer's hands, or about to be received, it will be needful for the meeting to consider what steps it shall take toward establishing the school. Necessarily, this will have to go to a large committee, and it will be impossible, of course, for the committee to give the subject mature attention during the yearly meeting's sessions. A report will therefore have to be waited for, until the yearly meeting of next year. Two main subjects would seem to call for consideration at the committee's hands: (1) the general plan of the school; and (2) a location for it, consistent with the plan. This latter matter might appear a distinct thing, and one not to be entered upon by a committee until after the yearly meeting had received and acted upon the report of a plan, but as it is obvious this would involve a delay of still another year before anything could be done toward the establishment of the school, it may be thought best to let the committee, as suggested above, consider and report in 1889, upon both points.

There is, so far as we are able to judge, a very general feeling that the new school should be of a character marked by these particulars:

1. It should be plain, substantial, and confined to a solid and useful course of study.
2. It should be distinctly Friendlike.
3. It should be not expensive.

To a considerable degree this character of the school was directed by J. M. George himself, who prescribed that the buildings (to be located in Eastern Pennsylvania), should be "suitable" and "plain," and his known wish was to make an institution resembling Westtown Boarding School in respect of its sobriety and freedom from high charge. In other words, be desired to provide a place of education for the youth of both sexes which should be within reach of the body of Friends.

As has been said, tofore, the whole subject is one of much interest and importance,and calls for the most careful and considerate treatment by the Yearly Meeting and such committee or committees as it may see fit to appoint. The caution has been expressed that it is needful to deal with the business in a broad and judicious spirit,—not with the intention of serving the interests of any person or any locality, but of carrying out the wishes of John M. George, and doing the most good to our Society and its children. We believe this feeling is general; certainly the acquiescence in the postponement of the business last year indicated a desire to move only in unity and good feeling. We have faith in the sincere purpose of the yearly meeting to do the best with this great gift which light is afforded it to do.

We may add that we understand that the Committee appointed at the sitting of the Yearly Meeting, last year: Joseph C. Turnpenny, John Saunders, Emmor Roberts, Isaac C. Parry, and Daniel Foulke, to consult with and assist the Treasurer, in the care of the funds, etc., have acted upon only two questions of importance. The first was to suggest a Trust Company, in which the funds when received should be deposited for the Yearly Meeting's use, and the second, to advise that where the money was already invested in safe and satisfactory securities, these need not be converted into actual cash by the executors, but be transferred as they stood. Of course the committee will present its report to the meeting; we only mention these details as of interest in connection with the general subject. It has been deprived by death, during the year, of the services of our friend, Daniel Foulke, who was warmly interested in the prospects of the new school,—a fact which seems sadly to remind us that the passage of time is rapid, and its uncertainties great, and that while there should be no haste, there should be no undue delays, in dealing with subjects of this kind.

THE LIBRARY.

The report of the Free Library maintained by Orthodox Friends at Germantown has been issued for the year 1887, and is of interest to all those who have to do with books in private or public collections. This library is sustained in part by funds left for the purpose, and in part by contributions and subscriptions from the Preparative meeting and individuals. Its use is entirely free to the public, under suitable guards, and the rule is to admit no works of fiction. From a knowledge of its operations gained in different ways we are free to speak of it as a very valuable and quite popular institution.

The report shows the present number of volumes to be 13,739. The number added in 1887 was 623; 21 were lost, and 4 worn out. The number loaned out was 12,185, classified as follows: History, 1,850; Science, 1,228; Travels, 2,250; Biography, 1,828; Juvenile, 2,829; Educational, 200; Miscellaneous, 2,000. The number of separate visits to the Library was 21,069, a weekly average of 413, or nearly 70 daily.

The new purchases of books are in the general line indicated by the statistics above of those taken out for reading. In respect of number, they stand in the following order: history, miscellaneous, science, biography, travels, juvenile, educational. The selections have been made with liberality, and not in a narrow field,—as is shown by a glance over the new list.

No doubt the possible ministry of sorrow for every child of God is very rich. It is painful and costly. But, if we yield to it in the spirit of love and faith as to the work of God's own hand upon us, it will leave us with new power. The life that, whole and unbroken, was cold, hard, and musicless, when pierced by sorrows is an instrument capable of giving out sweetest music. Of infinite importance to us, therefore, in the time of trouble is the question, What is our trouble doing for us? We will miss an opportunity of great blessing, and will receive harm to ourselves, if we get only pain and grief from it. If we receive sorrow with reverent faith and love, we shall find indeed, within the dark folds that enwrap the strange messenger, none other than the Master himself, come to bring us new gifts of grace and joy.—*Presbyterian.*

COMMUNICATIONS.

LOANING MONEY IN KANSAS.

Editors INTELLIGENCER AND JOURNAL:

AFTER reading the different communications in regard to Western loans, I thought it might benefit some of the Eastern Friends to know how we are getting along out here, in what was called the Far West when I came here. Seven years ago money was worth 8 per cent. per annum, and 10 to 12 per cent. commissions. I loaned several thousand dollars for Eastern parties at that rate during the first three years in my business, and we have never had a foreclosure yet. The business of the last two years has been at 8 to 9 per cent. "straight," without any commission, making from one to two per cent. with which to pay all expenses, and the borrower paying us our 1 or 2 per cent., with the interest on the mortgage. We have put out over seventeen thousand dollars for a Boston company within the last eighteen months and the interest has been promptly paid every six months, with no talk of any foreclosures. We have no interest in either of the companies that have written you on the subject, but I thought that it might help to put some of the Eastern people into more confidence as to how their money was invested here by our Western companies. Our lands are advancing in value too fast for there to be any chance of foreclosure.

Respectfully,

DANIEL GRIEST,

Ellis, Kansas. [Of Griest & Moore.]

Editors INTELLIGENCER AND JOURNAL:

I HAVE been very much interested in reading the communications in your paper concerning the Western mortgage question, and as I have lived in Kansas, on a ranch near Topeka, most of the time for several years, I am fully convinced that mortgage companies as a rule have greatly helped the Western farmer. It is well to bear in mind that while the Eastern farmer is generally running behind when he mortgages his farm, the Westerner is only desirous of getting ahead faster and does not mortgage his farm as a last resort; on the contrary, he makes improvements on his place, buys implements and stock, getting his money at 7 per cent., for which he would have to pay at his local banking institution from 10 to 18 per cent.

We often hear it asserted as an element of weakness that so large a part of the West is mortgaged, but a much larger part of the city and farm property in the East is also encumbered than most people think.

WM. W. COCKS.

New York City.

FRIENDS' LIBRARY LECTURES.

THE closing lecture of the course at 15th and Race streets, for the benefit of the Friends' Library, was given on Fourth-day evening of last week by Professor James MacAlister. His lecture was on "The Art of Etching." The wall behind the lecturer was covered with choice specimens of the etcher's work, kindly lent for the occasion by R. M. Lindsay. Prof. MacAlister began by giving a short description of the difference between line engraving, mezzotints, and etching.

In explaining the *modus operandi* persued in preparing the plates for etching, the lecturer said that the composition used does not assimilate with acid, consequently when the picture is drawn with the etching needle the lines from which the composition has been removed take up the acid, which eats into the copper plate, the wax or composition is removed and the plate thoroughly cleaned off. The ink is then dabbed on with a pad and an impression is then taken off. The first proof is never perfect. The artist has to go over his lines again in order to give the proper gradations of light, shade, and softness of tone.

Continuing, Professor MacAlister explained the numerous technicalities connected with the work and said that nature combined with the artist's hand to complete the picture. He said that the art was known to the ancients, as is seen in the beautiful designs on armor and weapons of the middle ages and even before that time. The only difference was that they filled up the lines with gold, silver, or some coloring matter instead of printer's ink. Albert Durer, the greatest master of the art of etching the world ever produced, was the first to apply it to producing a drawing or picture.

The lecturer then showed how the art had flourished for a time and then died out, only to be revived again by the English and French schools, followed subsequently by American, which at the present time stand second to none in the production of beautiful work. Speaking of the magnificent collection of the late James L. Claghorn, Professor MacAlister regretted that it was lost to the city. As regards the utility of etching, it enables those who cannot see the works of the great masters to become acquainted with their leading feature. The lecturer attacked the tawdry furniture and glaring inconsistencies which are so rife in the houses of modern society, and said that a proper appreciation of real high art tended to beautify our homes and exalt our lives.

A CURIOUS elevator has been proposed for use in the Eiffel tower, which it is proposed to erect in Paris for the next exhibition. The tower is to be 984 feet high, and none of the ordinary forms of elevators could be used with safety. The plan proposed is to construct in the interior of a cylindrical tower a spiral railway track, on which shall run a truck occupying the whole interior space. The circular truck carries a double-decked car, which is raised by the latter's revolution. Motion is communicated to the truck by an endless cable driven by a stationary engine. This cable passes through the car and runs over a series of friction-pulleys, which communicate their motion to the trucks through a worm-gear and spur-wheel. The weight of the elevator-car is supported by the wheels of the truck, and these are only to be revolved by the worm-gear. Consequently, if anything should happen to the cable the car would not descend, but would remain stationary until the persons in the car started the gear, and would then only descend as long as motion continued to be given to it. The cable is run at a high speed, which the gear reduces, and thus it is possible to use quite a small cable to give motion to a car containing two hundred people.—*Iron.*

ORTHODOX FRIENDS.

The *Christian Worker* states the number of Friends of its body, (the "Larger Body" or "Evangelical," situated mostly in the West), to be 72,968. It says:

"Two years ago we made a careful computation of the number of Friends in America. The figures, with two or three exceptions, were taken from the statistics published in the minutes of the yearly meetings of 1885, the year before. In these exceptions the estimates were made from reports of but a year or two earlier, and could not have been far from correct. Friends then numbered 69,475; this included New England, New York, Canada, Baltimore, North Carolina, Ohio, Indiana, Western, Iowa, and Kansas, all the American yearly meetings that are in correspondence with each other. We now take the same yearly meetings, and, searching the minutes of 1887, we find the number of Friends to be 72,968, an increase of 3,493. From Canada we take the report of 1883, not having access to any reliable statistics of later date; from New York we take that of 1886, no report being given in 1887; North Carolina reports were not accessible to us later than 1885. Philadelphia is not included in any of our computations.

"Between 1855 and 1885 three yearly meetings had been set off from Indiana, and the membership of the whole territory occupied by the four, had grown from 27,300 to 48,698, a gain of 21,398. The same yearly meetings now have a membership of 51,969, an increase of 3,271 in the two years from 1885 to 1887.

"In the ten American yearly meetings there are 91 quarterly meetings, 659 meetings or churches, and 955 ministers. Adding the statistics given by London and Dublin Yearly Meetings to the figures from America, we have in the world 91,256 Friends; 112 quarterly meetings; 991 churches; 1,315 ministers."

* * *

The *Christian Worker*, as will be understood by the reader, does not count as "Friends" any of the Wilburites, or other distinct bodies of "Orthodox" Friends, in Canada, or the West, nor, (as it states), the memberships of Philadelphia Yearly Meeting, nor, of course, any of our body. It appears from its statement that the growth which it reports has been almost entirely in Indiana Yearly Meeting and the three set off from it, (Western, Iowa, and Kansas), these showing, as it states, an increase of 3,271, while the whole increase has been 3,493. In regard to Iowa Yearly Meeting, the *Western Friend*, (Wilburite), asserts that there has been a decrease. It says that the statistical table in the minutes of that meeting shows that "the net decrease of members for 1887 was 153. 320 members were disowned and 171 resigned, a total loss of 491 by these two causes."

Find out what a man talks about most naturally and frequently, and you will thereby find out the ordinary current of his thoughts. Find out what this current is, and you will thereby find out upon what objects his heart is placed. Words thus become an index to one's character. All men naturally talk as they feel; and when the reverse is true of them, there is always some special reason therefor.

HIS COMING.

"Therefore be ye also ready; for in such an hour as ye think not the Son of Man cometh."—Matt. 29: 44.

He will come, perhaps, at morning,
When to simply live is sweet,
When the arm is strong, unwearied
By the noonday toil and heat,
When the undimmed eye looks tearless
Up the shining heights of life,
And the eager soul is panting,
Yearning for some noble strife.

He will come, perhaps, at noontide,
When the pulse of life throbs high,
When the fruits of toil are ripening,
And the harvest time is nigh.
Then, through all the full-orbed splendor
Of the sun's meridian blaze,
There may shine the strange, new beauty
Of the Lord's transfigured face.

Or it may be in the evening,—
Gray and sombre is the sky,
Clouds around the sunset gather,
Far and dark the shadows lie,—
When we long for rest and slumber,
And some tender thoughts of home
Fill the heart with vague, sad yearning,—
Then, perhaps, the Lord will come.

If he only finds us ready
In the morning's happy light,
In the strong and happy noontide,
Or the coming of the night;
If he only finds us waiting,
Listening for his sudden call,—
Then his coming when we think not
Is the sweetest hope of all.

—*New York Observer.*

THE DEATH OF KING WINTER.

King Winter sits on his icy throne
And governs his bleak domain:
It is all his own, and he rules alone,
Oh! an absolute, terrible reign.

His vassals around him in silence kneel,
While he rivets their cruel chains;
At his throne they kneel, but their hearts are steel;
Dumb tribute is all that he gains.

He raises his sceptre, and lo! the stream,
That sang as it journeyed along,
Is as still as a dream; it scarcely would seem
It ever had murmured a song.

The laughing fountain is checked in its play,
And stands as mute as a stone;
The heart that was gay, and singing for aye,
Is as cold as the heart on the throne.

Oh cruel and grim is the Winter King,
As he smiles on his sad domain,
A cold, gray smile, and ever the while
He rivets an icy chain.

The beasts and the birds may the tyrant endure,
Or elude his terrible thrall,
But Humanity's poor, of hamlet and moor,
Are the veriest vassals of all.

But thrones will totter and sceptres fall,
As thought and will run free;
And this monarch of all, who strives to enthrall,
Must bow to the Highest Decree.

Behold, the mandate has reached his ears,
As he sits on his tottering throne,—
He trembles and fears; he listens and hears
And knows the ominous tone.

But sweet to the fountain the message it brings:
"The reign of the tyrant is over!
Tell the silent springs and the river that sings
That winter shall reign no more!"

The fountain sparkled and laughed in its glee,
And dashed a warm spray on the river,
And cried: "We are free! Ho! ho! We are free!
Awake and shout it forever!"

The river awakened and trembled and thrilled,
As it felt the new life-blood quiver,
And the heart that was chilled, its music all stilled,
Beat stronger and faster than ever.

It rushed onward in haste, the glad news to tell,
And met other streams on its way,
And forest and dell the good tidings swell,
"King Winter no longer shall sway!"

They shouted so loud to the gathering crowd,
That the cataract wakened amain,
He mustered his force, led onward the course,
And rumbled o'er valley and plain.

And this was the thunder that shook the throne,
And startled the Winter King,
He utters one moan; his spirit has flown,
In his place stands the beautiful Spring.

—*E. J. Trimble-Lippincott, in Phila. Ledger.*

MAKING AND USING MONEY.

[The following is the major portion of an article on "Thrift" in the *Christian Union*.—Eds.]

1. There is only one legitimate way of making money—by honest industry. He who makes money by taking it out of his neighbor's pocket, without giving his neighbor an equivalent, does not make money at all; he simply steals it. He may do this pocket-picking by reputable methods or by methods that are disreputable; but pocket-picking, whatever the method, is always dishonest. Any transaction, the object of which is to make A richer by making B poorer is in the nature of theft. Naked we came into this world, naked we shall go out of it. No skeptic is so skeptical as to deny this proposition. If, then, after living twenty years, we possess anything, we must have gotten it either by receiving it as a gift, by producing it by our industry, or by stealing from our neighbor. There is, perhaps, a fourth way: we may share in a general increase of wealth which we have done nothing to produce. This can hardly be called theft, but it can hardly be called honorable industry. I meet young men continually whose ambition seems to me to be upside down; they are ambitious to get all that they can instead of being ambitious to do all that they can. Mr. Fletcher Harper once said to me, "There is more pleasure in earning money than in either having it or spending it." This pleasure in earning money is the solid satisfaction which comes to a man who is conscious that he is doing the world good service; the money that is paid him therefor is incidental and secondary. Money is only a convenient medium for exchange of services. For my own part I would a great deal rather give more service and get less than give less service and get more. The discomfort of receiving more than I deserve would be immeasurably greater than the discomfort of deserving more than I get. Indeed, in the latter feeling there is no discomfort at all, but rather a pardonable and honorable pleasure.

Loafing does not earn money, and it is the loafers who are generally the grumblers. It is astonishing how many men will gather in a great city to see one man dig in a cellar. Chance does not earn money, whether the chance be by the throw of the dice or by the rise and fall of stocks. The loafer lives on other people's money, and the gambler takes money out of other people's pocket and puts nothing back in return. The first ambition of every man should be to give a value equivalent for every dollar received, and according to the New Testament measure of economy—"Good measure, pressed down, and shaken together, and running over." He who gives in life's market in that way, will in the long run find it given to him on the same basis.

2. Spend less than you earn. Self-denial is at the foundation of all secular success. My father told me when I was a boy, "I am resolved always to have plenty of money." "Easier said than done," I replied. "Not at all," he answered; "perfectly easily done: spend less than you earn." I once said to a very successful business man, "I do not pretend myself to be a business man." He replied in almost my father's words, "There is only one rule for success in business: spend less than you earn." The poor man imagines if he were richer he would have plenty of money, but he is mistaken; no one has plenty of money; our wants increase faster than the supply. It is as much a disappointment to a railroad magnate not to buy a new railroad as it is to a boy not to buy a new goat-cart. Grade your income to your expenses; that is, spend what you want, and set yourself to earn the money, and you will always be pushed, harried, perplexed, worried, and you will live on the edge of bankruptcy. Grade your expenses to your income; that is, determine what you will spend, not by your wants, but by your possessions, and you will always be easy and comfortable with a quiet mind.

3. Spend your money after you have earned it, not before. Buy with your wages in your pocket, not with the prospective wages which you expect to have in your pocket when Saturday night comes. So keep out of debt. Hope inspires the man who is earning for future expenditure; debt drives the man who is earning for past expenditure; and it makes an immeasurable difference in life whether one is inspired by hope or driven by debt. Money earned is money valued. You recognize the worth of the dollar by what you have put into it; but a dollar unearned is a dollar unmeasured. We always underestimate the cost of work which is to be done in the future. I am almost inclined to favor the abolition

of all laws for the collection of debts, except those involving liens, like mortgages, or those founded on fraud and false pretense. It would break up the credit system and help to compel men to pay as they go. Debt is second cousin to dishonesty. When one incurs a debt without reasonable assurance of his ability to pay it, the relationship of the transaction to dishonesty is much closer. I would rather wear a threadbare overcoat which belongs to me than a new one which belongs to my tailor, and if I have not paid for my coat it belongs to my tailor. Owe no man any thing, but to love one another, is the eleventh commandment.

4. Maintain a moral perspective in expenditure; adjust expenditure to real needs, not to temporary inclinations. The young man who spends ten cents for a cigar but cannot afford to subscribe for a newspaper, the workingman who drinks two or three glasses of beer a day but cannot afford to send his boy to school, disregards moral perspective. It is well for us to remember that whatever we do not spend for one thing we have in hand to spend for another. Every expenditure debars from some other expenditure. In buying an article it is not enough to say the article is cheap for the money. Is it the very best thing that this money can get for me and for mine? A wise moral perspective will put home first in all expenditures, and in the home the intellectual and moral well-being of the children before temporary and sensuous gratification.

These four rules are very simple. I do not say that obedience to them will make the reader wealthy, but it will certainly make him comforable. Earn your money by honesty industry; earn more than you spend; earn it before you spend it; and spend it for the best things.

THREE STORIES.

THREE children were sitting on the sofa waiting for the lamps to be lighted. "Let's each tell a story of somebody very brave," said Flora.

"Yes, you and I can," said Willie, "but Shirley's too little."

"I can tell one," said Shirley, gravely.

"All right; begin, then, Flora," said Willie.

"There was once a wonderful young woman who had a wonderful dream. Her country had been conquered by another country, and she dreamed that an angel came to her and said that she must go forth as a soldier and restore her country. Of course that would be hard to do, as she was a woman; so, although she believed her dream, she did not obey the angel's voice. But she dreamed it again, and now she dared not disobey. She dressed herself as a soldier, took the lead of the army and conquered. So her country was saved; and it was growing to be strong. But in one of the battles that she came to be in afterwards, she was taken prisoner.

"Then the enemy tried to make her say that she had not been guided by an angel. They were foolish and bad, and told her if she did not confess she had deceived people, she must be burned. But they could not make her change; and this brave young woman was burned at the stake. I have seen her picture. Her name was Joan of Arc, and her home was in France."

"I think," said Shirley, slowly, "that my story is not of somebody brave. I guess he tried to be brave."

"All right; it will do as well. Now I'll tell mine," said Willie.

"Once there was a splendid young man who was led away with ten thousand of his countrymen into a wicked war. He did not know until they were many miles away from home how wicked the war was. Their general was killed, and then the other leaders thought they would plan to go back home. But the great king who led the enemy asked them to come to a council, and there he cut off the head of every one of the leaders. The ten thousand men knew not what to do. They had no provisions; nothing at all which they needed, and they knew not their way home. Besides, they knew that the king intended not to let them g o back. But this young man rose up and he said, 'I will show you the way home, and will get food for you if you will believe in me.' And he made such a beautiful speech to them that they did believe in him. Of course he knew that he, too, might be killed by the king; but he was not afraid. So they followed him; and although they had to go through great danger and suffering, most of them got through the long journey safely. And when they came in sight of the sea that they knew so well, they fell down and cried for joy. The man was a Greek, and his name was Xenophon. Our teacher read us the story."

"Mother told me mine," said Flora.

"Nobody told me," said Shirley. "There was once a bad boy and another boy. And the other boy's mamma said to him that not to fight back was brave. So one day the bad boy pulled his sled away from him and slid all he had a mind to. Then he threw a snow ball that hit him on the face that hurt. Then he called him a name. The other boy didn't do anything, nor he didn't say anything, and he held his fists behind him, but *it comed awful hard.*"

Shirley's voice trembled as he ended, and the children were silent for a moment, for they interpreted the story; but Flora leaned over and silently kissed Shirley in the dark.

A. M. G., in Unity.

EVERY revival of religion recorded in the Bible seems to have been a revival of personal righteou - ness among God's own people. No amount of outward prosperity, no increase of numbers, no new and attractive forms of worship can possibly make up for or take the place of the faithful conformity to the whole will of God on the part of those who are called by his name. The sooner the ministers and churches recognize this fundamental truth and necessity, and bend all their energies toward the bringing about of such a revival, the better it will be for the Church as such, and the speedier shall we all reach the desired end of seeing ungodly and skeptical unbelievers brought under the power of the Gospel.—*Selected.*

ALL I have seen teaches me to trust the Creator for all that I have not seen.—*Emerson.*

THE SAGUENAY RIVER.

The river is probably the deepest stream in the world; excepting in a few places the general depth is from 600 to 900 feet; and the bottom of the Saguenay at its mouth is 600 feet below the bottom of the St. Lawrence. Thus a low point of rock at the shore or an island is really the top of a great hill springing up steeply from the bottom, and many of the cliffs are not half out of water. As the spring tides rise about eighteen feet, the currents of the river are violent and eccentric; in some places the ebb stream runs from four to six miles an hour; the eddies along the shores are like those on a rapid; and the undercurrents sometimes lay hold of a vessel and turn her about or hold her still in spite of a tow-boat. Before the use of tow-boats, a vessel left helpless by a calm sometimes drifted against the rocks, lodged on a ledge, and when the tide fell capsized in deep water. As anchorage is very rarely found, large iron rings were let into the rocks, and vessels even now sometimes tie up to the cliffs and await a fair wind. The tide, for some unexplained reason, advances with extraordinary rapidity in the Saguenay; thus, notwithstanding the fact that the ebb current very rarely ceases to flow out of the river, yet high tide arrives at Chicoutimi only forty-five minutes later than at Tadousac—seventy miles. On the St. Lawrence the tide advances in the same time only from Tadousac to Murray Bay—about thirty-five miles. The source of the Saguenay, Lake St. John, seems like a northern sea. The pale twilight lasts far into the night—until the aurora borealis hangs its mystic veil across the sky. The beaches, a mile or more wide in summer, the sharp waves raised by a wind on this very shallow basin, the screaming gulls all make you look for a tide and for white-winged ships. But only a bark canoe now and then comes along from one of the thirteen rivers descending by many falls and cascades from the forest-covered mountains; and the pinched-up farms scattered along the shores add to the Arctic sentiment, felt even on a summer's day. The Saguenay comes into being as lusty twins, the Little and the Grand Discharge—deep, narrow channels worn in the rock. They run on separately for some miles through rapids and pools, and finally come together at the foot of Alma Island, at the Vache Caille. There begin the Gervais Rapids, three or four miles long; at their foot the river enters a smooth, quiet stretch of fifteen miles to the Grand Remous—the most furious cascade and the most turbulent eddy of the river; and then, after a few more miles of falls and cascades, the Saguenay ends its rapid career where it meets the tide near Chicoutimi. With the exception of a few clearings, the forest still covers the abrupt hills crowding upon the river. The Grand Discharge is a beautiful region; the stream is filled with an archipelago of small islands, some black, bare rocks, others tree-crowned or decked with rich mosses; it has all the virgin seclusion and quiet of a lake, enclosed by a shore of bold picturesque bastions and walls of rock, surmounted by stately balsams that rise like sentinels above the birches, poplars, cedars, and nooks full of tender green grass. But this quietness is full of life; the islands divide the river into a labyrinth of streams; the water runs silently and swiftly in many opposite directions—down, across, even up the general course of the river; one is piqued, surprised, at its coquetry and shyness. And farther down it leaps away in the furious rapids of Ile Maline. The Little Discharge is so rapid that it destroys logs in its falls and cascades; the government therefore built an aqueduct, "the Slide," for running the timber over these dangerous places. After fishing a few days for the active wannoniche—said to be the landlocked salmon—and exploring the waters of these twin Discharges, I joined the men driving logs at the Vache Caille, and began my acquaintance with the voya ge *C. H. Farnham, in Harper's Magazine.*

LOUISA M. ALCOTT.

To be mourned by the world of young people, as well as a very considerable portion of the adult reading public, is no small tribute to the character and work of a woman of letters. This tribute Miss Alcott receives in the sincerest and fullest measure, throughout her own country, of whose home-life she was ever wont to speak with a certain enthusiastic pride, and among thousands of quiet family circles in foreign, and especially English-speaking lands. Her literary life has been a relatively short one, but marked by an untiring industry, and a somewhat special success. For a long time to come we believe that she will remain among those whose works follow them. Beginning her career some thirty-five years ago merely as one of the then moderate-sized army of sketch-writers, she pursued it devotedly, by no royal road. She won the rewards that come to talent and perseverance. Her fortune and reputation may properly be said to have been based on the exceedingly popular household story, "Little Women," which appeared in 1868. It represents most fully her scope and purposes in work, as well as her literary excellencies and shortcomings. The latter, however, seem to one superficial, and critical analysis of them is almost ungracious, in view of the deep, the unfailing religious and moral influence that almost every page has exerted. Miss Alcott, from the first, held up home love and home life as the most precious and beautiful development of our modern civilization, something, indeed, "more than steam or a telegraph." She inculcated every wholesome idea that associates itself with the school-room and the fireside. She was never goody-goody; but few authors have spoken more powerfully for the beauty of goodness. Always with a slight leaning toward girl-nature, and girl-life, and womanhood in her stories, fathers and sons as well as mothers and daughters, read them eagerly and thoughtfully. She was not the writer for the rich nor the poor. She was the student, and, to some extent, analyst of the best middle-class life of our country. But rich, middle-class, and poor read, and were charmed and helped by her pages. She was not a great authoress, even in juvenile literature; she was more—a great, at one time a wonderfully great influence. Her memory, and such stories as that of her four "Little Women," her "Old Fashioned Girl," and all the

graceful series that depend about them, will not soon be set aside for other more accomplished but less feeling and truly *teaching* writers. Miss Alcott was in the fifty-seventh year of her age.—*N. Y. Independent.*

PUBLIC MEN'S EXPERIENCE WITH TOBACCO.

A RECENT issue of the *Brooklyn Eagle* quotes some experiences of prominent men with tobacco. One of these was Chauncey M. Depew, well known as the president of the New York Central Railroad. He said: "I have smoked ever since I was twenty, but of late years the habit has grown upon me, until I averaged about twenty cigars a day. I noticed that I was nervous and low spirited and my excellent digestion was going back on me, but I called it malaria for a while and then talked about nervous prostration and brain trouble, but I knew in my inner consciousness that the real difficulty was nicotine. First I tried to cut down the number of cigars and then to smoke milder sorts, but while I would smoke less one day I'd drop the next back into my old habits, till finally matters grew so bad I was forced to look them straight in the face and decide whether I was going to permit any habit of the sort to wreck my health, impair my usefulness, and destroy my life. Of course I decided I wouldn't, and, as I couldn't control the habit, I simply abandoned it. But at times, when I sit after dinner in a room filled with the smoke of good cigars, the old longing comes upon me almost irresistibly, and I have my battle to fight all over again.

R. G. Ingersoll is an inveterate smoker. Victoria is his brand, and a year ago he had to limit himself, for his throat began to trouble him and his physicians told him that he was in a fair way to follow General Grant with a cancerous growth unless he called a halt. He pulled up somewhat and is all right again. Judge William D. Kelley told me the last time I saw him here, that he had both smoked and chewed steadily for thirty years. If he was not actually smoking his mouth was full of chewing tobacco. So wedded to it did he become that when he went to sleep at night it was with a quid in his mouth, lying in his cheek, and the very first thing he did in the morning was to cut a fresh chew. A few years ago the left cheek, where the quid always lay when he slept, began to develop a cancerous growth, and the doctors not only cut it out but absolutely forbid him to touch tobacco again while he lived.

LIGHTNING STRIKES THE CAPITOL.

A WASHINGTON dispatch on the 21st ultimo says: During the storm this afternoon a stroke of lightning instantly followed by a deafening crash of thunder, startled everybody in the capitol building, where it seemed to strike. The flash was so vivid that members in the Senate and House and the justices of the supreme court were almost blinded, some of the latter starting to their feet and rubbing their eyes as if they had been roused from slumber. The switch boards in the telegraph rooms at both ends of the building blazed out big balls of fire with an explosion as the electricity was discharged, and communication was destroyed on all the wires by the damage to the instruments. A horse attached to a cab standing near the senate wing was instantly killed, and this seems, miraculously, to have been the only serious injury inflicted. In the Senate there was consternation for a moment, but Senator Manderson, who had risen to address the President, made his motion very coolly and then sat down as composed as if nothing had happened. In the House all business was suspended temporarily. Mr. Lane of Illinois, who had the floor, stopped short in the middle of a sentence, while various members bounded from their seats as if they had received a shock. Most people in the House wing thought the dome had fallen, so great was the concussion; and in the rotunda, where the reverberation on the immense iron structure above was terrific, there was a perfect panic among visitors. All the electric lights were extinguished, and in every part of the building the shock was plainly felt. The Washington monument did not escape, although the perfect system of lightning conductors on that structure prevented any damage to it. Three times during the storm the lightning seemed to decend from the sky and hit the aluminum tip on the monument, separating into forks of flame that flashed rapidly down the west side and then passed off into the ground. A hackman in front of Willard's hotel was thrown from his seat, but fortunately no one in the city was hurt.

HELP FOR THE TENEMENT HOUSES.

IT is pleasant to record the fact that some benevolent people on Murray Hill and Fifth avenue have come together to see what can be done to benefit the tenement house population on the East Side by coming in personal contact with them and their families in order to ascertain just how they live, and to try to do something to enable the helpless to help themselves. After a quiet meeting or two at an up-town hotel, the thing has taken practical shape in the organization of neighborhood and family guilds, two of which are already under way in Cherry and Forsyth streets. The general object of these guilds is to gather together the families of the neighborhood and organize them without reference to their religious beliefs, with a group of clubs for young and old of both sexes for the purpose of friendly intercourse, fellow helpfulness, rational amusements, mental, moral, and social culture. The intellectual life will be secured by means of a circulating library and reading-room, kindergartens, classes in elementary studies and arts for the young, and university courses of lectures for the older people, and by means of the regular and literary exercises in the various clubs. The salutary influence of such a movement cannot but be widely felt, and not less by those who are endeavoring to benefit their fellow-creatures than by those who are to receive their ministrations. The personal acquaintance of two classes that have been practically estranged from each other will do something, let us hope, to eradicate the unfriendly feeling that has sometimes cropped up between them simply because of that estrangement.—*New York correspondent Phila. Ledger.*

APRIL.

A LITTLE skittish and irresolute—
And yet I like her. I like the mixture
Of her cloud and sunshine; her tricks fantastic,
Boxing the compass of Old Probs to thwart
And muddle him. Her sigh will awake the bud;
Her tears, the apple bloom will drink and throw,
In perfume, out on the delighted air;
The pampered pansy and the shy violet
Are thirsty, too, and long have coveted
Her honeyed weeping. So, then, sweet April,
Welcome! thy blue eyes and thy tears
Are the twin artisans of Nature—Earth's
Apt upholsterers whom she calls to lay
Her carpet for the dainty foot of May.

—*Joseph Whitton in Table Talk.*

AN EMINENT PHYSICIAN ON FAITH CURES.

ALL the miracles of hearing in ancient and modern times seem to be explained by the triad, expectation, suggestion, faith. The quack says his medicine will cure, and it is taken with this assurance. There is no doubt on the part of the patient. Full confidence is first secured, and the cure may follow. And so it is with the mind cure, suggestive medicine, mesmerism, magnets, metals, and the Well of Lourdes. Quite recently, in New Jersey, a girl, after an attack of measles, lost her voice. Her parents had heard of the cures of like cases effected by visiting a certain chapel in Ireland. They were too poor to take her there, but they procured some of the plaster from the wall of the chapel, and the child drank of the water in which it had been soaked, and her voice immediately came back. Dr. Berheim mentions the case of an hysterical girl who came to his clinic with loss of voice. He told the students that such cases were often successfully treated by electricity. Before it, however, he applied his hand over the larynx, saying, "You will now be able to speak," and the voice returned.

Whatever may be the successes of Suggestion as a healing agent, it can never become a remedy of general application. Its limitation is distinct. Impressible natures only, whether hypnotized or in a waking state, can be brought under its influence. When any evidence of its having cured organic disease is presented, it will be time enough seriously to consider its merits. When it removes a cancer, arrests pneumonia, or typhoid fever, its claims as a mode of healing may receive attention. Lord Bacon tells us that "the mind of man is full of superstition and imposture," and that it is consonant to its nature "for the affimative or active to effect more than the negative or privative. So that a few times hitting a presence, countervails ofttimes failing or absence." When Diagoras was shown, in the temple of Neptune, the votive offerings of those who had escaped shipwreck, and was asked if it were folly to invoke the god in a tempest, he replied, "Where are they painted who were drowned?" When the event answers expectation it is registered, but the more numerous failures are passed by.

The history of all marvel cures tells the same tale. Each healing epidemic has its period of birth, development, decay, extinction, and their sun often goes down while it is yet day. They are pitiful evidences of the infirmity of the human mind, so readily moved by novelty, so credulous of wonders.—*Dr. Meredith Clymer in "The Forum."*

OF the new "Local Government bill," now pending in the English Parliament, an exchange says: The changes wrought in local government by this measure are manifold, both in the metropolis and the counties. London is now a nation by virtue of its 4,000,000, and it is the least-governed centre of population in the world. It is to have an elective Council in place of the Metropolitan Board of Works, and a Lord Lieutenant as chief executive. County Councils are to be elected either by rate payers or by popular suffrage, women who pay taxes being allowed to vote. It has thus been reserved for a Tory Minister to incorporate woman suffrage—long regarded in England as a Radical crotchet—in a Government scheme of local reform. The town Councils are to be popular assemblies, in which landlords' influence will not be predominant. The aristocratic and middle classes will no longer rule in town and country. The masses will have power gradually to displace the classes and to render local government at once more efficient and more progressive than it has ever been in England.

THE attempting to become "all things to all men," the determination to have a showy numerically and financially prosperous church on the part of church officials, only places before them, for their unravelling, the difficult, the never to be solved problem, "how to combine the service of God and of mammon, how to make two incompatible things consistent, the indulgence of inclination and the approval of God."—*Exchange.*

NEWS AND OTHER GLEANINGS.

—The London firemen are to be clothed in asbestos garments, which will not burn. The experiment has been tried already in Paris, and works well.

—London has eight homes for poor working girls, at which breakfast, dinner and tea cost only a dollar a week and room not over a dollar more. They are said to be well managed and liberally supported by charitable people.

—In Paris the substitution of glass flooring for boards continues to increase, this being especially the case, it is understood, in those business structures in which the cellars are used as offices. In one of these the whole of the ground in front is paved with large squares of roughened glass, imbedded in a strong iron frame, and in the cellars beneath there is sufficient light without gas for ordinary purposes.

—One morning last week two distinct earthquake shocks were felt at Nashua, N. H. The first vibration and rumbling came at about 1.30 o'clock, and was sufficient to awaken people and jar residences. The trembling lasted a few seconds, and was followed by a second or lighter shock at about 2 o'clock.

—Celluloid has recently been used as a substitute for copper in sheathing the hulls of vessels, and has been found to answer the purpose admirably. In the experiments performed with it, plates of celluloid were applied to a number of vessels and allowed to remain for six months. At the end of that time the parts of the hull left uncovered were found to present abundant collections of marine vege-

tations, while the celluloid was quite intact and free from any such vegetable masses. It can be applied to the hull in extremely thin plates and yet supply all demands for solidity, impermeability, resistance to chemical action, etc.

—The annual loss caused by insects in the United States is estimated at about $150,000,000, that on cotton alone being $15,000,000. The insects increase with the advance of civilization, on account, doubtless, of the greater abundance of the food furnished them. Every vegetable product and every variety of fruit and flowers are attended by special parasites, each of which thrives on its respective food-plant.

—Saida, the town at which has been discovered the sarcophagus supposed to contain the remains of Alexander the Great, who died in 324 B. C., from a fever contracted while surveying the marshes around Babylon, and to which he was more susceptible because he had just got over a protracted debauch, is about twenty-four miles from Beyrout, in Syria, and is the ancient Sidon or Zidon. In 1850, gold coins of the time of Alexander, valued at $40,000, were unearthed there, and it was while at the head of the French exploring expedition there in 1860, that M. Renan picked up a good many of the points which he used in his famous "Life of Christ."—*Boston Transcript.*

CURRENT EVENTS.

THE International Congress of Women which began its sessions at Washington on the 24th of last month, closed on the 31st. There was a very large attendance, and many interesting papers were read, addresses made, etc. Susan B. Anthony presided during most of the time. We shall give some outline of the proceedings next week.

No settlement has been reached, at Chicago, of the difficulties on the different railroads coming into that city caused by the strike of the locomotive engineers on the Chicago, Burlington and Quincy line. Several others are now involved, and the troubles, at this writing, seem likely to be serious.

RAIN prevailed throughout California Sixth-day of last week, and reports received from all the grain producing counties show that both the wheat and barley fields are looking exceptionally fine. The present prospects are for the largest yield of grain in the history of the State, while the fruit output will also be larger than in any previous year.

THE Bankers' Association in Buffalo, New York, has determined upon a discount of two per cent. on all Canadian currency received on deposit at the banks. The city is full of Canadian currency, and this action, it is thought, will drive it back across the border.

THE four judges who have been hearing the applications for license to sell liquor in this city announced on the 2d inst., their decision in five more wards. Out of 548 applications 212 were refused, and 16 were withdrawn. It now is estimated that instead of 6,000 saloons in the city, as at present, there will be but 1,500 after the 1st of Sixth month, when the new law goes fully into effect. The judges refused a license for the sale of liquor at the Academy of Music, when balls take place there.

A FRIGHTFUL explosion occurred in a coal mine at Rich Hill, Missouri, last week. There were 35 men in the mine at the time. Of these, 15 were taken out alive, 14 being severely injured. Five dead bodies were recovered, and 15 men were still shut up in the mine, most of whom, it was feared, would be suffocated.

THE House of Representatives of Massachusetts has passed a Woman's License Suffrage bill, which gives to the women the right to vote whenever the question of refusing or granting licenses to sell intoxicating liquors is to be voted on under local option law. The Iowa House of Representatives, by a vote of 66 to 25, has adopted a Constitutional amendment, conferring upon women the right of suffrage in all State elections.

CHINA advices received at San Francisco by the steamer City of Rio de Janeiro, state that the British steamer Swallow was wrecked February 22d, off Naomi Island, between Swallow and Shanghai. The vessel struck on some rocks and sank. The captain and a number of the crew and passengers saved themselves by clinging to the rigging, but thirty-one persons, who put off from the steamer in small boats are supposed to be lost.

NOTICES.

*** Abington First-day School Union will be held at Gwynedd, on Seventh-day, the 21st of Fourth month, at 10 o'clock. All interested are invited to attend.

J. L. ATKINSON,
ANNA MOORE, } Clerks.

*** Friends' Home for Children. The religious meeting at the Home for this month will be on First-day, Fourth month 8th, at 3 p. m. A number of Friends are expected to be present. The Directors would urge upon their friends and the friends of the Home to attend these meetings and to ask others to come also. These meetings are not intended alone for the children, but for the adults as well. We should be delighted to have our building crowded. The Home can be reached easily by the Girard Avenue or Baring street cars.

*** Concord First-day School Union will be held at West Chester, on Seventh-day, Fourth month 14th, commencing at 10 o'clock. All interested are invited to be present.

CLARA B. MILLER,
EDWIN J. DURNALL, } Clerks.

*** Salem First-day School Union will be held at Mickleton, N. J., on Seventh-day, Fourth month 14th, commencing at 10 a. m. All interested are cordially invited.

RICHMAN COLES,
LOUELLA WADDINGTON, } Clerks.

*** A Meeting of the Joint Committee on Temperance and Intoxicating Beverages of Philadelphia Yearly Meeting, will be held at Race Street meeting-house, Seventh-day, Fourth month 14th, 1888, at 1 p. m.

JAMES H. ATKINSON,
ANNIE C. DORLAND, } Clerks.

PUBLISHERS' NOTICES.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

*** AS a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

1888.

FOR SUMMER BOARDING.

QUEEN & CO. 924 CHESTNUT ST.

The use of the INTELLIGENCER AND JOURNAL *as a medium for advertisements will, we think, be found very satisfactory. A careful supervision is exercised, and nothing known to be unworthy is admitted. The paper now goes to about 3300 persons, reaching, say, 15,000 readers, and its size and shape, and the character of its contents give special weight to each advertisement.* ☞ *When our readers answer an advertiser, please mention that they do it upon seeing the advertisement in this paper.* ☜

(2 doors below Green.)

SWARTHMORE COLLEGE

OPENS NINTH MONTH THIRTEENTH.

Thirty minutes from Broad Street Station, Philadelphia.

Under the care of Friends, but all others admitted.

Full college course for both sexes; Classical, Scientific, and Literary.

Also a Manual Training and a Preparatory School.

Healthful location, large grounds, new and extensive buildings and apparatus.

For Catalogue and full particulars, address

EDWARD H. MAGILL, A. M., President,
Swarthmore, Penna.

FRIENDS' BOARDING SCHOOL.

NEWTOWN SQUARE, PA.

Terms, $150 to $175 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.

Or to

THOMAS P. BARTRAM, Newtown Square, Pa.,

CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

ABINGTON FRIENDS' BOARDING and DAY

School near Jenkintown, Pa., Bound Brook R. R. Ten miles from Philadelphia.

Second term begins First month 30th, 1888. Courses will be arranged to furnish a thorough English education and to prepare pupils for college.

Board and tuition $145 to $165 per school year. Tuition alone $25 to $45. For further information address,

ARTHUR H. TOMLINSON, Principal,
Jenkintown, Pa.

Or

CYNTHIA G. BOSLER, Sec.,
Shoemakertown, Pa.

GEORGE W. HANCOCK,

REAL ESTATE,

MONEY TO LOAN ON MORTGAGE.

PROMPT ATTENTION GIVEN TO THE COLLECTION OF RENTS AND GENERAL CARE OF PROPERTY.

INTELLIGENCER Vol. XLV. No. 15. | PHILADELPHIA, FOURTH MONTH 14, 1888. | JOURNAL. Vol. XVI. No. 794

"MY HOUSE IS LEFT UNTO ME DESOLATE."

A LITTLE while, you tell me, but a little while,
And I shall be where my beloved are;
And with your eyes, all large with faith, you say,
"Thy dear ones have not journeyed very far."

"Not very far." I say it o'er and o'er,
Till on mine ear mine own voice strangely falls,
Like some mechanic utterance that repeats
A meaningless refrain to empty walls.

"Not very far;" but, measured by my grief,
A distance measureless as my despair,
When, from the dreams that give them back to me,
I wake to find that they have journeyed there!

"Not very far." Ah me! the spirit has
Had its conjectures since the first man slept;
But, O the heart, it knoweth its own loss,
And death is death, as t'was when Rachel wept!

—*Chambers's Journal.*

THE DISCIPLINARY SYSTEM OF FRIENDS.

(*Concluded from last week,*)

WHEN Peter, through excessive zeal, smote off the ear of the high priest's servant, Jesus reproved him, but did not cast him off; and when, in a season of weakness, he soon after denied his Master, "the Lord turned and looked upon him," and that look, full of love and tenderness, so wrought upon his feelings that "he went out and wept bitterly."

Oh! that the spirit of the meek and lowly Jesus might prevail in our hearts, and bear rule in our assemblies; for "a bruised reed he shall not break, and smoking flax shall he not quench till he send forth judgment unto victory." Matt. xii. 20.

The incident to which I have just alluded in the life of a devoted apostle, is one among the many evidences we have that even those who have made some progress in the knowledge of Divine things are liable, if not continually watchful, to yield to temptation and fall into error. It is true that Peter had not then become fully acquainted with the spiritual nature of the Redeemer's kingdom, but it appears that long afterwards, and on another occasion, "Paul withstood him to the face because he was to be blamed." Gal. ii. 11. How important it is that we who stand in the station of ministers of the gospel, should be vigilant over our spirits, and that our brethren and sisters in profession should watch over us *for good*, in order to correct our faults, and not for evil, in order to report them to the world. We are no less liable to error than other members who are equally devoted to the cause of Truth, and in some respects have peculiar temptations from which others are exempted. One of these is found in the disposition so often manifested by weak and inexperienced minds to applaud our religious services, especially when a discourse is extended to a considerable length, and conveyed in appropriate language. These novices have yet to learn that fluency of speech and beauty of expression furnish no test of gospel ministry; for although it may be conveyed in "the words which man's wisdom teacheth," if it be not in the demonstration of the spirit and of power, it is utterly worthless in the divine sight. We should remember the apostolic injunction, "As every man hath received the gift, even so minister the same one to another as good stewards of the manifold grace of God. If any man speak, let him speak as the oracles of God; if any man minister, let him do it as of the ability which God giveth: that God in all things may be glorified." I. Peter iv. 10–11. The ministry of the gospel is a divine gift which no man nor body of men can confer nor take away. It must be received immediately from him who is the "Shepherd and Bishop of souls," and in order that it may be properly exercised, we must act in the name which signifies the power of Christ, for "without me," said he, "ye can do nothing." In order that ministers, when properly called and qualified, may be encouraged to occupy the talents entrusted to their care, and that, when they travel abroad in the service of the gospel they may be recognized by other branches of the Society where they are personally strangers, it has been found best that the meeting to which they belong should acknowledge their gifts, after a sufficient time has been allowed to form a correct judgment. This acknowledgment or recommendation of a minister confers no preëminence that should elevate him in his own esteem, or excite the jealousy of others; for it was said to the disciples, "One is your master, even Christ, and all ye are brethren." At an early period in the history of our Society, it became a practice to appoint two or more experienced Friends of each sex to sit with ministers; and hence originated the office of elders, which I believe also corresponds with the practice of the primitive church; for Paul and Barnabas, while in Asia Minor, ordained or appointed "elders in every church," and Titus was directed to do the same in every city of Crete. Acts xiv. 23; Titus i. 5.

Paul, in addressing the elders of the church at Ephesus, said to them, "Take heed to yourselves and to all the flock over which the Holy Ghost hath made you overseers," (Acts xx. 28); and Peter ex-

horts the elders to "Feed the flock of God which is among you, taking the oversight thereof, not by constraint, but willingly; not for filthy lucre, but of a ready mind; neither as being lords over God's heritage, but being ensamples to the flock." I. Peter v. 2. It appears that the term "elders" was sometimes applied to ministers, for Peter calls himself an elder; but it may be inferred that this was not always the case, for Paul says, "Let the elders that rule well be accounted worthy of double honor, especially they who labor in word and doctrine." I. Tim. v. 17. I conceive that the office of an elder is to watch with parental care over the whole flock, extending a hand of help and a word of encouragement wherever it is needed. They are not only to sit with ministers, but to endeavor to sympathize with them in their religious exercises; and when they perceive that a minister, through unwatchfulness or a desire of applause, runs into an excess of words without the life and unction of the gospel, or even if he fall into a habit of delivery unsuitable to the dignity of the subject, it is their duty, in a tender and affectionate manner, to extend suitable counsel. This may also be done by other members of the Society, male or female, who may feel it their duty; but there is an obvious propriety in this duty being especially committed to discreet, experienced minds, such as elders ought to be; for if it should become the subject of general remark, the minister's usefulness would be impaired, his feelings might be wounded, and the harmony of Society endangered. In some meetings there is a jealousy or distrust of the eldership, which I sincerely regret, because I believe it was instituted under the guidance of Divine truth, and I am not aware that any change has taken place in the state of Society which renders it unnecessary. Like all other institutions, it is liable to be abused when intrusted to improper hands, and has perhaps in some cases been made an engine of oppression; but the same may be said of the ministry itself, which, although a great blessing when preserved in purity, becomes the most terrible of all scourges when it falls into the hands of a mercenary or bigoted priesthood. We are admonished by the voice of history that the greatest encroachments upon religious liberty have been made by men who professed to be ministers of the gospel; and although we have closed one of the principal avenues to corruption by withholding pecuniary compensation, yet it appears to me that the eldership should be preserved, if it is only as a check upon the power and influence of the ministry. The appointment of elders belongs to monthly meetings, and if unsuitable persons are chosen, the fault rests with them. The description which Paul has given of a good bishop will apply to ministers and elders, for the term bishop only means an overseer in spiritual things. He should be "blameless, vigilant, sober, given to hospitality, apt to teach, not given to wine, no striker, not greedy of filthy lucre, but patient, no brawler, not covetous, one that ruleth well his own house; not a novice; and moreover, he must have a good report of them which are without." I. Tim. iii. The idea of perfect equality in all things which some persons appear to entertain, is one that I believe cannot be realized in practice. According to the parable of the talents (Matt. xxv. 15), it appears that "to one servant he gave five, to another two, and to another one, to every man according to his several ability." These talents may represent spiritual gifts, intellectual power, or temporal goods, which are dispensed to men in various proportions, according to the will of the great Giver. Our happiness depends upon the use we make of them, and the man who has one or two talents may be as fully blest in occupying them, as he who has five talents. The vessel that holds one measure, when it is entirely filled, is as unconscious of any deficiency as that which holds two or five measures.

If we lived up to the principles we profess, the Christian church would, for all practical purposes, enjoy a community of goods, for the rich would consider themselves as stewards intrusted with the means of helping their brethren; and the gifted in spiritual things, so far from being as lords over God's heritage, would be as ensamples to the flock. If we are not prepared to carry out these principles as we are now situated, should we be any better prepared by retiring into other communities? It appears to me that the same passions and propensities which now disturb us would be manifested there. The desire of preëminence would actuate some, the love of ease would influence others, jealousy and detraction would sow the seeds of discord; and where we expected to find a garden of Eden, we should be introduced into a wilderness filled with thorns.

The general aspect of Christendom at the present time is one of deep interest to the lover of mankind. It is a season of intense mental activity. How great is the conflict of opinions! how general the desire for discussion! what a variety of new schemes are brought forward having for their ostensible object the promotion of human happiness! Although many of these schemes will end in disappointment, and many pernicious doctrines are promulgated, I am far from being discouraged at the prospect before us, for I have entire confidence in the power of truth when left free to oppose the progress of error. This state of society is far preferable to that supine indifference which rests content without improvement, and sends forth no aspirations for the relief of suffering humanity. It is cheering to observe that many of the principles and testimonies which were opened by the light of divine truth to our faithful predecessors are now rapidly spreading in the world. There are multitudes not in membership with us who acknowledge and openly proclaim that war, slavery, and the use of intoxicating drinks, capital punishment, oaths, and a hireling ministry are inconsistent with Christianity and subversive of human happiness.

Should not this consideration increase our confidence in our fundamental principle, the immediate revelation of Divine power in the human soul, as the only and all-sufficient means of salvation; and should it not induce us to cherish in our hearts a deep attachment for a Society which has been so signally blest as an instrument of good to mankind? But let us not depend upon the labors of our ancestors, like the Jews who said, "We have Abraham

for our father," for such a reliance will lead us into dead formality, and then our portion will be given to others more worthy than we. There can be no doubt that the sincere and pious worshippers of all religious denominations are, equally with ourselves, the objects of divine favor; for "as many as are led by the spirit of God, they are the sons of God."

From the Friend, (O), Philadelphia.

THE FOUNTAIN HIGHER THAN THE STREAM.

The remarks of William Caton, (one of the early ministers in the Society of Friends) as to the source whence he derived the heavenly truths he was commissioned to declare to the people, are so instructive, that it seems proper briefly to refer to them. In speaking of his travels in the service of Truth, he says:

"Many large and precious meetings I had in the country, and the Lord was very much with me, who furnished me plenteously with his word and power; insomuch that I stood admiring, at sundry times, from whence I had that fulness. And it was not [admired at] by me only, but by many more, who, looking with the eye of reason upon my earthly tabernacle or outward man, could not expect any great thing from me, being then about twenty years of age; neither had I ever been in much profession, until I was convinced of the Truth of God. Yet plenty of heavenly things the *Lord was pleased to open in me*, and through me, to the end I might communicate the same to the multitude, which sometimes being very great, I was ready to say within myself, 'Where shall I have wherewithal to satisfy all these?' And when I looked out to my own weakness and insufficiency as of myself, I was ready to faint within me; but when I looked only at the Lord, and put my confidence entirely in him, I was strong and courageous."

It is needful from time to time to call attention to the fundamental truth, that "what the Lord is pleased to open" in the minister, is the source to which he must look for the food he is commissioned at the time to hand to the people; and that he must not depend on any stores of Scriptural or other knowledge which he may have accumulated, or rely upon the degree of intellectual ability which may have been developed by education or use. He who alone knows the hearts of the people, and what they need at any particular time, is as able now to give to his ministers his word to declare as he was to the prophets and apostles of old. It is his Divine Power inwardly revealed that is the authority of the true Gospel minister, and that gives him the ability to exercise aright the gift entrusted to him. This power is *independent of the Scriptures*, and though it may often make use of Scripture language, and of the blessed truths recorded in them, yet this is not essential to Gospel ministry. For the same Spirit that inspired holy men of old to write those invaluable records, still operates by its own power and authority on the minds of those whom it commissions to preach to others, and gives them fresh and living messages for the people.

In speaking of ministry, William Penn says: "It is not our parts or memory, the repetition of former openings in our own will or time, that will do God's work." "It is the Spirit of the Lord, immediately, or through the ministry of his servants, that teacheth his people to profit."

George Fox, in his Journal, remarks: "The knowledge which the world hath of what the prophets and apostles spake, is a *fleshly* knowledge; and the apostates from the life in which the prophets and apostles were, have got their words—the Holy Scriptures—in a form, but not in the life nor spirit that gave them forth."

What is a *fleshly* knowledge of spiritual things, but that knowledge obtained by the exercise of our own natural faculties, when separated from the enlightening influence of the Spirit of Truth, which furnishes the only key that can unlock the mysteries of the kingdom of heaven?

Very instructive in connection with this subject are the remarks of Stephen Grellet, written in the year 1819: "It is Christ's prerogative to feed and instruct his people: his servants, even those who are divinely anointed as his ministers, can only hand out to the flock the bread which the Lord first gives them for the purpose, and which he himself blesses; neither can any availingly instruct the people but as the Lord himself commissions and qualifies them by his Spirit; so that they have nothing to give but what they themselves first receive from the Divine fountain; hence the necessity to attend to the dear Master's injunction to his disciples, "Tarry ye at Jerusalem until ye be endued with power from on high."

Some of our readers may think that these principles have been so long and so firmly established as the doctrines of the Society of Friends, that there is not much occasion to urge their importance at this time. But there are frequent evidences of a necessity of recurring to first principles. One of these is contained in an essay delivered at the time of New York Yearly Meeting held at Glen Falls last summer, prepared at the request of its Standing Committee on Education and Evangelistic Work, so that it seems to have a semi-official character.

The writer of this Essay, "on Extemporaneous Speaking," states that an extemporaneous lecturer must carefully study his subject, and have his mind filled with facts and thoughts bearing upon it. In like manner, he thinks, the Gospel minister must have his mind stored with facts and principles relating to religion; and that these must be thoroughly digested by the study of the Scriptures. He says, "We must find what the law and Prophecy, the Psalm and Proverb, the Gospel and Epistle, have concerning our topic; and how it has been developed in history. This topical study is *indispensable*." Subject after subject is to be thus treated, until the whole range of Gospel truth has been examined and digested. "Without such study," says the essay, "no subject can be presented with its proper force."

To those who are disposed to acquiesce in these views, we commend the remarks quoted by Stephen Grellet, who at Zurich in Switzerland, in 1813, met with an aged man, Antistes Hesse, of a tender spirit, and the head of the clergy in his Canton. Of him,

S. G. says, "On one occasion when, at his request, I had given him an outline of the views entertained by our Religious Society, respecting the new birth, the Christian baptism, the bread of life on which the renewed man feeds; on worship, ministry, the Church of Christ, faith in our Lord Jesus Christ, his various offices, redemption and salvation by Him, together with the gift and operations of his Divine Spirit,—he, with much tenderness, expressed his gratitude in that the Lord has raised himself a people among whom the standard of Truth is lifted up, and the Gospel in its purity is proclaimed. 'I have read and diligently studied the Scriptures,' said he, 'in Greek, Hebrew and Latin, but it is in the school of Christ only, *through the teachings of that spirit by which alone the things of God can be known*, that I have learned that those things you have now set forth are true.'"

We do not undervalue the Scriptures, and would not by any means discourage a frequent and reverent perusal of them. A knowledge of their contents is of great value to the minister of Christ and to all other Christians. But ministry must not be degraded to lecturing on their contents. It is not founded on knowledge of them, but on the fresh communications coming from Him, who openeth and no man can shut.

For Friends' Intelligencer and Journal.

THE BELIEF OF FRIENDS.

Our Branch of Friends is accused of having no creed; we can afford to do without one, for we have, instead, a rule of life which is universal in its application. This rule is suited to every condition and every clime, and was given to us by the great founder of our Society in the three immortal words, "Mind the Light." Whoever obeys this rule cannot have a fixed creed, because, having more light to-day than he had yesterday, he may no longer believe what then seemed to him to be true. Moreover, nothing but obedience to this rule can effect our salvation; for what we desire to be saved from is sin, and we can be saved from sin only by obedience to the voice of the Holy Spirit.

It is a law of gravitation that whenever two physical bodies attract each other, the lighter of the two moves the greater distance before they come together, but if they be of equal weight they will move equally. So if the different branches of Friends are drawn toward one another by the attraction of love, the one which is most heavily weighted with truth will eventually absorb the others; in the spiritual as well as in the material world there is an inevitable "survival of the fittest." Our concern is simply to bear testimony to the truth as it is revealed to us, and leave the result to the great Author of all Truth.

What our heavenly Father requires of us, was summed up by Jesus in these two commands: "Thou shalt love the Lord thy God with all thy heart; and thy neighbor as thyself." He also said that the way to enter into the kingdom of heaven is to do the will of our Father which is in heaven. The Society of Friends in the future can stand upon no firmer foundation than this which Jesus gave; and its creed, if creed it must have, may be put into very few words; I believe in the fatherhood of God, the brotherhood of man, the self-renunciation taught by Jesus, and the saving power of obedience to the Light within.

Elizabeth Lloyd.

For Friends' Intelligencer and Journal.

THE TRAINING OF THE CHILDREN.

In the many years I have been permitted to live I have often been thoughtful and exercised in regard to the proper treatment of children; and while sensible there are and have been many qualified for the interesting task of rearing the young mind, I have felt impressed to write and bring into view for the encouragement of all, the counsel of the wise King to train up a child in the way he should go, and when he is old he will not depart from it. Also to cite the command given in ages past for the instruction and training of the little ones, and which is beautifully described in the sixth chapter of Deuteronomy in these words:

"Hear, O Israel: The Lord our God is one Lord: and thou shalt love the Lord thy God with all thine heart, and with all thy soul, and with all thy might."

"And these words, which I command thee this day shall be in thine heart; and thou shalt teach them diligently unto thy children, and shalt talk of them when thou sittest in thine house, and when thou walkest by the way, and when thou liest down, and when thou risest up, and thou shalt bind them for a sign upon thine hand, and they shall be as frontlets between thine eyes, and thou shalt write them upon the posts of thy house, and on thy gates."

This unabated care and concern in the love of the Heavenly Father cannot fail to influence the tender and susceptible minds of the precious children; teaching them not only to obey their parents in the Lord, but also to obey the voice of the Divine Spirit, that speaks within the heart, saying, "this is the way walk ye in it, when ye turn to the right hand and when ye turn to the left." And no greater joy can parents have, than to see their children walking in the way pointed out in the goodness of a loving Father which brings the sweet peace that the world can neither give nor take away and prepares them, when called from all earthly scenes to dwell with purified spirits in the realms of bliss and receive the joyful words, of "Well done, good and faithful servant, thou hast been faithful over a few things, I will make thee ruler over many things; enter thou into the joy of thy Lord."

Rebecca Price.

Fourth month, 1888.

Jesus taught love and peace. He preached self-examination, severity unto one's self, indulgence toward others, hate of sin, pardon of sinners. He taught trust in God, incessant efforts to gather lasting treasures, and to scorn what is perishable. His prayer was no humiliation of self before a diety, but the discourse of a son with his father. He denounced injustice and hypocrisy, yet fell himself a victim to the blindness of the masses and the villainy of the wicked.

EDUCATIONAL.

THE ENFORCEMENT OF SCHOOL DISCIPLINE.[1]

The necessity for discipline in our schools may arise from various sources. The pupil may be incited merely by excessive animal spirits, or simply indifference to the objects of school work, and so interested in getting from his association with his teachers and his mates the greatest amount of what he considers enjoyment; or he may be really vicious, having a love for what is low, finding nothing enjoyable in what is elevating or refining. These classes shade into each other by an infinity of gradations, and the difficulty of discipline is increased many fold by the uncertainty of the teacher as to whether a given case exhibits more of mere vivacity or of viciousness.

The overactive pupils are not difficult to manage; the thoughtful teacher keeps them out of mischief by finding plenty for them to do, and makes their excessive energy a means of good to themselves, and a help to others.

The indifferent pupil is not so readily managed. He simply wants to "have a good time," and is constantly engaged in schemes to that end. You talk to him of goodness as the means of happiness, and he is meantime engaged in bending a pin into a peculiar but effective form; you exhaust yourself in the endeavor to make clear to him vulgar fractions or quadratic equations or Cæsar's indirect discourse, and presently discover that you have afforded him a long-sought opportunity to pull some neighboring back hair or indulge in a game of tit-tat-toe.

Now if you go to seek a formula which will contain the cure for all the forms this mischief may assume, you will seek in vain; the varieties of human nature are too many; but you will find the study and cure of individual cases—laborious, tantalizing, discouraging, exasperating, yet infinitely interesting, and remunerative, for these pupils are frequently the brightest, and naturally the most attractive, and one success is sufficient recompense for a thousand failures. Benjamin Hallowell, in his old age, looking back over the many years of his teaching, and recalling the many eminent men who had been prankish, mischievous boys in his school, and who in their successful middle-life spoke his name with reverence, used to say, "I always liked the bad boys;" not that the pure minded old Friend had any liking for *badness* but he recognized the intellectual activity shown in continual mischief; the power wasted in mere foolishness and mistaken fun, which if stirred up to a nobler ambition, and diverted to channels of proper activity is capable of the best uses and a source of all the good that comes from mental power and proper mental growth.

The means of this reform are as various as human nature itself, and there is hardly a resource in the versatile equipment of the human mind that will not at times be brought into service. One pupil may be made to see the waste of time and money that he is making; another may have his ambition stirred by seeing something accomplished which appeals to him as both desirable and possible; this boy may be brought to see how much good he could do some one else by getting down to earnest work, while that one may only need to be shown that the school work is of *practical use* and that the teacher is not incapable of understanding and appreciating affairs which have a relation to the life outside the school-room, while the steady, unflinching application of the ordinary school-room discipline will result in many a reformation.

But in the case of the really vicious pupil, another consideration enters. Here we must think, not only of the chance of doing him good, but of the necessity of preserving his fellows from contamination. I was once in a school where the managers and teachers talked much and loudly of their excellent moral influence; they were men of pure lives and minds, several of them ministers, and most of them so far removed, by time or by habit, from youthful ways and the modes of propagation of evil, that they retained in their school year after year, young men who were actually graduates in vice, and who taught vice to their fellow students more successfully, it seemed to me, than the faculty taught the classics, mathematics, or moral philosophy. This is an extreme case, but it seems to me that we do not sufficiently appreciate the harm possible to be done by the really bad boy. We are concerned for *his* reformation; we want to pluck this one brand from the burning; our sympathies are aroused; we remember that no human heart is all bad, and we see many good and admirable traits in this particular character; and we forget that while we are working to bring back this one lost sheep, nine, if not ninety and nine, moved by the contagion of his activity, or incited by his example are too liable to wander away. Here, the surgical remedy is the only one: the health of the entire body is of more value than the retention of all the different members; and more than this, the pupil who finds that his character forbids his retention in one school has received notice in a form which he understands and appreciates, that reformation is advisable, and that without it, he is on the way to become actually a social outcast.

In the public schools, it must always be remembered that the pupil has a definite claim on the school, a claim which must have proper consideration, and it has also to be remembered that dismissing a pupil is in all probability sending him to the school of the street. But with us the case is different; no pupil has any particular claim on us; and it will certainly be good for the moral standard of our schools if every pupil understands that real vice will not be tolerated; more than this, to be intensely practical in the narrow sense which some people attach to practicability, it will be good for our schools financially, for in the vicinity of Philadelphia, there can be no better advertisement for a school than to have it generally known that immorality is excluded, and that the line is drawn vigorously, unhesitatingly, unvaryingly, and that the necessity for the application of the rule is therefore infrequent.

It seems to me,—I say it with a sense of discussing a delicate subject,—that teachers are frequently

[1] An Essay read at the Educational Conference, 15th and Race streets, Philadelphia, Third month 17th, by Prof. W. W. Birdsall of Friends' Central School.

placed at great disadvantage in this matter of dealing with refractory pupils. School committees and managers very properly retain in their own hands the power of final dismissal. Now it is absolutely essential, not only to the comfort of the teacher, but to the success of his work, that he shall be able to enforce prompt, cheerful, uniform obedience to regulations. Let the idea once enter the brain of a troublesome boy that he can raise a question of conflict of authority between teachers and managers, and there is an end of discipline. You say it is not so in business,—that a wrong ruling of a subordinate is reversed by the superior without damage,—but we are here dealing with children, with refractory pupils anxious to find the limitations of authority and ready to concoct more trying positions in a day than can be disposed of in a week.

The teacher, tried by a long-continued series of petty transgressions, worried by the continual attempt of a pupil who seems to be "smart" simply in the endeavor to discover the dividing line between the only outrageous and the wholly intolerable, finally seizes upon what seems a case of sufficient gravity, and cites the criminal before the highest tribunal. The offense, standing alone does not seem to outsiders such a terrible thing,—the teacher is rather put on the defensive and required to justify his view of the gravity of the case. The pupil, perhaps, is restored to his place with the assurance that his past will be remembered no more for ever, but that he really must not do so any more. The teacher is not comfortable. He can hardly call the court again together on an occasion of less gravity than the last, and the pupil has been warned that there is a limit to toleration, but takes this as notice that within this limit he is safe.

The pupil is not likely to improve under such discipline, and certainly the harm to the school is serious. It seems to me that the pupil should in all cases account to the teacher. As principal of a boy's school containing some turbulent pupils I used to have sometimes to deal with cases where the teacher was not altogether blameless, but I always found it best to say to the boy "You must make this right with your teacher," while if necessary, I advised the teacher to be satisfied with such reparation as seemed proper, and to exercise a wiser discretion in similar cases; but the work of the pupil stopped until he had corrected his record, and he understood that it must be speedily done.

I believe that it is rarely, if ever, well to allow a pupil to remain in a school where the teacher is strongly of the opinion that he should be dismissed, and the case has definitely come to an issue. The teacher may judge incorrectly,—may over-estimate the wickedness of the culprit,—but even in this case, my experience goes to show that the chances for that teacher to do any further good for that pupil are extremely small, while the influence of such a case on the school, and particularly on the teacher, cannot but be bad.

Do you say that it is a delicate thing to decide whether a pupil is really bad? Is it a weighty matter to put upon a child the odium of a dismissal? Does it seem an awful thing to assume to judge of motives? Are the tears and entreaties of friends or relatives an argument hard to resist?

These things are always with us; at each step of life we have only a choice of responsibilities, and in this case the consequences of the one course are no more serious than those of the other; all we can do is to face our duty courageously, and do the right as we are given to see the right.

No one who has seen much of school life can doubt that it is possible for the teacher to be largely instrumental in raising or lowering the standard of honor among his pupils. It seems to me that one of the most prominent causes of a low standard of honor among our pupils is an excessive spirit of emulation.

[*Conclusion next week.*]

SCRIPTURE LESSON, No. 16.

FOURTH MONTH 22D, 1888.

THE TEN VIRGINS.

TOPIC: IMPROVIDENCE.

GOLDEN TEXT.—"And while they went away to buy, the bridegroom came; and they that were ready went in with him to the marriage feast; and the door was shut."—Matt. 25: 10.

READ Matthew 25: 1-13.

THE parable of the ten virgins is another lesson intended to enforce the duty of watchfulness and forethought for the future. It was necessary for Jesus, again and again, to repeat in parable and simile the great truths he wished to fasten upon the attention of the people. It has always been needful to give "precept upon precept, line upon line," that the simple-hearted and the untutored may be able to comprehend the meaning.

Then shall the kingdom of heaven be likened, etc. This is a continuation of the former lesson. The intention of Jesus seems to have been to press home, upon the people who heard him, the important thought that while all are invited to be ready to receive the visitations of heavenly love represented by the coming of the bridegroom, there will be some who make no thoughtful preparation for that event.

In the East the ceremony of marriage was commonly performed in the open air and near the banks of a stream. The bride and groom, accompanied by their friends, returned in a palanquin, carried by four or more persons, to the bride's father's, where a feast, lasting usually seven days, was provided. At the end of this feast, the bridegroom conducted his bride to his own home, many of their friends joining in the procession. This was in the evening. A company of the bridegroom's friends gathered at his home, and went out with lighted torches to meet the procession; often they were kept waiting, and to meet any such emergency, the thoughtful ones carried a little can of oil, that their lamps might be refilled.

The improvidence of those who had only brought with them what oil their lamps would hold, is seen in the lost opportunity it occasioned. While they were looking about and begging for oil to trim their lamps, their companions met the wedding company, and

went in with them to the feast, and the doors were closed. None were afterwards admitted; all who participated in the enjoyments of the home-bringing had to be ready to enter with the bridegroom.

While none dare to set a limit to the forbearance and compassion of the Heavenly Father, or affirm that his spirit is ever withheld from any soul that asks in sincerity and truth to be led and guided by it into all truth, there have been, and continue to be, multitudes like the foolish virgins of our lesson, who fail to enter into the heavenly enjoyments through thoughtless improvidence.

The changes of the last two thousand years have made but little impression upon the customs and usages in these distant eastern lands, and travelers say the call may still be heard "Behold the bridegroom cometh, go ye out to meet him."

It seems to have been the prevailing method of Jesus to explain to the multitude those things which had a spiritual meaning by means of some temporal illustration, something with which the mind was familiar, but always showing the necessity of turning the attention to their temporal as well as eternal well-being: that there must be a continued effort to gather the Heavenly bread fresh from the divine source.

The second lesson is that we should provide for these physical bodies, which were given us for a wise and noble purpose; and unless we provide for the future, the time may come when it will be too late: the door will be shut.

Although we are told to "Be not therefore anxious for to-morrow, for the morrow will be anxious for itself" (Matt. 6: 34), yet it is necessary to lay up in the summer a supply to be used when the winter season is upon us. Those who are not thus provident, are most likely to become dependent upon the charity of the more thoughtful. But while thus engaged to feed and clothe the body, we must not be neglectful of our duty to seek first the kingdom of God and his righteousness.

BETTER THAN MEDICINE.

A lady in New Hampshire recently gave a party on her eightieth birthday. There was a most elaborate supper, every single article, from bread to cheese, and butter to pound cake, having been made with her own hands. When asked how she kept herself so vigorous and healthy, she replied, "By never allowing myself to fret over things I cannot help; by taking a nap, and sometimes two, every day of my life; by never taking my washing, ironing, and baking to bed with me, and by oiling all the various wheels of a busy life with an implicit faith that there is a brain and heart to this great universe, and that I could trust them both."

The better we are, the more satisfaction our conscience gives; the more temperate we are, the less trouble our body causes; and the more we reduce our wants, the greater our independence!

If we make religion our business, God will make it our blessedness.—*J. Adam.*

SELF CONTROL.

"An expert and experienced official in an insane asylum said to us a little time ago that these institutions are filled with people who have given up to their feelings, and that no one is quite safe from an insane asylum who allows himself to give up to his feelings. The importance of this fact is altogether too little appreciated, especially by teachers. We are always talking about the negative virtues of discipline, but we rarely speak of the positive virtues. We discipline the schools to keep the children from mischief, to maintain good order, to have things quiet to enable the children to study. We say, and say rightly, that there cannot be a good school without good discipline. We do not, however, emphasize as we should the fact that the discipline of the school, when rightly done, is as vital to the future good of the child as the lessons he learns. Discipline of the right kind is as good mental training as arithmetic. It is not of the right kind unless it requires intellectual effort, mental contest. The experienced expert, referred to above, was led to make the remark to us by seeing a girl give way to the "sulks." "That makes insane women," she remarked, and told the story of a woman in an asylum, who used to sulk until she became desperate, and the expert said, "You must stop it; you must control yourself." To which the insane woman replied, "The time to say that was when I was a girl. I never controlled myself when I was well, and now I cannot." The teacher has a wider responsibility, a weightier disciplinary duty, than she suspects. The pupils are not only to be controlled, but they must be taught to control themselves absolutely, honestly, completely."—*Journal of Education.*

In the late Robert Moffatt's "Missionary Labors and Scenes in Southern Africa," is a deeply interesting account of the conversion to Christianity of a Corenna chief named Mosheu and his people. At the close of the narrative is given the following, as illustrating "the power of pacific principles." It was communicated to Moffatt after his visit to England.

"The little Christian band [in Mosheu's village] had met, on a Sabbath morning, with the people in the centre of the village, to hold the early prayer-meeting before the services of the day. They were scarcely seated when a party of marauders approached from the interior, whither they had gone for plunder, and not having succeeded to their wishes, had determined to attack this Coranna village on their return. Mosheu arose, and begged the people to sit still, and trust in Jehovah, while he went to meet the marauders. To his inquiry, What they wanted? the appalling reply was, 'Your cattle; and it is at your peril you raise a weapon to resist.' 'There are my cattle,' replied the chief, and then retired and resumed his position at the prayer meeting. A hymn was sung, a chapter read, and then all kneeled in prayer to God, who only could save them in their distresses. The sight was too sacred and solemn to be gazed on by such a band of ruffians; they all withdrew from the spot, without touching a single article belonging to the people."—*Herald of Peace, London.*

HOME ECONOMY.

WHEN the subject of home, or as we usually say, domestic economy, is mentioned, it is usual to consider one point mainly, which though of great significance in all that concerns the material interests of the home, does not by any means cover the entire ground of its economies. There is a tendency to go to extremes in all that we as a people attempt, and in our earnestness to carry out some object that seems to us of great importance, we often exceed the limits of prudence in the expenditure of both physical strength and the time that is absorbed to the neglect of other things equally claiming our attention.

It is chiefly with the waste in the culinary department of our American households, that our present concern rests,—and this may be traced to several causes. First, perhaps, is the bringing in of more than the family consumes. This the prudent, thoughtful housekeeper can and does remedy either by limiting the supply; or, what is equally an economy, where it can be afforded, the careful saving of the "broken pieces" that they may go to supplement the scant fare of some worthy but poor family, to whom they come as a benediction.

Too often the mistress of the house takes no special interest in this part of her establishment; if she has little experience, and less thrift, what to do with the residue of the family's meal is a matter of indifference which readily communicates itself to the maid who rules in the kitchen, and who most frequently gets her first lesson in wastefulness from the larder of her employer.

The overflowing pails that go out from the gates of, not alone our well-to-do people, but of many who depend upon the weekly wage of the bread-winner for their living, may well bring a feeling of sadness to the thoughtful passer-by, who sees in these receptacles of waste many a dainty morsel, that if carefully saved, and turned to account would make the bread and butter of the evening meal all the more appetizing, or furnish a relish for breakfast fit for an epicure. And it goes into the waste because the house-mistress does not know what else to do with it, or thinks it beneath the dignity of her station to concern herself about such trifles, in which the maid, nine times out of ten, concurs, because she does not want the additional labor that the utitizing of broken fragments entails. It is so much less trouble to step to the market or the nearest meat-house and get chops or a steak or some other easily procured and easily prepared article, with no consideration of the addition it makes to the cost of living.

It is to the encouragement of all who think this a subject that should claim serious attention, that the example of economy comes to us from the Highest Authority. In feeding the multitudes, though the fare was meagre and of the simplest kind, the Master gave forth this injunction, "Gather up the broken pieces that remain, that nothing may be lost."

And this is the lesson of all the economies in nature, proclaimed daily since the earth began to roll upon its axis. "That nothing may be lost," is the law of living matter. There is no such thing as waste in the laboratory of the Creator. Whenever there is anything to be gathered—saved—utilized, some form of animated existence is there to accomplish the object. And after all have had their portion even to the infinitesimal insect, scarcely visible to the eye of man, it is change and not waste that follows. That which to the unobservant seems worthless, in due time appears again, clothed in new beauty, and ready to meet the needs of some form of life that waits its coming.

MARRIAGES.

BAVINGTON—CLAYTON.—At the residence of the bride's parents, Third month 28th, 1888, under the care of Abington Monthly Meeting of Friends, William W. Bavington, of Moreland township, Montgomery county, Pa., son of Watson and Hanna G. Bavington, and Hanna, daughter of Enos and Mary E. Clayton, of the same place.

JONES—COULSTON.—On Fourth-day, Third month 28th, 1888, at the residence of the bride's parents, under the care of Gwynedd Monthly Meeting, William Potts Jones, son of Evan D. and Anna P. Jones, of Conshohocken, and Elizabeth Coulston, daughter of James and Amanda Coulston, all of Montgomery county, Pa.

MILLER—TYLOR.—On Fourth-day, Second month 22d, 1888, at the residence of the bride's brother, Wilson M. Tylor, Easton, Md., under the care of Third Haven Monthly Meeting, Guion Miller, son of Caroline H. and the late Francis Miller, of Sandy Spring, Montgomery county, Md., and Annie E. Tylor, daughter of the late Jonathan and Rebecca M. Tylor, of Denton, Caroline county, Md.

DEATHS.

BORTON.—At West Unity, Ohio, on Second-day, Third month 19th, 1888, Job Borton, brother of the late Benjamin Borton, in his 70th year.

DURELL.—Second month 20th, 1888, Deborah Durell, aged 88 years; a member of Chesterfield Monthly Meeting, New Jersey.

EVANS.—In Camden, N. J., Fourth month 7th, Sarah N., wife of Robert E. Evans, in her 69th year; a member

of the Monthly Meeting of Friends held at Green street, Philadelphia.

HAINES.—On First-day morning, the 25th of Third month, 1888, at Haddonfield, N. J., Hannah Ann, wife of George T. Haines, aged 62 years; a member of Haddonfield Monthly Meeting of Friends.

She was a woman who looked well to the ways of her own household, none knew her but to love her; she had been afflicted with a cough for several years, which at times was severe, but she bore it with meekness and submission, ever trusting to her Heavenly Father for counsel and protection, and we believe that our loss is her eternal gain; although our trial is hard to bear, it is said that "afflictions are blessings in disguise." I have often felt as though I had to tread the wine press alone, but if we trust to the Almighty, his arm is not shortened that he cannot save, nor his ear grown heavy that he cannot hear.

On First-day, the 18th inst., having been very unwell for several days, she was induced to take her bed, trusting that her Heavenly Father's will might be done. She gradually grew worse until the morning of the 25th ult., when she quietly passed away in the 63d year of her age.

JOHN HAINES.

Haddonfield, N. J., Third month 31, 1888.

HARPER.—Fourth month 3d, Henry S. Harper, formerly of Frankford, in his 66th year. Funeral from residence of his son-in-law, Casper Nightlenger, Ashbourne, Pa.

NICHOLS.—On the evening of Third month 7th, 1888, Eli Nichols, aged 80 years; a member and attender of the Particular and Monthly Meetings of Centre, Delaware, during his whole life.

It is in the truth to say of him that he adhered firmly to the principles of which he was convinced, was just and upright in his dealings, and an enterprising citizen, a kind and indulgent father, and a faithful and devoted husband. Although his last illness was comparatively brief and sudden, he was impressed that his time had come to go hence, and in meekness and resignation expressed his willingness to submit to the will of God, and to obey the summons to what he believed to be a higher and more spiritual existence. In taking a retrospect of his life, he had tried to do what appeared right for him, and felt no serious condemnation for anything he had done. He calmly gave his words of counsel and direction to those of his sorrowing family, who were gathered about his couch, to administer the best they knew to the comfort of one they so long and so dearly loved. JOS. P. NICHOLS.

PAXSON.—In Philadelphia, Fourth month 5th, Joseph A. Paxson, M. D., formerly of Bucks county, in his 46th year; a member of the Monthly Meeting of Friends of Philadelphia. Interment at Buckingham, Pa.

TEMPLE.—Suddenly, Fourth month 7th, John Malin Temple; a member of the Monthly Meeting of Friends of Philadelphia.

TEST.—At her residence, in Camden, New Jersey, Fourth month, 3d, 1888, Leatitia M. Test, aged 74 years; a member of the Monthly Meeting of Friends held at Green street, Philadelphia.

"Blessed are the dead which die in the Lord from henceforth: Yea, saith the Spirit, that they may rest from their labors; and their works do follow them."

Quiet, unassuming, self-sacrificing, her life was a beautiful sermon more eloquent than words.

WILBUR.—At her residence, in North Easton, Washington county, N. Y., Huldah Wilbur, aged 87 years, 3 months, and 15 days; a member of Easton Monthly Meeting.

For Friends' Intelligencer and Journal.

IN MEMORIAM.

SUSAN RÔBERTS.

DEAR FRIEND! whose hand so lately clasped in mine
Has left with me the heart-warmth of thy touch,
Knowing how blessed now is lot of thine,
I may not mourn thy absence overmuch.

E'en though I miss thy greeting evermore
That found so full response within my heart,
E'en though the circle, narrowing alway,
Bring sense of loss, when our beloved depart.

Yet think I of thy sad and thoughtful mood,
Musing upon the downward slope of life,
Where one might lose the power of doing good,
And wrestle vainly in a joyless strife.

O helpful hands! gone from the earth for aye,
Whose treasures were beyond the moth and rust;
O feet! so steadfast on the upward way,
O heart! so faithful to its Master's trust:

Sooner than hoped you reached the peaceful goal
Where all the weary toil was ended quite,
And all the pain of doubt and fear were lost
Beyond that cloud in Heaven's most blessed light.

The thoughts that broke through many hours of rest,
The timid wonder what? and when? and how?
The faith that God would give what would be best,
Are glorious certainties to bless thee now.

We should not mourn thee, but within our hearts,
Hold ever, memory of thy faithfulness,
That the pure life, so true and tender here
May still retain its power to cheer and bless.

THE LIBRARY.

THE TEMPERANCE MOVEMENT: OR, THE CONFLICT BETWEEN MAN AND ALCOHOL. By Henry William Blair, United States Senator from New Hampshire. Boston: William E. Smythe Company. (Philadelphia Agents, E. R. Baxter & Co., 1015 Arch St.)

THIS is a volume of over 550 octavo pages, well printed, substantially bound, and liberally illustrated, its contents being divided into twenty-five chapters which deal with the whole subject signified in the title. The first eight chapters are a study of alcohol, its history, its use, its effect upon the human system, its relation to food and medicine, etc.; five chapters are devoted to a view of the social and moral injuries inflicted by intemperance; and the remaining twelve chapters describe and discuss the remedies proposed, by individual and associated action, political movements, etc. The author, H. W. Blair, is well known as a prominent member of the United States Senate, especially in connection with his bill to give aid from the national treasury to the work of education in the Southern States. He is undoubtedly a very ardent and energetic man, not always cautious enough for prudent people, yet in the main, as in the instance represented by this volume, on the side of the right.

In his opening chapter, Senator Blair describes alcohol, giving the earliest history of its use and a scientific analysis of the product, how it is obtained

and the ingredients that enter into its formation, with the percentage of alcohol contained in the various intoxicating beverages, the wines and fermented drinks that are consumed by the human family. The second chapter treats of the effects of alcohol upon man, both body and soul, and follows the subject closely, as it has been presented by able physicians of our own time. In this chapter we are told that the art of distillation was not discovered until the 12th century of the Christian era, and for several centuries after the process was concealed from general knowledge, being mostly confined to the laboratory.

The testimony of Dr. B. W. Richardson, of London, well-known in connection with his experiments with alcohol, is very freely quoted in this chapter; and the experiments of Dr. Parker and Canon Wilberforce in relation to the action of alcohol upon the heart are also given. The use of alcohol in medicine forms the subject of another chapter. Alcohol in its relation to pauperism and crime, is discussed at length. The destructive influence of the drink habit upon the wealth of the world is forcibly presented, and a melancholy detail is here reached, in describing the manner in which this baleful agent has followed the march of "civilization" and been carried to nations and tribes of people, who had been free from its blighting influence, until in every harbor of the habitable earth, which the white sails of commerce have entered, its evil influence is found. The language on this feature, though very strong, is of interest, and we quote it in part. Senator Blair says:

"Thus of the three hundred thousand natives who inhabited the Sandwich Islands when they were discovered, civilization has destroyed all but forty thousand, a deteriorated remnant which even the redemptory influences of Christianity have hardly saved. British rum has not reduced, but has actually obliterated, the Hottentot, and there is nothing left of him but his picture in the primary geography, which people now elderly studied when at school.

"The relation of the more civilized races to weaker nations in the spread of the alcoholic evil is the most important aspect of the whole problem. There has never been a race of men which has not demonstrated its power to rise to a higher and happier level if it had the opportunity. The principles of the Christian religion never yet failed to convert an ordinary man into a better one when they have had a fair chance to produce their natural . . This force which we call the Christian religion has unquestionably power to redeem and save to the uttermost—if it be given opportunity. Its apostles and witnesses have ennobled human nature in every kindred and tongue under the whole heaven, and the blood of martyrs has everywhere attested the sincerity of their professions, and their sublime devotion to the heavenly truth by which they were inspired. There is a force in the world which would save the world.

"But what is the process now in plain operation before our eyes? We find a population living upon our planet of fifteen hundred millions of human beings. Europe has three hundred millions, America one hundred millions, Asia eight hundred, and Africa two hundred millions, and one hundred million more are inhabitants of the isles of the sea Of this vast number of souls about four hundred millions may be classed as civilized people, among whom the Christian religion is nominally prevailing and controlling individuals and institutions, but really with only feeble application of its peculiarly unselfish principles in personal and national life. The remaining eleven hundred millions are many of them embraced in the provinces, colonies and dependencies of the Christian powers, and all are really subject to that supremacy which results from the spirit of political and commercial aggrandizement. Everywhere the heathen nations and barbarous tribes are giving way before the demands of the western powers which with gunpowder and opium and rum, proceed at once to 'develop' their destruction. The costs of war are largely dispensed with because unnecessary; for commerce has discovered a way to convert the work of destruction into a profitable pecuniary speculation, in which the dealer makes his fortune and the government its revenue. . . .

"Measured by what they do to others, Christian nations are the vilest criminals, the very murderers of mankind. Instead of civilizing and elevating the heathen we destroy them. It may be that this is the "order of Providence"; at all events they disappear. By a combined process of rum-selling and psalm-singing we 'improve' these weaker brethren from the face of the earth—we promote their emigration out of it. And now we are well on our way in this great crime of assassinating the race by poison administered in the robes of Christianity at the victim's expense of body, soul and estate."

In the remaining chapters the author takes up the various remedies that have been attempted to check the increasing evils of the drink habit, and discusses the "Temperance Movement," in its several aspects, summing all up with Prohibition, as the only sure means of effecting a radical reform. Senator Blair urges not only State but national enactments of Prohibition, the latter to be brought about by a Constitutional Amendment.

The illustrations are very numerous, including fifty-seven full-page portraits of prominent advocates of the Temperance Reform: among them we note Canon Wilberforce, ex Secretary William Windom, Senator Colquitt, of Georgia, Dr. Daniel Dorchester, Aaron M. Powell, Mary A. Livermore, Frances E. Willard, and many others well known by their works. There is a remarkable map of New York, showing the location of over 9,000 drinking places in that city, which were licensed by the Board of Excise Commissioners, in 1886. (The total number licensed was 9,168, and 1,000 were estimated to be selling without license).

The volume before us is strongly bound in sheep that will bear the hard usage to which books of reference are subjected. It is sold, we believe, entirely by subscription, the agents in Philadelphia being as above stated.

L. J. R.

COMMUNICATIONS.

THE SEPARATION OF 1827.

Editors INTELLIGENCER AND JOURNAL:

I HAVE so much unity and sympathy with a communication signed F. in FRIENDS' INTELLIGENCER, a few weeks ago that I think it right to say so in this way. I lived in that day, and felt many deep conflicts of spirit on account thereof. I believe the separation among Friends was an unavoidable necessity for want of that forbearance, love, and charity among the leaders of the people, whom we looked up to as fathers and mothers, brothers and sisters in the militant church.

I believe the declaration of Jesus is as imperative now as formerly: "By this shall all men know that ye are my disciples, if ye have love one for another;" and "By their fruits ye shall know them." With all due respect to the opinions and experiences of those who may differ from me in sentiment I will say I have an unshaken faith in that religion which enables us mutually to agree to disagree on some points, and yet promotes a harmonious labor for the honor of the Truth. E. P.

Bristol, Pa.

NEWS OF FRIENDS.

A FRIEND writing from Chicago under date Fourth month, 5th, informs: We have at last started a class in the study of the First-day school lessons. Nearly all the meeting remains, the young people taking much interest, and giving expression to their thought in a very satisfactory manner. H. A. Plummer leads the class.

FAMILY AND OTHER DETAILS: EVANS AND EVENS.

Editors INTELLIGENCER AND JOURNAL:

I NOTE in the brief memoir of S. A. E. Hutton, recently published, a mistake in the spelling of her "maiden" name, from which an error of family association may arise. Although this, to many may appear of small moment, yet instances are not wanting in which similar errors have been productive of difficulty. The author, Dr. Hibberd, is intimately acquainted with families who spell their name Evans, as in the memoirs. There were as early as 1684 and may be 1682, several families of this name who emigrated from Wales and located in Merion, Radnor, and perhaps Haverford, in Pennsylvania. At the settlement of the township, in 1698, families of the same name came to Gwynedd, from Wales, and probably some off-shoots of the Merion settlers, also. Clerical talents appear to belong particularly to some of them. A branch of the family migrated to South Carolina and thence to Waynesville, Ohio, and may not have been originally members as some of their ancestors were buried at the old Baptist burying ground in Lower Merion. Of this branch came Thomas, David, Jason, and Clayton (?) Evans, of Waynesville, Ohio, David being for many years clerk of Indiana Yearly Meeting, and Jason, long a useful and prominent member. The two others were attached to the other branch of Friends.

But the family of S. A. E. Hutton was of different race and lineage. While the former was from Wales and of the "ancient Britons," the latter, spelling the name Evens, was of Saxon origin, manifesting the characteristics of that race in their hair and fair complexion and coming from North Aveton, Devonshire, on the southern coast of England. They were Episcopalians, Edmund Evens, the father of Sarah,[1] came to Baltimore when only about 21 years old. Becoming acquainted with Friends, his mind was convinced of their principles, and he united in membership with them. Paying a visit to his parents and relatives in England on his return, his youngest brother William accompanied him. These two were all of the Evens family that migrated to this country. William united with the Methodists; his descendants were a few years ago in Greencastle, Putnam county, Indiana. Governor John A. Andrew, of Massachusetts, noted in the early years of the late war, was a relative on the maternal side.

Edmund Evens settled at first at Patuxent, afterward resided for two or more years at Indian Spring, then a few years about three miles out of Baltimore, and then for some twelve years in its immediate vicinity. He died at Richmond, Indiana, in 1846. The family name is extinct in his children,[2] but his brother had several sons, and it is probably also continued in England, as there was a very large family of John and Sarah Andrews Evens' children.

R. H.

THE humanity of heaven shall be nothing but the humanity of earth lifted to its full activity, filled with the divinest impulses, made cognizant of its greatest powers, and made ambitious for its completest work. God grant us the beginning of that heaven now!—*Phillips Brooks.*

INWARD goodness and benignity of spirit reflect a certain sweetness and serenity upon the very countenance, and make it amiable and lovely, inspire the soul with a noble resolution and courage, and make it capable of attempting and effecting the highest things.—*Scougal.*

[1] S. A. E Hutton's maternal grandfather was Joseph Husbands, who married Mary Pusey. His name appears on the minutes of Western Quarterly Meeting about 1779. Mary Pusey, (daughter of Joshua), appeared in the ministry in her 17th year, and married Joseph Husbands, as above, in her 19th year. He died in 1786, after which she married Daniel Mifflin, and was again a widow in 1810. She died in 1823, aged 81, having been a minister 64 years.

[2] John Evens, of North Aveton, Devon, England, married Sarah Andrews. Their son, Edmund Evens, who came to this country, married Elizabeth Husbands. Their children were:

1. Sarah A., m. John H. Hutton, Richmond, Ind., both now deceased.
2. Mary Mifflin, m. Irvin Reed.
3. Anna Florence, m. John H. Hutton, Richmond, Ind., both deceased.
4. Susanna, m. Robert Hatton.
5. John, (deceased), m. Mary G. Kinsey, Richmond, and Albina Greaves. He died in California; his widow, if living, is at Gilson, Cal.
6. Lydia H., *d.* young.
7. Elizabeth, m Noah H Haines and Dr. Elias Fisher, of Waynesville, O., all now deceased.

For Friends' Intelligencer and Journal.

ON AND OFF THE POPULAR ROUTES OF TRAVEL.

It is only the fortunate few in our cold climate who are so situated that they can with the birds flit to the "Sunny South" when the first chilling blasts of winter are upon us. And there is room for a doubt that even these, unless compelled by the law of self-preservation, are much more fortunate than those who can remain in their comfortable homes with congenial surroundings.

Nevertheless, it is a desirable thing after a struggle with the cold, such as has been ours this past winter, to drift away in the very early spring-time to meet, as it were, the pleasant weather for a little bracing up ere the battle with the heat begins.

An easy journey South, from Philadelphia, is over the Cape Charles route, down the Delaware "Eastern Shore" Peninsula to the Chesapeake Bay, where a good steamer transports you comfortably to Norfolk, Va. A small party of us found it worth while to stop for a few days in this quaint old city and note the situation, as well as make excursions to popular points from there.

Norfolk, thirty-two miles from the sea on the Elizabeth River, with its fine harbor, and midway between the North and South, is a point almost without a rival for a trade which is growing steadily. The oyster interest is a large one, and very curious it is to unaccustomed eyes to see the skill and rapidity with which, in one establishment employing hundreds of hands, these are opened and made ready for the market. Of kindred interest are the immense piles of shells that suggest the possibility of solid roads, in a country so indented with water courses that the ground seems to need such helps to solidity. The streams abound in fish, and a Norfolk citizen will tell you with pride, as well as with truth, that "our market is the finest in the world." But of late years the increase of trade in early vegetables is the absorbing topic, and the quotations of the New York and Boston market,—Philadelphia they consider a mere side show,—on spinach, kale, cabbage, etc., are watched with as much interest as stocks and bonds in some other cities.

In driving out from the city one is attracted by the acres of cabbage planted on the sunny side of the long rows of spinach, the plants having been set there in last Twelfth month, to be ready for use in Fifth month, their soil and climate easily allowing them several crops in one year.

Of the history of the city, as well as that of its pretty neighbor, Portsmouth,—where is the Navy Yard with its famous dry dock which both sides tried to demolish and could not, at the outbreak of the War, the Government buildings all looking so new and neat as seen from the river,—it is not needful to speak; their part in the late war is too near to be long out of mind. One observation we make, though not a new one, that whatever may be the feeling deep down in the hearts of Virginians, the great desire here as elsewhere is for Northern capital, Northern energy, to help bring renewed prosperity to their cherished "Old Dominion."

Of course, one of the things to do is to take a boat ride to Old Point Comfort and Hampton, the former the fashionable seaside winter resort of the country. To us it had no attractions aside from its location, which is a fine one contiguous to Fortress Monroe, and with its grand water views. The immense hotel with its rooms for 1,000 guests which are always full notwithstanding the charges are from $4 to $15 per day, does not commend it to the weary seeking a quiet place to rest. So we gladly pass on through the beautiful grounds of the Soldiers' Home to "Hampton School" in which our readers have long been interested. There the good work still goes on of educating both Indians and colored people. Very kind and pleasant are the cultured teachers in charge, but our strength was unequal to a visit to all the schools, besides it being a holiday; so after an unsuccessful search for board at the two or more private boarding-houses,—all "full,"—we returned to the boat. The situation here is delightful and the Fourth month said to be the one for climatic pleasure, but the supply of boarding homes does not at all equal the demand. Of the old town of Hampton, the colored population does not seem to have benefitted much by the surrounding civilization, for only their churches give evidence of thrift, their homes and their equipages,—one small steer hitched to a cart,—showing little sign of comfort or progress.

Another historical place, but a short sail from Norfolk, and much more attractive to our view than "Old Point," is Newport News, nine miles above Fortress Monroe on Hampton Roads. Its principal hotel, "Warwick," is on a high bluff overlooking the bay, with grounds planted in shrubbery and trees, with an artesian well of excellent water to supply it. A very haven of rest to the weary, (though not an inexpensive one) is its well kept and well furnished rooms, its well served and excellent food. An elevator conveys you to a sun parlor, where you sit and watch the vessels in the harbor glide in and out, or as they lay at anchor. Over eighty sails at one time we count as the eye rests on the broad waters, and we ponder on the different callings of men. In every station fitted for the work God has given them to do, leaving it for them to determine if it shall be well or ill done.

But we have not yet found the condition of existence that we are seeking, that of mildness, moisture and comfort, so we are quite willing to step aside from the beaten track of travel and take refuge on a steamboat bound from Norfolk to New Berne, N. C.

Two weeks from the date of the "great storm," and not yet is the unsettlement in business traffic between the north and south adjusted. Only now the boats are making their regular trips through the bays, rivers, canals, and sounds of this southern Atlantic coast to gather up the supplies to be sent North, and take back the merchandise for the South. So it happened on a Sabbath evening, just after the boat landed, we settled ourselves in a good, steam-heated state-room, with everything needed for our comfort for a week of sailing. As we glanced at the handsome brass plate with the name of the boat "Manteo," the eye was quick to see "The Pusey & Jones Com-

pany, Wilmington, Del., 1887, builders,"—and we at once felt the confidence that comes from a reputation for good work. Here was a new boat, 122 feet long, 480 tons burden, solid and strong, built at a cost of $65,000, with a skillful captain, so there was no need for anxiety,—we need only take our rest.

Norfolk, Va., Third mo. 25. L. H. H.

WAIT ON THE LORD.

"They who wait on the Lord shall renew their strength."

YOUNG souls, so strong the race to run,
And win each height sublime,
Unweary still would ye march on,
And still exulting climb?

Walk with the Lord. Along the road
Your strength he will renew.
Wait on the everlasting God,
And he will wait on you.

Burn with his love. Your fading fire
An endless flame will glow:
Life from the Well of Life require,—
The stream will ever flow.

Ye shall not faint, ye shall not fail,
Still in the Spirit strong:
Each task divine ye still shall hail,
And blend the exulting song.

Aspiring eyes ye still shall raise,
And heights sublime explore:
Like eagles, ye shall sunward gaze;
Like eagles, heavenward soar.

Your wondrous portion shall be this,
Your life below, above:
Eternal youth, eternal bliss,
And everlasting love.

—*Thomas Hornblower Gill.*

IN BONDAGE.

YOU weep my Lill, above the page
That tells the "ancient wrong"
Of captives' tears and tyrants' rage,
And weak oppressed by strong:

Your Poet knows a sterner thrall,
A harder yoke he sings—
The bondage of the Very Small,
The Tyranny of Things.

And truly ours is hardest fate,
Our lot more hopeless far,
Who scarcely feel our lost estate,
Or know what slaves we are.

Slaves to Life's thousand small demands,
Its toil, its fret, its care;
Slaves to our homes, our goods, our lands,
Slaves to the clothes we wear!

Slaves to the cherished things we fold
In careful closets shut,
The plate we store, the books we hold,
Too choice to read—or cut!

Slaves—ah, to what a host of things!
Poor Gullivers would quake
Beneath a web of threads and strings
We know not how to break!

Give place, O "Tamerlane the Great,"
Sesostris, Ptolemy!
I sing the bond to whose hard weight
Your chains were liberty;

The yoke more strict than despot's thrall,
More stern than rule of kings—
The hardest tyranny of all,
The tyranny of *things!*

—*Robertson Trowbridge, in The Century.*

THE INTERNATIONAL COUNCIL OF WOMEN.

THE sessions of this body were held in Washington City from the 24th of Third mo. to the 1st of Fourth Month inclusive, the preliminary meeting being held on the former date. About forty delegates were present, representing 10 foreign and 24 American organizations. The foreign delegates were as follows:

The Edinboro' National Society for Woman Suffrage, Mrs. Ormiston Chant, Mrs. Alice Scatcherd; the Darlington Women's Liberal Association, the Yorkshire and Southwark Women's Liberal Association, Mrs. Scatcherd; Newcastle Women's Liberal Association, Mrs. Ashton Dilke; National Prohibition Movement of Great Britain, Mrs. Axel Gustafson; Danish Women's Association, Danish Women's Society for the Protection of Young Girls, Mrs. Ada M. Frederiksen; Norway Women's Suffrage Society, Mrs. S. M. Groth; Finnish Women's Union, Baroness Alexandra Gripenberg; Work for the Prisoners of St. Lazare, Mme. Isabella Bagelot. [We are obliged to give these and other names found in the daily newspaper reports, without reference to the usage of Friends.—EDS. INTELLIGENCER AND JOURNAL]

Among the more prominent American delegates were Julia Ward Howe, Lucy Stone, Mary A. Livermore, Frances E. Willard, Antoinette Brown Blackwell, Hannah Whitall Smith, Jennie C. Cooly, Abby Morton Diaz, Ednah D. Cheney, and Clara Barton. The organizations and objects represented included Woman Suffrage, the Press, Moral Education, the W. C. T. U., Mission Work, various religious bodies, the New York "Sorosis," the Universal Peace Union, Industrial Education, the Women's Relief Corps, the Knights of Labor, the Gangers, and others.

The meeting was called to order by Susan B. Anthony, as chairman of the Committee of Arrangements. The question of forming a permanent International Council was brought up by May Wright Sewall, who vigorously championed the measure. Several delegates were asked to express an opinion on the subject, and a number spoke. Miss Eastman, Mrs. Bowles, Miss Willard, and Mrs. Whitall Smith agreed with Mrs. Sewall on the importance and need of an International Council. Mrs. Cheney had not considered the subject, and was not prepared to express an opinion. Mrs. Scatcherd thought it involved too much expense. Mrs. Howe said that such a movement should be very carefully considered. Mrs. Stone thought we could tell better after this Council, than now, whether a permanent one will be desirable. The old abolitionistsin carrying on

their reform had not thought it necessary to have an American and foreign anti-slavery society. There would be large expense involved in sending delegates across the ocean, and the various societies would find it hard to carry this. Mrs. Antoinette Blackwell said that such a council might stimulate to better work if they knew it would be reported. Baroness Gripenberg, in excellent English, said that those who were familiar with the language should speak on the question. It was voted, after discussion, to appoint a committee of fifteen on the subject, and the meeting adjourned.

In the evening of the same day (24th) a reception was held at the Riggs House, where the delegates generally stopped. The report in the *Woman's Journal* says: "The halls, corridors, and parlors of the hotel were densely crowded with delegates and visitors (nineteen-twentieths being women). The assembly, numbering several hundred, were almost all well-known workers for woman suffrage, although present as representatives of a great variety of educational, philanthropic, and reformatory enterprises. It was a striking evidence of the close relation of all forms of mental activity in public work on the part of women to woman suffrage, that there seemed such an identity of thought and purpose on the subject. As this great army of fine, intelligent, well-dressed ladies passed slowly through the spacious parlors, it must have occurred to lookers-on that a government which denies such women a share in its councils, is not wise or just, or fairly representative of its people. Another noticeable fact was the great diversity of localities represented, including Maine, Louisiana, Colorado, and every intermediate State. Canada had sent its representatives. The mere enumeration of States, to say nothing of individual names, would be a gazetteer of American geography."

On the 25th, which was First-day, religious services at various churches and halls in the city were conducted or addressed by women of the International Council. The Council itself met at Albaugh's Opera House in the afternoon, at 2.30 o'clock. The building was packed. Aisles were filled, boxes thronged, and people stood five tiers deep around the outer rail. Only once in a decade, it is said, is such an audience gathered in Washington. Nearly half the assembly were men. State banners and the flags of various nations decorated the balconies. Over three thousand persons were present. The platform was filled with delegates and invited guests. At 3 p. m. Susan B. Anthony called to order. Phebe A. Hanaford read Longfellow's "Greeting," which was sung by the audience standing. Ada C. Bowles read from the Acts the interview between Paul and Agrippa. Antoinette Brown Blackwell offered prayer. Annie H. Shaw delivered an admirable sermon from the text, Acts 26: 19: "Whereupon, O King Agrippa, I was not disobedient unto the heavenly vision." The sermon was earnest and eloquent, and many faces which showed only curiosity at the beginning were marked by a better sentiment before the close. Several hymns were sung, and the exercises closed with a benediction.

Mary A. Livermore, in fulfillment of a previous engagement, preached to large audiences in the Church of Our Father, both morning and evening. Frances E. Willard lectured at the Metropolitan Methodist Church, on "Social Purity," to an overflowing assembly. In the evening, in spite of the rain, a crowded congregation at Ryland Chapel listened to Mary T. Lathrop, of Michigan. Bessie Starr Keifer, of Toronto, Can., occupied the pulpit at the Union Methodist Church in the morning, and in the evening presided at a gathering under the auspices of the Grand Lodge of Good Templars. Mary A. Allen, M. D., spoke in the evening at the Union Methodist Church. Clara Cleghorn Hoffman, of Missouri, addressed a large audience on "Temperance," in the afternoon, at the Foundry Methodist Church. Elizabeth Saxon, of Alabama, spoke at the North Capitol Church on "The Home *vs.* the Saloon." J. K. Barney, of Rhode Island, preached in the evening at the Hamline M. E. Church. C. H. St. John preached to a very large congregation on "Temperance," at Grace Church. Fanny Barnes spoke at the Vermont Avenue Christian Church. Nellie Eyster, of California, lectured to children at the Lutheran Memorial Church. These varied exercises and the rainy weather did not seem to diminish the large attendance at each of these meetings.

At the formal opening of the Council on the 26th, there was a good audience and a large and striking group of delegates and visitors on the platform. Susan B. Anthony called the meeting to order, and invited Antoinette Brown Blackwell, "the first woman ever ordained as a minister in this country, and I think in the world," to open the meeting with prayer, which she did. S. B. Anthony made a brief address. She said: The notice that was issued forty years ago for that first convention, if I remember rightly, did not have any signatures attached, but, nevertheless, the two moving spirits in originating the call for the meeting and in carrying forward the meeting were those of our sainted Lucretia Mott, of Philadelphia, and Elizabeth Cady Stanton, who is with us to-day. Without any particular words that shall call to your mind the vast change in the world these last forty years for women as well as men, but especially for women, I will say that forty years ago women had no place anywhere except in their homes, no pecuniary independence, no place or position, no purpose in life save that which came through marriage, save that which came through the home. What a change from such a state of things, as many of you can remember, when no woman thought of earning her bread by any other means than sewing, teaching, cooking, or factory work! During those years there has been almost a perfect open sesame to every avenue of industry,—to every profession, whereby woman to-day stands almost the peer of man in her advantages for independence. What is true in the world of work is true in education, is true every where.

Men have granted us in law, in the privileges and civil rights of society, which we have been demanding, almost everything but the pivotal right, the one power that underlies all other rights, and with which citizens of this republic may protect all other rights.

Elizabeth Cady Stanton then delivered an extended

address, some portions of which we shall print hereafter.

The foreign delegates were then introduced, most of them making brief addresses, and letters were read from foreign associations and individuals, including Priscilla Bright McLaren, of Edinburgh. There were then short addresses by Lucy Stone, Frances E. Willard, Julia Ward Howe, Frederick Douglass, and others. In the evening the leading address was by May Wright Sewall, principal of the Girls' Classical School, Indianapolis, on "The Higher Education." This was followed by a paper on "The Women of India," by the Pundita Ramabai, and one on "The Kindergarten in its Development of Faculty," by Sarah C. Cooper, president of the Golden Gate Kindergarten Association. There were also addresses including one on "Coëducation," by Rena A. Michaels, Dean of the Woman's College of the Northwestern University, at Evanston, Ill. Miss Benneson, of Bryn Mawr College, advocated fellowships for women, in a vigorous and interesting address.

The session of Third-day morning, 27th, was devoted to the consideration of the various organized philanthropies in which women are engaged. The house was crowded. The proceedings began with a paper on "Philanthropy" by Harriette R. Shattuck, of Massachusetts, and besides others, there was an address in the French language by Madam Bogelot, of Paris, on work in the great prison of St. Lazare, in that city. Clara Barton spoke on the Red Cross movement, and Amelia S. Quinton on the work and object of the Women's National Indian Association. At the evening session the topic was Temperance, and the speakers were Frances E. Willard, Hannah Whitall Smith, and others. A resolution was passed strongly approving the work of the Women's Christian Temperance Union.

At the session in Fourth-day morning, the 28th, the topic was Industries. Laura W. Johns, president of the Kansas Equal Suffrage Association, presided, and made the opening address on the "Industrial Gains of Women During the Last Half Century;" Anna M. Worden, worthy master of Vineland Grange No. 11, on "Women in the Grange," and Hulda B. Loud, of Rockland, Mass., on "Women in the Knights of Labor." Helen Campbell, vice-president of the American Sociological Society, was not present, but sent a paper on "The Working-women of To-day." Lita Barney Sayles, secretary of the same society, had a paper on "Coöperation the Law of the New Civilization." Leonora M. Barry, organizer of Knights of Labor, holding credentials from T. V. Powderly, spoke on "What the Knights of Labor are doing for Women." Esther L. Warner, for twenty years a farmer in Nebraska, spoke on "Women as Farmers." Mrs. Dow, president of the Street Car Railroad Company, of Dover, N. H., was called upon, and made a brief address. Harriet H. Robinson spoke on "Factory Girls." M. Louise Thomas, president of Sorosis, (New York), gave an account of the Lowell *Offering*, and Miss Anthony gave her own experience of "Work in a Factory."

Hulda B. Loud read a communication from the Federation of Labor Unions of the District of Columbia, deprecating a remark of Mrs. Stanton's as contrary to the views of "organized labor." They add: "We discountenance and by no means tolerate acts of violence to persons or property on the part of our members, and we have neither affiliation or sympathy with associations that do so."

In the evening the topic for discussion was "The Professions," and numerous papers were read discussing the work of women in journalism, medicine, the law, etc.

At the morning session on the 29th, Matilda Joslyn Gage presided. The subject for discussion was "Organization." The topic was considered in a general sense by Julia Ward Howe, and she was followed by Mary F. Eastman, on the "Association for the Advancement of Women;" Amanda Devo, of New York, on the "Peace Association;" Abby Morton Diaz, of Boston, on the "Woman's Educational and Industrial Union;" Marilla M. Hills, of Dover, N. H., on "Missionary Work of the Free Baptist Church." Miss C. K. Fredericksen, of Copenhagen, reported for the "Danish Women's Union for the Protection of Young Girls and Lonely Women," also for the "Danish Women's Association." Fanny Zampini Salazaro, editor of *La Rassegna Femminile*, contributed a paper on "Woman's Condition in Italy." M. Louise Thomas, of New York, gave a history of Sorosis, and read a letter from the Crown Princess of Denmark. Jennie C. Croly (Jennie June), of New York, spoke on "United Womanhood." May Wright Sewall, of Indianapolis, spoke on "Women's Organizations." Frances E. Willard spoke of the "Power of Organization among Women."

In the evening Lillie Devereaux Blake spoke on the legal disabilities of women. She said in part: A general impression prevails that the laws in this country are especially favorable to women, yet this is far from being the case. Under the English law marriage is to a woman civil death, and where it prevails, as it does in all the Southern and some of the Northern States, a wife has no right to her own property or her own earnings. In many Northern and most Western States these provisions have been modified to the extent that property rights are secured to wives, and yet even in the States where married women may enjoy their own earnings they have no claim to their children, New Jersey, Kansas, and Iowa alone securing to the mother the legal control of her offspring. In New York, as in all other States, the honorable wife has no right to her child for a single instant of its existence. The father can give it away during his life and will it away after his death without her knowledge or consent. In happy union this cruel law has no terrors, but it places a fearful weapon in men's hands, which has been used in thousands of cases to wring women's hearts.

Alice Scatcherd discussed the legal condition of women in England, Ireland, and Wales. Among other things she said that the men have an unenviable notoriety for wife-beating, and only since 1878 had a wife the right to go before a magistrate and complain of this cruel and barbarous treatment. The streets of England are freer for men than for women, and the laws as to legitimacy are a crying disgrace.

The next paper was by Alice Fletcher, special Indian agent under the Severalty bill, and was entitled, "Legal Condition of Indian Women." Matilda Joslyn Gage read a paper on "Law in the Family."

The session on Sixth-day morning was devoted to the topic of Social Purity. This meeting was for women only, and the attendance was confined to their sex. The proceedings included papers, addresses, and letters from Elizabeth Boynton Harbert, Anna Rice Powell, Josephine E. Butler, and others. Mrs. Armiston Chant, an English delegate, said the statements made in the *Pall Mall Gazette* as to vice in London among aristocratic people, were true. Frances E. Willard, in the course of her remarks, criticized low-cut dresses, and said that those wearing them borrowed the idea from women whom she would be ashamed to touch. She also said that in the new era the half-nude pictures of women used as advertisements by cigar dealers would not stay in the windows over night. She also touched upon the impurity of dressing on the stage and the evils of round dances. The Arabs love to say of a pure man "He's a brother of girls" as typifying their best and greatest idea of purity.

The evening session was devoted to the discussion of "Political Conditions and Women's Right to the Ballot." The speakers included Isabella Beecher Hooker, J. Ellen Foster, Harriette H. Robinson, Martha A. Everett, Annie H. Shaw, Laura M. Jones, and others. Mrs. Robinson said a new party was required, to carry this issue to the polls. "The Prohibition party is very good about passing resolutions in our favor, but it has as yet no political power, and the majority of its members usually vote the Republican ticket. We do not count a great deal on its help."

The session on the morning of the 31st was devoted to the reunion of "the pioneers" in the movement for Women's Rights. The "pioneers" occupied prominent seats on the stage of the Opera House with the "celebrated six" on the front row,—Elizabeth Cady Stanton, Susan B. Anthony, Mary A. Livermore, Lucy Stone, Julia W. Howe and Matilda Joslyn Gage. Among the men on the platform were Frederick Douglass, Henry B. Blackwell, of Boston, A. G. Riddle, of the District of Columbia, and ex-Senator Pomeroy. The others were: Mrs. Amy Post, Sarah H. Willis, Mary H. Hallowell, Sarah Anthony Burtis, and Mary S. Anthony, of Rochester, N. Y.; M. Adeline Thomson and Emily Winslow Taylor, of Philadelphia; Sarah H. Southwick, Wellesley Hills, Mass.; Sarah E. Wall, Worcester, Mass.; Dr. Clemence S. Lozier, New York; Olive Frazer Ingalls, Glenora, N. Y.; Susan E. Wattles, Kansas; Esther Wattles, Oberlin, Ohio; Virginia L. Minor, St. Louis, Mo.; Dr. C. B. Winslow, Dr. Susan Edson, Jane B. Archibald, Julia A. Wilbur, of Washington, D. C.; Phoebe Mott Wills and Catharine A. F. Stebbins, of Michigan.

When S. B. Anthony called the meeting to order she said that in memory of Lucretia Mott, who, with Elizabeth Cady Stanton, called together the first woman's convention, and in spirit with the religious denomination of which Mrs. Mott was a member, all would observe a moment of silent invocation. After that began the speeches.

Mrs. Stanton, told of her calling the first convention together, and how in the long struggle she had never felt they stood alone, for she knew God himself and the lovers of liberty were with them. Incidents of the little meeting at Seneca Falls were told.

Fred. Douglass was the next speaker, and said it was fifty-two years ago to-day since he was driven with hands tied to the auction block to be sold to the highest bidder.

Lucy Stone talked of her work in Boston, when, at a salary of $6 a week, she made speeches for the anti-slavery movement.

Following her came her husband, Henry B. Blackwell, who referred in a pleasant way to the fact that his wife never took his name—saying she simply copied mother Eve. Who ever heard of Mrs. Adam or Mrs. E. Adam?

Antoinette Blackwell, a sister-in-law of Lucy Stone, told in a grave way many entertaining reminiscences of her early college life at Oberlin, Ohio.

Robert Purvis and Mary Grew of Philadelphia, and ex-Senator Pomeroy made speeches.

Rachel Foster, spoken of as "the youngest lady in the movement," was highly complimented for her work in organizing the convention, and a gold badge was presented her. Susan B. Anthony concluded the programme. Referring to newspaper attacks, she said she did not mind them nowadays, but at first they cut deeply.

A reception was held by a number of young ladies, descendants of the "pioneers," at the Riggs House, in the afternoon. In the evening the topic was "Political Conditions," when Helen H. Gardener spoke on "Sex in Brain," followed by Mrs. Ashton Dilke, and others.

On First-day afternoon, Susan B. Anthony presided over a religious symposium. Matilda Joslyn Gage spoke on "Women in the Early Christian Church," and Rev. Antoinette L. B. Blackwell on "Science and Religious Truth." In the evening Zerelda G. Wallace spoke on the "Moral Power of the Ballot;" and Elizabeth Cady Stanton made the closing address.

WINE PRODUCTION IN FRANCE.

It has of late been repeatly affirmed, by way of explanation of the increased consumption of the stronger liquors in France, that there had been a decrease in the supply of wines. In a recent sitting of the French Senate, Colonel Meinadier called attention to certain reports circulated abroad relative to an alleged decrease in the production of wine in France, and requested information from the government as to the exact figures, with a view to contradicting these statements. The Minister of Agriculture, in reply, stated that the production was annually increasing, and reached 30,000,000 hectolitres in 1887. It appears from this official statement that not only has there been no falling off in quantity of wine produced in France, but that there is an annual increase. The truth is that wine-drinking in France, as might be expected, has created an alcoholic appetite which only an increased and increasing consumption of the stronger liquors can now satisfy.—*National Temperance Advocate.*

THE "SLUMS" OF NEW YORK.

You will return from your first visit to the slums with two very strong impressions: one, of the utter hopelessness of trying to do anything; the other, of the necessity for doing something immediately, less the heavens fall. Perhaps you have evolved in your *boudoir* some beautiful scheme of amelioration; it has occurred to you that if ten rich men of the city could be persuaded to give $100,000 apiece, not as a charity, but as an investment, to build ten tenements, each to accommodate seventy families, it would be a great and glorious thing. But, as you stand in "the Bend" in Mulberry street and gaze about you, it will be to say in despair, $1,000,000, ten tenements, seven hundred families! Of what possible use to plan such an infinitesimal oasis of relief in this universe of misery and degradation?" You have never before seen people so hived before. Above you, below you, behind you, in front of you, to the right, to the left, in the rear, in the distance, crowded against each other, behind each other, above each other, are human beings. They swarm on the sidewalks, they are entering and issuing from the doorways, they lean out of the windows. You have always supposed that in the homes of the very poor you would be filled with pity for the hard work you would be seeing them do; women bending over washtubs or ironing-table, cobblers cobbling, tailors sewing, seamstresses running machines, tinkers mending, children weeping bitterly as they, too, turn a machine, or try to make a shoe; everybody toiling for dear life, for a mouthful of bread, too busy to look up, even as you pass. But the very first impression made upon you in the slums is that of a horrible leisure. What are these people doing? Nothing. What do they want to do? Nothing. What are they capable of doing? Nothing. What do they want you to do for them? Nothing. What can you do for them? Nothing.

Nothing is more astonishing, in investigating the slums, than the discovery of the enormous prices the poor are paying for the most wretched accommodations. One man boasts that he draws 33 per cent. on his tenement investments. Mr. Alfred White's experiments with improved tenements have been carried on for ten years, and have been made in the city which is the third largest in the United States, so that he has certainly had to grapple with all the problems presented by a large city; and he states that for $1.50 a week you can give tenants two light, airy rooms, with separate sink, scullery, and arrangements for coal, etc., and draw 6 per cent. on your investment; yet you will find families paying $6 a week for two rooms, with right to use the hallway for some of their "things;" and in the same house a woman with three children paying $2 a week for one room in the basement, where she lives, cooks, eats, and does washing for a living, with a dark closet and one bed where she and the three children sleep. In a semicircle of sheds occupied by ragpickers one woman pays $1 a week for the end of one shed.

More than half the population of the City of New York live in tenement houses. There are 30,000 of these tenements, 2,000 of them reported in the official statistics as "very bad." In one block on the East side there are as many people as you would find in a country village stretching over several hundred acres of land. Between two avenues and two streets in the same district are 3,000 or 4,000 souls. This in itself is not objectionable; for the same space, if built up with "apartment houses," such as we see in other quarters of the city, might afford to a much larger number of persons even luxurious privacy; but these tenements are only ordinary houses. In some rooms you will, in the daytime, see mattresses piled up till they touch the ceiling; at night, when the "boarders" stream in from their day's work, these mattresses are taken down and spread over the floor, touching each other. Forty-five people sometimes sleep in one room.

Half of the trouble is caused by the willful cruelty, but half by the careless thoughtlessness, of the landlords. A wise writer has said recently, "Often you don't need to say to a man, '*Why* do you do so?' If you can show him *what* he is doing, it is often enough to rouse him to reform." I have faith enough in human nature to believe that if we could organize a procession of landlords, and compel them to walk through the tenement districts, they would begin the reform themselves. Half of them do not know what they are doing; trusting the care of their property to agents, whose interest it is not to trouble them with demands for repairs or any lessening of income.—*Alice Wellington Rollins, in "The Forum," of New York.*

IT'S GOOD ENOUGH.

"There! I guess that will do," said John, as he took a shovelful of ashes out of the stove. "The pan isn't empty, but it's near enough: nobody will see it. If I can get the store swept in about five minutes, I can finish that story in the *Fireside Companion* before any one comes." The store was swept very much as the stove had been cleaned. The open spaces presented a good appearance, but out-of-the-way corners and underneath boxes and barrels told a different story. However, John said it was "good enough." The story was finished, and the paper hidden out of sight before the clerks arrived. Then Mr. Willis, the proprietor, came in, bade them all "good-morning," glanced around the store, and went into his private office. Presently he called John: "Take these letters to the office as soon as you can. They will be just in time for the nine o'clock mail. Come right back." John hurried to the office as he had been bidden, but, having deposited the letters safely, saw no more reason for haste. Indeed, he even indulged in a game of marbles before returning to his work. When he entered the store again, Mr. Willis made no comment on his tardiness, but remarked, "Well, John, I've almost learned my lesson."

John stared, "What lesson, sir?"

"Why, the one you've been teaching me lately."

John was more puzzled than ever, and all day long, he wondered what lesson he could possibly teach Mr. Willis. The next morning, John's work was done as speedily, and no better than the day before. Mr. Willis came before the clerks, and sent

John out on an errand. While he was gone, the gentleman, with a quiet smile, began to investigate the corners that John thought "nobody would see." When he returned, Mr. Willis said: "John, I told you yesterday I had almost learned my lesson. To-day, I know it thoroughly. Would you like to hear it?"

"Yes, sir."

"You have been teaching me how well I could get along without you. I thought the stove needed cleaning and the store sweeping every morning, but it seems they don't. So I shall not need you longer than this week."—*Selected.*

NEWS AND OTHER GLEANINGS.

—A writer in the *Electrical Review* states that a system of signals is on experimental trial in New York, in which different colored lights are flashed on the lamp-post. It is mainly intended to enable policemen to communicate quickly with each other when in pursuit of midnight criminals.

—The largest electric light in the world is in the light-house at Sydney, Australia. It has the power of 180,000 candles, and can be seen at sea fifty miles distant. America's largest light, 24,000 candle power, is at San José, Cal.

—The avalanches in the Alps have caused the death of over two hundred persons, whole villages being buried. The famous Hospice of St. Bernard (where for one thousand years the monks have succored victims of the storm) has been buried by two avalanches, without causing loss of life. Avalanches in sunny Spain have caused eleven deaths.

—Over extensive districts, or at least throughout Eastern North America, the ants are evidently by far the most effective animal agents in preparing soil for plant use, the part they play being much greater even than that of the earth-worms themselves. The latter are confined chiefly to cultivated clayey fields; while the ants rapidly overturn the soil material, as well within the forests as in the open fields, wherever that material is of a sandy nature.

—Printed matter is measured by "ems," the letter "m" being the unit. The following compilation is by Professor A. P. Lyon: The Bible contains 3,500,000 "ems," Webster's Dictionary 20,000,000, Chambers's Encyclopædia 58,000,000, Johnson's Cyclopædia 56,000,000, Appleton's Cyclopædia 60,000,000 and Encyclopædia Britannica 140,000,000 "ems."

—The tercentenary of the translation of the Bible into Welsh is to be celebrated this year by erecting a memorial to the translator, Bishop Morgan, at St. Asaph, and by establishing a Welsh scholarship for Biblical learning. It is also intended to issue a reprint of Bishop Morgan's Bible, with the Revised Version in a parallel column.

—Mrs. Ormiston Chant of London, a delegate to the International Council of Women, recieved a most cordial greeting in that body, and her addresses in seveaal large meetings elsewhere in Washington were received with marked demonstrations of approval. She will visit Baltimore, Philadelphia, Chicago, Boston, and New York before sailing for England, and should have, and will doubtless receive, a hearty welcome everywhere.—*The Philanthropist, (N. Y.)*

—A syndicate, including several Georgia capitalists, has secured the exclusive right for the Southern States of the Thompkins process for reducing vegetable fibres to paper stock, with the intention of establishing mills in all the cotton States and applying the process to the reduction of cotton stalks and seed hulls, now practically worthless.

CURRENT EVENTS.

THE one-hundredth anniversary of the pioneer settlement in the State of Ohio, under the "Ordinance of 1787," was celebrated at Marrietta, on the 7th instant. Senator Hoar, of Massachusetts, delivered the principal address, and there was speaking also by ex-President Hayes, J. Randolph Tucker, Senator Sherman, Edward Everett Hale, and others.

THE extensive strike among engineers and other employees on railroads coming into Chicago has substantially ended, the men on all the roads except the Burlington and Quincy having decided to go to work, at a meeting held on the 4th inst.

BENJAMIN HARRIS BREWSTER, ex-Attorney-General of the United States, died early on the morning of the 4th inst., in Philadelphia, aged nearly 72 years. He was a member of the Cabinet of President Arthur.

REPORTS from Florence, Italy, say that the health of James G. Blaine, who has spent the winter there, is failing. He and his family expect to make a tour in Sweden and Norway, and then return home, arriving about the end of the Sixth month.

FLOODS in the rivers have done considerable damage in Western States. At Waterloo, Iowa, on the 7th instant, barns, houses, and movables were carried off by the flood in Cedar river. Washouts were reported on the railroad at Vinton and Cedar Falls, and an important railroad bridge at Sioux City was wrecked by the rising of the Missouri river.

NOTICES.

JAMES H. ATKINSON, ANNIE C. DORLAND, } Clerks.

PUBLISHERS' NOTICES.

*** Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

*** As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies. A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

Terms, $150 to $175 per year.

Apply to HANNA R. CALEY, Principal, address, during vacation), Media, Pa.
Or to
THOMAS P. BARTRAM, Newtown Square, Pa.,
CLEMENT M. BIDDLE, 815 Arch Street, Phila.

FRIENDS' ACADEMY,

A boarding and day-school for both sexes. Thorough courses preparing for admission to any college, or furnishing a good English education. The next school year will begin Ninth month 13th, 1887. Terms for boarding scholars $150 per school year. The school is under the care of Friends, and is pleasantly located on Long Island, about thirty miles from New York. For catalogue and particulars address,

FREDERICK E. WILLITS, Sec.,
Glen Cove, Long Island, N. Y.

CHAPPAQUA MOUNTAIN INSTITUTE,—

A Boarding School for both sexes under the care of Purchase Quarterly Meeting. The present building is new and much enlarged, and has perfect sanitary arrangements. Excellent corps of instructors. Prepares for Business or College. Healthfully and pleasantly located near the Harlem R. R., one hour from New York city. For catalogue and particulars, address,

SAMUEL C. COLLINS, A. M., Prin.,
Chappaqua Institute, N. Y.

ABINGTON FRIENDS' BOARDING and DAY

School near Jenkintown, Pa., Bound Brook R. R. Ten miles from Philadelphia.

Second term begins First month 30th, 1888. Courses will be arranged to furnish a thorough English education and to prepare pupils for college.

Board and tuition $145 to $165 per school year. Tuition alone $25 to $45. For further information address,

ARTHUR H. TOMLINSON, Principal,
Jenkintown, Pa.
Or
CYNTHIA G. BOSLER, Sec.,
Shoemakertown, Pa.

FEALTY.

The thing I count and hold as fealty—
The only fealty to give or take—
Doth never reckoning keep, and coldly make
Bond to itself with this or that to be
Content as wage; the wage unpaid, to free
Its hand from service, its love forsake,
Its faith cast off, as one from dreams might wake
At morn, and smiling watch the vision flee.
Such fealty is treason in disguise.
Who trusts it, his death-warrant sealed doth bear.
Love looks at it with angry, wondering eyes;
Love knows the face true fealty doth wear,
The pulse that beats unchanged by alien air,
Or hurts, or crimes, until the loved one dies.

HISTORICAL SKETCH RELATING TO SOUTHERN Q. M.

"At a Quarterly Meeting of Women Friends held at Thirdhaven, the 27th of the First month, 1790:

"A minute from the Yearly Meeting held at Philadelphia from the 29th of Ninth month to the 3d of the Tenth month inclusive, 1789, was handed in to this meeting, containing an appointment of five Friends to attend here, viz.: Margaret Cook, Rebecca Chambers, Elizabeth Wickersham, Dinah Richardson, and Sarah Newlin, all of whom appeared except Elizabeth Wickersham; as also setting forth the solid and deliberate concurrence of that Yearly Meeting with a proposition from the Yearly Meeting of Maryland, (which appears to have taken its rise from the exercise and concern of some traveling Friends), as well as the united prospect of divers Friends of Pennsylvania and other parts: also taking place in the minds of Friends in Maryland, that the Monthly Meetings of Duck Creek and Murtherkill, should be joined to this quarterly meeting, and from thenceforward this meeting to be joined and report to the Yearly Meeting of Philadelphia.

"It is with much harmony resulted and agreed that the time of holding the meeting in future be on the fourth Second-day in the Second, Fifth, Eighth, and Eleventh months, and that the select meeting for ministers and elders be held the Seventh-day preceding, also, that a general or youth's meeting be held Third-day; that the next quarterly meeting be held at Little Creek, and afterward to circulate at Little Creek and this place and be distinguished and called as the Southern Quarterly Meeting."

The foregoing minute shows the forming of the Southern Quarterly Meeting. The Quarterly Meeting for Friends on the Eastern shore of Maryland (so termed from being east of Chesapeake Bay), had been in existence from the year 1676, or about 114 years. The records inform us that it was held at Thirdhaven, Cecil, Chestertown, and Sassafras, the three last places being in Kent county. Cecil and Sassafras were in Cecil county when first set up; but a change of county lines put them in Kent. The position of Sassafras is not now precisely known, but is supposed to have been near the head of the Sassafras river, now the dividing line between Cecil and Kent counties. There is reference in some old deeds to the "Quaker lot," or graveyard near the decayed village of Bridgetown, on Tuckahoe creek, not far from the Delaware line, and in Caroline county, Md. None of the present day know of a meeting being held there.

Cecil is near the village of Still Pond, a station of the Kent county R. R., a branch of the Delaware division of the Philadelphia, Wilmington and Baltimore, connecting with it at Clayton, Delaware. Chester was on Quaker creek, about four miles southwest of Chestertown, where a few Friends yet reside. Chestertown is the county seat of Kent, and some thirty-five miles east of north from Easton. Thirdhaven Meeting occupies the site of "our great meeting-house at the head of Third-haven creek," or sometimes "river," and is one-half mile south of the town of Easton, Talbot county, Md.

It would appear from the minute that Friends who composed the several meetings had not been consulted in the proposed change before the introduction of the minute, and the Delaware Monthly Meetings were summarily changed from one quarterly meeting to another, unheard and unnoticed; an exercise of disciplinary (?) authority which in this day would be thought arbitrary. At that time meetings in Delaware were pretty large; at Duck creek, about one mile north of Smyrna, Little Creek, three miles northeast of Dover, Murtherkill (which is spelled variously) about six miles southeast of Camden, with several smaller ones. Little Creek house is yet standing, but perhaps only one member remains in its immediate neighborhood.

Duck creek and Little creek formed the Monthly Meeting of Duck creek[1] with a small meeting at George's creek, subsequently removed to Appoquini-

[1] Probably one of the first boarding schools among Friends in America was established at Duck Creek. It was kept up only three years, not proving successful pecuniarily, the property was sold and the proceeds now form part of a fund to assist poor Friends' children to get educated, under the quarterly meetings.

mink, about one mile east of Middletown. Motherkill (Murtherkill in the minute) appears to have been established only a year before the change of the quarterly meeting, and having with Duck creek reported to Western Quarterly Meeting. The monthly meeting consisted of two preparatives, Motherkill and Cold Spring, and a meeting for worship near Milford, called Mispillion, and subsequently Milford. Cold Spring was near Lewes town. (It may be remembered that *kil* or sometimes *kill* when affixed to a given name means creek or small stream.) Camden, the successor of Motherkill, is the only one of the Delaware meetings for whose peculiar benefit the change in quarterly was made, now kept up.

It is worthy of remark that this change originated with some meddlesome travelers, and not from the request of those immediately concerned. And it required an extra day, as men's minutes inform us, to persuade the honest Friends to submit to it. Two or more times were efforts made to re-transfer the quarterly meeting from the oversized Philadelphia, to the slender Baltimore Yearly Meeting.

It is also a cause of regret that the time-honored name of Third-haven was ruthlessly cast aside by these individuals; we cannot conceive it possible that this misnomeric change could arise with a native. Every attachment of the Eastern Shore-man bound him to his brethren of the other side of the Bay and to the home honored names used by his great grand parents. His heart thrilled to the legends told of the century past, and as his graceful boat was wafted on the bright waters to West River or Baltimore for the annual gathering, in gentle converse some one would relate of the suffering or privation of an ancestor, or tell of the devotion of some maiden to the Truth. But days of weary travel bestride his horse, among strangers whose idioms he knew not, whose thoughts flowed in different lines, and whose manners to him savored greatly of pride, were the attendants of a journey to the city of William Penn. We can but admire and would we could emulate the self-denying spirit with which Friends of that section yielded so much to the wishes of others. It did not arise with them, but probably sprang up at the Western Quarterly which had the meetings of Delaware in care, some of which were about 100 miles distant, and with the humble vehicles of that day required no small exertion to visit.

It was but a few years before Thirdhaven Monthly Meeting presented to the quarterly meeting the proposition of being reunited to Baltimore, which was sent to the yearly meeting, where it was laid aside. Baltimore Yearly Meeting, also, perhaps about 1816, forwarded a similar request to Philadelphia Yearly Meeting, where it was so far approved as to be sent to the quarterly meeting, where, probably on consideration of Delaware Friends' convenience, it was left "for further deliberation." The difficulties which arose soon after, no doubt, had influence in causing it to be put aside.

It would almost appear anomalous that with the views so often carried out in that day of having meetings for quarterly conferences in each county, that the Friends of Delaware State were not united together. But Wilmington was included in Concord Quarterly Meeting, and some fifty miles interposed between it and Little Creek, yet a like distance separated Little Creek from Thirdhaven. It is yet in remembrance how Friends of Bay Side and Choptank, in going to Quarterly Meeting at Little Creek, would dine at the "Quaker Tavern," and then lodge on the way at a hospitable friend's near Denton, pursuing the journey the day after. The "Quaker tavern" was a large oak, with widely spreading branches separating from each other some twenty feet from the earth, and was standing within three years, and would possibly yield twenty cords of wood. It is at the summit of a hill somewhere near a mile west of where the Tuckahoe creek crosses the line of Talbot county, and the corner of Queen Anne's. The circumference of this tree cannot be less than forty feet at the ground.

The habits of living in the neighborhood of the Chesapeake bay were much different in that time from the present mode in Pennsylvania. Clad in the homespun, and without the intervention of the tailor the good dame, *a genuine helpmeet*, was sufficient to fabricate all the clothing except the low quartered shoe, or the almost bullet proof hat with its broad appendage. In the house, comfort, but not often convenience, was to be noted. Generally of wood, lined with boards, the house was left unpainted, and rarely knew a cellar, while low and small buildings were appropriated to the small, yet spirited horses. In-doors the floors were carpet proof, while in the living room pegs were placed conveniently to suspend divers garments. Few books and no newspapers, were visible, but piles of blankets, quilts, etc., occupied corners, with now and then a "chist" to put valuables in. In cookery, warm bread of worked biscuit, or of corn, held chief place, while oysters, crabs, poultry, etc., in endless variety loaded the pine tables, banked up with excellent sweet potatoes. Dairy product beyond home use was not often attempted. The language was often quaint with a degree of honest bluntness. "I see thou hast not been well brought up," said one to a young man who had made much apology for calling to shelter from heavy rain; "If thou had been well brought up thou wouldst have known *thou had a right* to call on a friend without making apologies." Another, who was named as representative to the Yearly Meeting excused himself by saying, "I shan't go."

But musing on the memories of the humble, honest-hearted Friends has led from the circumstances of the present day in the land where Friends existed long antecedent to Philadelphia city. While William Penn was only a boy of 12 to 15, settlements were made in what is now the limits of Thirdhaven meeting, and some of the earliest settlers united with Friends. They increased till some 12 or more congregations were formed. Early the iniquity of slavery was brought upon them. Wenlock Christison, the intrepid denouncer of Boston intolerance, died the possessor of a slave. Doubtless he was treated as a rational being, fed, clothed, and taken to meeting, yet he was by law a chattel, a thing to be used as

the master willed. This iniquity was not long in becoming burdensome to their tender spirits. Some of them relieved themselves of the burden and then plead with, and entreated their brethren in the Society to do the same. Growing stronger they separated those whom they convinced, but could not convert, from religious fellowship. Many suffered the love of gain to prevail, and there was a lessening of numbers in the Society. The giant evil gained ascendency in the land, and large numbers of Friends emigrated to Western States. The Monthly Meeting at Centre[1] issued certificates for over twenty families in one year. This depletion has continued until numerically the quarterly is small, while extending over much territory. As before stated, the meetings in Delaware have receded until one only remains and it not a large one. In Maryland five exist on the records, but Tuckahoe Neck, Pine Grove, (ancient North West Fork), and Preston, are the remnant of the Nicholite Friends, and very small. Pine Grove and Preston, alias Snow Hill, alias Marshy creek, form North West Fork Monthly Meeting. Cecil Monthly Meeting remains a small body in Kent county. By the business interests, by family connection, by economy of travel and time, as also by methods of business, Friends of Maryland Eastern Shore are nearer Baltimore than they are to Philadelphia. To members of the Society of Friends the Eastern Shore should be a land of pleasant memories. No dungeon on its soil received a Quaker; no hangman plied his skill on any of the sect within its bounds; no fines were amerced from any of the preachers. Tithes and military exactions were not great. On its sunny soil and its beautiful waters, the bold men dared and none doubted their right to live out their convictions of Truth. In its graveyards, some of them now a waste, were laid the humble, lowly, yet glorious forefathers of many who scarce know of the land of their ancestors. *Requiescat in pace.*

Third month, 1887. R. HATTON.

A HISTORY OF FRIENDS IN NORWAY.

THE following interesting sketch of the rise of Friends in Norway is given in the *Quiver*, of London, entitled "The Friends' Colony in the Far North":

One of the characteristics of the "Pennsylvania Pilgrim" was that he felt through the "common sequence of events" the guiding hand of Providence "reach out of space." And, gazing as spectators at events distant, we see how true it is what Whittier has so said, and what a greater poet has put into other words—a Providence "doth shape our ends," however we may rough-hew them. That the running away of a boy to sea would be the means of the growth of a religious body in the land he went from seemed unlikely, and still more unlikely it seemed that that lad and others, prisoners of war, should introduce Quakerism into Norway. But so it was; and the story of how it came about is worth telling.

Enoch Jacobsen, son of a Stavenger carpenter, was apprenticed to an apothecary, but in 1808, when about 18 years old, he "ran away to sea," going on board the privateer *Havneren*. When only a few days at sea, a British frigate, the *Ariadne*, took the privateer and carried her crew captive to Leith. Jacobsen was imprisoned about three years in Scotland, and then removed to the *Bahama* prison-ship at Chatham. In his own simple language, the Almighty was pleased to convince him that "a man must witness repentance and become a new creature in order to witness salvation and eternal peace in Jesus Christ." He obtained a Testament; he saw on board another prison-ship "one of Robert Barclay's books" (believed to have been the "Apology" in Danish), placed there by a Plymouth Friend. He met in the ship one Andersen, of Stavanger, one of the "Hougeians" or "Saints," and the two had religious conversation. They were removed to the *Fyen*, where were many prisoners, and two others were added whose religious views seemed to develop like theirs. By inquiry they heard that there were people in Rochester whose opinions were like theirs, and to one of these, William Rickman, an aged minister of the Society of Friends, Jacobsen wrote a letter with the aid of a dictionary, asking that "you will send me some of your books." This was in 1812. Rickman visited the little company, and so did Frederick Smith, of Croydon, and other ministers. By permission, they held a little meeting, at which 12 Danish and Norwegian prisoners were present; and they were at times favoured with visits from English Friends and visitors like Stephen Grellet, the Quaker missionary. Their little meeting grew; they held it at last thrice a week, "but there was seldom any instrumental (vocal) ministry amongst us." In 1814, the time of their release came and they were scattered. Some of the Chatham Friends gave "certificates" to the returning prisoners; the executive of the Society granted a number of books for their use; and so to Norway and Denmark most of them went. They met in some cases with the "Saints," the followers of Hans Neilson Houge; but gradually —weeded in one part, added to in others—they drifted into little communities, and then they had to meet the persecution which early Quakers have often had to endure in many parts. They had adopted olden peculiarities of the sect; they refused to doff the hat; they objected to pay the school-tax, because the catechisms were so largely read in the schools; they objected to the imprisonment of young people amongst felons for the sole reason that they were not able to say their catechism; and they desired liberty to marry and bury in the method they deemed best. Refusal to take an oath caused the refuser to be deprived of property or involved imprisonment; and thus for thirty years the little struggling company of Friends in Norway had to meet the difficulties that persecution, poverty, and emigration brought upon them. Stephen Grellet and William Allen visited the country in 1818, and the executive of the Society

[1]The records of some of these meetings are probably in possession by the Orthodox Friends of Wilmington, Del, to which meeting the very few who adhered to that branch in 1827 were attached. Some interesting documents of the Nicholites were thought to be with them. By reference it appears, only about 30, including (men, women, and minor children) out of 530, were of the seceding class, who united with those in Wilmington. Not one is now known in the limits of the quarterly meeting. The Nicholites who united with Friends numbered about 400.

in England sent an address to the King of Sweden and Norway on the subject of the persecution, but it was years before there was liberty granted to them to "meet under their own vine" or its representative in Norway. Meantime, it may be added that in 1818 the first marriage "after the manner of the Society of Friends" in Norway, took place at Stavenger. Thomas Shillitoe, an eminent Quaker minister, visited Christiania in 1821, when Elias Tasted was fined five dollars daily till "he dug up the bodies of children of his whom he had buried in unconsecrated ground"—a sentence which when reviewed by the king, was not allowed to be enforced. Shillitoe's visit was of value in proving to many of the authorities that it was for conscience' sake the Quakers declined to adopt many forms. In 1830, however, for a time the Norwegian Friends were forbidden to hold their religious meetings. In 1840 Elias Tasted enumerates the members at Stavanger and district as only nine in number, with four or six others attending the meetings. Two of these were "Endre Jacobsen Dahl" and his intended wife. They were married in the Quaker mode, and for this cause were "sentenced to be sent to prison, to be kept ten days on bread and water," with a repetition of the punishment until all expenses were paid. The "marriage also was to be annulled." The king, however, finally set aside this sentence on appeal. George Richardson, a minister in New Castle, appealed to the Norwegian authorities as to this persecution, and a copy of his appeal was sent to the Swedish Ambassador, and it probably reached the King of Sweden. In 1845 an address to the "Representatives of the Norwegian Kingdom in Storthing Assembled" was sent from the executive of the English Society of Friends, which stated their views and the privileges they have here, and added, "Our brethren in Norway are few in number, and mostly poor as respects this world's goods. They are principally resident in and about Stavanger." The address recited some of the sufferings they had to endure in Norway, and asked that they might have freedom to worship, to marry, to affirm, and that they might be relieved from harrassing and oppressive proceedings. And in that year "greater liberty of conscience" was given to "those who profess themselves of the Christian religion" whilst dissenting from the Lutheran Church in Norway. This was gratefully acknowledged by an address from the "Society of Friends in and near Stavanger." From that date the path of the Norwegian Friends has been easier. Some of their number have been imprisoned for refusing to work in men-of-war and for refusing to be trained for military service; emigration has continually thinned their numbers, but they have had such help as their English brethren could give them; and visits of British and American ministers have been many.

It is two years now since the death of the last-living of these early Friends in Norway—Endre Dahl, of Stavanger. Endre Dahl's ability and integrity had raised him to a position almost of affluence. He was highly esteemed by his fellow-citizens of many religious persuasions, and his interment was attended by a larger number of mourners than at any previous funeral remembered in Stavanger—priest, consul, and people thus honoring one who had been booted in his native streets for being a Quaker.

The temperance movement in Norway, it may be added, owes much to another Friend,—the late A. Kloster. The successors remain in Stavanger (where they maintain a school of their own, with some forty scholars, children of Friends in Norway and their associates), at Bergen, at Christiania, and in other parts. They are still few in number in Scandinavia; some are fishermen and farmers, as were the disciples of old; but the root which had its origin in the prison-ship at Chatham seems still to have vigorous life, though the transplanting of shoots to America appears often to threaten it with extinction in some of the parts where it has thriven. The introduction in so romantic a method of this peculiar form of faith, and its maintenance for seventy years in what could scarcely be called fit soil for its propagation, is not the least notable in the stories of religious growth. There was little instrumental aid in the sowing of the seed; the reading of a Testament led to the gradual development of spiritual life, and the reading of "Barclay's unrefuted page" gave it a tendency towards Quakerism in its ancient type. The fostering care of English Friends led to the gathering of very small communities and to the gradual recognition of these by the law; and thus, in the land of the Vikings, there linger a few followers of this most peaceful faith—that of Fox and Barclay, Penn and Woolman, Grellet and Allen. And, in the words of one of the latest denominational utterances from Norway, "may these few be faithful and preserved untouched by this world and its many snares."

TEACHING "THE TRUTH."

Editors INTELLIGENCER AND JOURNAL:

THE sum and substance of R. Heber Newton's advice to the "doubt-benighted young man," recently printed, is to stop worrying about what you don't know, and to do what you do know. The closing up of this sermon is as beautiful and simple and practical, and it is as good Quakerism as anything I ever read. But it stops at the most important point, and leaves the most important question unanswered, which is, Why should "the young man" feel "doubt-benighted," when he "knows duty, and can spell out Righteousness, Purity, Goodness, Justice, and Truth, and can translate these terms of the soul into life?" What did Jesus of Nazareth know or do or teach more than that? What is there to know more than that, and why should anyone who knows that feel doubt-benighted?

I believe this doubt arises almost exclusively concerning theological speculations which are not of vital importance, and about which no two people entirely agree; and Biblical traditions and inventions, which are altogether rejected by many who are sincere, wise, and good. And I believe it is because children are impressively taught in their earlier years to accept these things as truth, and to rely for salvation in some mysterious way on a belief in them, that so many thoughtful minds are brought to

this period of painful, perilous doubt. I believe it is altogether unnecessary and wrong to teach children such things in such a way that when they arrive at years of understanding, if they are so fortunate as to be honest and intelligent, they will be compelled to doubt. The way to avoid it is easy and simple,—teach as truth only such things as are known without doubt to be truth.

A child is taught that the earth is a sphere; as he advances in life, every experience and every fact that he becomes acquainted with, conforms to that truth. On the other hand, a child is impressively taught that the Bible is "the Word of God," and is to be implicitly believed to secure salvation; and to admit any doubt concerning it would be a dire calamity. The child grows up and reads and thinks, and what is the result? An inclination to question and investigate on one hand, and on the other a demoralizing fear of the threatened penalties of doubt and unbelief, which fills the mind with trouble and distress.

Of course this does not apply to Friends and Friends' children, as much as to other denominations; but yet Friends are so apt to make use of the language and expressions of the churches, that the children are led into somewhat the same confused state of mind. Therefore the great need of plainer language and more correct expressions among our ministers and others, so that the children especially may not be misled.

But I believe this subject of doubt has a further interest for Friends. Why is it that many of our young people, on growing up, leave the Society? On passing through this season of doubt they succeed in smothering it, and then join the church; or they go to the other extreme and discountenance religion generally, with the impression that there is little or no difference between Friends and others.

Is this not because Friends have failed to teach the children the difference between their views and the views of the churches? Is it not because Friends have failed in two things: first, to give the children a definite idea of the why and the wherefore of the reasonableness and the right of our principles; and second, to teach the why and the wherefore of the unreasonableness of the church doctrines which we oppose, and the positive wrong of a mere belief in them as able to confer salvation?

In saying this I am aware that some Friends hold that it is not necessary to point out the wrongs if we only teach the rights; but how can our young people be expected to resist successfully the proselyting efforts of the churches, if they are not equipped with a knowledge of church fallacies, and the arguments to overcome them? This does not imply "going into the darkness to drive away the darkness with its own spirit;" it means putting our light on a candlestick to dispel the darkness with the spirit of light.

I take the liberty of expressing this view in opposition to older ones, because I think they are beginning to forget the experiences of their younger years.

Teach the children our principles, and how to support them with reasons and arguments, both in and out of the Bible. Show them the injury of binding creeds, and the right and the benefit of fearless thought. Show them how beautifully our principles accord with the teachings of Jesus Christ, but how inconsistent with his teachings are some of the dogmas of the churches that use his name.

Teach them the omnipotence of pure thoughts and kind acts.

In short, where we are right, teach it, and the reason of it; and where we think the church is wrong, teach that, and the reason of it.

Are the First-day Schools doing this?

JONATHAN C. PIERCE.

THOUGHTS ON THE SCRIPTURE LESSON OF FOURTH MONTH 8.

TEXT from Matthew, XXIII., 23-39.

At first reading, the severe language used by Jesus seems almost out of keeping with his loving, forgiving character; but when carefully studied and understood, we find it is not inconsistent. I cannot for one moment entertain the thought that there was hatred or bitterness in the heart of Jesus, or that he could take any pleasure or satisfaction in the "woe" that would come upon these false teachers. This woe was, to "be left desolate in the place of condemnation" until they repented of their evil, and should be ready to welcome the divine message. Nothing worse than that, we may say; could anything be worse than to be shut out by our own act, from the loving at-one-ment with the Father?

To get the full benefit of this lesson, let us bring it down to our own times and to ourselves. Are we guilty of any of these things that Jesus has so denounced? Are we professing to be good and not practicing? Are we in any respect like a whited sepulchre? Let us each examine our own hearts, not with a feeble candle, but as with an electric light, if need be. Turn it upon every corner, and let it remain there until we can clearly see what our condition truly is. What do we find that is comparable to the sins of the Scribes and Pharisees? Jesus called them "serpents" and "sons of vipers." What did he mean? What is the nature of serpents and vipers? Firstly they crawl, they do not go upright; secondly, their sting is deadly poison. They are slimy, malignant, treacherous. Do we find any of these qualities in our natures? Let us be fair and not spare ourselves. If we invoke the true Light in this examination, we shall be able to see these faults. I pray we may be equally willing to confess them to ourselves and our Father, and invoke his aid in driving them out utterly—even if it takes a life-time. The cause is worthy the battle.

Are we guilty of "killing the prophets and stoning the messengers sent unto us"? We wonder how the Jews could have treated them so. Have we any prophets or divine messengers in these days? And how are we to know? There are so many new things coming up "in the name of the Lord," professedly. How are we to know? And may we not be guilty of condemning a divine idea? Truly we may, and thus

do violence to the "Lord's annointed." But we must be in the condition of Peter when he responded to the query of Jesus, "Whom say ye that I am?" How did Peter know to answer so promptly and so positively, "Thou art the Christ, the Son of the living God"? Because in that hour the Father revealed that truth to him, and he knew. So unless a truth is revealed to us, we cannot know it. We may be inclined to believe it, we cannot say with certainty, perhaps, that it is not truth, unless that is also revealed to us, but until we know we dare not condemn lest haply we be working against the truth. The scribes, who made it their business to understand and explain the law and the prophets, had no hesitation, it seems, in giving them such interpretation as they chose. They preached righteousness but did not walk in it themselves. They preached abstinence and slyly indulged the appetite in what it craved; and preached purity of life, and did not practice it; thus making themselves untrue and false teachers. Woe unto such.

Zechariah dared to expose and cry out against the corruption in the king's court, and was summarily slain. Can we bear to have our faults cried out against, thus injuring our standing in the church or society? Let us humbly ask ourselves if it is possible that we have been pharisees and did not know it. Let us welcome the friend who can thus take the scales from our eyes, and like Saul who, though a Pharisee was unconscious of the pharisee spirit, let us turn from our wrong course and become a true disciple. Can it be that we have resisted that loving pathetic appeal of Christ? "O, how I would have gathered you, ... but ye would not."

How can we deliberately turn away and separate ourselves from such love and such fellowship? But we have the power of choice. It has been permitted us to choose, so that we might experience the joy and reward of choosing aright. We may go away from the Father, and reject all his invitations; we may indulge in everything that is evil and impure; we may come to be companions of swine; and beasts we may remain if we choose; but the soul lives, before it is utterly dead, (for it is written "the soul that sinneth it shall die,") the call is extended, the Divine message of forgiveness and love may reach us yet; until we do accept it, and its conditions of true repentance and amendment, our souls must sit "desolate."

When we can say "Welcome is he who cometh in the name," or "in the love and power" of the Lord," or welcome is the Divine message which reaches our hearts, whether through human instrumentalities or directly to our inmost souls, then the way is open for our return. Jesus does not set a limit to the time, whether it may be here or in the hereafter; but he distinctly says, "the time may come when ye shall see me no more until ye want me, and are ready to welcome me; ah! even ready to cry 'Blessed is he who cometh in the name of the Lord.'"

Chicago. H. A. P.

THE cross has no healing power until it is taken up and carried. To the hand that seizes it there is warmth; to the soul that bears it there is strength.

UNION OF CHURCH AND STATE.

Editors INTELLIGENCER AND JOURNAL:

I HAVE no intention of offering you thoughts for publication very often, but it has been on my mind for some time to call the attention of Friends to what seems to many a very important matter, and one upon which the early history of the people called Quakers and the persecutions which they suffered through the combination of the sacerdotal with the civil power, renders them peculiarly competent to bear a testimony. Doubtless all well-read persons have observed the evident and increasing efforts being made amongst clergymen and a portion of their followers, to gradually merge or alter the secular character of our Government into one that will rest more upon a theological basis.

We now see influential combinations of persons advocating openly such a change, and it is hard to tell what follies may be committed by the over-zealous and blinded (or designing) leaders of the blind, toward weakening our constitutional provisions so wisely provided for the maintenance of true liberty of conscience. Does it not become all those who have learned from history, ancient and modern, that evil and wrong have always resulted from the union of the sacerdotal with the civil power, to raise their voices against proposals to give up the vantage ground gained by our fathers in the path of progress, and efforts to return again to "wallowing in the mire" of ancient days?

There have been recently letters and other expressions in the public press, both pro and con as regards this question. I did not take up the pen to discuss it at this time, but to ask you to note and publish some "golden words" spoken concerning it by Elizabeth Cady Stanton in her address of welcome delivered at the opening of the Woman's Congress at Washington. It is hopeful to learn that there are some mature minded women at the helm competent to check the thoughtless wildness so prevalent amongst certain classes, and aid to divert it into the channels of true wisdon.

The following are the words I allude to:

"As to the amendments of the Constitution asked for by a body of the clergy to recognize the Christian theology in the Constitution, and introduce religious tests into political parties and platforms, in direct violation of Article 6, Clause 3, of the National Constitution, I think the majority in our Woman's Suffrage Association would be opposed to all such amendments, as they would destroy the secular nature of our Government so carefully guarded by our fathers in laying the foundations of the Republic. This freedom from all ecclesiastical entanglements is one of the chief glories of our Government and one of the chief elements of its success. We cannot too carefully guard against all attempts at a retrogressive policy in this direction. If there is one lesson written more plainly then another on the institutions of the Old World it is the danger of the union of Church and State—of civil and canon law—of theological speculations in the practical affairs of government."

Hockessin, Del. J. G. J.

SCRIPTURE LESSON, No. 17.

FOURTH MONTH 29TH, 1888.

TOPIC: THE TALENTS.

GOLDEN TEXT.—"Be thou faithful unto death, and I will give thee the crown of life."—Rev. 2: 10.

READ Matthew 25: 14-29.

THE obligation to make life fulfill the true objects of living is again presented in the parable of our lesson. Our Heavenly Father is represented as a man traveling into another country, a far country, going on a long journey. Such journeys were undertaken in the olden times as well as in our own, but they were tedious and involved an absence that could not be calculated with any definiteness, hence the necessity of making careful arrangements for the transaction of business, that the affairs of the traveler suffer no loss during his absence.

Called his own servants. Those upon whom he had a claim because they were his own by possession.

His goods. These are enumerated as talents, which represent the largest sums of money known to the ancients. That the goods are reckoned in talents illustrates the great value Jesus placed upon the abilities and opportunities for doing good with which our Heavenly Father has endowed us.

According to his several ability. This recognizes what we all know is true, that the ability of some lies in one direction, and of others in quite a different one, and that some have greater ability for the same thing than others. This is seen in the business relations of life, and is equally true of those things that pertain to the life of the soul.

Having received the talents is an evidence of the favor in which the servants were held, and the employment of the same so as to increase their lord's treasury may be looked upon as a test of the fitness to possess. He who received but one talent must have appeared in the eyes of his master to possess some capacity for service, and though his portion seemed small in comparison with the portion of his fellow-servants, it was of sufficient value to be an incentive to add thereto.

Let us comprehend the thought, that the lesson mainly turns upon this point, the *using to profit the one talent.* By far the larger part of the human family are in the ranks of the one talented, and it is for the encouragement of these that the blessed Jesus made their representative,—the man with one talent equally responsible with those who had received more, but only to the extent of that which had been entrusted to him; the parable calls for no more than the increase that the one talent was expected to yield.

Had Jesus not shown that the one has its place with the five and the two, how many of us might excuse ourselves behind the plea that for but a single gift or ability we are not held accountable.

This parable gives us one of the most practical lessons of scripture. It is so hard for us to be willing to do our little every-day duties. We long for greater opportunities, for a larger sphere—for the chance to do a great deed. We envy those to whom five talents are given, who lead reforms, who stand at the head in the world's work. We are inclined to bury our one talent, by not using it to the best advantage. Yet we know that a leader is of no use if he has no followers. The gifted ones of the earth can only become a power for good when they have good material to work upon—each individual must do his own part, or the work will be ineffectual. We can all recall instances in history where men have failed, because the world was not prepared for them. The conscience of the masses must be quickened, or no leader, however magnificent his talents, can achieve a great reform. If we desire to help on the world's progress, we must be faithful to each intimation of duty. We must improve our one talent, that when the time comes to move, we shall be ready.

The one little habit of punctuality which we of the one talent, may easily acquire if we try, may save the valuable time of our associates with two and five talents, so that they may be able to broaden their work. Any good habit or any power of any kind that we have, may in this way be called "a talent," which we should try to increase.

As in some degree an illustration, may be given a story about a Freedman's school soon after the war. During the night there was a heavy fall of snow, and in the morning the teacher, a young girl, was not able to wade through it to the school-house, a quarter of a mile distant. A little before nine o'clock she was surprised to see about forty colored men approaching the house. They had started from the school-house, and with their feet had cleared away the snow and pressed it down, so that, as they said, "Now Miss Belle can walk." We may call her education and the power to impart it the five talents, and their physical strength, the one talent. Had theirs been buried, hers also for that day, would have been of no avail.

No doubt the possible ministry of sorrow for every child of God is very rich. It is painful and costly. But, if we yield to it in the spirit of love and faith as to the work of God's own hand upon us, it will leave us with new power. The life that, whole and unbroken, was cold, hard, and musicless, when pierced by sorrows is an instrument capable of giving out sweetest music. Of infinite importance to us, therefore, in the time of trouble is the question, What is our trouble doing for us? We will miss an opportunity of great blessing, and will receive harm to ourselves, if we get only pain and grief from it. If we receive sorrow with reverent faith and love, we shall find indeed, within the dark folds that enwrap the strange messenger, none other than the Master himself, come to bring us new gifts of grace and joy. —*Presbyterian.*

INWARD, spiritual improvement, I believe, is the only sure remedy for social evils. What we need is a new diffusion of Christian, fraternal love, to stir up the powerful and prosperous to succor liberally and encourage the unfortunate or weak; and a new diffusion of intellectual and moral force, to make the multitude efficient for their own support, to form them to self-control, and to breathe a spirit of independence which will scorn to ask or receive unnecessary relief.—*Channing.*

INTOXICANTS FOR DANCERS.

AMONG the applications to sell liquor, passed upon by the Board of Judges in this city, a few days ago, was one from the owners of the most important place of amusement, the "Academy of Music." This building is used at intervals throughout each winter for public balls, and it was seriously urged upon the judges that intoxicating drinks ought to be allowed to be sold to the people who attended them. The attorney who presented and advocated the application said that unless the Academy could have the revenue from such balls, it would not "pay," and that the balls themselves could not be profitable to their managers, unless those attending could have the drink.

To the ordinary observer the simple statement of this case must be abundantly sufficient. No words are needed to add force to the condemnation which must arise against such a plea. That those who frequent the public balls demand intoxicating drink, that they so much demand it as to be deterred from coming when it is not furnished, and that a prominent and presumably reputable "place of amusement" should desire to furnish it to them in order to increase its revenues, is a spectacle which speaks for itself.

In refusing the application,—which, to their credit, the judges did,—Judge Willson pointed out, with severe but just logic, the vicious features of the case. The application was to sell liquor only at the times when balls were held, and after saying that the law had made no provision for such a license, the Court declared its unwillingness to let intoxicants be furnished "to a promiscuous assemblage of both sexes, heated with the excitement of a night's revelry." In another case it had been announced that it "would not knowingly grant a license to sell liquors in premises where men and women shall be in the habit of assembling nightly for dancing," and in this decision it was pointed out that this rule must be applied not merely to the poor but to the patrons of "the more luxurious festivities" at the Academy.

Our thought, in dwelling upon the case, refers chiefly to the circumstance of the dancers craving drink. After all, how far are these from those of the Bacchanalian revels? And how far would society of this day be above the rank of the Roman Senate which suppressed those orgies, if our Court had done otherwise than refused so scandalous an application? And yet we must not lose sight of two facts: (1) that until now, the liquor has been furnished habitually, in the manner applied for; and (2) that in some way the law is likely to be evaded, and the liquor continue to be furnished. Here is food for the thoughtful mind. Here is an object lesson from their own day and generation for the young men and young women who chafe at the conclusions of Quakerism concerning the vanities and snares of life.

ONE or two communications, intended probably for this week's paper, but which reached us after the necessary amount of copy was in the hands of the printers, have been laid over to next week.

MARRIAGES.

BUNTING—PYLE.—On Fifth-day, Fourth month 12th, 1888, at the residence of the bride's mother, Wilmington, Del., by Friends' ceremony, Charles A. Bunting, of Steelton, Pa., son of Susan L. and the late Samuel Bunting, of Darby, Pa., and Helen C., daughter of Mary B. and the late Cyrus Pyle, of Wilmington.

SUTTON—CHASE.—At Twelfth street meeting-house, Philadelphia, Fourth month 11th, 1888, Harriet K. Chase, daughter of the late Prof. Pliny Earle Chase, and Isaac Sutton, of Friends' Grammar School, Haverford, Pa.

DEATHS.

BALDWIN.—At her late residence, near Downingtown, Pa., Fourth month 10th, 1888, Mary Ann Baldwin, in her 85th year.

BUNTING.—On Second-day, Fourth month 2d, 1888, William H. Bunting, formerly of Darby, Pa., in his 68th year; a member of the Monthly Meeting of Friends of Philadelphia.

CARPENTER.—Suddenly, of apoplexy, Third month 30th, 1888, at his residence, Harrison, Westchester county, N. Y., William S. Carpenter, in the 74th year of his age; an elder of Purchase Monthly Meeting.

CASSEDAY.—In Camden, N. J., on the morning of Fourth month 11th, 1888, Ruth Casseday, in her 91st year.

CLOUD.—At Woodbury, N. J., Fourth month 7th, 1888, Benjamin Cloud, (father of Hooper Cloud, Philada.), in his 74th year.

COLE.—Twelfth month 26th, 1887, Arthur P. Cole, infant son of John and Efphama Ann Cole.

COLE.—On Third-day evening, Fourth month 3d, 1888, at the home of her father, Samuel R. Battin, after a lingering illness, Efphama Ann, wife of John Cole, aged 32 years, 9 months, and 22 days; a member of Green Plain Monthly Meeting.

COMLY.—On the morning of Fourth month 10th, 1888, at Edgemoor, Del., Mildred G., only child of George N. and Alice G. Comly, aged 14 months, 4 days. Interment at Byberry, Pa.

GREEN.—Fourth month 11th, 1888, Margaret Green; a member of the Monthly Meeting of Friends of Philadelphia.

MAUGHAM.—At the Old Men's Home, in West Philadelphia, Pa., Third month 28th, 1888, George R. Maugham, aged 73 years.

He was a native of Great Britain, and had for a number

of years been an attender at Race street meeting, where his demeanor was always reverent.

His position at the Home being of a humble character he had much to contend with, and many disappointments to encounter, but whilst speaking of these with feeling, he nevertheless always seemed cheerful, contented, and thankful for his blessings.

He was not in the habit of asking aid, but ill health made him dependent, and he felt very grateful to those who aided him in becoming an inmate of the excellent Institution in which he ended his days, and where his deportment during the few months gained him the favor of those in charge.

MELLOR.—In Philadelphia, of scarlet fever, Fourth month 9th, 1888, Wharton, son of Edward and Deborah Wharton Mellor, aged 4 years.

SOUTH.—In Philadelphia, at his residence, First-day evening, Fourth month 8th, 1888, Ephraim W. South, M. D., formerly of Plainfield, N. J., in his 53d year.

STACKHOUSE.—At Altoona, Pa., Fourth month 10th, 1888, Ella W., wife of Ellison Stackhouse, and daughter of the late Lewis L. and Elizabeth S. Walton; a member of the Monthly Meeting of Friends of Philadelphia held at Spruce street.

Minute of Appreciation by the Library Association of Friends, Philadelphia:

It becomes our painful duty to record the decease of our co-laborer, Susan Roberts, who departed this life Third month 7, 1888. We feel that in the removal of this valued Friend our Library has sustained an irreparable loss, as her culture and discriminating taste gave her unusual qualifications to have care of a library.

Associated with us since 1876, she has manifested a deep and active interest in its best welfare.

She was ever zealous to keep the standard of books high, and to admit nothing inimical to the principles and testimonies of Friends.

Inspired by her example, may we continue the watchfulness she so heartily gave to the Library, and double our diligence to fill the void so suddenly created in our midst.

On behalf of the Committee,

EDGAR KIRBY, Clerk.

COLORED PEOPLE MEMBERS OF THE SOCIETY.

Editors INTELLIGENCER AND JOURNAL:

In reply to a question in a recent number of the INTELLIGENCER AND JOURNAL, whether colored people were admitted as members of our Religious Society, I would say, that in my childhood I was a member of Burlington Quarterly Meeting, where David Maps, and his wife Grace, a worthy pair of elderly colored people, were also members, in high estimation in the Society. They were constant attenders of meetings, were well off in this world's goods, and entertained many traveling Friends and others. They lived up to the discipline, in observing plainness of speech, behavior and apparel; but though their dress was plain it was of good material; they drove a pair of horses attached to a comfortable carriage. They were very retiring in manner, and always insisted on waiting until their white friends had arisen from table before partaking themselves, if their friends would allow it, which was seldom the case. They had no children. I think this was about the year 1823; it was before the separation in the Society. I never knew what became of them, but should regret that Friends should lose their remembrance.

Fourth month 10th. E. G. FENIMORE.

For Friends' Intelligencer and Journal.

ON AND OFF THE POPULAR ROUTES OF TRAVEL.—II.

As before stated, it was of a Sabbath evening we settled ourselves on the boat *Mantes*, as she lay at her wharf in Norfolk, Va. But how strange the feeling as we listened to and looked at the gangs of sturdy negroes—for the brilliant lights in the docks and in the warehouses revealed all that was going on—busily unloading the wares from the boat. Under the direction of the mate they all worked with a will, but with the lightheartedness characteristic of the race, they would often break out in snatches of song, or a light laugh, which helped no doubt to enliven the toil. Not one murmur or rough word did we hear during the six hours of hard labor, for handling cotton bales, pine lumber, hard wood, boxes of fish, etc., is by no means light work. We could not feel there could be any condemnation for this departure from the Mosaic command "Six days shalt thou labor, etc.," for have we not the broader freedom of the Master's example where he permitted good to be done on the Sabbath day? And is it not a good thing to bring order out of chaos? We were told it was not the usual custom to thus work, but the "blizzard" had created such a wave of confusion from North to South, that all regularity was set aside, and much extra time, labor, and expense were needful to bring things into the accustomed channels. Shortly after midnight the unloading ended, to be followed after a brief rest, at 4 a. m., by the reloading, and at 9 we sailed out of the harbor and into the Elizabeth river, and our journey off the beaten track of most travelers began. And what easy riding it was! So perfect was the working of the machinery the motion seemed only the throb of a great pulse as we glided along the river, passing out of its broad channel into narrow winding ways amid acres of marsh land, where the watchful observer can occasionally see the famous canvas-backs and other ducks that find a home here, but not always a refuge from the gun.

Passing out of the river we enter what is called the Virginia cut of the Chesapeake canal where we sail slowly on for eight miles interested in the pine woods that border the canal, with here and there a maple or an oak having on their branches fine growths of the mistletoe which abounds in this region. We longed for some of it in possession, but though so near as to be almost within reach, it was yet far away, as there are no habitations in these swamps.

The sensation of rest in passing through these waters is most delightful. One feels out of the world and its activities, and as if laziness were no crime. We sit on deck and watch perhaps a passing raft as it winds like a serpent its slow length along, too indolent even to count the huge logs as they lie chained together, or to take note of the steam tug that propels them to their northern destination, except to observe the exquisite cleanliness of all its belongings as it passes almost within reach of our touch.

And just here let us query, Why it it that on boats and vessels kept almost always in motion, such perfection of cleanliness as to house-keeping is possible, when in houses built on solid ground it is an attain-

ment so hard to reach? Is it that men who train men to such service are better fitted for it, and their subjects better fitted, than are women who stand in the positions of mistress and maid? Is it not because of the recognized importance of the absolute command and perfect drilling on the one part and the acknowledged necessity to learn and of perfect obedience on the other?

Leaving the canal, we entered another winding river called Northlanding, which we traversed for fifteen miles, then we sped away on the broad waters of Currituck Sound for a like distance to the delight of our good captain, who dislikes the winding ways and slow canals, expressing himself as to the latter as "Man's interferences with the Almighty's water courses designed especially to vex sea captains." But nevertheless we must again enter a canal, this time the North Carolina cut of the Chesapeake canal, and view with the interest of history and tradition the southern end of the great Dismal Swamp. Our imagination could well picture the discomfort of a hunted slave forced to take refuge in such a place as this. But this canal is short, only six miles, and we emerged into the Albemarle sound, thence to Croatan sound, and then into the Pamlico sound, upon which we had 90 miles of fine sailing.

There is a very pleasurable feeling of safety on these sounds. Bordering so closely upon the Atlantic Coast that we can at times see the breakers, and feel the invigorative influence of the salt air, yet we are spared the buffetings of the waves. It may sometimes be a little rough on this inland route, but generally it is smooth sailing and cannot but be beneficial to such as dread a sea voyage on account of sickness and like discomforts.

Our destination being New Berne, N. C., we reached it near noon of the third day from Norfolk, it being finely located on the Neuse river forty miles from where we entered it, our trip having covered a distance of 220 miles.

As it was not our purpose to quit the boat, it being such a comfortable abiding place where one could breathe freely, we made our tour of inspection of the city in a carriage, the captain kindly acting as driver, being as much at home behind a span of horses, as in guiding his boat through the waters.

The town is essentially southern in its aspect, two-thirds of the population being colored. It is well located for trade, having a railroad and the broad water ways of the Neuse and Trent rivers. Like Norfolk, its trucking interests are large. Being further south we did not see the spinach, but saw acres of peas nearly ready to bloom, as well as many acres of asparagus which would be ready for cutting by the 1st of Fourth month. A truck farm of 300 acres, the property of a Jerseyman, gave evidence of being managed by one who understood his business. There is considerable trade in cotton; and oysters, too, come in for their share of attention, one establishment using steam in their opening. This does not, however, add to their value to those who live near their haunts and know the true taste, but answers for the purpose of canning and shipping to the Western States and territories. Lumber is one of the products of the State, and steam saw-mills here rapidly convert the great pine logs that are floated or tugged down the rivers, into marketable shape. Some fine old mansions of the old colonial times are yet in good preservation, the pretty Episcopal chapel is proud of a communion service presented by George the Third, and many private relics of the time when we were subjects of a British sovereign are highly prized by their owners. The public buildings, such as court-house, school-houses, etc., were creditable. In a large building for the use of the colored children we noticed the meagre attendance, and the numbers at play around the homes in the outskirts of the town, and were told that too many priding themselves on being free, came and went at their own sweet wills, not caring for the school privileges. What is to be done with the vast numbers of colored children and youths growing up idle and untrained is a very serious problem. On every hand the complaint is want of competent help, and all who seek it desire only those who have been reared as slaves. This supply will soon be at an end. And what then? It is not to be expected that those who have been the former owners of this unfortunate class, will interest themselves to train them, if they could, to be skilled laborers. The supply of missionaries, doing such noble work as Martha Schofield, and others like her, is entirely inadequate to the demand. The only remedy that presents, would seem to be for government to establish industrial schools, in which both head and hands, especially the hands, can be trained, and compel attendance. The salvation of all classes, both white and black, depends on forming habits of industry which will lead to thrift, and cleanliness and comfort will follow.

Quite near the city is located the National Cemetery, a very beautiful spot, kept in fine order. Here, it will be remembered, numbers of Union soldiers lie buried, this being one of the hospital points where during the war disease slew its thousands. Here floats every day the stars and stripes, a perpetual reminder that now we are all one nation.

Returning to the boat we were quite ready for our return trip, which is made over nearly the same waters, a little change being made in order to stop for freight. This time it was at Roanoke Island for shad, for all along these rivers were the nets of the fishermen, and it was one of the interesting things to observe how our early supply of this favorite fish is obtained. 400 pine boxes, each containing from 80 to 100 shad all packed in ice and consigned to Baltimore, Philadelphia, and New York markets, were here taken on board. This time we had several passengers, all Northern people returning from the South, and as all had the freedom of the boat we soon became acquainted, and were mutually interested in all that concerns the boat, as one family. Indeed this is one of the pleasures of such a trip, the union of interests of those on board. At the table were the Captain, the mates, the engineers, all gentlemen in appearance and manners, and these with the passengers held much converse, and enjoyed the excellent and bountiful meals together.

There was always something to interest. It was

pleasant to watch the sea-gulls, especially if they are furnished with bread which they enjoy and are so graceful in their movements to secure it, their sharp eyes detecting it amid the white foam in a marvellous manner. The light-houses that dot the channel, the manner of their lighting, and those afar off, were interesting to us. On board as freight was a large iron tank going to New York to be filled with gas to be returned to Cape Hatteras to do duty in lighting there for five months when it will again make the same trip to be filled. All these things tell us how varied and yet how connected are our interests. There can be no entire division. The "signal service" plays a very conspicuous part now in water navigation. We learn from the Captain that it is not an "unmixed good," as it makes" timid men and nervous women." In former times sea-faring men studied the weather signs, ventured more,and gained courage, and nine times out of ten came through all right. Now they depend mainly on the flags and lose much time and are less courageous. It may be he is right in the matter, yet we would be sorry to dispense with it.

Having lost time in the taking on of much freight we failed to reach the Elizabeth river at high tide on our second day out, and had the experience of "running aground." But as the evening was delightful, it being just sunset, and we had faith in the skill of our Captain, we watched with great interest the methods used to convey the heavily laden boat into deep waters again. Ere long it was accomplished and we were soon once more in sight of the brilliant lights of Norfolk harbor, after a week of pleasant and profitable sailing. Our family, that in so short a time had grown to know each other, separated to return to Maine, Connecticut, New York, and ourselves to the good old Keystone State, via Richmond. As we approached this beautifully located city, through a country sparsely inhabited, and where we would see occasionally notices of 8,000 acres of land for sale, we could but contrast it with the approach to our own modest capital. Where are the fine farms with the beautiful homes that border our own railroads? Alas! this noble State will long have to struggle to overcome the desolation caused by the unwise institution of the past. Yet there is hope in the future, and brighter days in store, if only we cultivate feelings of love, and bury deep in forgetfulness the bitter feelings engendered by wrong and injustice. And this will come to pass largely through our business intercourse; for neither the North, with its wealth, energy, and activity, nor the South, with its mild climate and undeveloped resources, can afford to remain a divided people, and through it all we can recognize "a Divinity that shapes our ends," for which we should be ever grateful. L. H. H.

THERE is one kind of wisdom which we learn from the world, and another kind which can be acquired in solitude only.—*Longfellow.*

EDUCATIONAL.

THE ENFORCEMENT OF SCHOOL DISCIPLINE.[1]

(Con d from last week.)

OUR pupils are desirous of good marks—they dread failure, they are ambitious of high standing; and we teachers anxious for the success of our pupils, honestly interested in their doing the best possible for them, and knowing, too, that our employers and our fellow-teachers will judge of our ability largely by the standing of our pupils, are prone to hold up a high standing as the sum of all good, and a failure to be promoted as the greatest possible evil. What wonder that the ambitious youth finds the temptation to petty dishonesty irresistible? What wonder that he is willing to earn a good mark by a false report or a glance at his mate's paper? What wonder that temptation grows by what it feeds upon? I suppose that ambition or emulation in some form is the source of most of the dishonesty in school, except that which arises from the desire to escape the merited punishment of misdeeds. Not only in the school but in the family is failure, or low-standing, made a terrible bug-bear, and the pupils in many of our schools live both in and out of school hours in a condition of feverish anxiety on this point.

We forget that the same gifts are not given to all; we forget that all pupils are not mentally alike, and that unlikeness to the type is not necessarily inferiority. Our literature is full of the stories of those who though dull in school and unpromising in youth, have outstripped their fellows in the very race of intellectuality; in short, we are prone to reverse the proper order, and exalt the machinery of the mill while we forget the grist itself—tithing mint and anise and cummin, while we neglect the very spirit of the law.

As the first means, then, of promoting a higher standard of honor, I would say we should strive to remove as far as possible this excessive feeling of the importance of "marks," ranking, and promotion. I would not say, "Never hold out a fear of failure as an incentive to work," for that may be the best means of stirring up a lazy, indifferent pupil, but I would make every pupil feel, if I could, that the important thing is to have knowledge and ability—not high marks; that what he does, not what he gets credit for, is of value, that to be, not to appear, is the essential thing. We shall never get rid of machinery,—it is a necessary evil,—and in our larger schools it is necessarily both prominent and complicated, and its continual adjustment, lubrication, and repair will consume much of our time and attention; but we need to be reminded continually that it is mere machinery; we need to remember continually that the work of a school can never be entirely or even approximately shown in percentages.

Are the children in your school intellectually alert? Can you trace the increase of mental activity and the growth of mind as your pupils are promoted from class to class? Do they retain their appetite for knowledge? Have they good habits of study, and do they know how to use books? And with all

[1] An Essay read at the Educational Conference, 15th and Race streets, Philadelphia, Third month 17th, by Prof. W. W. Birdsall of Friends' Central School.

this, are they forming the habits of punctuality, perseverance, submission to authority, and right conduct which will fit them for true manhood and citizenship? These are the true tests of school work, and while it will always be necessary to add to these others of less real value,—something in black and white, which will show for itself, and appear the same to every observer, we must be careful that the machine tests are added to the others, not substituted for them. "This ought ye to have done but not to leave the other undone."

The fear of punishment or the hope of evading irksome duties will always remains a temptation to deceit and falsehood; it is so among men and women, we would hardly expect that it would not be among boys and girls. Now if we could do away with discipline it would be a great gain in this direction; but we shall have to grow better and wiser before this can be accomplished, and, in the meantime, the temptation should be reduced to the minimum. It is here, perhaps, that there is most room for the exercise of personal influence, and especially of tact in the management of pupils. I have known teachers whose attitude of assumed omniscence was a perpetual challenge to the pupil, teachers whose every movement and action seemed to say "Get ahead of me if you can!" Is it any wonder that a smart boy occasionally does get ahead? Is it any wonder that when he does he thinks it only success in legitimate warfare? Say to a pupil in words or by your actions "You can't cheat me; I have my eye on you," and he is something more than human if he does not recognize the emptiness of the boast—something less well-posted than the average school boy, if he doesn't know that you cannot fathom all his possible schemes for your circumvention; perhaps, if you are energetic and usually successful in your efforts at discovery of fraud, and if you are particularly complacent and self-gratulatory at your success, perhaps the added glory of success under difficult circumstances is an added temptation.

I have seen schools where every individuual would positively deny participation in something which had evidently been done by some of them, and I rejoice to say I have seen schools where the question "Who did this?" brought up, instantly, the hand of every participant.

Let us not say to our pupils "Don't cheat, for woe unto you if you do;" but let us rather say, "A lie is contemptible,—written, spoken, acted, or looked, it is degrading, disgusting, detestable. You cannot afford to despise yourself, you want to be on good terms with yourself; self-respect lies at the root not only of your success, but of your very comfort. Don't do that which will make you unworthy of your own respect. I will remove from your surroundings every removable temptation. I will be vigilant in the attempt to prevent temptation reaching you. If you are so unfortunate as to be tempted and fall, and so fortunate as to be discovered, you will know that you deserve punishment; but if you are so extremely unfortunate as to evade discovery, I believe that you will nevertheless be sufficiently punished, for you will think of yourself as mean and dishonorable; you will have done something that you will not forget, something that you will think of again and again, and for which you will despise yourself more and more, every time it comes back to memory." Am I over sanguine? Do you think there will be no response? I believe there will be none if you talk this way and act another, that is, if you are not honest yourself. If, when the next offender comes before the court of justice, you seem to be "paying him back," and getting satisfaction out of the process, you will hardly convince the youngster that you are not less concerned about the moral crime than about the attempt to evade your detection.

The days of the ferule are gone, but perhaps we have not yet gotten far enough from the idea that the offense and its penalty are equal and balance each other, that the boy had his fun in the mischief, the teacher has his in the punishment.

But I thoroughly believe—nay I know, because I have seen it,—that the honor of the average pupil may be appealed to in the way I have outlined. It will not succeed in every case, nor in the hands of every teacher, and its results may frequently be long deferred, but boys and girls, no less than older people, are glad to discover that the right is worth following because it is right that the punishment of evil deeds is not all post-mortem, and that the reward of right conduct is a present positive gain. Tell a boy to be studious, obedient, docile, kind, self-sacrificing, forgiving, charitable, and that he will thus lay up treasures in heaven, and be able to enjoy it at a period which he fondly hopes to defer as long as possible, and it occurs to him that it would be a smart business transaction to discount a little of this long time paper and without seriously damaging his future prospects, realize just a little in the present. In other words he is continually thinking of a possible average between present and future enjoyment. But show him that right conduct carries its reward with it, that, in school-boy language, it is more fun and better fun, to do the right, and think the right, than to do and think the wrong, *and show him that you believe it yourself*, and he will be ready to believe.

Would I then do away with all school punishment, and rely upon moral suasion alone? By no means. Our careless boys and girls need to have their attention held to the distinction between right and wrong conduct; they need to have this distinction emphasized, and the punishment should be such as will bring out this distinction sharply and clearly. I have seen much good done by a sharp, indignant reproof, which expressed in forcible language the teacher's disgust at some unusually gross misconduct, while later, a candid talk over the aggravated features of the case would bring the pupil to a proper frame of mind. But it is useless to attempt to formulate rules for such a thing as this; teachers and pupils are too various.

One of the most successful teachers of boys that I have known, used to delight in saying that "good humored justice" would appeal to every boy's manly feeling and sense of right. "Good humored justice;" I like the phrase better every time I think of it; a good humored man and a just man, surely where the

teacher is such an one, a high standard of honor will prevail. Our pupils are not anxious to be wept over, and they wear a somewhat curious look when we say, "D-e-a-r C-h-i-l-d-r-e-n," but they appreciate good humor, and they usually have a passion for justice. Watch your pupils and see if they do not hate injustice; do they not grow indignantly eloquent over every story of outrage and wrong? Do they not rejoice in the triumph of right? You will tell me that neither boys nor men enjoy or admire justice when it is meted out to their misdeeds; but I will agree with you only so far as to grant that it is sometimes apparently so, and even these exceptions I believe to be usually caused by association and education. It helps one's faith in human nature to see a manly fellow take his punishment bravely owning that he deserved it, and ready to learn the lesson and profit by it.

I think we will be greatly helped by constantly assuming a high standard of honor among our pupils. Do not tolerate a falsehood, but never act as if you expected your pupil to tell one. I am not fond of being imposed upon, and I try to take proper measures to prevent it; but unless there is the gravest reason for doubt, I believe that a pupil's statement should be final. I would rather be deceived a dozen times than unjustly doubt a pupil's statement, and I think it a most serious injury to the pupil for him to know that his word is not held in honor. "It is a shame to lie to Arnold," said the Rugby boys, "he trusts you so." Human nature has not changed, like still begets like, trust begets trust, suspicion begets suspicion, honesty begets honesty, still, as it did at Rugby.

But it were useless to attempt to treat of more than a few of the phases of this question.

Our success in elevating the standard of honor among our pupils will depend largely upon ourselves, upon our own standard of honor, upon our ability to make our pupil see with our eyes in this as in other matters, upon our ability to see with their eyes, to appreciate their views of things, to be in practical sympathy with them, upon our ability to find out their strong points and strengthen them, to build up their moral defenses where they are weak, to discover and assist them to overcome their peculiar temptations, upon the completeness with which we can fill our place of teacher.

For this is no light task we have set ourselves; to mould the characters of children is an undertaking not lightly to be assumed or lightly accomplished; it will tax our knowledge, our judgment, our patience, our whole being. We shall feel that while mistakes may be unavoidable, they are of the nature of calamities, and to our failures we shall never be reconciled. But if we are faithful we have our reward. I shall be thankful all the days of my life that when I was a little boy I went to school to a certain high-minded, scholarly gentleman. His hair is white now, and since my boyhood he has given to hundreds of careless boys and girls the same good impulses, the same incentives, the higher standards, the better view of life, that he gave to me; and if moments of weariness and discouragement come to him, as to us all, the thought of the work of his hands and head and heart through all these years of usefulness, must chase away the clouds, and remind him again what a noble thing it is to be such a teacher.

SALEM, N. J., FIRST-DAY SCHOOL UNION.

The half-yearly meeting of this Union was held at Mickleton, N. J., on Seventh-day, 4th month 14th.

A sudden shower a little before the time of gathering interfered somewhat with the early settlement of the Union, but the sun shone out brightly again and when the opening minute was read, the meeting house was well filled with the friends, the workers, and the scholars of the several schools belonging to the Union.

Reports were read from the schools held at Mickleton, Woodstown, Mullica Hill, Salem, and Alloway's Creek. All were interesting and suggestive, the one from Salem was especially so, as the method of conducting the school, which was briefly set forth, embodies the principles upon which all profitable teaching in First-day school, must be based.

The removal of Aaron Borton, and the loss the Union has sustained in his decease were feelingly referred to, and the friends of Mullica Hill were exhorted to follow his example, throwing the weight of their influence on the side of the school, as he had done, and thus carry forward this good work that had been so near his heart, and to which he was always ready to lend a helping hand. Others, scholars in the schools, had also been called to the higher life, to whose memory tributes of affection were offered.

One of the reports expressed the thought that we should not rest satisfied with what we have done, but seek to advance. It was said in response that we should not be discouraged if our work is not just as satisfactory as we would like,—but strive to attain to something beyond.

The Lesson Quarterlies are used as helps, but not entirely depended upon. Effort is made to draw out the scholars. Woodstown and Salem schools make a study of the Book of Discipline. Mickleton and Woodstown are under the care of their respective Preparative Meetings. Alloway's Creek school is very small, numbering about twenty; only two or three are members. All the other schools appear to be holding their own with unabated interest; the severity of the winter has had some effect upon the regular attendance.

No written report was received from Greenwich, but a friend on behalf of the school reported it in session.

After the reading of the reports from the schools was concluded, a paper, prepared by a delegate to the Meeting of the First-day School Association held in Philadelphia in Eleventh month last, was read. It gave a summary of the proceedings of that meeting, with an epitome of the exercises and essays. This report was received with animated expression as to the advantage to the Union of such a review of the subjects under consideration at that meeting, with the belief that if all delegates or representatives appointed to the larger bodies, were to observe this custom much good would result.

The routine business of the Union was then transacted and the session adjourned for lunch which was bountifully provided in the school-house near by.

The afternoon session was the children's opportunity. The concert recitations and selections by individuals were well chosen, and rendered with good effect. This is one of the most enjoyable features of the Unions held outside Philadelphia, and makes such occasions very interesting to the children, for whose special benefit the work is carried on and who are thus more fully identified therewith.

Two essays followed which elicited remarks from several. A brief petition and words of encouragement to those actively engaged in this excellent work concluded the exercises, and after the usual quiet observed at the close of all our meetings, the Union adjourned to meet at Mullica Hill in the Eleventh month. R.

THE QUESTION OF FRIENDS' SCHOOLS AGAIN.

Editors INTELLIGENCER AND JOURNAL:

FRIENDS everywhere can but rejoice in the success which may attend Swarthmore's appeal for aid. We were told that at one time the subscription was increasing at the rate of about one thousand dollars a week, so that the raising of the desired amount seems to be only a question of time. Presumably, this amount has been largely contributed by Friends who seek in this way to extend the facilities for educating the young under Friendly influences which Swarthmore possesses.

But this appeal from Swarthmore has raised the question in the minds of many concerned Friends, which has long been discussed in educational circles, as to the relative value of primary and secondary education. The latter is surely the more showy, but the former is the more far-reaching and substantial; and while the aid that has been given Swarthmore may result in effects that are brilliant, it may well be doubted, as was stated in the INTELLIGENCER AND JOURNAL some time ago, by Friend Mariana B. Truman, "whether the funds already expended in Swarthmore College might not have been used to greater advantage for the Society of Friends, if good schools under the care of the Society had been scattered over our country. But the remedy lies, not in restricting the aid to Swarthmore, but in extending the beneficence here so well begun, to those schools and academies under the charge of Friends which naturally will be somewhat in the nature of nurseries to this College. We have one here in Easton, within the limits of New York Yearly Meeting, to which a small amount of money would come like a shower in a desert. We have buildings, library, and apparatus which cost upwards of thirteen thousand dollars. It is located in a community of Friends who, in the face of adverse circumstances, have been unable to meet the current expenses and the cost of needed repairs. Now, under more favorable conditions and with the school upon a good basis, a little aid, sufficient to put the building in repair and to furnish a few rooms for boarders, would place the institution on a strong footing and send it forward to many years of usefulness. In this and similar directions, Friends can supplement and perfect the good work so well begun with Swarthmore. E. A. H.

South Easton, Washington county N. Y.

[We have no doubt of the great need there is for the sustaining of such Friends' schools as our correspondent refers to. Wherever they are at all favorably situated, they are valuable to our Society and to the community at large. A wise and generous policy will include aid to them as well as to the higher education. We wish we could see in some direction the signs of some such gift for the general work of education among Friends, the Western States included, as has been made in the special bequest of John M. George.—EDS. INTELLIGENCER AND JOURNAL.]

SWARTHMORE NOTES.

—The annual reunion of the Somerville Literary Society was held on Seventh-day. About seventy-five of the life members returned to the college on that day, and the occasion was in every way a most happy one. At the afternoon session a paper on "Physical Culture for Women," by Dr. Frances Linton, called out a full expression of opinion on the various points of the paper. A second valuable paper was by Caroline Burr Hall, on "Our Social Duties." The morning and afternoon meetings having been devoted to business, and to the consideration of serious themes, the evening was given up to social entertainment, and was greatly enjoyed by all. The proceedings will be published in pamphlet form.

—At the last meeting of the Board of Managers a committee was appointed to consider the propriety of building professors' houses upon the college grounds. It is hoped that several of these will be built during the coming summer.

—The meeting on First-day morning, the 15th, was very large, many of those who were present at the Annual Reunion of the Somerville Literary Society having remained over First-day. Elizabeth Lloyd, of Easton, Md., was present, and appeared very acceptably in the ministry.

—A number of new entries have been made for next year, and most of these expect to enter the college classes. Those desiring places should apply early. The choice of rooms, each year during their stay at the college, is given by classes, and in the order of the original entries.

—The conditional endowment subscription toward the first Endowed Professorship, has been largely increased, and the prospect is good for securing the endowment before the coming Commencement. A few thousand dollars more will make it sure. Friends will certainly not allow the whole subscription to lapse for want of this moderate sum.

AFFECTIONATE dependence on the Creator is the spiritual health of the creature, as averseness and independence are the spiritual disease of the creature. Sin consists in the absence of the love of God from the heart as the dominant principle, and is not so much an action as a manner of existence.—*Thomas Erskine.*

BOOKS FOR FRIENDS' LIBRARIES.

Katharine Backhouse, of Sunderland, England, having been interested in an account of a visit by William Jones and Charles Brady, of London, to Race Street Meeting, Philadelphia, last autumn, as well as their social intercourse with some of our members, has generously forwarded a number of volumes of two works by her late husband, Edward Backhouse, and Charles Tylor, lately published in London, entitled "Early Church History," and "Witnesses for Christ," for gratuitous distribution in this country, among the Friends' Libraries of our branch of the Society.

"Early Church History," one volume, is a history of the Church down to the death of Constantine, A. D. 337. "Witnesses for Christ," two volumes, a supplement to the above, divided into four periods, is a history of the Church from the 4th to the 13th Century.

The works will be interesting to Friends, as the history is written from their standpoint, the author, Edward Backhouse, having been a liberal minded Friend of unusual acquirements, culture, and research. It is proper to observe, however, that a part, (in the "Witnesses for Christ" an important part), of the work of authorship and editing is by Charles Tylor, who also acknowledges his obligations to Joseph Bevan Braithwaite, Thomas Hodgkin, and others for their assistance. All these Friends are of the "Orthodox" school, and while it is true that not many subjects arise, in the early history of the Christian Church, involving the doctrinal differences of later times there are some, as for instance the Arian controversy, the adoption of the Nicene creed, etc. The description of the Council of Nice, (in "early Church History"), we presume to be by Edward Backhouse, and he points out, in clear language, "the incalculable mischief" done to practical Christianity by the attempt to enforce a uniformity of belief. Other expressions to the same effect show his breadth of view, and we think the preponderance of his work over that of his editor, in the "Early Church History," makes that the more satisfactory work, wherever the doctrinal attitude is involved.

The books are expensively gotten up, and profusely illustrated. They have been sent to our friend, Isaac H. Clothier, to be distributed at his discretion. Those having charge of Friends' Libraries—desiring the works—will please address him, at 801 Market St., Philadelphia.

One act may be more sinful than another act. But one sin cannot be more sinful than another sin, because since sin is sin, there can be nothing right about it. You may cross the line that divides right from wrong many times in one course of action; but the dividing line has neither breadth nor thickness, and every time you step over the line you are no longer on the other side of it.

It is shallowness that decides instantly—that always thinks it knows what it is about.—*Mrs. A. D. T. Whitney.*

EXTRACTS FROM E. C. STANTON'S ADDRESS.

AT THE OPENING OF THE WOMEN'S INTERNATIONAL CONGRESS, WASHINGTON, D. C.

We are assembled here to-day to celebrate the fortieth anniversary of the first organized demand ever made by women for the right of suffrage. The initiative steps were taken in my native State. In 1848 two conventions were held in Central New York, and the same year the married woman's property bill passed the legislature. Other conventions were soon called in Ohio, Indiana, Massachusetts, Pennsylvania, and the other States, one after another, adopted New York's advance legislation. Thus started the greatest movement for human liberty recorded on the page of history, a demand for freedom to one-half the entire race; and the keynote struck in this country in '48 has been echoed round the world. And to-day, to clebrate our fortieth anniversary, we have representatives in person or by letter from nearly every State in the Union, from Great Britain, France, Finland, Italy, Sweden, India, Denmark, and Norway. It has been our custom to mark the passing years by holding meetings of the suffrage societies on each decade, but for this we decided a broader recognition of all the reform associations that have been the natural outgrowth of the suffrage agitation, in the old world as well as the new.

Four years ago, at a reception in Liverpool, given to Miss Anthony and myself, the question of an international convention was discussed, and so favorably received, that committees of correspondence were appointed to ascertain what the general feeling might be. While the response from the different countries was encouraging, the general feeling seemed to point to America as the country to make the first experiment. Accordingly the National Suffrage Association assumed the responsibility of calling this International Council.

In welcoming representatives from other lands here to-day, we do not feel that you are strangers and foreigners, for the women of all nationalities, in the artificial distinctions of sex, have a universal sense of injustice that forms a common bond of union between them. . . . . .

Whether our feet are compressed in iron shoes, our faces hidden with veils and masks, whether yoked with cows to draw the plough through its furrows, or classed with idiots, lunatics, and criminals in the laws and constitutions of the State, the principle is the same, for the humiliations of spirit are as real as the visible badges of servitude. A difference in government, religion, laws, and social customs makes but little change in the relative status of woman to the self-constituted governing classes, so long as subordination in all nations is the rule of her being. Through suffering we have learned the open sesame to the hearts of each other. There is a language of universal significance, more subtle than that used in the busy marts of trade, that should be called the mother-tongue, by which, with a sigh or a tear, a gesture, a glance of the eye, we know the experiences of each other in the varied forms of slavery. With the spirit forever in bondage, it is the same

whether housed in golden cages, with every want supplied, or wandering in the dreary deserts of life, friendless and forsaken. . . . . .

Those who inaugurated the movement for woman's enfranchisement, who for long years endured the merciless storm of ridicule and persecution, mourned over by friends, ostracized in social life, scandalized by enemies, denounced by the pulpit, scarified and caricatured by the press, may well congratulate themselves on the marked change in public sentiment that this magnificent gathering of educated women from both hemispheres so triumphantly illustrates.

In the great national and State conventions for education, temperance, and religion, even thirty years ago, woman's voice was never heard. The battles fought by the pioneers in the suffrage movement to secure a foothold for woman on these platforms have been eloquently described many times by Susan B. Anthony, Lucy Stone, and Antoinette Brown, and I hope during this council they will be rehearsed for the benefit of those who, while holding the vantage-ground they secured, are afraid of the principles by which it was gained. The protracted struggle through which we have passed, with our labors not yet crowned with victory, seems to me in review like a painful dream, in which one strives to run and yet stands still, incapable alike of escaping or meeting the impending danger. The civil and political position of woman, when I first understood its real significance, was enough to destroy all faith in the vitality of Republican principles. . . . . Nothing more common forty years ago, than to see the sons of a family educated, while the daughters remained in ignorance; husbands at ease in the higher circles, in which their wives were unprepared to move. Like the foolish virgins in the parable, women everywhere in serving others, forgot to keep their own lamps trimmed and burning; and when the great feasts of life were spread, to them the doors were shut.

Even married women enjoy, in a measure, their rights of person and property. They can make contracts, sue and be sued, testify in courts of justice, and with honor dissolve the marriage relation when it becomes intolerable. Now most of the colleges are open to girls, and they are rapidly taking their places in all the profitable industries, in many of the offices under government. They are in the professions, too, as lawyers, doctors, editors, professors in colleges, and ministers in the pulpits. . . . .

Their political status is so far advanced that they enjoy all the rights of citizens in two Territories, municipal suffrage in one State, and school suffrage in half the States of the Union. Here is a great record of the work achieved in the past half century, but we do not intend to rest our case until all our rights are secured, and noting the steps of progress in other countries, on which their various representatives are here to report, we behold with satisfaction everywhere a general uprising of women, demanding higher education and an equal place in the industries of the world. Our gathering here to-day is highly significant in its promises of future combined action. When in the history of the world was there ever before such an assemblage of able, educated women, celebrated in so many varied walks of life, and feeling their right and ability to discuss the vital questions of social life, religion, and government? When we think of the vantage ground woman holds to-day, in spite of all the artificial obstacles she has surmounted, we are filled with wonder as to what the future mother of the race will be when free to seek her complete development.

Since the inauguration of our movement most of our noble coadjutors, men and women, have passed to the unknown land: Garrison, Phillips, Channing, Rogers, Burleigh, Edward M. Davis, Lucretia Mott, Josephine Griffing, Clarinda Nichols, Frances Gage, Paulina Davis, Abby Foster, Lydia Maria Child, and many others, together far outnumbering those who still remain to watch and wait. The vacant places on every side warn us in the sunset of life that we, too, are passing away, and that younger hands must soon take up our work. To achieve equality for woman in every position in life, and fit her to maintain that position with wisdom and dignity, is a work worthy to unite all our energies and attune our hearts in harmony. . . . .

In calling this Council we anticipated many desirable results. Aside from the pleasure of mutual acquaintance in meeting face to face so many of our own country-women, as well as those from foreign lands, we hoped to secure thorough national and international organizations in all those reforms in which we are mutually interested. To come together for a week, and part with the same fragmentary societies and clubs, would be the defeat of one-half the purpose of our gathering.

Above all things that women need to-day in their reform work is thorough organization, and to this end we must cultivate some *esprit de corps* of sex, a generous trust in each other. A difference of opinion on one question must not prevent us from working unitedly in those on which we agree. Above all things, let us hold our theological speculations of a future life in abeyance to the practical work of the present existence, recognizing all sects alike, and all religions—Jew and Gentile, Catholic and Protestant—to be held equally sacred in their honest opinions. We sincerely hope that the proceedings of this Council, as a whole, will be as successful and satisfactory as our conventions in Washington invariably have been, and that marked courtesy in public and private will be generously extended to all our guests. We trust this interchange of sentiments and opinions may be a fresh inspiration to us all in our future work, and that this convocation may be long remembered as among the most pleasant and profitable days of our lives. As the character of this convention must depend in a large measure on what those who called it may do and say, it would be well for us to keep in mind the responsibility that rests on each and all. If it be true that we can judge of the civilization of a nation by the status of its women, we may do much during this convention to elevate our institutions in the estimation of the world.

What the world calls education is chiefly mere training; discipline makes skillful, culture elevates.

A LITTLE WHEEDLER.

"There never was a grandma half so good,"
He whispered, while beside her chair he stood,
And laid his rosy cheek,
With manner very meek,
Against her dear old face, in loving mood.

"There never was a nicer grandma born,
I know some little boys must be forlorn
Because they've none like you;
I wonder what I'd do
Without a grandma's kisses night and morn?"

"There never was a dearer grandma—there."
He kissed her and he smoothed her snow white hair;
Then fixed her ruffled cap
And nestled in her lap,
While grandma, smiling, rocked her old armchair.

"When I'm a man what lots to you I'll bring—
A horse and carriage and a watch and ring,
All grandmas are so nice,
(Just here he kissed her twice.)
And grandmas give a boy most anything."

Before his dear old grandma could reply,
This boy looked up, and with a roguish eye,
Then whispered in her ear,
That nobody might hear:
"Say, grandma, have you any more mince pie?"

—*George Cooper in the Independent.*

THE NEW EMPRESS OF GERMANY.

Queen Victoria's eldest daughter, the new Empress of Germany, has proved herself a woman of more than average brains, besides being very warm-hearted and charitable. Yet she is not altogether popular. The Berlin correspondent of the *Pall Mall Gazette* says: "The new Empress has English ideas with regard to the position of women. The German men feel this, and are very apprehensive of the force of her example when it will be given from the throne. As I write, Germans are anxiously wondering how long their new Emperor will be spared to reign over them, for here there is no encouraging doubt in men's minds as to the nature of his disease. If public opinion is right as to this, I fear the Empress will be able to do but little by example and precept in behalf of her German sisters. If their fears are idle (which God grant!), she may yet live to do a noble work in the cause of woman in the Fatherland, a work which will, perhaps, do more for the well-being and for the permanence of the German nation than did ever Koniggratz or Sedan."

The Empress, replying to an address presented to her the other day by the women of Berlin, said: "For a number of years it has been permitted me to labor with the women of Berlin for the good of the female sex; for their education, and for the alleviation of their material and social wretchedness. Thanks to the intelligent and self-sacrificing aid extended to me, much has been accomplished; but more remains to be achieved. With sincere devotion and eager enthusiasm, I place my whole strength at the service of our people. I confidently expect from the women of Berlin, as well as the rest of Germany, after the many evidences that have reached me, that they will in the future, as in the past, readily work with me in the great task devolving on womankind, namely, to alleviate distress and suffering, create pure happiness, and lay a sure foundation for all truly human virtues by the proper nurture of the young."

MODERN JERUSALEM.

The order of things in Jerusalem is very different from what it was only a few years ago, and the change the Holy City is gradually undergoing strikes every traveler who has revisited the place after an interval of eight or ten seasons. Whole quarters have been rebuilt, sanitation is cared for, the streets are well lighted, clocks are placed on many public buildings, and the gates are no longer closed at sundown, to the inconvenience of residents and the hindrance of tradespeople. The tanneries and slaughter-houses have been removed to a distance, and outside the walls of the ancient enclosure a "new Jerusalem" is slowly rising, that at the present rate of growth will in a few years quite overshadow the old city, exceeding it both in area and population. Suburbs are springing up round about and extending, notably on the western side. And as Herr Schick, the government surveyor, estimates the number of dwellings to have "probably trebled" in five and twenty years, some idea may be formed of the rate at which Syria is making progress, notwithstanding many and serious disadvantages.—*London Spectator.*

Mrs. Annie Jenness Miller, the editor of *Dress* recently lectured at Swarthmore College, near Philadelphia, by invitation of one of the societies of young ladies, upon the subject of hygienic dress. A correspondent, writing of her lecture, says: "Mrs. Jenness Miller gave her lecture last Fifth-day evening to the very great satisfaction of the girls. She is certainly happily appointed to advocate hygienic dressing. For her system of dressing is absolutely hygienic, and at the same time she makes it beautiful. And she has a most pleasing and convincing way of presenting her subject. There is nothing startling in her styles. She keeps the general effect in unison with prevailing styles, and the distinctive characteristic is the perfect freedom of the body to move in any direction. She had several different dresses with her, walking dresses, tea gowns, and party dresses. I never saw anything in a picture, or out, more charming than she was in some of her gowns. The practical obstacle in the way of adopting her style will be the difficulty of finding dressmakers of enough originality. For it requires more brains to dress according to her plans."—*The Philanthropist, N. Y.*

"All things have something more than barren use;
There is a secret upon the brier,
A tremulous splendor in the autumn dew,
Cold morns are fringed with fire;
The clodded earth goes up in sweet-breathed flowers,
In music lies poor human speech,
And, into beauty blow these hearts of ours,
When love is born in each."

Truth is like the sun; whatever darkens it is but a passing cloud.

NEWS AND OTHER GLEANINGS.

—Several State legislatures have passed laws against the use of the car stoves, without especially limiting the substitute.

—The California Board of Silk Culture is engaged in distributing 720,000 silkworm eggs recently received from Italy.

—The Emperor of Japan has decided to establish a government printing-office at Tokio, and is anxious that the nucleus of the working force shall be composed of Americans. The Japanese minister at Washington has proposed to twenty employees in the government printing-office to go to Japan for five years.

—Dr. Barnardo, the Superintendent of the large school for dependent children in England, has appointed a lady as medical superintendent of the three hundred children under his care. These children are boarded out in many different homes. Each child is visited four times a year, and thoroughly examined as regards its health, hygiene, and general well-being, and then reported on to Dr. Barnardo.

—*Science* publishes a reproduction of letters written to Professor A. Graham Bell by Helen Keller, a little girl of seven years, who is totally blind and deaf and dumb. She has been under the instruction of Miss Annie Sullivan for just one year, the only means of conveying information to her being the sense of touch, yet the letter is clearly and intelligently written, and, indeed, is as good as any intelligent child of her age could be expected to write, even with the aid of all the senses. A picture of Helen and her teacher, Miss Sullivan, engaged in talking, through their clasped hands, is also given.

—A petition has been received by the Boston School Board from the Massachusetts Emergency and Hygiene Association, asking that such school-yards as are suitable may be opened at certain hours of the week during the summer vacation for the benefit of little children who remain in the city. The petition was granted. It is proposed to provide games which will be healthful and amusing, under the supervision of matrons or guardians, the expense to be borne by the Hygiene Association and private contributions.—*Woman's Journal.*

—"There are counties in Dakota," says the Sioux Falls *Press* "which not many years ago were almost bankrupt through unsuccessful efforts to solve the problem of how to make a living by raising wheat, but which have been brought to affluent circumstances through butter and cheese. There are at least a dozen creamery projects afoot at this time in Southern Dakota."

—The meteorological phenomena accompanying the building of railroads in Mexico are receiving the attention of scientific men in that country. Recent serious damage done by wash-outs on the northern section of the Mexican Central Road was due to water-spouts bursting on the track, and it is a curious fact that water-spouts seem to be attracted by the iron track and telegraph wires. Engineers on the line of the Guadalajara branch of the Mexican Central Railway have noted that as fast as the construction advances, rain follows; and they hold that this is due to the large quantity of steel rails on flat cars which are carried forward as fast as the work of construction permits. The most noticeable fact is that the country is dry in advance of the construction trains, and also behind them for many miles. Rains beat down as described in bucketfuls just where the steel rails are, but only in circles a few miles in diameter.—*Boston Transcript.*

—We have received from Mr. L. P. Hubbard, the venerable Secretary of the New England Society in New York, a copy of the annual proceedings. Mr. Hubbard is a native of Hollis, N. H. Accompanying the report is a very remarkable leaflet, entitled "How a Smoker Got a Home." The leaflet is a statement by Mr. Hubbard how he began smoking and finally left off, and deposited the money in a savings bank. He had smoked six cigars a day, which, at 6¼ cents each, came to $136.50 per annum. Laying aside this amount annually, and adding interest for 54 years, the amount is $73,324.65. After a few years Mr. Hubbard took his cigar money from the bank and bought a beautiful home at Greenwich, Ct., where he has since resided, surrounded by his children and all the comforts of life. "Great as the saving has been," he adds, "it is not to be compared with improved health, a clear and steady hand, at the age of 79 years, and entire freedom from desire for tobacco in any form." This is the best tract on the tobacco question that we have ever seen, and it ought to be put into the hands of every child in the land.—*Nashua (N. H.) Telegraph.*

CURRENT EVENTS.

ROSCOE CONKLING, well known as a leader of the Republican party, for several years preceding 1881, died in New York city, early on the morning of the 18th, of an affection of the brain, having been critically ill for more than a week. He was sixty years of age. From 1867 to 1881 he was a member of the United States Senate.

THE condition of the Emperor Frederick, of Germany, has been less favorable, but at this writing, (18th inst.), he is again slightly improved.

IN France, General Boulanger, the military agitator, has been elected, by a very great majority, a member of the National Assembly from the Department of the North, and there is much anxiety over the situation which is thus indicated. In the event of the early death of the Emperor of Germany, and the succession of his warlike son, a breach of the present peace would be almost certain.

IN consequence of disputes between the brewing firms of New York City and other near cities with their hands, an extensive "lock-out" of the latter began on the 16th. About 5,000 men are said to be out.

MATTHEW ARNOLD, the English critic and poet, died suddenly in Liverpool, on the 15th instant. He was in his 66th year.

PHILADELPHIA Yearly Meeting of (Orthodox) Friends began its sessions on the 16th instant, at 4th and Arch streets meeting-house, this city.

A TELEGRAM from Augusta, Georgia, says that a contract has been awarded for a $100,000 hotel on the Sand Hills near Augusta, for Northern visitors. Philadelphia capitalists have purchased 2,000 acres of land within a mile of the city limits. A National Exposition is to be held at Augusta, in the autumn, beginning in Tenth month and continuing six weeks.

A BOX CAR containing 100 kegs of powder blew up on Saturday, at Montgomery, Alabama. A colored car coupler standing near by was blown to pieces. The city for a mile around was shaken.

NOTICES.

*** Haddonfield Quarterly Meeting's Temperance Committee has appointed a Conference to be held in Westfield Meeting-house, on First-day, the 22d, at 2.30 o'clock. All are cordially invited.

J. M. LIPPINCOTT, Clerk.

*** Abington First-day School Union will be held at Gwynedd, on Seventh-day, the 21st of Fourth month, at 10 o'clock. All interested are invited to attend.

☞Trains on N. P. R. R. north, reach Gwynedd Station, (one mile from meeting-house), at 8.31, 9.30, and 12.02; south at 8.13, and 8.55. Will Friends who are coming please advise Walter H. Jenkins, Gwynedd, Pa., so that provision may be made for meeting them?

J. Q. Atkinson, Anna Moore, } Clerks.

*** Bucks First-day School Union will be held at Friends' meeting-house, Buckingham, Fourth month 28th, commencing at 10.30 a. m.

All interested are invited to be present.

PUBLISHERS' NOTICES.

*** Matter intended for insertion in the Intelligencer and Journal should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** We particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent.* Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

***As a definite number of copies of the Intelligencer and Journal is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans* Royal Baking Powder Co., 106 Wall-st., N. Y.

FAITH AND WORKS.

I ASK thee not, O Lord, for faith alone;
But let my faith take form in act and deed,
That I may show, wherever I may be,
That trust in thee is not an empty creed.

Help me to grow more patient day by day,
Let every thought be pure as in thy sight,
Put far away my selfishness and pride,
And flood my heart, O Father, with thy light.

Help me each day more Christ-like to become,
Give the divine a fuller, wider scope,
So let my life bear witness to my faith
By deeds as well as words of love and hope.

And give me grace to heal the wounded heart,
To aid the weak that stumble by the way,
Nor harshly judge those who in sin's dark path
Grope blindly on, far from the light of day.

No, Lord, I ask thee not for faith alone;
But, with my heart fixed on the things above,
May I work on, with earnest, hopeful zeal,
Trusting in thee and thine all-saving love!

—*Mary L. Davenport in Christian Register.*

From Friends' Quarterly *Examiner*, (London.)

DR. WESTCOTT AND THE SOCIETY OF FRIENDS.[1]

ATTENDING this summer one of those privileged religious conferences at Broadlands, convened by Lord Mount-Temple, the striking characteristic of which is the spirit of Christian love that pervades the gatherings, composed of leading minds of widely different schools of thought, I was greatly interested in an incident that occurred at one of the meetings. A young man, evidently with an earnest desire to have the question solved, asked how it was that, with all the ordinances and services so elaborately and carefully arranged in the Church of England for the fostering of spiritual life, there was so little vital religion manifested by those who attended them.

The answer to this interesting inquiry was committed to Canon Carter of Truro, who gave an able defense of the sacraments, as calculated to aid the devotional spirit, and through outward forms and symbols to stimulate faith in the hearts of the worshippers.

In the course of his remarks Canon Carter referred to an address to which we had just listened from Hannah W. Smith, so full of the reality which marks her utterances; and whilst showing a full and loving appreciation of the reality to which many attain, who, like the Friends, disregard all forms, he quoted the following sentence from Canon Westcott's recent work, "Social Aspects of Christianity." It occurs in the chapter on "The Quakers:" "Fox had no thought of the weak and immature, for whom earthly signs are the appropriate support of faith."

The remark struck me forcibly, and on procuring the book I found it full of beautiful and suggestive thought, so wide in its grasp and earnest in its spirit that I would strongly recommend its perusal, especially to those who, having imbibed the truth of the unity of the race, feel their responsibility as parts of a whole with whose interests they are identified, so that they cannot escape the conclusion of being in some sense their brother's "keeper," and that "No man liveth for himself."

The particular chapter of which I propose to give a digest here, is that on "The Quakers." Written from the standpoint of a clergyman of the Church of England, it manifests a wide charity in dealing with the subject, and is full of appreciative sympathy and recognition of the work of George Fox and his followers.

I will give extracts in Dr. Westcott's own words, and as we pass along it may be well for us to ponder some of the remarks which he makes in pointing out the supposed imperfections of our system, and the reasons why he conceives Quakerism has not taken such root as to flourish in this nineteenth century.

Dr. Westcott brings into vivid contrast the teachings of Francis of Assisi, and of George Fox; the one as embodying the truth in its relation to society, the other to the individual. In the former discourse he vividly portrays the life and work of Francis, which he describes as:

"The noblest and most characteristic effort which was made in the middle ages to establish on earth the kingdom of God. . . . Francis aimed at conquest by absolute self-denial and humility. . . . He united princes and beggars in one sacred fellowship of human service. . . . But this holy crusade of love failed to complete what it had begun; it was doomed to failure by the very principle on which it was founded. For it disregarded the inalienable gift of individuality which is the pledge of each man's worth in the cause of God. . . .

"Francis aimed at an ideal which neglected essential facts of life. He sought to destroy individuality. It is said that he once ordered a disobedient brother to be stripped and placed in an open grave. The earth was then heaped round him, and when his head alone was uncovered Francis came near and

[1 This article in the *Friends' Quarterly Examiner* for First month, 1888, is by the late editor of that periodical, William C. Westlake, of Southampton, (England), a well known member of the Society, and the author of many contributions to its literature.—EDS. INTELLIGENCER AND JOURNAL.]

said, 'Art thou dead, brother; art thou dead?' 'Yes,' the penitent replied; 'I am dead now.' 'Rise then!' he said; . . . 'I will have dead men not living, for my followers!' Francis paused, that is, at the first stage in the transformation of the Christian. The death of perfect self-surrender is the condition of resurrection to the power of a new life; but life deeper, fuller, intenser, must flow from the completed sacrifice. Every gift, every faculty, every circumstance of personal being, is transformed by that death, and given back to be used with nobler energy and keener responsibility. The living God seeks the service of living men."

These are noble words, and show a true estimate of the varied aspects of truth. And now, having taken a glance at the Franciscan order and its views of Christian life, let us follow our author into those of the Society of Friends. I shall quote rather largely in order to do full justice to his arguments, and also on account of the interesting character of the thoughts given.

"Outwardly," he says, "there was little resemblance between George Fox and Francis of Assisi; between the young Leicestershire shepherd of the 17th century and the young Italian merchant of the 13th. But they both felt the power of God, and yielded themselves wholly to it; both left father and mother and home; both defied the opinions of their time; both won their way through bitter opposition to solid success; both cast themselves upon the infinite love of God; both were most truly 'surrendered' souls. But Francis submitted himself to established authority; Fox only to the spirit of God speaking to the single soul. . . . This then is the first point on which I desire to insist. In solitude and silence Fox found God and heard him. He proclaimed that the Kingdom of God is the kingdom of a living Spirit who holds converse with his people. . . . He realized as few men have ever realized, that we are placed under the dispensation of the Spirit. . . . In this conviction Fox himself 'saw' the Truth, Christ himself showing it. . . . And others could see that his eyes had looked upon the King. 'The most awful, reverent frame I ever saw or felt,' writes William Penn, 'was that of Fox in prayer.' Nor did Fox claim this privilege as something peculiar to himself. Far otherwise. The decisive question which he proposed as a test of the vitality of a church was, 'whether it had the Holy Ghost poured forth upon it as the Apostles.'

"And, brethren, have we not need to put this question to ourselves? Have we not need to ponder heedfully this first lesson of the Society of Friends? We have not, to our shame and loss, either as a Church, or as living members of a Church, thrown ourselves with strong dependence on Him whom we confess to be 'Lord' and 'Life-giver.' . . . Here, then, is the first lesson as to the Kingdom of God which the Society of Friends offer to us. It is a kingdom of spiritual converse; and a second is included in it. For Fox maintained that this power of divine converse belongs to all men by the will of their Creator and Redeemer. He appealed unweariedly without restriction or gloss to the words of St. John, in which the Evangelist speaks of 'the light, the true light, which lighteth every man;' 'a light,' Fox adds, 'sufficient to lead unto the day-star,' because it is a light from God. . . .

"This message opened once again the prospect of that universal kingdom to which Isaiah looked. It gave back to the world the idea of a Divine Fatherhood commensurate with the divine love. It offered to the preacher of the good tidings of the kingdom an assurance sufficient to support his largest hope; for he knew that he could not approach any hearer without having God as his fellow-worker, and the secret voice of the soul for his witness. . . .

"But there is still a third lesson as to the Kingdom of God flowing from the other two, which is declared to us by the Society of Friends. The facts of intercourse with God, of affinity to God, must, if they are received, find expression in life. . . . Fox accepted the consequence and insisted upon it. He could not conceive of religion and morality apart. His labours were from first to last a comment on the text: '*If we live by the Spirit, by the Spirit let us also walk.*' For him justification was indeed a making and not an accounting just, not forensic but loyal, and conduct was the sign of the fact. . . . We may think that many of the details on which he laid stress were trivial; but in spite of every infirmity and disproportion he was able to shape a character in those who followed him, which for independence, for truthfulness, for vigour, for courage, for purity, is unsurpassed in the records of Christian endeavour.

"And this he did by connecting the loftiest thoughts and the commonest obligations alike, with a personal sense of Divine communion. He opened to all, without distinction, the opportunity for spiritual influence. He taught them to trust to principles, and leave consequences to God; to confess their ideal, even when attainment was for the time impossible.

"We cannot wonder, therefore, that the Society of Friends has achieved results wholly out of proportion to their numbers. No religious order can point to services rendered to humanity more unsullied by selfishness, or nobler in far-seeing wisdom. Our prisons purified, our criminal law reformed, our punishments rescued at least in part from the dominion of vindictiveness, witness to the success of Quaker labours. Fox was the first who raised his voice against the evils of West Indian slavery, and after 150 years his Society was allowed to take a chief part in suppressing it. He claimed freedom of opinion in things pertaining to God; and little by little, through calm and patient endurance, his cause was won. He denounced war, and the doubt, the waste, the threatening which make an armed peace an almost intolerable burden, must even now be turning the hearts of many to that one experiment of Christian statesmanship which has not yet been tried, the policy of national brotherhood. It may be true, nay, if we hold that man is made in God's image, it must be true, that love is stronger than fear. William Penn was, I believe, the only colonist in America who left his settlement wholly unprotected by force of arms, and his settlement was the only one which was unassailed by the Indian tribes.

"These splendid achievements, these significant promises, are written in the annals of Quakerism for our strengthening and guidance. They have not yet been placed in their harmonious relation to the fulness of Christian life; they have not yet borne their perfect fruit. For though not one of Fox's positive principles can be shown to have failed, his Society has failed. It has not been the seed of the Kingdom of God on earth. It was, indeed, condemned to failure, like the order of Francis, because it was essentially incomplete. Francis sacrificed the individual; Fox left wholly out of account the powers of the larger life of the church and the race. For him the past was a 'long and dismal night of apostasy and darkness.' He had no eye for the *many parts and fashions* in which God is pleased to work. He had no sense of the reaction of the Holy Spirit through the great body of Christ. *He had no thought of the weak and immature, for whom earthly signs are the appropriate support of faith*; no thought for the students of nature, for whom they are the hallowing of all life. And so it came to pass that he acknowledged no gracious means for the personal appropriation of God's gifts, as he knew no stages in the popular embodi-

ment of the Truth. He disinherited the Christian society, and he maimed the Christian man.

"But none the less he established, even more impressively from his false negations, one fundamental fact, which is of momentous importance for us in our present endeavours to bring before the world the majesty of the Kingdom of God. He made clear beyond question the power of the simplest spiritual appeal to the consciences of men; the efficacy of a childlike trust in the reality of a divine fellowship to cleanse the rudest and coarsest life. For he did not labour towards the accomplishment of any special work of mercy or justice. He strove simply for the recognition of a living Christ within every soul. He wrought for God in the conviction that the new life is the consequence and not the condition of the quickened Faith; that *righteousness, peace, joy*, are the notes of the believer, but not the pre-requisites for believing. He struck, in a word, and encourages us to strike, at the disease of the sinful, which is ignorance of God, and not at the symptoms of it.

"The fact of his success, far-reaching, deep, enduring, is therefore, I repeat, of momentous importance to us now. We are busied, engrossed, absorbed in dealing with partial evils, with intemperance, with uncleanness, with dishonesty. We think (is it not true?) that we can build up the kingdom of God in fragments; that some breath from heaven will at last animate the frame we have painfully fashioned bit by bit.

"But there is, as far as I can see, little encouragement for such a reversal of the processes of nature, for such a denial of the teachings of history. The principle of life fashions the organism, and sustains it. *No organism, however delicately constructed, can summon to itself the principle of life.* . . . No scheme has ever shown a power of continuance, which has not been based upon religious faith. No scheme which has retained its first faith has ever wholly failed. '*If we live by the Spirit, by the Spirit let us walk.*' That is the law of the kingdom. That is the law which we have to realize under the conditions of our own age."

The arguments of Dr. Westcott through the foregoing passages are so clear and connected, and convey lessons so valuable to the Christian Church in the present day, as well as to the members of our Society, that I risk their appearing long in order to do full justice to the author's views. Having set these forth, I desire in the same spirit of charity and impartiality that Dr. Westcott has manifested, to look at the subject from the standpoint of a Friend.

Let us come at once to the Canon's verdict, "Though not one of Fox's positive principles can be shown to have failed, his Society has failed. It has not been the seed of the Kingdom of God on earth." Is it so? It may have failed to grow in a visible sense like the grain of mustard seed until it has become a great tree, so that believers of all types may lodge under the shadow of it. But is not the seed of the kingdom still in its principles, as the Canon has so strikingly shown? And if so, will it not yet spring up and bear fruit a hundredfold, when the "good ground" is prepared? Is not the fact of a high authority in the Church of England thus recognizing the power of its principles to mould and stamp the divine likeness on the soul of man, and to develop the germs of spiritual life, an evident proof of its vitality? and of its destiny yet to turn the dull tide of exaggerated corporate Christianity into the springing *fountain* of individual spiritual life?

I am not careful whether this is done by preserving the external framework of the community in precisely its present shape. It may be that modifications are necessary; but if its principles of "Primitive Christianity" permeate the Church, and make the dry bones stand up clothed with living power, the result cannot be termed a failure. And it appears to me that such writers as Canon Westcott are preparing the ground for the seeds to take root, and to prove that the Gospel, in its living fulness and grand simplicity, is still "the power of God unto salvation unto *every one* that believeth."

It may be that Fox and his followers have exaggerated the truth of individuality, and not taken sufficient account of corporate life; but is it not by seizing on some one *positive* truth and pressing it, that each Christian organization helps to build up the whole? It is not given to any one man or body of men to hold the truth in all its symmetrical proportions. In one alone, who is Himself "the Truth," does this full-orbed majesty reside. And if George Fox had heeded equally the corporate view as he did the individual, he would not have produced the strength and independence of Christian character, which have marked him and his followers. I believe, with our author, that his principles "have not yet been placed in their harmonious relation to the fullness of (modern) Christian life;" and this, it appears to me, is the problem to be now solved. There is somewhere a hitch in the machinery, a link wanting; and if thoughtful minds on both sides will give their attention to it, it may be that a better adjustment of individual and corporate life may yet be found than at present existing, The Society of Friends appear to have discovered the need of this in recent times, and have given themselves largely to evangelistic and other Christian work. The "Adult First day-schools," at Birmingham and other places, have been a great stimulus to the corporate principle, and have proved a most happy blending of individuality with the Society. If it be true that "the main interests of men are once again passing through a great change, and are most surely turning from the individual to society," it may be that individuality is still largely needed to guide society in its social tendencies.

(*Conclusion next week.*)

A FOLLOWER of Pythagoras once bought a pair of shoes from a cobbler, for which he promised to pay him on a future day. On that day he took the money, but, finding the cobbler had died in the interim, returned, secretly rejoicing that he could retain the money, and get a pair of shoes for nothing. "His conscience, however," says Seneca, "would not allow him to rest, till taking up the money, he went back to the cobbler's shop, and casting in the money, said—'Go thy way, for though he is dead to all the world beside, yet *he is alive to me.*'"

There is in the minds of men a certain presage, as it were, of a future existence; and this takes the deepest root and is most discoverable in the greatest geniuses and most exalted souls.

REMARKS BY SARAH HUNT TO THE NEW JERSEY LEGISLATURE.

[This visit of Sarah Hunt to the Legislature of New Jersey was made in 1859. She was accompanied by our late excellent friend, William Parry, of Cinnaminson, and the report given below of the remarks of S. H., given in the Trenton *True American* of Third month 23d, 1859, has been preserved in a manuscript copy by W. P. In a letter of sympathy from Sarah Hunt to the widow of William Parry, in which allusion was made to this visit, she said: "William Parry, in the brightness of his manhood, took me to the Legislature, without so much as asking what mission I had there. I shall never forget the time or manner in which this was done."—EDS.]

AT two and a half o'clock yesterday afternoon Sarah Hunt, a minister of the Society of Friends, addressed both Houses of the Legislature.

She commenced by saying that she felt a concern to unburthen her mind to the Legislature on a subject of importance. She had not come to announce her religious tenets, but as time was precious, she would only say, that we Friends believe in God as the Universal Father, and in Jesus Christ as the Redeemer of Mankind, and look upon mankind as a general and universal brotherhood. In the first place, she desired to thank God for an admittance into this place, before the assembled representatives of the people. In the next place to say that she hailed them all as brethren, and that this sentiment was full of reality and affection. She then alluded in very eloquent terms to the dignified and important position held by, and the trusts committed to, the members of the Legislature. She assured them that she came into their midst from a solemn sense of duty to God and to her fellow beings.

Her principal object was to plead for the criminal —the outcast—for the murderer, the manslayer. To appeal to all that are here collected, and to entreat them to take into consideration our penal code, and to ask whether the time has not arrived when this code ought to be changed. She asked them to commute the sentence of death, now authorized by our code, to imprisonment for life. To shield them from doing further harm, and give them employment for their hands, and instruction for their minds, in order that they may have time to prepare for the final consumation of all things. Shut out from the beautiful light of heaven, from all that is beautiful on earth, there would be time to melt down their obdurate hearts, and opportunity to ask God for forgiveness before they go hence. It was an awful thing to send a human being into the presence of his God unprepared. We believe in future rewards and punishments, as promulgated by the gospel of Jesus Christ, and how can we, in face of these truths, cut off a human being from the opportunity of preparation for the future state. She alluded also to the fact that sometimes the innocent are convicted and executed. We ought to weigh and reflect upon these considerations. O, that God, by his grace, may so operate upon your hearts, as to bring your minds to a right conclusion. She said she knew it was late in the session; she had herself been in the rear in this matter; but at least the subject might so affect their minds as to bring it up at the next session. She appealed to the fathers present, and said they might themselves be called to witness one of their own darlings suspended in the air. So great are the evil surroundings that none of us are safe. Think of these things.

Look at England. So long as she continued the death penalty, even for petty offenses, crime increased. But when a Howard, a Fry, and a Buxton were found to send up their appeals for the poor criminal, the heart of England was moved in the right direction. But they stopped short and so have we. She referred to New Jersey; she had liberated the black and dealt kindly with the Indian. Now she wanted her to lead off in the great question, and stand like Saul among his brethren, a head and shoulders taller than all the rest. But to take this position she must do justice. She closed by alluding to the Mosaic law, and said that the same law that declared that whosoever sheddeth man's blood by man shall his blood be shed, also said thou shalt not kill in cold blood. But all these retaliatory laws have been done away by the coming of the Messiah who said "Love your enemies." This doctrine was ushered by anthems of praise.

She felt now that she had unburthened herself, and after pronouncing a beautiful benediction on the members sat down, and when about to depart the Senators arose and walked out, the house being already organized proceeded with their business.

FRIENDS UNION FOR PHILANTHROPIC LABOR.

AT a recent meeting of the Executive Committee of New York Yearly Meeting's Committee for Philanthropic Labor, the following memorial to Congress on the subject of International Arbitration was adopted:

To the United States Senate and House of Representatives:

Your memorialists, the Committee for Philanthropic Labor of New York Yearly Meeting of the Religious Society of Friends, respectfully represent that we strongly deprecate war as wasteful and destructive of life and property; as attended with evils many and grave; as promoting immorality, vice, and crime; as inimical to the development and progress of the true, higher Christian civilization; and we therefore earnestly ask that you will initiate and adopt measures looking to the establishment, in conjunction with other nationalities, through treaty stipulations, of a permanent Court of International Arbitration for the amicable adjustment of the differences which may arise between our own and other countries.

JOHN WM. HUTCHINSON, *Clerk.*

A brief appeal to the President, of kindred import, asking his kindly interest and coöperation for the promotion of International Arbitration, was also adopted by the Committee.

The Committee likewise adopted a special petition to the Senate of the United States, in relation to the better legal protection of young girls in the District of Columbia, asking that a bill which has passed the House of Representatives, fixing the legal "age of

consent" at fourteen, be so amended as to raise the age of legal protection to at least eighteen years.

The Committee appointed Aaron M. Powell to take charge of these several petitions to Congress, and to present to the President the appeal in relation to International Arbitration.

The Executive Committee of the Friends' Union for Philanthropic Labor of the five yearly meetings, in Eleventh month last, also adopted memorials to Congress and to the President on the subject of International Arbitration. That to President Cleveland has awaited a suitable opportunity for presentation to him in person.

In the United States Senate, on Third month 29th, the several petitions were formally presented in the Senate, by the acting Vice-President, Senator Ingalls, of Kansas, Senator Frye, of Maine, and Senator Hiscock, of New York. Printed copies of the New York Committee's International memorial given above, were also placed before each Senator and member of the House of Representatives.

On the afternoon of the 2d inst., a deputation composed mainly of members of the Executive Committee of the Friends' Union for Pilanthropic Labor of the five yearly meetings, and consisting of Henry Janney, of Baltimore, Sarah T. Miller, and —— Thomas, of Sandy Spring, Md., Mercy J. Griffith, of Ohio, Phebe C. Wright, Elizabeth R. LeFetra, Aaron M. Powell, and Anne Rice Powell, waited upon the President at the White House, accompanied by Hon. Joseph D. Taylor, a member of the House of Representatives from Ohio. Aaron M. Powell presented to the President the memorial and appeal, briefly explaining from whom they emanated, and bespeaking his friendly interest in their behalf. The President responded very kindly, expressing his sympathy with the method of arbitration, and intimating that he would give it such encouragement as lay in his power. Each of the deputation was in turn introduced to him and he gave a pleasant greeting to all.

In the Senate a petition was also presented from the standing Committee on Social Purity, of Friends' Union for Philanthropic Labor, signed by Jonathan W. Plummer, of Illinois, Sarah C. Fox, of Ohio, Caroline L. Thomas, of Indiana, Elizabeth P. Blackburn, of Baltimore, and Aaron M. Powell, of New York, asking that the legal "age of consent" on the part of young girls in the District of Columbia, now at the lawful age of ten, be raised to at least eighteen years.

It is hoped that these efforts, in the name, and on behalf of the Society of Friends, for the promotion of peace and purity may be fruitful in good results.

P.

For a few brief days the orchards are white with blossoms. They soon turn to fruits, or float away, useless and wasted, upon the idle breeze. So will it be with present feelings. They must be deepened into decision, or be entirely dissipated by delay.—*T. C. Cuyler.*

For Friends' Intelligencer and Journal.

VIRGINIA FRIENDS DURING THE CIVIL WAR.

Having frequently been much interested in the accounts of Friends and Friends' meetings in different sections of the country, I have often thought that more accounts of quarterly meetings, and the date of settlement of different monthly meetings and some extracts from the minutes of them, if not too lengthy, would add materially to the interest of the Intelligencer and Journal. I do not know that any account has ever been given of the trying circumstances under which some of the Friends of Virginia were placed during the late Civil War, to keep up their meetings; but by reference to the record book of Hopewell Monthly Meeting, kept from the year 1851 up to the present time, I have been deeply impressed with the zeal of some of the Friends in facing the dangers of those trying days to keep up the meetings both for worship and discipline.

It is a remarkable fact that the records of Hopewell Monthly Meeting have been kept almost perfect from month to month, for one hundred and twenty-nine years, or since the year 1759. The meeting is supposed to have been established many years previous, but the records up to that time were destroyed by fire.

The minutes in the record-book above alluded to report that with perhaps one exception the monthly meeting was held regularly during the Civil War, but many times the representatives from the preparative meetings were prevented from attending by military prohibition. In the minutes for 10th of Fourth month, 1862, the first mention is made of the absence of the representatives on that account, and on the 9th of Tenth month, 1862, occurs the following minute: "Hopewell Monthly Meeting held at the Ridge, in consequence of Hopewell meeting-house being occupied by soldiers." On the 4th of Twelfth month, 1862, the monthly meeting was held at the house of Aaron H. Hackney, after which it was held at the Ridge until Fifth month, 1863, when it appears from the minutes it was again held at Hopewell meeting-house.

On the 6th of Eighth month, 1863, the monthly meeting was again held at the Ridge, and in the Ninth month, 1864, there was no monthly meeting held, owing as is supposed to military operations. The minutes frequently state, throughout the several years of the war, that the representatives from the preparative meetings were prevented by military interference from attending the monthly meeting. The writer has a very vivid recollection that many of the First- and Fifth-day meetings were held at Friends' houses, owing to the meeting-house being unsuitable to hold meetings in.

Yet with all the dangers attending going to and from meeting it seems that very few were dropped, and in the case of the representatives appointed to attend the quarterly meetings, although not all able to attend, there was without an exception one or more present with the reports. And when we remember that many of the Friends who were prominent in the meetings in those days, have since been

called to their reward, and the mantle laid down by them has been taken up by their successors, it is a reminder that ere long we too must follow them, leaving the affairs of the church to those who are to be faithful standard-bearers, with a sincere hope that our valuable testimonies may be upheld for future generations. A FRIEND.

Frederick County, Va.

FRIENDS IN SAN FRANCISCO.

Editors INTELLIGENCER AND JOURNAL:

In this day of progress and advanced thought, we read with pleasure the suggestion of measures which a generation ago would have seemed wholly impracticable.

The subject of the reunion or reuniting of Friends, though beset with difficulties, is worthy of consideration, and will awaken thought and perhaps lead to good results. But I only took up my pen to tell of a pleasant meeting of that kind which we have in San Francisco. It was formerly a meeting of the Orthodox Friends, but was not under the care of any monthly meeting,—was simply a First-day meeting.

Their numbers became smaller, and some of our branch moving to the city attended it, and were welcomed by them, for they increased the numbers. Of late years it has been half composed of our branch. Great harmony and unity prevails, and all seem to feel as though they were simply Friends. No disputes ever arose on minor points, and all seem drawn to each other in love. Formerly an aged Orthodox Friend preached to us, and latterly a member of our branch; both acceptably.

Why could not such meetings be held in many parts of our country where there are but few Friends of either branch? Thus "gathering up the fragments that nothing be lost," each and all being thankful for the privilege of mingling with, and worshiping with any who are Friends. Do we rightly estimate these privileges and the principles secured to us at so great a cost by persecuted Friends of former days?

The time may come when it will seem right to all to lay aside sectarian feeling and minor matters, and attend only to the "weightier matters of the law;" and being drawn together in that love which overcometh fear and difficulties, unite on the common platform of Friends. Recognizing not the branch, but the principles. This, if desirable, might be possible with the coming generation. If we trust the matter to Him "who doeth all things well," He may yet bring these things to pass, if it is His pleasure.

S. E. M.

Oakland, Cal.

Without steadiness of character in social life, there can be no true fellowship. Accomplishments may please, beauty may charm, fluency and grace may attract; but to win confidence and respect, to be trusted and relied upon, the man or woman must be stable in character, self poised, true to promises, punctual, uniting firmness to geniality, and steadfastness to good nature.

HEALING AND HURTING SHADOWS.

ROBERT COLLYER wisely says in his volume entitled "Nature and Life":

"Friends, I wonder whether we have any deep consciousness of the shadow we are weaving about our children in the home; whether we ever ask ourselves if, in the far future, when we are dead and gone, the shadow our home casts now, will stretch over them for bane or blessing. We possibly are full of anxiety to do our best, and to make our homes sacred to the children. We want them to come up right, to turn out good men and women, to be an honor and praise to the home out of which they sprang. But this is the pity and the danger, that, while we may not come short in any real duty of father and mother, we may yet cast no healing and sacramental shadow over the child. Believe me my friends, it was not in the words he said, in the pressure of the hand, in the kiss, that the blessing lay which Jesus gave to the little ones, when he took them in his arms. So it is not in these, but in the shadow of my innermost self; in that which is to us what the perfume is to the flower, or soul within a soul,—it is that which, to the child, and in the home, is more than the tongue of men or angels, or prophecy or knowledge, or faith that will move mountains, or devotion that will give the body to be burned.

I look back with wonder on that old time, and ask myself how it is that the things which I suppose my father and mother built on especially to mold me to a right manhood, are forgotten and lost out of my life. But the thing they hardly ever thought of—the shadow of blessing cast by the home; the tender, unspoken love; the sacrifices made and never thought of, it was so natural to make them; ten thousand little things, so simple as to attract no notice, and yet so sublime as I look back at them,—they fill my heart with tenderness, and my eyes with tears, when I remember them. All these things, and all that belong to them, still come over me, and cast the shadow that forty years, many of them lived in a new world, cannot destroy.

I fear few persons know what a supreme and holy thing is the shadow cast by the home over especially the first seven years of this life of the child. I think the influence that comes in this way is the very breath and bread of life. I may do other things for duty or principle or religious training; they are all, by comparison, as when I cut and trim a vine, and when I let the sunshine and rain fall on it—the one may aid the life, the other is the life.

"PARENTS must give good example and reverent deportment in the face of their children. And all those instances of charity which usually endear each other—sweetness of conversation—affability, frequent admonition—all significations of love and tenderness, care and watchfulness, must be expressed toward children; that they may look upon their parents as their friends and patrons, their defense and sanctuary, their treasure and their guide."—*Jeremy Taylor.*

GOOD resolutions may often fail, and yet grow gradually into good habits.—*Edward Wigglesworth.*

SCRIPTURE LESSON, No. 18.

FIFTH MONTH 6TH, 1888.

TOPIC: JUDGMENT.

GOLDEN TEXT: "But if we discerned ourselves, we should not be judged"—I. Cor. 11:31.

READ Matt. 25:31–46.

THIS vivid picture which Jesus gave his disciples of the judgment has generally been regarded as portraying the final verdict of our Heavenly Father upon the actions of the whole human family. It has been held as a doctrine of the Christian Church that this verdict will be pronounced at some time in the far-off future, when the souls of all who have lived upon the earth, will be summoned to appear before him and answer for the deeds done in the body. The words of Paul (II. Cor. 5:10), "For we must all be made manifest before the judgment-seat of Christ: that each one may receive the things *done* in the body, according to what he hath done, whether *it be* good or bad," have been regarded as teaching essentially the same.

Friends believe and teach that the judgment portrayed by Jesus is that experience of an individual which follows any course of action that is brought in review before his conscience, and upon examination in the light of the Divine spirit is shown to be approved or disapproved, as the case may be, "their conscience bearing witness therewith, and their thoughts one with another accusing or else excusing them in the day when God judgeth (or shall judge) the secrets of men."

This judgment may and does take place whenever there is a feeling or sense of some deviation from the line of duty or responsibility marked out for our course, so that the testimony of the Apostle (I. Tim. 5:24–25) is verified: "Some men's sins are evident, going before unto judgment; and some men also they follow after. In like manner also there are good works that are evident; and such as are otherwise cannot be hid."

So believing and so teaching that our actions, be they good or evil, are brought to judgment every day we live, our great concern should be to stand approved of God, and if through unfaithfulness, condemnation is experienced, to seek forgiveness and restoration through repentance and amendment of life. This being the habitual exercise of the soul, there is no room for fear as to what the final sentence may disclose.

The religion of the Society of Friends, which, in the absence of a better name, we may simply term "Quakerism," deals essentially with the *present* time and with the *present* life. It is eminently for *now* and *here* that it is concerned. "The Kingdom of Heaven is at hand;" "Know ye not the Kingdom of God is within you?" "The hour cometh and now is;" "Behold, now is the acceptable time; behold now is the day of salvation." These Scriptural expressions set forth the views of Friends. Some one has said: "Lost souls are simply those who have lost their way,"—they are souls that have left their Guide, turned from his directing influence, forsaken the fountain of all good, and strayed into ways of transgression and paths of sin. To them, as to us all when we turn (even for the moment) from the path of rectitude, comes the reproving spirit, the condemning conscience, the remorse of soul; and it comes in greater or less degree as we more or less preserve our soul sensitive to his influence. This is the eternal judgment, transpiring every day and hour throughout our lives.

There is, however, another phase of the judgment equally as important as that of the evil-doer,—it is the judgment of right action. Who has not known this *approving* voice in the soul, the feeling of joy and peace and heavenly comfort that follows obedience to the impressions of duty that are continually present with us? Have we not felt this Kingdom of God within us, and have we not experienced the joy of the present salvation from sin when we have resisted evil thoughts, impure desires, and sinful temptations? This is the judgment that we should earnestly seek, which we should strive to merit, and thus striving, we shall in good measure attain. This is the judgment Paul refers to when he says: "But if we discerned ourselves, we should not be judged." That is to say, if we continually bring our thoughts, words, and actions under the control of the Divine principle within us, by thus *discerning* ourselves, or, as a collateral translation makes it, by thus *discriminating* ourselves, we shall not be judged, for our lives will then be in harmony with the Divine Spirit, the immortal life of God.

And here comes the culmination of the religion that thus deals eminently with the "now" and "here." This communion of the soul with God lifts it above the limitations of the present and gives it an inspiration of the *immortal* life, gives it a realization that the death of the body cannot separate us from the Infinite Spirit that has so interfused our spirits here, and fills us with a reliant hope, that in the life beyond God still will care for us, and that his infinite love will bless us evermore.

SPEECH is one of the distinctive characteristics of humanity, and one of its most valuable possessions. It is the means through which thought becomes conscious of itself and the body it assumes, in order to become apprehended by the world. It is the bridge by which we cross from our own individuality to that of another, carrying the knowledge, affection, and sympathy which alone bind us together, and make society possible. Yet like all other good things it is abused. It is used in wrong ways, at wrong times, and too copiously, until silence, from being the emblem of vacuity and lifelessness, comes to be regarded rather as a token of wisdom, and is honored by the epithet—*golden*. There is no doubt that we all talk too much and too carelessly, with too little judgment, too little sympathy, too little charity. If there is one thing in which we all, and especially the young, need instruction, it is as to when and under what circumstances to choose silence rather than speech.

THE condition of the world would be improved, if men were to think less of the dishonor of submitting to wrong and more of the dishonor of doing it.

PHILADELPHIA, FOURTH MONTH 28, 1888.

THE ANNUAL QUERIES.

As the time for the answering of all the queries in the subordinate meetings of our Religious Society is at hand, the concern arises that there be, if possible, clear and comprehensive answers given, so that all can understand the true state of affairs. Of course, in the condensation necessary for them to reach the Yearly Meeting, it is not to be expected nor desired that detailed answers be sent there; but in the home meetings if instead of "generally clear" or "mostly free," plain statements are made—not personal ones—as to how many "offenders" we have, if it can be done, especially in reference to our Fourth Query, we will ourselves be adhering to "plainness of speech," and avoid the impression being given that many more are "offenders" than is actually the case. We, in common with the rest of mankind, have many in our midst who are inclined to see the darker side of life; and such are easily discouraged by half truths and better able to work and endure if they know the whole truth.

If we have that love one for another that our Second Query enjoins, we will be able to speak plainly, for it is the good of all we have at heart; and even transgressors may be reached if the right spirit is manifested. A feeling, too, arises, that in this excellent concern for the best welfare of Society, which in the past gave rise to the formation of the queries, more attention should be given to the gathering of all to hear them answered. Care should be especially taken to invite the lukewarm, not only to the large meetings, but to the "primaries," or preparative meetings, that these may know for themselves how we stand. Overseers should be careful to perform their part in the right spirit, searching for the truth in love, and not permit any formal or lifeless answers to be presented.

In one instance of which we have knowledge, an adjourned preparative meeting was held, to which special invitations were extended, with the result of persons being present that had never heard the queries answered, most of these being so situated they could only attend public worship on the First-day of the week. In that particular locality there is an increase in interest in business meetings.

If in these small gatherings greater encouragement were given to the younger members to participate, there could be no better school in which to learn of our principles, for when some one puts the query, "what do we Friends mean by plainness of speech?" fine opportunity for instruction is right at hand. The idea too much prevails that a few only need respond to the business of the meeting, the many sitting in silence, and judging sometimes from after expressions, not always a satisfied silence. And it is in the preparative meetings that we should endeavor to have general participation by giving, if possible, a feeling to those assembled that it is a family gathering on church affairs in which all should share the work and responsibility.

An intelligent comprehension of our book of discipline would then obtain, and bright minds would aid us in seeing wherein it should be changed to meet the requirements of our age, and yet not take from it aught that it possesses to hold us to a high moral and religious standard. Such meetings might with profit be made conversational; always, however, bearing in mind that most excellent of our Advices, "in conducting the affairs of our meetings, Friends, endeavor to manage them in the peaceable spirit and manner of Jesus, with decency, forbearance, and love of each other."

If our members were more thoroughly interested in all the business transactions at the home meetings, the strength would extend to the larger gatherings, the influence would be felt in mingling in general society, and the name of Friend would carry weight not so much from outward garb and speech as from *character* manifest in word and action.

Many persons believe the training above mentioned to be the work of the home, or, in later years, the First-day school, and in these should be given the beginning precepts, but let these precepts be interestingly confirmed in the meetings and the result will be to attach us closer to our Society. Just as work for it increases our interest, so the feeling that we are indebted to it for confirming our high morality, as well as deepening our spirituality, will enlarge its claims upon us.

PHILADELPHIA Yearly Meeting, this year, will begin its sessions for business on the 14th of next month. Arrangements for reduced rates of fare have been made, as usual, by the committee of Philadelphia Friends in charge of the subject, and a notice giving the details will be found in the advertising columns of the present issue of the paper.

WE have had, recently, some complaints from subscribers that they do not receive their papers punctually. We are investigating the cause of the trouble, and shall endeavor to have it corrected.

MARRIAGES.

BARTLETT—DIXON.—On Fourth-day, Fourth month 4th, 1888, at the residence of the bride's parents, 16 West Madison street, Baltimore, by Friends' ceremony, I. Kemp Bartlett, Jr., son of I. Kemp and Virginia C. Bartlett, of Baltimore, and Mary Garrett, daughter of Robert B. and S. Amanda Dixon, of Talbot county, Md.

GAWTHROP—TANGUY.—In Wilmington, Del., on Fourth month 11th, 1888, at the residence of the bride's uncle, Allen Speakman, according to the order of Friends, William A. Gawthrop, of Kennett Square, Pa., and Frances A. Tanguy, of Wilmington, Del.

WEBSTER—SHARPLESS.—On Fifth-day, 19th of Fourth month, 1888, at the residence of the bride's parents, under the care of Penn's Grove Monthly Meeting, Chester county, Pa., William Webster, son of Chalkley and Margaret C. Webster, of Upper Oxford, Chester county, and Anna M. Sharpless, daughter of Samuel and Sarah H. Sharpless, of Hockessin, Del.

DEATHS.

BROSIUS.—In West Fallowfield, Chester county, Pa., 21st of Fourth month, 1888, J. Comly Brosius; a life-long and valued member of Penn's Grove Monthly Meeting.

CROASDALE.—Fourth month 18th, 1888, at Langhorne, Bucks county, Pa., Mary R., widow of Robert Croasdale, in her 96th year; a member of Middletown Monthly Meeting

GREAVES.—In West Chester, Pa., on Fourth month 23d, 1888, Mary Greaves, in the 91st year of her age; an esteemed member of Birmingham Monthly Meeting.

LIPPINCOTT.—At her residence, in Camden, N. J., Fourth month 18th, 1888, Mary S., widow of Isaac Lippincott, late of Moorestown, N. J., in her 87th year; an approved minister and for many years clerk of Philadelphia Yearly Meeting of women Friends.

PANCOAST.—Fourth month 20th, 1888, Hallie J., wife of Samuel H. Pancoast, 28 years of age. Funeral from residence of James C. Pancoast, Woodstown, N. J.

PAUL.—At Bristol, Pa., Fourth month 18th, 1888, John S. Paul, formerly of Bensalem, in his 72d year; a member of the Monthly Meeting of Philadelphia.

TAYLOR.—At his home, in Minneapolis, Minn., on Fourth month 23d, 1888, Benjamin Taylor, aged 63 years. He was the son of Rachel and the late Lowdnes Taylor, of West Goshen, Pa., and a member of Birmingham Monthly Meeting, held at West Chester, Pa.

TRUMP.—Fourth month 14th, 1888, Anna H., daughter of Charles Newbold and Helen M. Trump, of Wilmington, Del., and grand-daughter of the late John Needles, of Baltimore, Md., in her 28th year; a member of Wilmington Monthly Meeting.

WEEKS.—At his residence, in Somers, Westchester county, N. Y., on the 29th of Seventh month, 1868, Silas Weeks, aged nearly 74 years; and on the morning of the 9th of Third month, 1888, Sarah S. Weeks, widow of Silas Weeks, in her 93d year; members of Amawalk Monthly Meeting.

At a meeting of the Mutual Aid Association of Friends, held Fourth month 6th, 1888, the following minute, proposed by Samuel S. Ash, was adopted:

We desire to place upon record our appreciation of the services of M. Dawson Richards, for many years the efficient Secretary of the "Mutual Aid Association of Friends," who departed this life on the 29th day of Third month, 1888, aged 58 years.

He was conspicuous for clearness of comprehension and gentle ness of manners, combined with an obliging disposition and a watchful care over the affairs of the Association and the interests of its members, which endeared him to all of us, and we are ready to ask, how can his place be filled?

Extracted from the minutes.

RICHARD MOORE, Acting Secretary.

For Friends' Intelligencer and Journal.

MARY S. LIPPINCOTT.

"FAREWELL, precious mother in Israel," was the ejaculation of the heart as we gathered round the casket to take a last look of our beloved and venerated friend.

Truly was she as a loving mother in our Religious Society, ever solicitous for the best welfare of its members of every age and for the promotion and sustaining of the precious testimonies of Truth, given us to bear distinctively to the world. In her daily walking this concern was consistently exemplified, and we view her bright *example* of Christian meekness, humility, and love, as paramount even to the noble attributes of mind and of intellect with which she was gifted. These were cultivated, expanded, and enriched, but always in subservience to the higher law, and the unquestioned requirements of her Heavenly Father. By a close attention to the revealings of his will, her comprehensive mind was led along in a path of true simplicity and great usefulness, socially and religiously.

During many years her literary talents were occupied as a preceptress; in this sphere she coupled with the diffusion of useful knowledge an earnest concern to instil into the youthful mind a love for the good and reverence for the Truth,—and many there are who cherish a grateful remembrance of her pure teachings and the promptings of her tender interest for their welfare. Through all the trials and vicissitudes that were meted unto her, there was ever a firm reliance upon the Divine Arm for support and guidance, and with a true nobility of character she was enabled to rise superior to the depressing cares of life, and to pursue with energy the duties allotted to her.

In her gospel labors as a minister, there was a fluency, a fervency, and a persuasiveness that touched the heart and met the witness within. Her close acquaintance with the invaluable Scripture writings and her readiness in illustrating these to the comprehension of the simplest understanding, were remarkable, and in social interviews with her friends her mind was sometimes led in this direction, greatly to the enjoyment and edification of the quiet listeners to her words of wisdom and applicability.

As a disciplinarian she was clear-sighted and prompt, and a willing and efficient laborer in the concerns and interests of our Religious Society. Her place in our annual assemblies has been as a mother indeed,—watching over, counselling, and encouraging in the pathway of obedience and to a firm adherence to the principles and testimonies, the order and discipline which have characterized us as a people. That with all our acknowledged deficiencies, we suffer them not to discourage, but to stimulate to greater dedication and faithfulness.

Thus, in all the departments of life and discharge of duty, we view our departed friend as having been a favored instrument for good, whose memory is very precious. And as we pass from this brief review of her long and well-spent life, it is with a feeling not of mournfulness, but rather of gratulation, that as the fully ripened grain, her sanctified spirit is blessedly gathered to the heavenly garner of eternal rest and peace.

Fourth Month 22d. C.

HONOR TO WHOM HONOR IS DUE—SUSAN ROBERTS.

In the removal of Susan Roberts from this world by death, the W. C. A. of Philadelphia loses one who amidst many engagements and varied labors for the Religious Society of Friends, of which she was a most active and faithful member, a teacher, and a leader, found time to aid them in their emergencies just when and where her aid was most needed. When the Evening Classes commenced several years ago at the Seventh St. House as an experiment, most of the teachers were volunteers. Among these no one entered more heartily into the work than Susan Roberts whose kindly manner and skill in teaching soon attracted a large class.

In her earnest, devoted life, nothing seemed more characteristic than to help all within her influence who needed help. While making a list of her pupils at the Seventh Street Home she was struck with a familiar name. Inquiry taught that the unusually attractive looking girl was the daughter of a widow who had found a humble position whereby to relieve her mother from her support. Susan Roberts decided to do what she could for this pupil—and solicited a few friends to aid her. Her efforts resulted in the collection of sufficient funds to place the girl in a college where the art of teaching holds a prominent place—Swarthmore. She remained at college, thus supported, until she passed an examination which resulted in obtaining a position as teacher. Since Miss Roberts' death, it has come to light that, unknown to her most intimate friends, she had educated at her own expense several girls otherwise unprovided for, paying both their board and tuition. Meantime, she was always quick to tell of the generous and helpful deeds of others.

When the classes were removed to the Race street public school house, Miss Roberts went through cold and storm two evenings each week to give instruction to those who sought it at her hand,—for, in addition to the class of the W. C. A. meeting at the Race street public school house, she had a large class at the New Century Working Woman's Club.

Again, when the question arose as to the practicability of placing the monthly paper into the hands of a Committee of Managers, who would do the editorial work of *Faith and Works* without expense to the Association, it was her influence and example, as one of the editors of the FRIENDS' INTELLIGENCER, that was urged as a precedent and that resulted in the appointment of an Editorial Committee that still continues. Her remarkable knowledge of literature, her love for the best books, and her experience in the selection, reviewing, and purchasing works for the library of Race Street Meeting led her to take a lively interest in the welfare of the Arch Street library and its readers.

Her sympathy with the brave industrious girls who attended the classes and the library was ever warm, intelligent, and constant. In her death they have lost a true and faithful friend who used the rare talents bestowed upon her with the strongest desire to do good and thus to manifest the "Indwelling Christ."—*C. A. B. in Faith and Works.*

ABINGTON MONTHLY MEETING PROPERTY.

Editors INTELLIGENCER AND JOURNAL:

On the Fifth-day of Second month, 1697, John Barnes, of Springhead, Abington township, deeded to certain trustees (named) 130 acres of land "towards the erecting of a meeting-house for Friends, and towards the maintenance of a school for the use and service of such as they, the said trustees, and the survivor or survivors of them, by and with the advice and direction of Friends belonging or to belong to the said monthly meeting, should in their said meetings from time to time see cause to order and direct." It is recited in the deed made during the lifetime of John Barnes, that no person or persons shall act as trustees who shall be declared "out of unity" with the monthly meeting, he having known what the then recent separation by the followers of George Keith meant; they having been numerous enough to retain possession of the Oxford Meeting property,—now Oxford Church, in Philadelphia county.

John Barnes deeded, he says, his property of 130 acres to "the People of God called Quakers," for the above mentioned purpose, and he says, "for no other intent or purpose whatever." The property is ten miles north of Philadelphia, and the land is in a high state of cultivation, and on it are situated the old meeting-house and school-house, with the new school-building adjoining, and with two sets of farm buildings. The land in the neighborhood has become, for suburban purposes, very valuable, bringing from $1,000 to $1,500 per acre. The trustees of Abington Monthly Meeting property have frequently leased the land, two leases of ninety-nine years having expired some years since; and if it is desired they could, no doubt, lease the property, or as much as would be wanted, for "999 years" for the purposes of the "George School." We have a grand site for such a purpose, with a heavy spring of water,—"Springhead,"—adjoining. The new school building could be utilized as a boarding-house. The ancient meeting-house would be convenient to all for the purpose of Divine worship, and this is certainly very desirable in the choice of a site for the new school.

Abington Friends will not solicit any in this matter; they merely suggest it, and would inquire of Friends whether they know of such other advantages that can be had as a free gift to the Society.

DAVID NEWPORT.

Abington, Fonrth month 16.

SWARTHMORE NOTES.

—Dr. Spencer J. Trotter, of Philadelphia, son of the artist, Newbold H. Trotter, has been appointed "Lecturer in Charge of the Department of Natural History" in the place of Dr. Charles S. Dolley, resigned. Dr. Dolley's health, under the strain of his engagements at Swarthmore and the University of Pennsylvania, showed signs of failure, and he was obliged to confine himself to the duties of the latter institution, much to the regret of his students and all others connected with Swarthmore.

—Dr. Leuf, "Assistant Director of Physical Culture" in the University of Pennsylvania, has been appointed to direct the exercises in Athletics during the Spring Term. He will come to the College for this purpose two afternoons of each week.

—Minnie S. Blakie, a former instructor at Swarthmore, has been appointed to take charge of the classes in Elocution for the remainder of the year, in place of Susan W. Gillam who resigns in consequence of ill health.

—Silas S. Neff, of St. David's, Pa., has been appointed to give special instruction to the Seniors in their preparations for the Exercises of Commencement.

—Daniel Underhill, of Jericho, L. I., a member of the Board of Managers, was present at the meeting on First-day morning, the 22d inst.

—The Spring "Athletic Sports" will be held on Seventh-day, Fifth month, 12th.

—The new rule for Commencement appointments has been announced. There will be six speakers; two chosen from the Department of Arts and Letters, considered as one division; two from the Departments of Science and Engineering, considered as one division; and two from the remaining members of the class after these four have been taken out. All the appointments are made in the order of Scholarship. The Commencement promises to be one of universal interest, this year.

COMMUNICATIONS.

THE USEFULNESS OF SWARTHMORE.

Editors INTELLIGENCER AND JOURNAL:

SINCE there is some questioning about Swarthmore's usefulness, it would be fitting for some one who has been personally benefitted by a four years' course under her tender care, to weild the pen in her defense. Everybody should have been convinced by this time that if the Society is to retain those who crave a liberal education, Friends must liberally support a college, as well as elementary schools. Such at least has been the experience of all other denominations that are not merely names in the list of sects. Look at the Catholics. They have four large boarding-schools in addition to a number of day schools in close proximity to Philadelphia, not to mention the great number of institutions in the city itself. Look at their fine high school building, the gift of a single person. Since Friends contribute much less for the support of the Church than members of other denominations, they should be more generous towards their schools.

The writer, from a two year experience at Swarthmore, can testify that it was she that taught him to prize his birthright. Perhaps many will say that his home influence may have been at fault. Be that as it may, it is doubtless the counterpart of many other homes where there is no systematic study of the Scriptures and of the testimonies of prominent Friends.

"The remedy," as E. A. H. has so well said, "lies not in restricting the aid to Swarthmore, but in extending the beneficence here so well begun, to those schools and academies under the care of Friends which will act as nurseries for the College."

R. H.

COLLEGE FELLOWSHIPS FOR WOMEN.[1]

MRS. PRESIDENT, Delegates, and Friends of the International Council of Women: I beg to call your attention to-night to the benefits of a movement quite new in the history of higher education, the founding of college fellowships for women. And lest there should be any misapprehension, let me ask you, in the beginning, not to confound fellowships with scholarships.

Scholarships are commonly aids granted to undergraduates to enable them to complete a college course, when they have pecuniary need of such assistance, or they are sometimes given, as at Cornell University, to those candidates for admission who pass the best examinations, ability alone being considered. Most of our colleges offer scholarships.

Fellowships, on the other hand, are honors conferred on graduates who have shown special proficiency in some subject, to give them opportunity for advanced study of a high character.

The holder of a fellowship is expected to reside at the college and to continue her work in the main independently, but may have the supervisio assistance of professors, the use of libraries and apparatus. Beside free residence and tuition, an amount is usually granted her, about equal to the expenses of a college year.

The advantages of fellowships are two-fold: 1st, to the college; 2d, to the holder of the fellowship.

The scholarship and culture of the college are promoted by the presence of a number of students of advanced standing, pursuing special researches with enthusiasm and devotion. A beneficial influence is exerted upon the entire life of the institution. The fellows are naturally leaders in the debating societies, the literary and scientific organizations. The undergraduates are aided by observing the aims and methods of students of longer experience.

The fellowships bridge over, in a measure, that unfortunate gulf which often lies between the faculty and the great body of the students. Occupying an intermediate position between the two, the fellows, if they will, may frequently render substantial assistance to the undergraduates, whose difficulties they understand because they have so recently been in the same position themselves, while it may perhaps

[1]Read by Cora A. Benneson, A. M., LL. D., (Michigan University), Fellow in History at Bryn Mawr College, at the International Council of Women held in Washington, D. C., Third month 26th, 1888.

be helpful for professors, at times, to know from those more constantly associated with the students than it is possible for them to be, how far their methods are meeting the needs of their classes.

To the holder of a fellowship, its value will depend, of course, upon her personal ability. At the least it is an opportunity to test her power. If she have natural fitness for her work and habits of industry, she may obtain a grasp of her subject which will lead to exceptional usefulness and success. If the fellowship fall to one of rare talent, she may be enabled thereby to add directly to the sum of the world's knowledge.

The spheres of human thought have now so widened that, in order to render any important service in the way of original work, it is necessary to become a specialist. A fellowship offers the best conditions for this. The student is relieved from care as to material wants. She has at her command libraries, laboratories, and all of the college appliances for research and experiment, with a previous training which teaches her how to use these, and she has her time free from interruption. Only those can appreciate the full value of such aids who have tried to pursue investigations far from any good library or centre of learning, or amidst pressing social claims.

The usual curriculum of a college covers so wide a variety of topics that, even under the elective system, it offers little opportunity for specializing; nor is it well to specialize until the foundations of a liberal education are laid. But a fellowship comes as a supplement to a college course, after the tastes are clearly defined, and then the attention may be directed to one subject with hope of mastering it, and without great danger of narrowness.

The system of fellowships was introduced into this country from Great Britain, but, like most of the institutions we have borrowed from her, has been variously modified to suit American ideas. For a long time the older colleges of our country have offered such honors to men. Harvard has 13 fellowships, Yale 3, Columbia 7, Princeton 7, Washington and Lee University 1, Pennsylvania University 1. These have been restricted, with a few exceptions, to their own graduates. To develop the system on a broader plan and to make it a most conspicuous success was reserved for Johns Hopkins University. It opened its twenty fellowships to graduates from any college, and, as a consequence, has drawn to itself from the best talent of all. To-day, when a professor's chair is vacant, his successor is quite apt to be sought among the fellows of Johns Hopkins University.

Similar results are to be hoped from the founding of college fellowships for women. Not only will they offer opportunity for excellence in the chosen specialties, but institutions will know where to look when they wish professors or teachers in those subjects. To-day, even in the colleges exclusively for women, with the exception of Wellesley, there is a much larger number of men than women in the faculties, while few of our leading coëducational institutions have yet recognized the attainments of their women graduates by appointments to professorships.

At present the fellowships open to women are eight at Cornell University, six at Bryn Mawr College, one at Wesleyan University.

The eight fellowships at Cornell are conferred upon men and women on equal terms, while a portion of the Sage fund, amounting to $50,000, has been set apart for the establishment of scholarships and fellowships for women exclusively. The appointments are for one year, or in cases of exceptional merit, for two years.

Of the six fellowships at Bryn Mawr, five are open to graduates of any college of good standing, and, "generally speaking, are given to the candidate who has studied the longest or whose work affords the best promise of future success." (See Bryn Mawr College programme.) They are awarded in the subjects Biology, History, Mathematics, Greek, and English. One, the European fellowship, is restricted to Bryn Mawr graduates, is unlimited as to subject, and entitles to a year's study at some foreign University. Thus far the Bryn Mawr fellowships have been held by twelve persons. Of these, beside the five still at the college, one is associate professor of history at Vassar, a second has a responsible place in the U. S. Bureau of Agriculture in this city, a third holds a college position in Greek, two are continuing their studies, the one in Nova Scotia, the other at the University of Zurich, two are teaching in normal schools.

The fellowship of Wesleyan University is awarded to that member of its senior class who shall pass the best examination in Greek.

The Massachusetts Institute of Technology offers five graduate scholarships which are in effect fellowships.

Although Johns Hopkins University does not commonly open its doors to women, it has done so on one occasion. Mrs. Christine Ladd Franklin was invited by the trustees for three years (1879–1882) to continue her studies at the University, and was granted the regular stipendium of a fellow. Her specialty is mathematics.

The alumni of Michigan University are raising a fund to establish one or more fellowships of $8,000, which will afford each an annual income of $400.

A fellowship at Michigan University is now offered by the Western Association of Collegiate Alumnæ to that one of its members who shall present the most satisfactory thesis before June 15th, 1888, the decision to be referred to a joint committee of the members of the faculty and of the association. This fellowship is not restricted to a year, but is subject to the faculty's approval of work done, an arrangement which seems preferable to the one year system, since that hardly gives time for extended investigation, and under the limitation, work well begun may be dropped for lack of opportunity to complete it.

In Great Britain, fellowships have often been conferred for life, but now a custom of limiting them to six years is gaining favor. The benefits which have resulted to the literary and scientific world from English fellowships will be apparent, if one glance at the title pages in any well selected library and notice how often we are indebted for the most fruitful investigations of special subjects to the holders of fellowships.

At Newnham College, Cambridge, England, there

is already one fellowship for women (called, however, a studentship), while another is about to be endowed.

There seems, indeed, no way at present in which the higher education of women can be advanced so effectively as by the founding of fellowships for them in our colleges where none now exist, and in adding to their number where they have already been established.

"THE KINGDOM OF GOD IS WITHIN YOU."

THY kingdom here?
Lord, can it be?
Searching and seeking everywhere
For many a year,
"Thy kingdom come," has been my prayer.
Was that dear kingdom all the while so near?

Blinded and dull
With selfish sin,
Have I been sitting at the gates
Called Beautiful,
Where Thy fair angel stands and waits,
With hand upon the lock to let me in?

Was I the wall
Which barred the way,
Darkening the glory of thy grace,
Hiding the ray
Which, shining out as from thy very face,
Had shown to other men the perfect day?

Was I the bar
Which shut me out
From the full joyance which they taste
Whose spirits are
Within thy Paradise embraced,—
Thy blessed Paradise, which seemed so far?

The vision swells:
I seem to catch
Celestial breezes, rustling low
The asphodels,
Where, swaying softly ever to and fro,
Moves each fair saint who in thy presence dwells.

Let me not sit
Another hour,
Idly awaiting what is mine to win,
Blinded in wit.
Lord Jesus, rend these walls of self and sin;
Beat down the gate, that I may enter it.

—*Susan Coolidge.*

IN MEMORIAM.

[Lines written by Louisa M. Alcott on the death of her mother.]

MYSTERIOUS death! who in a single hour
Life's gold can so refine;
And by thy art divine
Change mortal weakness to immortal power!

Bending beneath the weight of eighty years,
Spent with the noble strife
Of a victorious life,
We watched her fading heavenward through our tears.

But, ere the sense of loss our hearts had wrung,
A miracle was wrought,
And swift as happy thought
She lived again, brave, beautiful, and young.

Age, pain, and sorrow dropped the veils they wore,
And showed the tender eyes
Of angels in disguise,
Whose discipline so patiently she bore.

The past years brought their harvest rich and fair,
While memory and love
Together fondly wove
A golden garland for the silver hair.

How could we mourn like those who are bereft,
When every pang of grief
Found balm for its relief
In counting up the treasures she had left?

Faith that withstood the shocks of toil and time,
Hope that defied despair,
Patience that conquered care,
And loyalty whose courage was sublime.

The great deep heart that was a home for all;
Just, eloquent, and strong,
In protest against wrong;
Wide charity that knew no sin, no fall.

The Spartan spirit that made life so grand,
Mating poor, daily needs
With high, heroic deeds,
That wrested happiness from fate's hard hand.

We thought to weep, but sing for joy instead,
Full of the grateful peace
That follows her release;
For nothing but the weary dust lies dead.

Oh, noble woman! never more a queen
Than in the laying down
Of sceptre and of crown,
To win a greater kingdom yet unseen;

Teaching us how to seek the highest goal;
To earn the true success;
To live, to love, to bless,
And make death proud to take a royal soul.

THE LESSON OF THE LEAF.

A SPRING MADRIGAL.

BENEATH the waning, westering light,
Across a ragged patch of snow,
Which winter, in its haste to go,
Had dropped, I wandered yesternight.

No token, to my anxious sight,
Of spring was in the nipping air;
Nor round the garden anywhere
Did even a snowdrop show its white.

No promise seemed abroad, no bright
Suggestions of a fairer day,
When leaden skies should lose their gray,
And chill and gloom be banished quite.

"Just like my life," I said. "The blight
And blast of care so sweep my mind
That not one hope is left behind
To open, henceforth, to the light!"

But stepping, in my oversight,
Across a border, where had blown
Clusters as rich as ever shown
When summer-tide was at its height,

I brushed aside—brown, shriveled, slight,—
A last year's leaf; and there, beneath
The foldings of its close-wrapt sheath,
In all the winter's harsh despite,

Upon a fragile stem, upright,
A bud half open reared its head.
"Go to," with sudden shame I said;
"Shall grief that's overpast still blight
My hopes, that else would blossom white?"

—*Margaret J. Preston, in S. S. Times.*

AN ALABASTER BOX.

It was in those dreary days in Kansas when the grasshopper had become a burden in a far heavier sense than that which was in Solomon's thought when he drew his picture of weary old age. Days when even strong, hopeful men grew desperate, and sent out their plea for help to their more blessed brethren whose farms and gardens and orchards the plague swarms had not visited; days when it fared harder yet with the feeble and the lonely who knew not how to make their voices heard, or where to stretch their hands save in the sight of heaven. Men's hearts move quickly to the cry of want, in spite of sin and selfishness, and very soon relief came pouring in from every quarter, as church after church presented the matter in the public congregation, and the press everywhere urged speedy and generous giving. From one of these church services a lady went home, eager to contribute her share toward the relief fund, and especially interested at finding among those designated by the governors of the afflicted states to receive and distribute supplies, the name of a personal friend. She said to herself, "I, myself, will pack a special box, and send it to Mrs. B. There shall not be one thing in it which I would not be willing myself to use or to receive from a friend."

The box was filled in that fashion, and held store of new, comfortable, and valuable things—clothing, books, and bedding, and still there was space for one thing more. Three years before there had been taken from that household a precious mother, one of those gentle saints whom, as Beecher once said, God sometimes lets linger on through an Indian summer of life just to show us how beautiful his grace can make a human soul. All her clothing had gone to help the destitute except one garment, a wrapper of soft cashmere, handsomely trimmed with silk, and warmly lined and wadded, for the comfort of the delicate invalid to whose shoulders a shawl was a burden. It had been a Christmas present, every stitch set by loving fingers, and had been constantly worn for the few remaining weeks, until laid off by the owner only a day before her death. It was a sacred garment, and the daughter had said, "I can never part with it; it would seem like a desecration for any one else to wear it."

But looking for one more article for the box she saw the wrapper, and instantly came the thought, "What if in some home, a mother equally beloved and cherished is suffering for the lack of just such a comfortable garment? Would not your saint in Heaven be grieved if you withheld it?" She took it out and looked at it. There in the pocket were the spectacles through which the sweet eyes were wont to find strength and patience in God's Word, and the soft silk handkerchief, just as the invalid's hands had placed them on that last morning when she said, "After all, I believe I am too tired to sit up. If the Lord lets me come home to-day, I want you all to be glad."

The daughter took these out, but with a second thought put them back, placing with them a note to say:

"My precious mother laid aside this dress when she went to put on the garments of immortality. I hope it may be a comfort to some other invalid who, like her, may find God's grace made perfect in weakness."

In a letter to Mrs. B. she told the story of the wrapper, and asked as a special favor that it might, if possible, be given to some one who would appreciate it at its real value. So the box went on its way, and very soon word came back from it through Mrs. B., who wrote:

"You must have been inspired to send that wrapper. The box was here, but not yet opened, when I had a call from a young lady, formerly one of our teachers, who had gone out to live with her mother in a little shanty on some land she was trying to secure under the Homestead bill. She had to walk a long distance to her school, and finally her mother fell sick and she was compelled to give it up. There they struggled on all alone, till at the very point of starvation, before either of them could consent to ask for help, but this morning she succeeded in getting a boy to stay with her mother while she walked fourteen miles to town to ask for relief. We shall send them supplies to-morrow and having sent her within a mile of her home with a basket for their immediate wants, I opened your box and found *the wrapper*, sent, I am sure, for this very case, for we have only the coarsest clothing left, and these women are refined, cultivated, and withal brave, as only Christian women can be. You did well to break your alabaster box, though it was 'exceeding precious,' and I think you will even catch a little of its sweetness yourself."

But that was not the last. Two weeks afterwards came a beautifully written letter from the little prairie home, telling the rest of the story.

"It was very hard for me to realize that I must actually ask for charity, but I could not see my mother suffer. Her confidence in God has never faltered, and all through that long, weary walk, I was asking, with some bitterness in my heart, why she should be forsaken in her old age. My talk with Mrs. B. cheered me up a little, she was so kind and sympathizing, and then I saw that scores and hundreds were as bad off as we, or even worse. But after all I could not bring myself to ask for clothing; I thought we would get along in some way as we were, and all the way home I was reproaching myself for my foolish pride that had prevented my asking for what might have made my mother more comfortable. You can never know with what delight the beautiful wrapper was received when we found it among the stores sent us. I cried with joy when I shook it out and spread it before my mother, and witnessed her almost childish pleasure in its warmth and daintiness. I soon had her dressed in it, and sitting up once more without fear of a chill, but when

she put her hand in her pocket and drew out the spectacles, then she, too, cried. Her delight and comfort during the long, lonely days when I have been away from her, has been to read, and for some time the rapid failure of her sight has almost wholly deprived her of this resource, but these glasses were exactly fitted to her eyes, and she felt as rich as if she had fallen heir to a fortune, when she opened her Bible and found the pages once more clear and distinct before her. She turned to the verse: 'I have been young and now am old, yet have I not seen the righteous forsaken, nor his seed begging bread,' and put your little note in there for a mark, saying, 'It is true, my dear; it is not begging bread to make known your wants to those who give with love, because we are children of one Father. It is blessed for us and for them.'"

This story is true in all its particulars as nearly as I can recall them after the lapse of years since they came to my knowledge. Perhaps it may move some other Mary to bring out her hoarded box of precious ointment and break it for the refreshing of way-worn feet.—*Emily Huntington Miller in the Union Signal.*

HOW AGASSIZ TAUGHT HIS CHILDREN.

Agassiz collected about him, by invitation, a small audience of friends and neighbors, to whom he lectured during the winter on botany and zoölogy, on the philosophy of nature. The instruction was of the most familiar and informal character, and was continued in later years for his own children and the children of his friends. In the latter case, the subjects were chiefly geology and geography, in connection with botany; and in favorable weather the lessons were usually given in the open air. One can easily imagine what joy it must have been for a party of little playmates, boys and girls, to be taken out for long walks in the country, over the hills about Neuchâtel, and especially to Chaumont, the mountain which rises behind it, and thus to have their lessons for which the facts and scenes about them furnished subject and illustration, combined with pleasant rambles.

From some high ground affording a wide panoramic view, Agassiz would explain to them the formation of lakes, islands, rivers, springs, water-sheds, hills, and valleys. He always insisted that physical geography could be better taught to children in the vicinity of their own homes than by books or maps, or even globes. Nor did he think a varied landscape essential to such instruction. Undulations of the ground, some contrast of hill and plain, some sheet of water with the streams that feed it, some ridge of rocky soil acting as a water-shed may be found everywhere, and the relation of facts shown perhaps as well on a small as on a large scale.

When it was impossible to give the lessons out of doors, the children were gathered around a large table, where each one had before him or her the specimens of the day, sometimes stones and fossils, sometimes flowers, fruits, or dried plants. To each child in succession was explained separately what had first been told to all collectively. When the talk was of tropical or distant countries, pains were taken to procure characteristic specimens, and the children were introduced to bananas, cocoanuts, and other fruits, not easily to be obtained in those days in a small inland town. They, of course, concluded the lesson by eating the specimens, a practical illustration which they greatly enjoyed. A very large wooden globe, on the surface of which the various features of the earth as they came up for discussion, could be shown, served to make them more clear and vivid. The children took their own share in the instruction, and were themselves made to point out and describe that which had just been explained to them.

There was no tedium in the class. Agassiz's lively, clear, and attractive method of teaching awakened their own power of observation in his little pupils, and to some at least opened permanent sources of enjoyment.—*From Life of Agassiz.*

WOMEN NURSES IN HISTORY.

Dr. Sophia Jex-Blake, in her exhaustive work on medical women, takes us to the earliest classical times. In the Iliad there is mention of Agamede, a woman skilled in the science of medicine; and, again, similar reference also occurs in the Odyssey. In France, in the fourteenth century, we have the negative evidence of there being women practicing medicine and surgery, for in a document of 1311 "surgeons and female surgeons are forbidden to practice if they had failed to pass a satisfactory examination before the proper authorities." In England, we are told, that women practised in the time of King John (1352) with full legal authority. There is no question that there have, in all times, been a great number of women calling themselves midwives, and earning a scanty livelihood as such in this country; but the dignity and importance which belonged to them in the Middle Ages, "as a profession scientifically studied and carried out under proper control," has become a thing of the past. In the fifteenth century midwives were duly licensed. The first of whom we find any account is Margaret Cobbe, who had a yearly salary from the Crown. She attended Elizabeth, wife of Edward IV., at the birth of Edward V., and special provision was made for her rights and privileges by an Act of Parliament. In the sixteenth century the Bench of Bishops gave particular attention to the question of midwives, and curates were enjoined to teach and instruct them "of the very words and forms of baptism." It was in consequence of the ceremony of baptism being sometimes performed, in cases of urgency, by midwives, that they were examined in their duties not only by a doctor, but by a bishop. There was much complaint made of the bishops giving their license without taking any care to find out if they possessed "needful knowledge or instruction." "In 1567 the Archbishop of Canterbury granted a license to Eleanor Pead, midwife, and required her to take a long oath to fulfil her duties faithfully; and among other things, she bound herself to use the proper words at baptism, and, moreover, to use pure and clean water, and not any rose or damask water." It is clear that in early times women took a much higher stand and

position in nursing and medicine than has been given to them till within the last few years again. It may be that they lost their position because the feeling of the times changed, and, in consequence, they were denied the opportunities for needful study and instruction. Now the tide has turned in their favor, and the chance is offered them of recovering that which was formerly their undisputed right.—*The Woman's World.*

DARWIN.

This was a character which might well spare the humanities. The fact remains that he did spare them. What he lost was culture. The confession that he makes of the gradual atrophy of his æsthetic tastes will be long quoted as one of the most remarkable facts of his life. He began with a susceptibility to music, which by his son's account he did not lose; with a liking for poetry, such that he read The Excursion twice, and he would not have read it except for pleasure; and he used to take Milton with him in his pocket. In art he went but a little way, if indeed he ever really had any eye for it. He was religious, as an English boy usually is; but his interest in belief regarding religious subjects died out, and, what is of more consequence, the emotions which were called out by it in early life ceased to be exercised. There was a deadening, in other words, of all his nature, except so far as it was fed by his work, his family, and his friends in its intellectual and social parts. So complete was this change that it affected even his appreciation of beautiful scenery, which had evidently given him keen delight in his youth and travels. He dates this change from just after his thirtieth year, when he became absorbed in scientific pursuits as his profession. Something, no doubt, and perhaps much, is to be set down to the effect of his ill-health, which left him with diminished energies for any recreation; his strength was exhausted in his few hours of work. He was himself so convinced that his life had been narrowed in these ways that he says if he had to live over he would have planned to give a certain time habitually to poetry.

It would be too much to say that the failure of Darwin to appropriate the humane elements in his university education accounts in any perceptible degree for these defects. In culture as in science, the self-making power of the man counts heavily; and there is such inefficiency in those whose duty it is to give youth a liberal education from classical sources, there are such wrong methods and unintelligent aims in the universities, that it might easily prove to be the case that a student with the most cordial temperament toward the humanities would profit only imperfectly by his residence at seats of learning. In spite of these reservations, however, the Greek culture is the historical source of what are traditionally the higher elements in our intellectual life, and has been for most cultivated men the practical discipline of their minds. But it is to be further observed that the example of Darwin, if it should be set up as showing that Greek culture is unnecessary in modern days, goes just as directly and completely to prove that all literary education, as well by modern as by ancient authors, is superfluous. It is enough to indicate to what a length the argument must be carried, if it is at all admitted. The important matter is rather the question, How much was Darwin's life injured for himself by his loss of culture, in the fact that some of those sources of intellectual delight which are reputed the most precious for civilized man were closed to him?

The blank page in this charming biography is the page of spiritual life. There is nothing written there. The entire absence of an element which enters commonly into all men's lives in some degree is a circumstance as significant as it is astonishing. Never was a man more alive to what is visible and tangible or in any way matter of sensation; on the sides of his nature where an appeal could be made, never was a man more responsive; but there were parts in which he was blind and dull. Just as the boy failed to be interested in many things, the man failed, too; and he disregarded what did not interest him with the same ease at sixty as at twenty. What did interest him was the immediately present, and he dealt with it admirably, both in the intellectual and the moral world; but what was remote was as if it were not. The spiritual element in life is not remote, but it is not matter of sensation, and Darwin lived as if there were no such thing; it belongs to the region of emotion and imagination, and those perceptions which deal with the nature of man in its contrast with the material world. Poetry, art, music, the emotional influences of nature, the idealizations of moral life, are the means by which men take possession of this inner world of man; to which, for man at least, nature in all its immensity is subsidiary. Darwin's insensibility to the higher life—for so men agree to call it—was partly, if not wholly, induced by his absorption in scientific pursuits in the spirit of materialism. We praise him for his achievements, we admire his character, and we feel the full charm of his temperament; he delights us in every active manifestation of his nature. We do not now learn for the first time that a man may be good without being religious, and successful without being liberally educated, and worthy of honor without being spiritual; but a man may be all this, and yet be incomplete. Great as Darwin was as a thinker, and winning as he remains as a man, those elements in which he was deficient are the noblest part of our nature.

On finishing the story of his life, the reflection rises involuntarily in the mind that this man, in Wordsworth's line, "hath faculties that he has never used."—*Atlantic Monthly.*

In Germany the woods have their police, whose duty it is to see that no devastation is wrought by inconsiderate owners. No man may cut down his trees without the sanction of these authorities. The reason is that wood is the staple fuel of the country, and if the government did not step in to protect the people against their own improvidence the peasants would speedily sweep away all their forests to enable them to clear the mortgages which the Jews hold on their lands. In Bavaria the price of fuel rose between 1830 and 1860 as much as 60 per cent., and building timber rose 70 per cent.

SONNET TO DUTY.

LIGHT of dim mornings, shield from heat and cold;
Balm for all ailments, substitute for praise:
Comrade of those who plod in lonely ways
(Ways that grow lonelier as the years wax old);
Tonic for fears, check to the overbold;
Nurse whose calm hand its strong restriction lays,
Kind but resistless, on our wayward days;
Mart, where high wisdom at vast price is sold;
Gardener, whose touch bids the rose-petals fall,
The thorns endure; surgeon, who human hearts
Searchest with probes, though the death-touch be given;
Spell that knits friends, but yearning lovers part;
Tyrant relentless o'er our blisses all,—
Oh, can it be thine other name is Heaven?

—*T. W. Higginson in Christian Union.*

COURTESY AT HOME.

"GOOD breeding, like charity, should begin at home. The days are passed when children used to rise the moment their parents entered the room where they were, and stand until they had received permission to sit. But the mistake is now made usually in the other direction, of allowing small boys and girls too much license to disturb the peace of the household.

I think the best way to train children in courtesy would be to observe toward them a scupulous politeness. I would go as far as to say that we should make it a point to listen to children without interrupting them and answer them sincerely and respectfully, as if they were grown up. And, indeed, many of their wise, quaint sayings are far better worth listening to than the stereotyped commonplaces of most morning callers.

Of course to allow uninterrupted chatter would be to surrender the repose of the household, but it is very easy if children are themselves scrupulously taught to respect the convenience of others and to know when to talk and when to be silent.

"If a child is brought up in the constant exercise of courtesy toward brothers and sisters and playmates, as well as toward parents and uncles and aunts, it will have little to learn as it grows older. I know a bright and bewitching child who was well instructed in table etiquette, but who forgot her lessons sometimes as even older people do now and then. The arrangement was made with her that, for every mistake of this sort she was to pay a fine of five cents, while for every similar carelessness she should discover in her elders, she was to exact a fine of ten cents, their experience of life being longer than hers. You may be sure that Mistress Bright Eyes watche the proceedings at the table very carefully. No slightest disregard of the most conventional etiquette escaped her quick vision, and she was an inflexible creditor and faithful debtor. It was the prettiest sight to see her, when conscious of some failure on her own part, go unhesitatingly to her money box and pay cheerfully her little tribute to the outraged proprieties."

LOUISE CHANDLER MOULTON.

THE HEART OF THE HOME.

THE hearthstone is the very heart of home. From it radiates the blood of the home-life. Around it centre the hopes of the home's future. The hearthstone, in fact, determines the home.

Of course we use the word in a somewhat figurative sense. Literally, in a majority of homes to-day, there is no hearthstone. The good old fireplace has vanished. Back-log, andiron, and fender, are things of the past. We burn coal; we have a furnace; we use stoves—the liberal, laughing, open-mouthed heater of fifty years ago is discarded for some new contrivance; for are we not growing more civilized, and must we not do better than our fathers did?

But though the old hearthstone is given up, the spirit of it may remain—should remain in every home. In every home its cheer should still gladden and bless. Warmth and comfort and peace—these form the hearthstone's gift of grace to all who circle round it. In the midst of these, all life should be wholesome and sweet. Taking color from these, all thought should be tender and true. Mellowed and molded by these, all purpose should be noble and uplifting. Out of true homes go seldom untrue men. Whatever of social reform may be practicable and worthy, must begin in the home. Whatever of ideal manhood and womanhood may be realized by-and-by, must commence its realization at the home's heart.—*Selected.*

THE good heart naturally allies itself with eternity.—*Channing.*

TRUTHS which appear of little value may help to bring out other truths of great value.

NEWS AND OTHER GLEANINGS.

—The London *Queen* says: Ladies are no longer to wear birds on their bonnets and hats. Thus it has been decreed by fashion. The benevolent edict comes just in time to save the last remaining members of the race of humming birds and birds of Paradise. The great forests of India, Brazil, and the banks of the Mississippi have been ransacked and have yielded up their treasure of winged jewels to adorn the feminine headgear. Now at last there is to be a truce to the massacre, and the pretty denizens of the woods may sing and fly awhile in peace. To estimate the extent of slaughter perpetrated for the sake of womankind's adornment we may take the statement of a London dealer, who admits that last year he sold 2,000,000 small birds of every possible kind and color, from the soft gray of the wood pigeon to the gem-like splendor of the tropical bird. Even the friendly robin has been immolated to adorn the fashionable bonnet.

—A spectacle mission has recently been started in London, to provide poor applicants with spectacles carefully suited to their eyesight. Printers, seamstresses, tailors, and shoemakers will be especially grateful for this provision.

—An effort is being made to raise $100,000 for the permanent endowment of the American School of Classical Studies at Athens. Dr. Charles Waldstein, of New York, has consented to accept the position of Director of the school on condition that this sum is raised before the end of July.

—An ingenious sleeping-bag which is in use by some mountain-climbers consists of a mackintosh sack, one longitudinal half of which can be inflated, so that the camper can have the luxury of sleeping on an air-mattress.

—Prof. C. H. Hitchcock, of Dartmouth College, has been studying the tracks of animals on the sand of the seashore in the Indian river region of Florida, in the hope that they might assist in the interpretation of the fossil foot-marks found in the sandstone of the Connecticut valley in Massachusetts. The late Prof. Edward Hitchcock, of Amherst College, devoted a great deal of study to these fossil foot-marks, and published in 1858 a report in which he described, and illustrated by plates, a hundred and nineteen species of insects, worms, mollusca, crustaceans, etc., supposed to have been represented by them. Prof. C. H. Hitchcock is pursuing the same line of study in which his father worked so long, and the result of his recent visit to Florida is that he leans more and more to the opinion that the fossil tracks are chiefly those of crustaceans.—*Christian Register.*

—In Dakota the Indian Reservation lands comprise more than one-fourth of the land in the entire territory, in Montana nearly one-fifth, in Washington one-tenth, while in New Mexico about one-eighth of the land is set apart for the use of the Indian.—*Pipe of Peace.*

—Sir Walter Scott, when walking along the banks of the Yarrow, saw Mungo Park throwing stones into the water, and anxiously watching the bubbles that succeeded. In reply to Scott's inquiry as to the object of his occupation, the great traveler said he was thinking how often he had thus tried to sound the rivers in Africa by calculating how long a time had elapsed before the bubbles rose to the surface. This was a slight circumstance, but the traveler's safety frequently depended upon it.—*Chambers's Journal.*

CURRENT EVENTS.

A STEAMER from China, which arrived at San Francisco on the 22d inst., brings frightful details of destruction of life by earthquakes in the province of Yunnan. The shocks continued on different days during nearly a month, and in many towns and cities, hundreds of people were crushed to death by the falling of their homes, etc.

THE Massachusetts House of Representatives, on the 23d inst., rejected the woman suffrage bill by a vote of 107 to 36, with 14 pairs.

TELEGRAMS from fifteen of the most important points on the Delaware peninsula in regard to the condition of the peach buds, give every indication of an unusually large crop this year.

A SYNDICATE of English and Minnesota millers is being formed at St. Paul, Minn., with a capital of $200,000 to ship Dakota and Minnesota wheat direct to Liverpool. The grain will go via. the lakes. The object is to avoid mixing in transfer elevators.

CAPITALISTS of Berlin, Frankfort, and Vienna are said to be considering a gigantic canal scheme to link the Danube with the Neckar, Elbe, Oder, and Vistula, thus piercing the continent from the Mediterranean and Black seas to the Baltic and North seas.

QUEEN VICTORIA, of England, arrived at Berlin on the 24th instant, to visit her daughter, the present Empress of Germany. Her reception was cordial but not enthusiastic.

WITHIN a month the United States Mint at Philadelphia has coined $4,000,000 of gold and $1,800,000 of silver.

THE German Emperor, after being apparently at the point of death for some days, is again somewhat improved, at this writing, (24th inst.) His endurance is very heroic, and he continues to give attention to public business for some part of each day. It is declared that he has been at work on a draft of a new constitution for Germany.

THE *Farmer's Review*, Chicago, says that the crop of winter wheat will be below the average. "A considerable acreage has been plowed up and seeded to other crops in Ohio, Illinois, Indiana, Missouri, and Southern Michigan. The general complaint is that the season is cold and backward, and spring seeding much delayed." The prospect for fruit, especially small fruits, is considered good.

THE completion of the great Sweetwater dam at San Diego, California, was observed on the 19th instant. The dam is of solid masonry, built across Sweetwater Valley, in order to form a large reservoir for the purpose of storing water for a dry season. The dam is ninety feet high from the base, and is claimed to be, by twenty feet, the highest dam in the United States. The area of the reservoir is 750 acres. The cost of the dam was $800,000.

NOTICES.

*** Bucks First-day School Union will be held at Friends' meeting-house, Buckingham, Fourth month 28th, commencing at 10.30 a. m.

All interested are invited to be present.

31. Bucks, Buckingham, Pa.

PUBLISHERS' NOTICES.

***As a definite number of copies of the INTELLIGENCER AND JOURNAL is printed each week, we would suggest to any of our friends who may wish extra numbers of the paper to inform us of the fact previous to the publication containing the particular article wanted, that we may have the required amount of extra numbers printed.

***Matter intended for insertion in the INTELLIGENCER AND JOURNAL should reach us by Third-day morning, though notices or advertisements relating to affairs of immediate importance *may be* used as late as the morning of Fourth-day. In order to reach our distant subscribers, the paper is now mailed on Fifth day, and must be sent to press at noon of the day preceding.

*** WE particularly ask that when money is forwarded to *renew* subscriptions, care be taken to give us the name of the person *to whom the paper is now being sent*. Sometimes, instead of this, the name of another member of the same family is given, in which case, the new name not appearing on our list, we suppose it to be a new subscription, and send two papers.

Where it is a *new* subscription, please say so, and this will also help to avoid mistakes.

ROYAL

BAKING POWDER

Absolutely Pure.

This powder never varies, A marvel of purity, strength, and wholesomeness. More economical than the ordinary kinds, and cannot be sold in competition with the multitude of low test, short weight, alum, or phosphate powders. *Sold only in cans* ROYAL BAKING POWDER CO., 106 Wall-st., N. Y.

KEPT.

"They are not lost." Oh! say this in your weeping
O'er the still faces that your lips have kissed;
For God himself doth take into his keeping
The jewels from our household treasures missed.

He, the "Great Father," knows each heart's sore aching;
His hand will wipe away the falling tears,
And gather up the links, unclasped and breaking,
To shine undimmed through the eternal years.

—*Ellen M. Comstock in S. S. Times.*

From Friends' Quarterly *Examiner*, (London.)

DR. WESTCOTT AND THE SOCIETY OF FRIENDS.

(*Concluded from last week.*)

LET us now look at another of Dr. Westcott's strictures on George Fox: "He had no sense of the action of the Holy Spirit through the great body of Christ." Probably in one sense this is true. Fox did not believe in a spiritual force residing in the Church, and handed down from age to age, available for the wants of each successive generation; but his whole system, which he designed to be an *organism*, quickened by the life within, is evidence that he believed in the action of the Holy Spirit through the Church, as manifested from age to age in its living members.

Fox eminently believed in the Spirit brooding over the assembly of spiritual worshippers; and whilst he gave large scope to the exercise of individual communion with God, believed fully in united worship as well, and that in the felt presence of the great Head of the Church prayer, praise, and exhortation can vocally be offered as embodying the wants of the congregation. And, as coming very near in spirit to what the Church of England practices through her daily intercessory prayers, he would believe, as one of our more recent ministers has expressed it, "The backbone of the Society (or of the Church) consists in those reverent, waiting souls, who are in continual inward *exercise* for the good of the body."

This spirit animated the whole of his organization. "Let *all* your meetings," he said, "be held in the power of God." Thus, to take one example, in the "recording of ministers," the Church meets in earnest conclave, waiting for the manifestation and guidance of the Holy Spirit, and the decision is made, for or against, "according to the judgment of the meeting." Again, "in liberating ministers" to travel at home or abroad, the whole meeting is solemnly involved in the act. In other matters the same action is observed, and for more than 200 years the "Yearly Meeting of Friends" has been held on this principle, and the most important affairs decided by "the sense of the meeting," *without the recording of a single vote.*"[1]

Next comes the indictment: "Fox had no thought of the weak and immature, for whom earthly signs are the appropriate support of faith." This sentence led to the writing of the present paper, and the subject is one which calls for close examination, and on which a good deal can be said on both sides. The question is not so much whether "*Fox* had thought or not for the weak and immature" (though undoubtedly he had the tenderest regard for the lambs of the flock, whether he tended them rightly or no), but whether "earthly signs *are* the approriate support of faith?"

Doubtless the weak and immature must be fed with milk rather than with strong meat; but Fox's principle was to bring the soul, weak or strong, young or old in the Christian life, *face to face with God*, convinced that his Spirit could deal with such according to their needs, "feeding them with food convenient for them." He who "feeds his flock like a shepherd, gathering the lambs with his arm, and carrying them in his bosom" (Isaiah xl. 11), will surely be tender to the weaklings of the flock, and is best able to adapt his teaching to the soul that "learns of him." Fox profoundly believed in the Saviour's invitation, giving it a large and full interpretation, "Suffer little children to come unto Me, and forbid them not, for of such is the kingdom of heaven." He trusted more to the direct workings of the Holy Spirit on the hearts of children, than to the help of signs and symbols which are but the shadows of the true. The principle which underlays his whole religious structure was, that Christ, the fulfilment of all

[1] There are other aspects of this subject, touching the powers of the larger life of the Church and of the race, which are ably treated in this book, but space forbids our entering upon them here. The brotherhood of man, or what is now termed "the solidarity of the race," is forcibly dwelt upon. This truth was hardly developed in Fox's time, although his doctrine of the universality of grace *practically* covered the whole ground. I think, with the author, that Fox did not sufficiently recognize "the many parts and fashions in which God is pleased to work," and "so the past for him was a long and dismal night of apostasy and darkness," rather than a dawning of the light, and a gradual *preparing* of the inheritance we now possess as "heirs of all the ages."

"Lord of the Ages, Thine
Is the far-traced design,
That blends Earth's mighty past with her to be.
"Slowly the web enrolls,
And only wisest souls
Some curves of Thine unwoven cypher see."

—*T. Hodgkin.*

types, the substance of all shadows, had himself come; and that in this day of his real Presence (the Parousia), we have the One essentially in our midst —"Immanuel, God with us," who is all-sufficient for our needs; and, therefore, the dispensation of signs and symbols, types and shadows, is no longer needed, and has passed away.

Were this truth *fully* accepted, I believe the weak and immature, as well as the strong and those of full age, would find their "appropriate support" in Christ himself. This was strikingly manifested in the days of the early Friends. It was sometimes the case that nearly all the older members of a meeting were imprisoned for their conscientious convictions; and in their absence the children carried on the meetings, looking to the great President of the Assembly to impart life and power to their worship. But, if mistrusting the Divine power, we resort to human aids and supports, our faith becomes weakened, and we mistake a sensuous devotion for spiritual worship.

Whilst saying this I know how hard it is thus to step out in living faith. Our sensuous nature has so strong a hold upon us that we easily believe the spiritual must be reached through its means, and be cultivated through the earthly signs and symbols that seem to stimulate the higher faculties. It has been forcibly said that the bulk of nominal Christians are but as children in spiritual life, and therefore must be attracted by outward signs before they can be brought under the influence of inward and spiritual grace. Doubtless this system brings a greater number into the outer courts of the temple; but would it not be better to have a less number and more vitality? The lament of the enquirer mentioned at the commencement of this paper, shows the want of success from the present plan. Would it not be well to try the other, and beginning with *life*, allow this to fashion and sustain the organism, rather than first to make the framework, trusting to "a breath from heaven to animate it?"

Professor Drummond, in a chapter on "Parasitism" (see "Natural law in the Spiritual World"), treats this subject in a masterly way. I think his essay is one of the best defenses of the views of George Fox in this respect. He says:

"Where the worship is largely liturgical the danger assumes a more serious form, and it acts in some such way as this. Every sincere man who sets out in the Christian race begins by attempting to exercise the spiritual faculties for himself. The young life throbs in his veins, and he sets himself to the further progress, with earnest purpose and resolute will. For a time he bids fair to attain a high and original development. But the temptation to relax the always difficult effort at spirituality is greater than he knows. . . . Connecting himself with a Church, he is no less interested than surprised to find how rich is the provision there for every part of his spiritual nature. Each service satisfies or surfeits. Twice or even three times a week this feast is spread before him. The thoughts are deeper than his own, the faith keener, the worship loftier, the whole ritual more reverent and splendid. What more natural than that he should gradually exchange his personal religion for that of the congregation. . . . Thus, instead of ministering to the growth of individual members, and very often just in proportion to the superior excellence of the provision made for them by another, does this gigantic system of deputy nutrition tend to destroy development, and arrest the genuine culture of the soul." (See also the whole chapter.)

With the second part of Dr. Westcott's remark, "He had no thought for the students of Nature, for whom they (earthly signs and symbols) are the hallowing of all life," I should more readily agree. I believe that in the region of the intellectual and emotional nature such are truly helpful, and have even a hallowing influence, and that too rigid an exclusion of such does, in this sense, "maim the Christian man." But in the sphere of religion, *that which binds the soul to God*, we need to be as direct and practical as possible, and to see that "our expectation is from Him alone."

One more point I will touch in these tempting fields of thought. "We are busied, engrossed, absorbed," says Dr. Westcott, "in dealing with partial evils, with intemperance, with uncleanness, with dishonesty. We think we can build up the kingdom of God in fragments. Fox struck at the *disease* of the sinful, which is ignorance of God, and not at the symtoms of it." This passage is full of deep truth, and whilst we would not put up a finger to check aggressive movements against these different forms of sin, can we fail to see that the essence of Christianity is to *be right*, and then all that is wrong will pass away? This was the central principle of George Fox's religion It lay at the root of his conduct with regard to war, oaths, slavery, and other wrongs; it dictated his scruples with regard to language, dress, and other peculiarities. *Be* true, and you cannot utter what is false; *be* loving and you cannot hate even your enemy, nor engage in war; *be* pure, and impurity cannot take hold. And so Fox proclaimed the Gospel of Christ as the panacea for all the wrongs and woes of humanity.

To sum up, I believe that the Society of Friends hold a charter of Christian truth and liberty, of which neither they nor the world at large have yet tested the full value,—a great ideal which has yet to be wrought more fully into the actual. Let this now be our aim. In reading Dr. Westcott's estimate of the work already accomplished, there is some danger of self-complacency at the deeds of our forefathers. But it should also lead us anxiously to enquire, whether this spirit of uncompromising truthfulness and independence is actuating the bulk of our members to day? To me it brings rather a sense of humiliation to think that with such grand principles we are losing rather than gaining ground among the Churches around us. We possess a heritage won by the passive resistance and "faithfulness unto death" of those who "counted not their lives dear unto themselves," so that they might be true to what they believed required of them by the great Head of the Church. We have the vantage ground of conscientiously believing in the entire spirituality of the Gospel dispensation, and accepting all that this belief legitimately involves. May we then contend, not for Quakerism, but for primitive Christianity, "the faith once delivered to the saints," and, by bringing its principles into contact with actual life, show that "the Gospel is still the power of God unto salvation to every one that believeth."

RICHARD WESTLAKE.

For Friends' Intelligencer and Journal.

THE CONDUCT OF BUSINESS IN OUR YEARLY MEETINGS.

It has been so appointed that the times for holding our seven yearly meetings are all embraced in a period of less than six months. As we are now about to enter upon this period there is, on the part of many Friends, a desire that the meetings may be so conducted as to bring no reproach upon us, but rather that they may serve to promote the welfare of the body, as well as prove beneficial to those in attendance.

There are many who—like the writer of this article—have been accustomed from childhood to attend these annual gatherings, and without ever having taken part in their proceedings, to feel a deep interest therein, accompanied by a belief that a good yearly meeting exerts an influence which extends to its most remote branches; and that dissensions at the head are likely to shake the whole body.

As Friends are a feeling people, we cannot (if true to our profession) lay out work in advance, or predict what will, and what will not be likely to take place. It is, however, as true of assemblies as it is of individuals that while we cannot command the good, we may place ourselves under favorable conditions for reception; and the most important of these—so far as the assembly is concerned—are quietness, seriousness, condescension, and deliberation. If, on the contrary, restlessness, levity, determination, and haste prevail, they will be as likely to repel the good as their opposites will to invite it. Now since both classes of these conditions are measurably under our control, does it not behoove us to eschew and reject the latter, and to seek and cultivate the former?

(1) *Quietness.* This may be regarded as the preliminary condition; and until it has been attained, no business can be transacted properly. If any individual present feels unable to get quiet, he may safely accept the inability as an evidence that he is not to take any vocal part in the proceedings during that session. The larger the number that have attained a state of inward stillness the greater will be the solemnity spread over the meeting.

(2) *Seriousness.* It should be constantly borne in mind that a yearly meeting of Friends is a *religious* body, and not a mere convention for the transaction of secular business. A firm conviction on this point will be likely to keep down all levity of expression, of manner, and of thought; while it will make way for any religious exercise that is properly authorized. The weighty manner of the silent burden-bearers has an effect that can be both seen and felt over the meeting. William Evans, in his "Journal" speaks of Philadelphia Yearly Meeting, as it appeared to him in the days of his youth, and of the effect produced upon him by the solemn countenances of those who occupied the higher seats. But even of later date, and in other yearly meetings—as many who may read this can testify—the solidity of the silent ones, in the galleries as well as in the body of the house, has been as the ballast to a ship in times of great agitation.

(3) *Condescension.* Of course, those who are under the weight of the meeting will desire that the *right* may prevail, and that all who express a sentiment may go down deep enough to find what is right, and not be so superficial as to attempt to sway the meeting by the power of argument, or the mere force of numbers. If the answers to the Second Query are as true as they are usually full, there will be no disposition to give or to take offense: If, however, any member should discover that his zeal is getting ahead of his meekness, he should at once cease from participation in the subject before the meeting, and try to take care of one. "He that ruleth his own spirit, is greater than he that taketh a city." But the very name of our organization implies brotherly love, and where that is at the root of the tree, the ripest fruit thereof will be condescension.

(4) *Deliberation.* This may be regarded as an outward practice proceeding from an inward condition; and the prevalence of it is absolutely essential in every assembly bearing the name of "Friends' Meeting." The tendencies to violate it are found in the attempt to do too much, to say too much, to be impatient of restraint, and to feel in a hurry. Men who are accustomed to the ways of business, as it is now conducted, have much to leave outside when they come into Yearly Meeting: the prompt manner and executive haste of the counting-house must be laid aside; and with them, every impulse that is impatient of delay. The merchant's motto, "Despatch is the life of business," does not apply here; and any attempt to force it, will be likely to lower the dignity, to mar the unity, and to detract from the solemnity of the meeting.

In the observance of proper deliberation, and in keeping down what might lead to excitement, much, very much, lies with the clerks. A weighty demeanor at the table has a powerful effect upon the assembly; and the ability to turn inward when the outward elements are jostled, is one of the most essential qualifications for a clerk of a Friends' Yearly Meeting. If the clerk and the assistant clerk are in hearty sympathy with each other, their coöperation will prove a source of strength to themselves, and of advantage to the meeting.

The pauses observed before and after reading the opening and the adjourning minute at each session, are conducive to deliberation as well as indicative of it. They are certainly Friend-like, and their efficacy has stood the test of time, and been acknowledged as well as proved.

In naming Friends to serve on a committee, there is sometimes manifested an eagerness to get certain persons appointed, which begets unseemly haste, imposes a severe strain upon the clerks and has the appearance of indecorum. The larger the gathering the greater, of course, will be the confusion growing out of this haste; but in all of our meetings it should be guarded against, as a practice at variance with our profession, and one which may prove a stumbling block to our younger members, and to all serious enquirers.

Crowding the last session with business prevents proper deliberation, and it has often marred what might otherwise have been a good meeting. Would

it not be better, if need be, to have *one more session* than to close in haste and confusion? There is something very solemn in hearing read the concluding minute of a yearly meeting, and if Friends part under a feeling of this solemnity they are likely to carry it with them to their homes, accompanied by an increased love for the brethren, and a sense of gratitude for the privilege of being members of such a Religious Society.

If, then, on assembling to transact "the weighty affairs of the church," all would endeavor to attain a quietness of spirit, and to feel the seriousness of the occasion met about, they would be likely to keep self down, to exercise forbearance, and to practice deliberation: there would then be a fulfillment of the favorable conditions which are under *our* control, and the rest we should be willing to leave in humble and reverential trust that we might be favored with a good yearly meeting.

H.*

Fourth month, 27.

For Friends' Intelligencer and Journal.

FURTHER NOTES CONCERNING HOPEWELL MONTHLY MEETING.

The account given by your correspondent in relation to Hopewell Monthly Meeting is very interesting. From the minutes of Chester Quarterly Meeting held at Concord, it appears that in the year 1734 Nottingham Monthly Meeting, a branch thereof, made application on behalf of Friends of Opeecon, (Opequan) for the privilege of having a meeting for worship settled among them. In the following year a similar application was made for Friends in or about Manoquacy, with a view to the establishment of a monthly meeting, to be composed of members in those locations. The quarterly meeting, "taking the affair into solid consideration," appointed a committee to visit them which reported 10th of 9th month, 1735, as follows: "Pursuant to the directions of last meeting, the Friends that visited those Friends living at Manoquacy and Opeekon report, that upon mature consideration of the affair, judge that it would be well and necessary under divers considerations, that the quarterly meeting would grant them the liberty of having a monthly meeting set up amongst them. And they from Opeekon renewing their request, who do also signify that upon a friendly conference with those of Manoquacy, have unanimously agreed on the time and place for the better accommodating the same. This meeting, under a solid consideration thereof, do judge it necessary and convenient for the encouragement of those Friends and their families, who are removed so remote from Nottingham Monthly Meeting of which most or all were members, that they have the liberty of having a monthly meeting for discipline and church affairs, in hopes and with desires it may be for the prosperity of Truth, the good of them and their posterity. Therefore accordingly do allow that the Friends now residing at Monoquacy and Opeekon, (being members of Nottingham Monthly Meeting), have and keep a monthly meeting for discipline amongst them, and that it go under the name, as they themselves call it, Hopewell, and be kept on the first Second-day in every month till further order. Provided, nevertheless, if there are any person or persons under dealing by Nottingham Monthly Meeting, such are not to be deemed members of Hopewell Monthly Meeting, until they have made or given Nottingham Monthly Meeting satisfaction."

From the above minute it appears that the new monthly meeting was to start with a clear record; all delinquencies were to be previously settled. At the quarterly meeting held 13th of Sixth month, 1744, the following minute appears:

"The Friends of Hopewell Monthly Meeting continuing their request on the behalf of Friends of Fairfax and Monocquacy of their having a monthly meeting to consist of the above said two meetings; as, also, that Fairfax Particular Meeting may have leave to be and keep a preparative meeting; after some consideration had on the affair, this meeting do agree to allow the Friends of Fairfax County, Virginia, and those near Monocquacy, in Maryland, liberty to keep and hold a monthly meeting on Fourth-day of the last week in each month; and that the Friends of Fairfax Particular Meeting have liberty to hold a preparative meeting on the Fourth-day of the week next before the said monthly meeting is kept; which is allowed till further order."

The Friends of Hopewell and Fairfax Monthly Meetings attended for several years the quarterly meeting at Concord. On account of the great distance, Friends of Fairfax, in the year 1755, proposed joining the quarterly meeting held at West River in Maryland. No change was then made, as in the division of Chester Quarterly Meeting, in 1758, when the Western Quarter was established, Fairfax became a branch of that meeting. In the year 1755 a committee was appointed by Chester Quarterly Meeting to visit Friends who were settled at or near Goose Creek, on their request for the establishment of a meeting there. Liberty was given them to build a meeting house and hold a meeting for worship until further order.

The French and Indian War, in 1756, led to the establishment of the Meetings for Sufferings, by Philadelphia Yearly Meeting, for the relief and assistance of Friends in distress, particularly in the frontier settlements. From the report made to the quarterly meeting by Hopewell Monthly Meeting it appears that a number of Friends' families were obliged to fly for fears of an Indian enemy. In those cases of suffering relief was extended. A long and very sad report from a committee appointed to visit them in their deep trials appears on the minutes of the quarterly meeting. The committee recommended Friends of Fairfax Monthly Meeting "to send three or more discreet members of their meeting to attend the next monthly meeting at Hopewell, and assist them as they may be enabled: which they agreed to comply with." The committee also advised the appointment of another committee to visit them, of which no evidence appears on the minutes of Chester Quarter, as by the establishment of the Western Quarterly Meeting in 1758, Hopewell Monthly Meeting was

connected therewith. I am thus unable further to trace its history, from which it appears that at an earlier, as was the case at a more recent period, Friends of that meeting severely suffered from the evils of war. G.

Fourth mo. 30, 1888.

ETHICS FOR THE YOUNG.

The broad and far-reaching system by which, in this country, we confer upon our whole population the blessings of education, cannot be over-estimated. It is, however, important that we bear in mind the fact that this education is, after all, not so much a positive and unmixed good in itself, as a power capable of producing good. This is often overlooked by those who make the most strenuous and laudable efforts to raise the coming generation intellectually and socially. They see so clearly the need of mental development, and the benefits which it is capable of producing, that they very naturally conclude that, when they have secured it for the young beings who are to manage the world in a few years, they have done all that is needful to fit them for their important and responsible duties.

The truth is that education, in the popular meaning of the word, gives strength, energy, capacity, and influence, but not direction. It puts a valuable tool into the hands, but does not always give the wisdom to use it. It enables the future man and woman to accomplish great results, but does not also ensure that they shall be good as well as great. It makes its fortunate possessor a larger, more powerful, and more important factor in the community, but whether for good or for evil it cannot determine. The continuance of crime and vice, and low standard of honor in commerce and politics, the many devices to escape from simple equity, the multiplication of new and complicated forms of deception, the repeated triumphs of selfishness over sympathy, and lax sentiments over right principles, must convince every thoughtful person that the education so freely bestowed upon all is too often used in the interests of shrewd cunning, and artifice, and made the indirect instrument of evil, instead of the powerful agent for good that it might become.

Yet we should not, because of this, throw any discredit upon mental education, nor relax a single effort in its behalf. Because the strength of the right arm may be used for murder, it does not follow that it should be kept in infantile weakness. Power is always good in itself, and when it is put to bad purposes it only shows that something else is lacking. The mighty engine that swerves away from its path carries with it ruin and desolation, but we do not blame its power, or strive to diminish it in future. It is the direction of that power that has been amiss, and must bear the blame. So knowledge is a power which never needs arresting, but only guiding in right directions.

Instruction in the principles of right and wrong can alone give this much needed guidance. The great need of such teaching is visible everywhere. It seems as if the idea prevailed that, while every other species of instruction needed systematic and assiduous effort, this would come of itself.

It is shifted about between parent and teachers, the school, the home, and the church, and no one knows exactly where the responsibility ought to fall. Thus, no regular plan is laid for teaching the young the grounds of honesty, purity, and truth, the functions of conscience, the basis of right-living, the laws which should govern the every-day duties of life. When we reflect how strong is the hold of passion, desire, and interest, and how firm must be the principles that can control them, it would seem that the full comprehension of these principles must be the most important study that can occupy the mind of youth. Every other branch of instruction belongs to some special part of life, and may or may not come into special requisition; but this concerns every portion, it comes into use each hour, it influences every choice, and determines the character of every action. Surely, then, it deserves more and not less attention than other things. So far from leaving it to the haphazard of desultory talks and occasional formal lectures, it ought to claim the best thoughts and the most carefully prepared systems, the wisest plans and the most earnest efforts of those entrusted with the guardianship of the young.

We do not mean by this to urge any dry, didactic study of moral science or philosophy. This, however useful for other things, will not supply the need of which we speak. Neither will it suffice to exhort the young to a life of abstract goodness, or to fret them with continual censures of their shortcomings. What is chiefly needed is plain, practical instruction in the principles of right living, as applied to their own circumstances and relations, in the character of motives, in the meaning of truth and honesty, in the power of kindness and sympathy, in the duties of every-day life. A sound and strong statement of what is right, and why it is right, of what is wrong, and why it is wrong, is a most needful foundation for any other moral or religious training that may follow.

From the lack of this plain and reasonable knowledge comes much of the confusion of mind which fails to detect the sophistry with which self-interest will plead against the calls of honor and of duty. People drift into wrong-doing of every kind far oftener than they deliberately plunge into it, and a thorough comprehension of its nature from the beginning is frequently the first cause. How this want can best be supplied as a fitting preparation for life's arduous and responsible duties, is a matter worthy the consideration of every well-wisher of the rising generation. Hitherto it has been strangely neglected, but, if the conviction of its great importance be once firmly implanted in our hearts, suitable methods to promote it will not be long in following. No one, whether in the home, the school, or elsewhere, who has responsibility or influence with the young, can avoid a share of obligation in this matter.—*Phila. Ledger.*

Oh, what a glory doth this world put on,
For him who with a fervent heart goes forth
Under the bright and glorious sky, and looks
On duties well performed and days well spent!
—*H. W. Longfellow.*

THE FIRST-DAY SCHOOLS.

WHAT SHOULD BE THE AIM OR OBJECT OF A FIRST-DAY SCHOOL?[1]

With the material we use and the labor given so gratuitously, it were a thousand pities if the object was any but a grand and good one. The aim or object of a First-day school should be to give a clear understanding of the principles of Friends and a better knowledge of the Scriptures. As the future of the schools and through them of the Society, is largely dependent on those having them in charge, if they have appropriated the true religious thought and understand the privilege of being in full sense Friends,—the result cannot be other than we would have it.

The question in our unions and to each one of us is,—What to teach? Teach the Scriptures,—but how? Certainly not as to the letter entirely; still, we must study the language and customs of ancient history, and in giving the literal meaning make it applicable to our lives at present in the spiritual sense, and we cannot fail to bring to light the beautiful and shining truth of God's infinite love and care over us.

Believing that the Heavenly Father reveals himself in the hearts of children, and that the full fruition is in acts of unselfishness, tenderness, and a reverence for the good and true, we might feel at times as though we were intruding in the work of developing this spiritual life; but viewing our influence upon the children about us carefully, we shall always find that somebody's influence shapes the religious characters of our children, and we hope and work that the influence may be good.

There is a sentiment among some that we cannot teach the Word,—that only from the Voice within can we know what is required of us in our Lord's vineyard; but we surely could not know did we not read the Scriptures understandingly.

However there is a difference between teaching and learning; a student must learn the lesson himself, the teacher can only show the way; the same as a traveler asking the road to his destination, the director can only point the way and the traveler must go himself, else how could he know of the uneven and stony places to be avoided in his path. And so another object of the First-day school is to help the weary traveler over the rough places in life, and if possible to start aright those just beginning the journey.

Now a word as to the duties of the Monthly Meeting Committee. The workers in the First-day school feeling the responsibility and need of a care from the monthly meeting, committees have been appointed to serve in that position.

We believe the care consists in meeting with the school, and if any suggestions seem advisable to give them, to see that we are supplied with suitable books and pamphlets, which are always needed in the way of lesson-helps, and that we are working for the promotion of the best interest in the welfare of the Society. Our committees may seem to feel that the schools are doing very well, and possibly they are, but the workers therein are not without their discouragements, and what is felt to be a benefit and strength is the support and presence and companionship of our older friends, that we may while they are with us, journey with them, learning more and more of the grace of older years.

A First-day school is a piece of mosaic work, composed of such differently shaded bits of intelligence,—some so sparkling and bright in the earnest work they are called to do, others quiet and sedate in expression, showing that there are many ways to accomplish the work, and because all are not alike or do not feel as we do it does not follow that the way of a brother or sister is wrong; we have to work with the talents given us and if we do our best before our God and conscience, certainly angels can do no more.

There are still other bits of mosaic intelligence that must be sought after, brought to the light and the corroding influences that have surrounded them must be removed, and polished by the light of Christ's teachings, which should be given in our First-day school. And if Christ's teachings were essential to the establishment of his Church we as First-day school teachers have no right to let it go down, but must take hold with an earnest purpose in view,—that of enlightening to the best of our ability, the minds which form a part of our wonderful mosaic structure.

Is our work ever completed? For are there not those who go and others who come into our fold,—is it ever just alike? I think the completeness should exist in the workers of the schools; let them always be the same, so that they may feel when the work is done, they have made:

> Life, death, and that vast forever,
> One grand, sweet song.

THE LORD'S SUPPER.

Topic: The True Communion.

Golden Text: "It is the spirit that quickeneth; the flesh profiteth nothing: the words that I have spoken unto you are spirit, and are life. John 6: 63.

Read Matt. 26: 17-30.

Now on the first day of unleavened bread. The beginning of the Passover, the most important memorial feast of the Jews. It had been observed from the time of the exodus from Egypt, and is still kept with great solemnity by the Jewish people wherever found. It was instituted to commemorate the deliverance of the Hebrews from their bondage in Egypt, and lasted eight days. It was called the Passover because in the great calamity or pestilence that came upon the people of Egypt by which one child out of every family died very suddenly, all the children of the Hebrews escaped the disease and were preserved or passed over. Ex. 12: 29, 30. It was also called "the days of unleavened bread" from the fact that all the bread eaten during the Passover was made without yeast or leaven, it was simply flour and water kneaded together and baked in thin cakes.

They made ready the Passover. The disciples whom

Jesus had sent to obtain a room for their use and to procure the lamb, with the bitter herbs, and whatever the rules of the feast called for, had done so. The lamb without blemish had been killed by the priests and its blood poured by the altar, and the roasting whole of the animal had been attended to, and all was now ready.

When even was come. The Passover was eaten in the evening. *One of you shall betray me.* This is the first intimation Jesus had given of the treachery of Judas, but with his clear discernment, he must have been before cognizant of his traitrous designs.

Jesus took bread and blessed and brake it. This blessing of the bread and also of the wine, was an important part of the ceremony, and not as has been asserted, the institution of what is known as "The Sacrament of the Lord's Supper."

This is my body, etc. Jesus, in this way, associated the last Passover he would eat with his disciples, with his cruel death, which was so soon to follow, not that his body in any part of it would be broken, for it was not, but that it should be a figure to them, that as often as they partook of this feast he should be brought to their remembrance. He wanted them to know that he expected to be remembered by them. It was the yearning of his tender, sympathetic heart for the continued affection of these men who had been his constant companions through all his public ministry, with whom he had eaten and drank, and shared all the vicissitudes of his eventful life, and who now for the last time sat around the Passover feast with him.

We must remember the humanity of Jesus. Because he was in all points like his brethren, sin only excepted, he was able to minister to their varied conditions, and the love he so freely bestowed upon them, craved for himself a reciprocal affection.

The distinctive truth taught by Jesus as he spoke unto the multitude was, that God is a spirit. This was an exceedingly difficult thought for the people of his day to understand, and it appears to be as difficult for the people of our day. The Jews made certain places holy in which, alone, God could be acceptably worshipped, and certain ceremonies and formulas necessary, by which He could be approached. The Samaritans, also, had their notions equally limited as those of the Jews, but differing as to form and manner. So, too, we may find more or less prevalent to-day ideas of holy days, holy places, and holy ceremonies, when and by which God can be more surely approached than in any other.

Jesus distinctly taught the fallacy of such views in his memorable words to the woman of Samaria. (John 4 : 23, 24.)

Yet, notwithstanding this positive teaching of the true character of the divine, illustrated so frequently, as Jesus did his teaching, by references to the indwelling spirit of the Father in his own soul, and in the souls of all men, many, nay, even most of those who profess to be his followers and call themselves Christians to-day, fail to appreciate his thought, to accept his teaching. They take his words which describe spiritual influences as meaning outward, material things.

The religion of Friends calls for a spiritual understanding. Robert Barclay says, "Eternal life is to know God, and God is only known by his Son, and the Son only known by the Spirit, which gives an inward sight of him." Now what does this mean to us? Not an intellectual admission of its truth as a dogma, but a realization that there is an understanding, a life, a spirit in us, which acts upon, influences, guides our thoughts and feelings "raising us above our own dead selves," over-ruling and overthrowing many of our *opinions* and substituting *convictions* in their stead. The pure in heart see God, not as a person, and not as the eye sees, but as the heart sees, viz. by an experience of heavenly enjoyment, by a sense of inward strength, by a peace that passeth human understanding. This is the "True Communion"—the communion that Jesus had with the Father, the communion that he commended his disciples to have.

A LIFE NECESSITY.

A New York Fourth Avenue car was rumbling up the avenue ; the day was cold, and the door opened and shut to admit and discharge passengers with an agonizing groan that rasped the nerves of everyone who heard it. At Thirty-fourth street a new conductor jumped on the car, and the man who examines the register opened the door, which gave a peculiarly agonizing shriek. The new conductor put his hand in his pocket, took out a small oil-can and oiled the track on which the door slides and the rollers on which it hung, saying to the former conductor who still stood on the platform, "I always carry an oil-can ; there are so many things that need greasing." Was that the reason that, though a man evidently past middle life, h is cheeks were ruddy and his face free from lines? The man who had brought the car from City Hall shrieking and groaning on its way was thin, worn, and crushed, apparently by circumstances. Is there a philosophy of oil-cans? We rumbled on to the tunnel, feeling we were under the care of a man trained to meet emergencies; time was short, but the nervous anxiety that made the journey from City Hall interminable had disappeared, and we leaned back, saying inwardly, "Well, we might as well take the next train." Unconscious teacher, how often has your comfortable manner and hearty voice recalled us to the necessity of using an oil-can to modify the friction of life.

Recently three or four earnest women met at luncheon. The conversation drifted on to the question, "Shall love have a hundred eyes, or be blind?" Which is the best? Which is most comfortable? The conclusion was that there must be a judicious blending of sight and blindness; affection enough to forgive and forget. At the close an earnest woman, whose every gesture is an indication of wisdom and mental balance, said : "I sometimes think that one must go through life carrying an oil-can, if she desire peace." Here was another face beaming with health and good cheer, whose philosophy of life was an oil-can—deep, trustful affection, bearing and forbearing.—*Christian Union.*
